COLLEGE

CONTENTS

Editorials	3
The Vital Need of the Army.....Hon. Lindley M. Garrison	6
In which the Secretary tells what he wishes to do, and how the public can help	
Confessions of a Reformed Dramatic Critic.....Julian Street	9
Comic experiences in some aspects of stage life	
Illustrations by James Montgomery Flagg	
The Gaynor Charter.....	12
Showing what a deadly blow the Mayor of New York was willing to give the city, had he not been thwarted	
With a cartoon by Cesare	
Banker-Management.....Louis D. Brandeis	14
A judgment on the New Haven Railroad troubles by the leading expert student of industrial problems	
"Both Members of This Club".....George Bellows	16
Cartoon	
Back of Third Base.....Gerald Morgan	18
A Story	
Illustrations by James Preston	
An Open Letter to Woodrow.....Edmund Vance Cooke	20
A view of President Wilson's problems, expressed in humorous verse	
A New York Summer Show.....Wallace Morgan	21
Cartoon	
The Drama Outlook.....	22
What is best worth looking forward to in the approaching theatrical season	
Thoughts About the Theater.....	23
"Down at the Corner".....John Sloan	24
Cartoon	
Current Athletics.....Herbert Reed ("Right Wing")	25
Recent events in the various fields of sport	
The Autopilgrim's Progress.....Wallace Irwin	26
The adventures of a man who was persuaded to buy an automobile	
"Winds of Doctrine".....	27
A review of a very brilliant recent book	
What Women Are After.....Norman Hapgood	28
Describes the real meaning of the Feminist Movement	
Finance.....Albert W. Atwood	30
What They Think of Us.....	32
Comments by newspapers all over the country on the change in HARPER'S WEEKLY

HARPER'S WEEKLY

Admonition of Civilization

Edited by NORMAN HAPGOOD

Vol. LVIII
No. 3333

Week ending Saturday, August 16, 1913

[10 Cents a Copy
\$4.00 a Year]

A Program

AMERICANS like to be informed, and also like to think. They do not like to be bored. A publication that wishes to be the mouthpiece of intelligent and active Americans to-day should be sound and progressive, but also brisk and varied.

HARPER'S WEEKLY hopes to play something of a rôle in the large matters that are decided in Washington, in our State capitols, in our city elections, but to put into these matters sufficient human insight and sympathy to make them comprehensible to everybody, and therefore interesting to everybody. To understand a thing is to be interested in it.

Moreover, with equal enthusiasm, it hopes to have a part in matters that are less political. You will probably guess from the article "What Women Are After" that we intend, if possible, to make ourselves the official organ for the Feminist Movement, not through agitation or argument so much as through a lucid and persistent explanation from many angles of what changes in civilization that movement seeks to bring about.

Moreover, also, we take the intellectual life to include many topics. There are certain interests that are degrading to the mind, or rather certain ways of treating certain subjects, and those we shall forgo; but those that are part of the normal interests of an active man or woman are those we shall endeavor to reflect. The drama is the most popular of all the arts. The new editor of this paper was for four years a professional dramatic critic, and from the age of twelve a special lover of the drama. Naturally, therefore, an attempt will be made to build up a dramatic department that shall pick out and emphasize and help along those aspects of the stage in America that are worth attention, whether as plays, management, or acting.

In the treatment of books the same plan will be followed. We shall make no effort at reviewing everything, or nearly everything, as we do not care to load the paper with discussions of what has no interest; but we shall be sharply on the watch for books that signify, and shall point out to our readers why we think these particular books ought not to be overlooked. We hope one result of this policy will be to make a few additional persons realize that to read a really good book gives something that could not be had by reading newspapers or magazines, including weeklies like this.

Fiction will appear in the paper only as an element in the variety of human interest. We do not wish to push it too much to the front,

because we desire to have the paper in its proportions reproduce the interests of the most energetic and important class of Americans. We shall put in stories whenever we happen to like them, and think a large number of the kind of readers we desire will like them; but we do not intend to use fiction to build up circulation in a way that would collect for us a mass of readers who care for little else. We are not to be a high-brow publication, in the limited sense, but we do not intend to collect a lot of low-brows.

That, in brief, is the spirit—to be progressive and well informed, but at the same time varied, simple, and human. Can we do it? A comparatively short time will tell. The idea is just, because there are a great number of men and women, from Portland, Maine, to Portland, Oregon, who want that kind of a publication, and the only question is whether we have in this office sufficient ability to furnish the paper they want.

To Artists

SINCE it became known that HARPER'S WEEKLY was to change hands, a great many questions have been asked of us about illustration. We can not do in that department, or any other, all in a minute, what we wish to do; but the idea is hinted at in some of the cartoons in this number and will be further reinforced next week.

Germany has, in *Jugend*, *Simplicissimus*, and *Fliegende Blätter*, probably the most spirited weeklies in the world—papers in which not only is the text brilliant, but the pictures are full of artistic quality, full of thought, and full of wit. In other countries in Europe the same combination is found, to a lesser degree. In our opinion, the illustrations in *The Masses* have a higher average interest than those in any other periodical in this country.

We do not expect in HARPER'S WEEKLY to publish much illustration that is standardized or stereotyped, although doubtless we shall have to do a certain amount of this, especially until we have been running on the new lines long enough to become recognized as the medium for the kind of thing we have in mind. This work will be largely a by-product with some of our best illustrators. What we want is not what they do because there is a widespread demand for it, but what they do because it expresses them as intelligent, gifted men. It is the thing that they would do for a dinner of artists in which every guest was contributing something which he knew would be appreciated by his friends but would hardly be sought for by the department-store publications.

54554

Pass the Currency Bill

THE administration will never again find circumstances as favorable to the passage of the currency bill as they are this summer. Hence all the arguments by the opponents of real reform about giving more careful consideration. Consideration in abundance has been given for years. The fact is that the bankers want a bill that will make the currency more elastic without doing anything to decentralize credit. They are pursuing various well-known tactics, such as sending out circular letters to scare small country bankers and stir up the less intelligent radicals in Congress to introduce amendments that have no chance of passing. Some men in Congress who have the fate of the bill largely in their hands are none too anxious at heart to have so radical a reform. The President, however, holds the whip band just now; the country is with him, and the only thing to do is to act.

Mayor Gaynor

A GREAT man, if his mural nature equaled his intellect and his ability; an ideal mayor, if his mind were straight; but a very dangerous man because his charm and his cleverness are combined with political tortuousness and untrustworthiness. Tied up with the present Board of Estimate, he has been a useful official because his force and originality have been made use of and his trickery has been thwarted. Had there been no one to stop him when the devil in him was uppermost, he would have done immeasurable harm to the City of New York. The disastrous Charter that he would have inflicted on the city is an illustration. The motives for this outrage appear in the article that we publish in this issue. Mr. Gaynor is a brilliant, gifted, and experienced man who is immoral politically. This is much more important than habits that are commonly called immoral, because we are not quite sure to what extent those affect the ability to grapple with vice in a complex and cosmopolitan metropolis. What we refer to is the readiness at any moment to use great power against the public when it happens that the public's interest is in conflict with personal ambition. Mayor Gaynor is as wise as a serpent, but not as harmless as a dove.

Arithmetic

ABOUT three years ago, before the Metropolitan Traction Company of New York went into the hands of a receiver, Mr. Brandeis came down from Boston, and in a speech at Cooper Union prophesied that that company must fail. Leading bankers in New York and Boston were heartily recommending the stock to their customers. Mr. Brandeis made his prophecy merely by analyzing the published figures. How did he win the Ballinger case? In various ways, no doubt; but perhaps the most critical step was when he calculated just how long it would take a fast worker to go through the Glavis report and make a judgment of it; whereupon he decided that Mr. Wickersham could not have made his report at the time it was reported to have been made, and therefore it must have been predated.

Most of Mr. Brandeis' other contributions to current history have involved arithmetic. When he succeeded in preventing a raise in freight rates, it was through an exact analysis of cost. When he got Savings Bank Insurance started in Massachusetts, it was by being able to figure what insurance ought to cost. When he made the best contract between a city and a public utility that exists in this country, a definite grasp of the gas business was necessary—combined, of course, with the wisdom and originality that make a statesman. He could not have invented the preferential shop if that new idea had not been founded on a precise knowledge of the conditions in the garment trades. When he established before the United States Supreme Court the constitutionality of legislation affecting women only, he relied much less upon reason than upon the amount of knowledge displayed of what actually happens to women when they are overworked—which, while not arithmetic, is built on the same intellectual quality. Nearly two years before Mr. Mellen resigned from the New Haven Railroad, Mr. Brandeis wrote to the present editor of this paper a private letter in which he said:

"When the New Haven reduces its dividends and Mellen resigns, the 'Decline of New Haven and Fall of Mellen' will make a dramatic story of human interest with a moral—or two—including the evils of private monopoly. Events can not be long deferred, and possibly you may want to prepare for their coming.

"Anticipating the future a little, I suggest the following as an epitaph or obituary notice:

"Mellen was a masterful man, resourceful, courageous, broad of view. He fired the imagination of New England; but, being oblique of vision, merely distorted its judgment and silenced its conscience. For a while he trampled with impunity on laws human and divine; but, as he was obsessed with the delusion that two and two make five, he fell, at last, the victim to the relentless rules of humble arithmetic.

"Remember, O Stranger, Arithmetic is the first of the sciences and the mother of safety."

Consequently

IN the autumn we shall publish a series of three articles by Mr. Brandeis on a subject of which he is a recognized master. It is well known that in the hills that have recently been drawn in defense of competition, such as the La Follette Bill, the Lenroot Bill, and the Stanley Bill, Mr. Brandeis' hand was constantly at work. It is also well known that the very successful defense of competition made by President Wilson during the campaign last summer was largely founded on Mr. Brandeis' material and conclusions. Mr. Brandeis has naturally put most of his energies on the preservation of competition. While he has constantly referred to an undesirable kind of competition, he has not gone into that subject with fullness. The series that we shall publish will give completely that side of his thought,—an analysis of the Competition that Kills,—and it will be printed just before the next session of Congress, when amendments to the Sherman Act will be proposed.

Anti-Vivisection

SOME dozens of letters have come to us all at once, asking us to be fair in the vivisection controversy and to give "both sides." Some of these letters inform us that the writers will subscribe to this WEEKLY if we are fair, but not if we pursue a course hostile to the anti-vivisection crusade.

We have no intention of giving both sides. On the contrary, the support of the cause of scientific medical progress will be one of the things to which we shall be energetically devoted. We shall no more give both sides of the argument on experiment than we shall give both sides of the question of whether the household fly shall be encouraged in the dining-room, or sewers emptied into the city reservoir, or swamps kept for the breeding of mosquitoes, or smallpox patients permitted to ride on the street-cars. We shall be extremely hinged on the subject, and shall hope that the day will soon come when cancer will be added to the great diseases that have yielded to investigation.

An Inside View

ONCE in a while private letters throw on foreign affairs a vivid light which would hardly reach us in any other way. One such letter has just come into our hands. A letter received from Albania, written by a member of the Greek Army to his cousin in this country, says:

"We just have left Permet, and have come to the district of Kolonia, six hours distant from Korce. What shall I tell you about the Albanians? They have treated us in a most hospitable way, in spite of our meanness. Ever since we stepped in their land we have grabbed, killed, and disgraced. It is not an easy job to make Greeks out of them, for they are very different people, with different customs, and, what is worse, they don't know a word of Greek. We are lingering here and waiting for a chance to get hold of Sali Butka, one of their leaders, who goes from village to village to tell his people to be prepared to rise against us. If we can only get hold of him we shall broil him alive.

"The Greeks take advantage of the fact that Bulgaria is shut out at present and can not communicate with the outside world, and are circulating the report that the Bulgarians are massacring and devastating all the places which they are forced to leave, retreating before the Greek army. The Greeks are doing to her strongest ally, Bulgaria (after her exhaustion from fighting and driving out the Turks from Europe), the same thing that she did to Albania when she could not communicate with the outside world. They were the authors of the reports that Esad Pasha, the famous defender of Scutari, was a traitor to his country, giving Scutari to Montenegro and southern Albania to Greece, which time has proved to be entirely false. The present reports of the Greeks against the Bulgarians are used to conceal their own cruelty."

Nothing sadder has happened in many years in foreign affairs than the turning of these little countries against one another after their glorious record against the Turk. We may find comfort, however, for the light thrown on the Greek character in this letter by remembering history. In

considering what happened in the most brilliant era of the human intellect, it is permissible to hope great things of the Greeks still, for the faults which that country shows now were dominant even in the period of the highest genius of Athens. It is altogether possible, of course, that our correspondent has greatly exaggerated, as is the nature of the human mind when deeply stirred; but, even if he is correct, it does not mean that there may not be mixed up with the present Greek cruelty and treachery a share of the old determination and brilliancy and freedom which, under favorable circumstance, may produce another renaissance. Jealousy and distraction characterized the Greek cities at the time of the unsuccessful effort to make Greece a united whole. Herodotus quotes with pleasure Cyrus' definition of the Greek market as "a place set apart for people to gather and cheat each other," and tells us that the Delphic oracle was bribed, and that one political faction wished to betray Athens after Marathon.

It will be remembered that Alcibiades commanded an Athenian fleet and the next day pointed out to the Spartans the weak places in his country's defense, yet he has no such reputation as Benedict Arnold. The changeability of the Greeks has been pointed out from the very beginning. Plato emphasizes it in the Republic, and Juvenal five centuries later energetically attacks their want of steadiness and character.

If the ancient Greeks had the faults of the modern there is at least a chance to hope that the moderns may develop some of the virtues of the ancients.

"Is It Frivolous?"

DISCUSSION of baseball in the editorials of a grown-up periodical seems rather ludicrous to our wives. "Our wives," by the way, in this case is not the editorial plural; otherwise it would be "our wife." It refers to the wives of several persons concerned.

Our wives, then, somewhat object to having baseball made a feature. There is only one remedy for this state of affairs. More girls must play the national game when they are young. They are coming to it. We have this summer seen several girls in their teens in one small school throw a baseball with a proficiency that fifty years ago could not have been equaled by thirty women in the United States.

No Trespassing

THE Democrat of Laconia, New Hampshire, ironically observes that the people of that State, in order to obtain advice in regard to managing public affairs in New Hampshire, will now have to subscribe to this WEEKLY. One of the most peculiar traits of human nature is the haughtiness with which certain publications think they have an exclusive right to celebrate on affairs in their neighborhood. Doubtless the Laconia Democrat frequently expresses powerful and endlessly valuable opinions about affairs in New York, or even in China; but it seems to see something like a trespass, if not indeed an insult, in any interest taken in New Hampshire by a publication not printed there. We did not make human nature, however, and are not responsible for it.

SECRETARY GARRISON WATCHING A REVIEW

"The contingency of war in the present state of civilization must be one that all reasonable thinking men must consider."

The Vital Need of the Army

By HON. LINDLEY M. GARRISON
Secretary of War

THE vital need of the Army of the United States is to have the people of the United States know more about it and care more about it. In a general way the average citizen feels that the country should have an army and that it should be efficient, but that seems to be the limit of his consideration of the subject. He has little or no acquaintance with the Army as it exists, with what it is accomplishing, or with what should be done to make it the highly efficient instrument which it is necessary that it should be. Most of the consideration which the average citizen gives to the Army is *after a crisis*—and then he looks backward, not forward.

One has but to read the story of the War of 1812 as told by Admiral Mahan to have a picture of this situation. The story of that war is a pitiful one for an American to contemplate. It involved defeat after defeat upon land, and the final practical exclusion of all of our

vessels from the high seas. One drawn battle and one defensive success on land, and several brilliant victories in individual actions at sea, only served to emphasize the possibilities that this nation had, if only it had been prepared for the struggle. The warnings of the approach of the war were numerous and prolonged, but the country utterly failed to heed them or to make any proper provision therefor. In consequence, it suffered the loss of its capital, the burden of a great pension list, and the humiliation of silence upon the causes of the war in the treaty of peace. History repeated itself upon all other subsequent occasions where similar conditions existed.

The *Maine* was blown up in Havana harbor in February, 1898. For a long time before that there were distinct warnings of impending trouble. The disorders in Cuba had forcibly brought the attention of the government and the country to the impending crisis. Two successive Presidents, of opposite political parties, had declared, in messages to Congress, that the situation was such that the United States could not continue to endure it. During all of this period there was not that active interest in the situation which a patriotic people should feel and exhibit; and effective preparation for efficiently raising, equipping, and maintaining an army was not provided.

A curious but striking illustration of the effect of popular interest is shown with respect to the legislative treatment of the so-called Dick Bill in 1903. That bill, as first drafted, not only dealt with the militia, but provided for the organization of a volunteer reserve force. The members of the National Guard, taking a proper personal interest in that part of the bill which affected them, aroused interest therein. The citizens as a whole, taking little or no interest in the matter providing for a volunteer reserve force, ignored that portion of the bill. As a result, the bill, as passed, confined itself wholly to giving federal aid to making the militia more effective, and contained no provisions upon the absolutely necessary matter of raising volunteer forces and having a reserve.

Do not misunderstand me. I am not criticizing Congress. If the people take no interest in any particular portion of government, you can scarcely expect Congressmen altruistically to devote their time and attention to that which does not appeal to their constituents. It will be recalled that in England a government was voted out of office in June of 1895 because of a shortage in the ammunition supply. The early failures in the South African war were charged to inexcusable neglect of proper preparation for war—proper preparation in time of peace—preparation for which Parliament itself was largely responsible. The people, however, finally became aroused, and, with their eyes opened, saw the long existing situation, and turned the government out to show their displeasure thereat. It hardly seems possible that the American people, highly intelligent as they are, should need such severe lessons in order to cause them to take the slight necessary precautions to avoid such undesirable conditions.

The need for an army arises from the fact that it takes two parties to keep the peace, and at best any nation can control only one party, namely, itself. It is surely not necessary to cite instances to show that many wars were brought on by an issue forced by one nation upon another, and that the latter would have kept the peace, if possible. The contingency of war in the present state of civilization must be one that all reasonable, thinking men must consider. All reasonable, just people desire peace, both with respect to individual differences and national differences. Private conflicts between private individuals over personal interests have largely ceased, and their settlement been left to tribunals. But it must be remembered that the effectiveness of this method of settlement is because lack of each tribunal is the entire force of the state. It is impossible to believe that every defeated litigant gracefully and willingly yields, and that he would not resort to force if he felt that force would avail him anything. Whether or not this desirable method of settling international disputes can be accomplished, I do not now propose to

discuss; nor is it proper that I should do so in this connection. It is a fact that no such tribunal for those questions that are most likely to bring on war has been established. And, until it is, we can only be guided in the future by what has taken place in the past. The past contains so many instances of unexpected wars, so many instances of the lamentable consequences of unpreparedness for war, that any nation of intelligent people is fully advised of all the dangers of inattention and inaction in this respect.

Our country is fortunate in that it has no powerful neighbor on this continent which requires the maintenance of a large army in times of peace. The stretches of water that separate us from other great nations are, however, no longer the protection that they used to be. The oceans furnish fine highways for the transportation of troops and supplies, and improvements in shipping have made it easily possible to utilize these highways over long distances. The distances, it is true, are still a protection; but it would be foolish to close our eyes to the fact that at various points of the public domain of the United States we are still vulnerable to attack.

The great benefit accruing to us by reason of our distance from other nations is that it frees us from the necessity of maintaining an army upon a war footing. We are free to count upon the time necessary to pass from a peace to a war footing. But this time is of little

or no avail if previous preparation for such passage has not been provided. We also are all the more required to maintain our small army in peace time at maximum efficiency, with the most perfect organization and supplied with officers of the most advanced training. Only by doing this can our present small army effectively act as a school of military instruction for the nation, and as a nucleus for the expansion that will be necessary in time of war.

In the Spanish-American war—which was not, and was not contemplated to be, a war upon a large scale—we mobilized a force of something more than three hundred thousand men. In a similar war, that of Great Britain in South Africa, Great Britain sent about the same number of men six thousand miles. If, in these restricted conflicts, such numbers were considered necessary, it is quite easy to conceive the great numbers that would be required if war upon a larger scale were threatened or existing. In the Civil War, the United States government at the end thereof had more than a million men under arms.

It seems inexcusable neglect and blindness to duty not to provide, in times of peace, the proper method for augmenting the small standing army as it would need to be augmented in time of war. All of the details necessarily involved in that procedure should be carefully pro-

vided for in advance; and all regulations for the guidance and instruction of those upon whom the task would fall should be determined upon in order that the absolutely necessary things to be done might be done efficiently by those upon whom the duty would then fall. It is only thus that we can prudently take advantage of the freedom from the necessity of maintaining a large standing army—a thing that no one desires to contemplate.

Militarism, with all of its great financial and other burdens, is the last thing that I advocate or that any one connected with the war establishment advocates. Our army today is of such a size that no one has yet subjected himself to the ridicule of suggesting that we are remotely tending toward militarism. It is surely no tendency toward it to suggest that the small army that we have should be kept at the highest stage of efficiency for the necessary purpose of making it the basis for the expansion which will be inevitable if war comes. This great nation will surely not convict itself of willful blindness or conscious inattention and neglect, when it once understands the situation clearly.

If the people of the country will but consider what the Army has done, and is doing, they will begin to realize what a great, efficient force this branch of the government is, and what it is capable of doing, provided it receives proper support and sympathy from the people of the country.

When the war with Spain was over, it became necessary to prepare for carrying out the remainder of the declared purpose of Congress to turn the government and control of the island over to the people thereof. During the interval it was necessary that the island should be governed in accordance with the principles that it was intended should prevail after the government thereof had been turned over to its own people. This duty was turned over to the Army—an organization that contained within itself executive capacity, business training, knowledge of constitutional government, and the necessary self-control for the kindly control of others. The island prospered greatly during the time that it was governed by the Army. The physical conditions improved; the administration of its affairs proceeded with smoothness—so much so that there was a failure to appreciate what this smoothness was due to. When the military government was withdrawn, difficulties almost immediately began; and at the end of four years it was necessary for this government again to intervene and to take over the conduct of the island again. In this second intervention, while a civil governor was appointed instead of one from the Army, there was placed an officer of the Army as an adviser with respect to each administrative department. And these officers, in comparative obscurity and with little recognition, largely

"I am not criticizing Congress. If the people take no interest in any particular portion of government, you can scarcely expect Congressmen altruistically to devote their time to it"

conducted the affairs and restored order and efficiency. Another officer of the Army revised and supplemented the laws of Cuba so that they might better insure the application of the principles of the excellent constitution with which the island had been provided after the war, but which its own people had not been able to operate efficiently.

When this country took over the possession of the Philippines, the Army was charged with the dual task not only of carrying on the civil government, as in Cuba, but of suppressing an insurrection at the same time; and the Army did each with equal efficiency. The insurrection was suppressed, civil justice was administered, commerce was regulated, and popular education was forwarded—all to an extent and with a success theretofore unknown in colonial administration. We entered into possession of Manila in May, 1898, and it was not until July, 1901, that the military authorities turned the government of the islands over to civilians.

The achievements of the Army with respect to the Panama Canal are of too recent occurrence and are too widely known to require more than mention. In 1902 the President was authorized and directed to construct the Canal, and was assured of the necessary funds. The instrumentality provided was a Commission made up of seven members. As will be remembered, eminent civil engineers had been tried, one after another, as the head of this Commission, and, for one reason or another, they were not successful, and finally the whole matter was turned over to the Army; and its great and memorable success in the management of all the difficult engineering, civil, and sanitary problems there encountered is universally admitted.

In the line of sanitation and of medical activity and progress, the record of the Army is of the highest. Progress in this direction since the Spanish-American war has been truly remarkable. The recent example of the Gettysburg encampment should not be overlooked or its lessons minimized. More than sixty thousand old men were there cared for under the medical and sanitary officers of the Army, and were fed, housed, and taken care of by the Quartermaster's Department, with a minimum of discomfort, ill health, and mortality.

The management by the engineers of the Army of the great public works has always received the unqualified praise of those who have come in contact with them and who have knowledge of the facts. It would be an extremely difficult task to persuade people of this country to consent to take this work away from the engineers of the Army and place it elsewhere. That magnificent body of men has not only devoted itself with great skill and application to all of the projects committed to its charge by Congress, but has always refrained from yielding to the temptation of enlarging its functions by recommending extravagant or unnecessary expenditures.

In most of the emergencies that are not only unexpected but unprovided for, the Army is the first branch of the Government called upon, and I am proud and glad to say that it has always responded in such a way as not only to render efficient assistance, but to gain the unanimous praise of those who know its work. In fire, earthquake, and flood the Federal Government has been called upon to extend a helping hand to the citizens overtaken by dire calamity and beyond the power of their immediate resources to handle. The Army, with a personnel of intelligence capable of grasping and dealing with such situations, has always been sent in, and has dealt efficiently therewith.

With respect to many of its duties the Army is enabled to draw upon a common source for aid; but it has special activities in which it has to depend very largely upon

itself for progress. The manufacture of arms and ammunition belongs principally in the domain of mechanical engineering, and with respect to this class of material private enterprise has not found it profitable to devote a great proportion of its energy. In mechanical engineering for military purposes the literature and experience of the civilian is not sufficiently extensive, and the military man has therefore been required himself to absorb the general principles and to make his own application of them for the particular needs of his science. The United States Army has not been behind any other in its contributions along these lines. The great gun of the Civil War period, the most advanced weapon of its time, owed its success to the deep insight into mechanical principles possessed by its inventor, General Rodman. He cast his guns hollow, and cooled the molten metal from the interior, thus bringing into play the strains due to the contraction of the successive concentric layers and greatly increasing the strength of the material.

The same officer introduced into the manufacture and employment of powder the most useful improvement that up to that time had been made in it. He recognized that a grain of powder did not flash into gas instantaneously upon ignition, but burned in successive layers. He conceived the idea of pressing powder into large grains and perforating these with holes, the effect of which was that the consumption of the grain would be progressive, and that portion of it which was ignited in the interior perforation would burn on a constantly increasing surface, so that the gas would form at an increasing rate, to compensate for the growing space behind the projectile as it traveled down the bore. The effect of this was to keep up for a considerable interval such pressure as the gun would be able to stand, instead of having this pressure drop rapidly away, as was the case where fine-grain powder was used. The velocity of the projectile and the consequent power of the gun were greatly increased, whereas the strain upon the gun was not increased at all.

To officers of our Army are also due the invention of the disappearing gun-carriage upon which our sea-coast guns are mounted, and which artillery officers consider the best type in use anywhere in the world. Likewise our officers are responsible for the wire-wrapped rifle, which offers the best combination of efficiency and economy that has thus far been effected in the production of heavy ordnance.

It will readily occur to any citizen of average intelligence who will devote the necessary time, that the problem confronted by those who have charge of this great establishment is no easy one. Numerous things must be done in cooperation with Congress to make the present organization what it should be, to provide it with what it needs, and almost everything must be done to put us in a proper state of preparedness for the necessary expansion to a war footing. I feel assured that the members of Congress are acutely aware of the situation, and would energetically and actively carry out the wishes of their constituents in these respects. The people of the country should interest themselves in these matters, and should take such sympathetic and active part as to insure proper support. You can not expect your Congressmen to act if you are not interested. You should not neglect your duty, and I feel sure that they will not neglect theirs, and I hope I shall not neglect mine. If we set about doing it, we can accomplish it. It is no idle boast that the American people are intelligent, competent, and efficient, when once they set about any business. Is not this a business of national importance, and should not the people set about it? I think so, and I hope so.

Next week we shall print the first of three articles in which will be given the plans of Secretary Lane regarding the control and disposition of the public domain. Mrs. Harriet Willis, the author of the articles, has been in close touch with the Secretary and his work for weeks, and the articles give not only an authoritative statement of what Mr. Lane plans to do in such large matters as the Alaskan resources, the water power of the United States, the reclamation service, and the Indian Bureau, but also sketches intimately and vividly his relation to office-holders and his daily illustration of public service. The whole development of the country is closely connected with the policy of the Interior Department, and we believe that the reader who absorbs these three articles will come near to knowing how our immeasurably valuable natural resources are to be handled during the present administration.

"People would whisper my name to one another as I made my majestic way to my aisle seat"

Confessions of a Reformed Dramatic Critic

By JULIAN STREET

Illustrations by James Montgomery Flagg

THE regular Dramatic Critic of our newspaper was going abroad for the summer. He was not in the habit of coming down to the office often, but had his headquarters somewhere in the theater district, where he edited a dramatic paper "on the side."

I had only seen him a few times. He was a good-looking Broadway type of young man, well dressed and super-sophisticated. Later he rounded out his career by becoming a wine agent and marrying a musical-comedy star.

When the City Editor told me, one morning, that the "Chief" wished to see me, I did not associate the fact with the departure of our Critic, but began to wonder what reportorial "break" I had made, and if it was bad enough to get me "fired."

When I entered the Chief's office, he cocked his eye and went on writing, while I stood there trying to conceal my apprehension.

Presently he looked up and asked:

"How would you like to do some dramatic work?"

I was astounded. I told him I would rather do dramatic work than eat—and I

wasn't over-eating in those days, either. "All right," he replied, turning again to his work. "We'll give you a whack at it and see how you make out."

Let me state my qualifications for the post:

I was an able-bodied American, male, white of color, and in a fair way to reach the desirable age of twenty-one years. I had attended a good boarding-school. At seventeen I had gone into a railroad office and sorted way-bills for six months, after which I had been fired. Three succeeding employers had endured me for half a year each, and had parted with me showing no regret. As a reporter I had done better, though not brilliantly. I had held my place a year and a half, and been raised from \$10 to \$15 per week.

But perhaps my strongest qualification was a certain inheritance which I possessed. I do not wish to seem boastful about this, but it should be mentioned. It was not an inheritance of a financial character, but one of style. I don't mean literary style, either. That has nothing to do with dramatic criticism. The style which I inherited was sartorial. My

father had given me his old dress-suit. Even as I stepped out of the Chief's office I thought of this, perceiving that a dress-suit may be a very valuable adjunct to a New York dramatic critic. But not until long after did I perceive the more illuminating fact that a New York dramatic critic may be an adjunct to a dress-suit.

That night I could not sleep for thinking of the career before me. I pictured myself arriving, in full regalia, at first nights, accompanied by a certain very charming person. How proud she would be! Managers would greet me with humble effusiveness as I entered their theaters. People would whisper my name to one another as I made my majestic way to my aisle seat. The audience would watch me, covertly, during the performance, wondering what stupendous critical thoughts were concealed by that inscrutable mask, my face! Celebrated actors and beautiful actresses would endeavor to meet me, and, on succeeding, would hang upon my lightest words. For I should be a very scholarly critic. My photographs (which I would have taken in great numbers) would show me at a

JOHN ROBERTSON PAULSON

"I tried to appear casual, but I was conscious of averted glances"

table with my books about me. My chin would be propped upon my palm, and my eyes would have a strange poetic look. I should be cold yet gentle, the Nemesis of had actors and managers, the idol of good ones. Actresses of the loftiest type would be allowed, occasionally, to give me teas—no, not teas, either, come to think of it, but suppers. I could wear my dress-suit to suppers. Some day, at the theater, my piercing eye would discover, in some actress playing a small part, the signs of a great talent, hidden from the ordinary observer. I should write a startling, analytical critique upon her art, which would come as a complete surprise to her and to the rest of the theatrical world. She would be made famous overnight. And how grateful she would be! Probably she would fall in love with me, poor thing! But I should not marry her. I had other plans; and, besides, she should know suffering in order to become truly great. . . . My salary was still \$15 per week.

NEVER, before or since, have I experienced the feeling of importance, the delusion of grandeur, which filled me as, for the first time, I went to review a play. Little did those innocent first-nighters, flucking into the theaters, realize that in a certain slender youth (wearing a dress-suit) they were looking upon a mighty agency for the uplift of art. Little did they suspect that the beginning of a renaissance had come!

But I must own that beneath my feeling of elation was one of dread. True, the play was upon trial before me, but I was also upon trial before the Chief. Archaically I hoped that the piece might be bad, for it seemed to me that one might write more brilliantly about a bad play than a good one.

But the play wasn't bad. It wasn't good, either, but fell somewhere between the two extremes. This was discover-

ing; the more so because I did not know the other critics, and could not, therefore, discuss the matter with them and find out what I thought.

That night I sat up in my hall bedroom until four, writing an article which treated the new play ironically. I felt that I ridiculed it rather neatly, and went to bed satisfied.

If my first review did not create that furor which it should have, it was, at all events, pronounced "pretty good" by the Chief (who had not seen the play), and the dramatic department of the paper was placed definitely in my charge.

Now, obviously, it was time for me to meet the managers, the prominent actors, and my fellow critics. My first acquaintance in this field was the critic of a large morning paper. Though he had been a critic for some time, and ought, therefore, to have known better, he took himself very seriously. And because I took him seriously, too, he was pleased with me, and offered, generally, to "show me the ropes."

Together, we set out to call along Broadway. I remember that we carried canes and discussed drama. After visiting several secondary managers we went to the office of the most celebrated theatrical man of that day. My critic friend informed me that we should not see this Napoleon himself, for it was his habit to maintain a mysterious seclusion. Newspaper men were referred to one of his leading representatives.

I shall never forget that representative. We were kept waiting in his outer office for some time—a fact which jarred my new-found sense of importance. When at length we were admitted, I expected some apology for the delay. Indeed, I looked for almost anything but that which happened. The man was seated at a desk in his private office. His back was toward us. As we entered, he whirled around in his chair, glared at my companion, and without giving him time to intro-

duce me hurst into a torrent of profane abuse.

"Look-at-here!" he howled. "You blankety-blank-blank! Did you write that article in this morning's paper?"

That ought would follow save a rough-and-tumble fight around the office never even crossed my mind. If my companion critic needed help in holding up the banner of the independent press, I meant to give it. What, then, was my amazement when he merely flushed and dropped into a chair.

"Aw, say, now!" he said mildly. "You know you don't mean that! What was wrong with the story, anyhow?"

The other was not to be pacified so easily. He set forth his grievance, punctuating his remarks with expletives. It seems that the article in question stated that a very popular woman star—the pet of this management—was going to Paris, and would there witness Sarah Bernhardt's performance in a certain play. The truth of the statement was not, as I remember, questioned; but, because the play was the one in which the American star would open her next season in New York, it was feared that people might infer, from what my fellow critic had printed, that she would benefit by seeing Miss Bernhardt, and that she was therefore the lesser artist of the two. The fact that such an inference would be correct made no difference. It was bad "publicity."

Somehow—I don't remember how—we retired, in disorder, from that office. Before leaving I may have been introduced. I am not sure about it. Having gotten away from the managerial representative, I got away from the critic as soon as I could. I was embarrassed for myself, but most of all for him. Thereafterward we saw but little of each other. For a few months, we bowed when we met. Then we nodded. Then we stopped altogether, and pretended that we didn't know each other.

Frequently, in the course of the next two years, I had occasion to visit the office of the great manager's representative. Our relations were always formal and civil. Sometimes, it is true, he interrupted a conversation with me to curse his girl stenographer. She took it stoically, as if she, too, had been a critic.

Though he did not call himself so, this man was really a press agent—the "head devil" of a large corps employed by the manager. As you probably know, all theatrical managers have press agents, whose duty it is to get as much as possible in print regarding their employers and their employers' plays and actors. "Press stuff" comes to the Dramatic Editor of a newspaper in such vast volumes that it is possible to print only a small selection from the mass; and as the best press agent is, obviously, the one who makes the greatest showing in the pages, these gentry are forever scheming. Some concoct "fakes" which they surround with the trappings of the truth; others give "dog stories" with the frank admission that they are "fakes," but hoping, nevertheless, that they may be printed for their fantastic absurdity. Sometimes a Dramatic Editor will expose a "fake story" by way of "guying" the press agent, and at the same time showing his own shrewdness. I used to like to do this, now and again. It was like saying: "You can't fool me!"

In the "press stuff" which came to me from the man I have mentioned I frequently found glaring errors: mistakes in grammar or in the spelling of names of important plays and actors. Instead of correcting them when I "caught" them, I enjoyed printing the items, mistakes and all, with sarcastic comments of my own.

Not until long after did I learn, to my chagrin, that the errors had been made deliberately. The shrewd press agent saw through my sophomore tendency to point them out, and, as all he wanted was publicity, he "planted" them for me to find, like raisins in a cake.

I know a dramatist who makes a specialty of salting critics' tails. He keeps a country place on Long Island, and invites his victims down for week-end parties. When the relatives of that dramatist go to visit him, they take the train. Not so the critic. The motor is sent in for him, and he arrives grandly, upon rubber tires, as befits his rank and station.

Awaiting him he finds a carefully selected house-party—how carefully selected he never dreams. Each member is in the plot and knows his "lines." That critic's visit is like some royal visit to the house of a favored subject. The other guests are a few attractive actresses, an interesting actor or two, a few more

attractive actresses, another dramatist, who runs in from his neighboring estate, and a few more very attractive actresses. What chance has that critic? What hope is there for him, with a dramatist at either elbow to fill his glass, and a group of starry-eyed beauties hunched about him like a lot of children at the zoo and begging him to make a noise like a lion. Such little modesty as he may have had with him when he arrived is snatched away. Far into the night he drinks and lectures on the wonders of himself. And when at last he goes to bed he is less drunk with his liquor than with the debauch involved in conducting the "seeing me" tour.

It is to be hoped that the critic sleeps late on Sunday morning, thus providing the others with an opportunity to spend an hour or two in talking of themselves—an occupation which, as he has often pointed out in print, they dearly love.

When he appears the orgy recommences. In relays they take him through the day. The house and grounds are littered with personal pronouns which he has thrown away as a millionaire throws money. The air is full of them. But when bedtime comes the host and his co-conspirators retire fatigued but victorious. At the cost of a little champagne, gasoline, and subterfuge, they have purchased a large newspaper.

That is the true story of what happened to a certain critic whom I know. With

only slight variations, it has happened to others. Yet I venture the prophecy that, as I have told it, he will not know himself, but will wonder which of the other critics was the victim. And how much simpler, even, is the "fixing" of the critic in a smaller city!

Fancy, if you will, a famous star on tour in his private car. He arrives at a city of, say, two or three hundred thousand population. He is a national figure. His presence in the city is a matter of oaks. Imagine, then, his importance in the eyes of the local critic, a young newspaper man, living on ten or twenty dollars a week, and lacking even the sophistication of his brother of the metropolitan daily. The actor has a glittering car to live in. The critic rooms in a shabby boarding-house and eats in quick-lunch rooms.

He asks the press agent for an interview with the star. Very likely that astute person hands him a "canned" interview from a mimeographed sheet. But if he thinks it worth while to "fix" the critic for life, he tells the star to have him in for dinner on the car.

What an occasion for the critic, in whose life even a good dinner is an event! He dons his Sunday suit, clips his cuffs with more than usual care, and appears upon the car at the appointed hour. The great actor greets him with what he afterward describes in print as "a delightfully simple manner." He is not, we learn,

"the stiff, formal person he had been made out to be." He reels off stories in "his inimitable way." A steward appears and bids them to "a feast of delicate viands cooked to perfection by a high-priced chef." Then, full of champagne, coffee, liqueurs, and the smoke of fifty-cent cigars, the critic rises to take leave. But before going he musters courage to ask for a signed photograph.

"Certainly, my dear Mr.—ah—" The great actor seems positively flattered by the request.

He takes a photograph from a pile placed conveniently near the desk, seats himself, and, with pen poised, inquires suavely:

"Let me see. How do you spell your name, Mr.—ah—?"

"S-m-i-t-h," says the critic. "Henry J. Smith."

"Ah, yes; to be sure! Quite so."

The star writes and hands the picture to the critic, who bleats his pathetic thanks, and leaves in a dazed condition. Alone in his room in the boarding-house, he looks at the inscription:

To my good friend, Henry J. Smith,
with warm regards.

Very cordially,
J. Montgomery Fitzgibbon.

The critic is deeply touched. He has the picture framed, of course, and hangs it on his bedroom wall along with photographs of all the other theatrical "friends of his."

In speaking to his landlady and the girl he takes to first nights, he refers to the actor familiarly as "Monty" Fitzgibbon. His interview and his review of the first performance are done in his very best manner. Consider these excerpts from the latter, which is headed "A BIG NIGHT":

"Seldom indeed has there been witnessed in our city . . . auspicious occasion . . . histrionic artist of no mean ability . . . rose to heights of great emotional power . . . magnificent rendition of a difficult rôle . . . artist in all that the term implies. . . . A narrative so generally known needs no description of its plot at this time." (Then a description of the plot.)

As to the "supporting company," one had "authority," another "repose," another "distinction," another "played

with understanding," several others were "satisfactory," and the remaining few were "adequate." . . . A criticism well up to the high literary standards set by New York papers!

To be continued

The Gaynor Charter

William J. Gaynor is inviting the voters of the second city in the world to make him Mayor again, after four years' trial. The circumstances under which he was elected before were peculiar. There were three tickets in the field. Mr. Gaynor ran on the Tammany ticket, with a Tammany Board of Estimate and Apportionment. Of the other two tickets, one was headed by Mr. Otto Bonnard and the other by Mr. William Randolph Hearst, and they fused on the nominees for the Board of Estimate and Apportionment. The consequence was that they elected their Board, but Mr. Gaynor was elected Mayor. He has therefore been working in conjunction with a Fusion Board of Estimate. He is a brilliant man who frequently shows startling lack of scruples. Tied up with the Fusion Board of Estimate, his ability has been used and his political trickery thwarted. If he is put into office again, it will be on a Tammany ticket, with a Tammany Board of Estimate. This article shows the sort of thing we may expect of him if he and Tammany divide the full power among themselves. Nobody is cleverer than he. He is independent of Tammany in little things. It is only in big things that he is satisfactory to the organization—in matters like the Charter and the prosecution of big police offenders.

IT is no idle Hibernianism," says Chesterton, in the *Victorian Age*, "to say that toward the end of the eighteenth century the most important event in English history happened in France. It would seem still more perverse, yet it would be still more precise, to say that the most important event in English history was the event that never happened at all—the English Revolution on the lines of the French Revolution." And with similar accuracy it may be said that the most significant act of the present Mayor of New York was one that never achieved its end or had a practical result—the attempt made in the middle of his term to bring about a radical change in the distribution of political power in the city by a bill that, for sufficient reasons, came to be called "the Gaynor Charter."

This document was the most significant act of the Mayor, because it contains the indisputable record of the Mayor's ambitions for himself, and of his relations with the Tammany organization, both of which have been obscured in his official conduct by clever allusions and epistles in which the wisdom of the serpent is set forth in the language of the Sunday-school.

In 1909 there was sent to the legislature, by a commission appointed to draft a charter for New York, a brace of bills known as "the Charter" and "the Administrative Code," together constituting the so-called "Ivins Charter." It was universally recognized that this was an incalculable improvement upon the existing Charter in point of form. Its language was simple and scientific, while

the existing act has been described by Mr. Gaynor, a thoroughly competent critic, as "the illiterate Charter." But it was unsatisfactory to the politicians. They were shocked by the suggestion of an unpaid board of aldermen, and frightened by the separation of the document into two parts. They suspected this divorce of substantive law ("The Charter") from procedure ("Administrative Code"), because they were unable to figure out its partisan effect; and the Republicans were not then prepared to give the local authorities the augmented power of amending administrative details contemplated by the "Code." Consequently, the only action taken by the legislature was to refer it to a committee of which Mr. Hammond, then chairman of the Assembly Cities Committee, was the head,

to draw a bill for the next session, embodying the literary excellences of the Ivins Charter, but without its startling changes, and restored to the familiar form of a single instrument.

In 1910 such a bill was introduced by Mr. Hammond, and known as the "Hammond Charter." It was generally but not enthusiastically approved. The City Club urged its passage; the Democrats thought it would be wise to accept from a Republican legislature so generous an instalment of home-rule; the Republicans were ready to adopt it. Toward the close of the session, however, and when the bill was on the point of becoming law, Mayor Gaynor wrote a letter begging that action be deferred till he could examine it. In compliance with this request, the bill was dropped, and in the autumn a Democratic Governor and legislature were elected.

During the first months of 1911, pending the long contest over a United States Senator, the Hammond Charter was revised to meet the requirements of the Democratic majority—as expressed by its leaders in Senate and Assembly; but the changes were not radical. While this revision was in progress, efforts were made to obtain the views of the Mayor. It was known that he had referred the Hammond draft of 1910 to the Corporation Counsel for criticism, and that a report had been made by that officer or a committee of his assistants. Counsel for the Hammond Committee implored the Mayor to let this report be seen; and it was at last delivered three days before the Hammond Committee was required to report its bill. And yet no word from the Mayor.

On March 31, however, this reticence was explained by the introduction of a bill "constituting the Charter of the City of New York," which had been drawn in the Corporation Counsel's office under the inspiration of the Mayor himself, although he denied having written any of it. This was the original "Gaynor Charter." In arrangement it was similar to the Hammond Bill of 1910. It was subjected to fierce criticism as to both matter and style. Nevertheless, it was about to be pressed for passage,—for it enormously increased the powers of boards and officers in control of the "organization,"—when Governor Dix announced that, unless a reasonable opportunity were given for examination of the bill, he would veto it—an act of justice and courage for which he has never received the commendation it deserved.

In consequence of this threat (it will be noted that the Mayor asked no delay this time), hearings were held in New York City; and it became apparent that the bill would have to be completely redrawn. Mr. Ray Smith of Syracuse, and a corps of aides in command of Assemblyman Foley (representing Mr. Murphy's home district), were employed on this work. Two drafts were prepared, one in July and the other in September, and in its final form the bill ("Cullen-Foley Bill") presented a model of admirable English. In substance it remained an "organization Charter"; that is to say, it was designed to transfer vast and important powers from the Board of Estimate and Apportionment, chiefly composed of members elected on an anti-Tammany ticket, and from anti-Tammany officers, such as the Comptroller, to the Mayor, the Sinking Fund Commission, the Corporation Counsel, etc., largely in control of the Mayor and the local Democratic organizations in Manhattan and Brooklyn.

It would be tedious to set forth the details of the Mayor's Bill; but, "lest we forget," it is indispensable to mention a few of the most serious and those that shed light on what the Mayor sought to gain for himself. And it must be remembered that the last form in which the bill was submitted to the legislature, where it was passed in the Assembly but defeated in the Senate, was prepared under the direct and constant supervision of members of the Corporation Counsel's staff and in daily conference with the Mayor himself.

1. According to the calculations of the Allied Real Estate Interests, the mandatory increases of salaries would have been \$8,570,000 a year; the salary roll of new places would have been \$394,000; and there would have been possible a further addition of \$816,500 to the city pay-roll. *Altogether, \$9,780,500 in salaries.*

2. The Comptroller would have lost a large part of the fiscal functions he was elected to perform, and which had been given to him as the result of long and costly experience, and they would have passed to the Corporation Counsel, an appointee of the Mayor.

3. The Borough Presidents would have been shorn of some of their most important functions; e. g., the Building Bureau would have been consolidated into a department and placed in control of the Mayor.

4. Much of the power of the Board of Estimate over contracts, especially *subway contracts*, would have been taken from that Board and vested in the Mayor.

5. New and vast powers over public improvements would have been lodged in an office to be known as City Engineer, to be appointed by the Mayor.

6. The power now for and many years given to the Governor to remove the Mayor or a Borough President would have been destroyed (as it was in the Tweed Charter).

7. The Commissioner of Accounts would have been stripped of the power to investigate, except on the order of the Mayor.

8. Every matter requiring the consent of the Board of Estimate under the Rapid Transit Act would have required the *separate consent of the Mayor, who would thus have obtained absolute control of rapid transit matters.*

9. In addition to the right the judges have to designate a newspaper in which summonses, citations, notices of sale, and all other legal notices should be published, the Mayor, who is not a judicial officer at all, would have been authorized to designate a law journal for such publication in the entire city, including five counties.

10. The Mayor would also have been able to specify a newspaper in which all notices of sale by auction anywhere in the city must be published.

11. The hospitals of the city would have passed into the control of a new Commissioner, to be appointed by the Mayor.

12. The educational system of the city would have been committed to the charge of a small body of paid commissioners, to be appointed by the Mayor.

13. The Department of Docks would have been split in two and a new Commissioner of Ferries been appointed by the Mayor.

14. Many of the powers over the finances of the city now controlled in the Board of Estimate would have been exer-

cised by the Sinking Fund Commission, a majority of which were Tammany men.

15. The provisions of the present Charter regarding contracts—the result of generations of experience—would have been enfeebled in the interests of contractors.

16. Many enactments regarding the discipline of the police would have been wiped out or hamstrung.

It will be seen that the most conspicuous effect of this bill would have been to enhance immensely the power, patronage, and importance of the Mayor; in respect to subway matters he would have been omnipotent.

In a less palpable but more insidious fashion, the influence over the city's finances and contracts, always exercised by the "organization," would have grown incalculably; and the multiplied salaries would inevitably have flowed chiefly into the pockets of its members.

Recalling these particulars, it will be understood why this bill was called the "Murphy-Gaynor Charter."

The elections in 1911 turned almost exclusively upon the Gaynor Charter; and the judgment of the people of the State was conclusive against it. The Assembly, the only legislative body elected that year, was heavily Republican. Yet in 1912 this amazing assault upon good government seemed to be completely forgotten.

Surely nothing can compare with the successive drafts of the Gaynor Charter as a test of the fitness of its chief designer to be continued in the chief city office. It may be contended that the Mayor dictated only the provisions that would have magnified the Mayor's office, and that concentration of power and responsibility in him is a defensible policy. It is a defensible policy, but not midway in the term for which the Mayor was elected; and discussion of that question must not turn aside from the consideration of the Mayor's assent to the purely "organization" features of the charter. *He was willing that Tammany should have its pound of flesh, if it would give him the subways and a few other fat things.*

And what shall be thought of the proposal that the Mayor should choose a law journal for the whole city (§1138)? The burden upon litigants for publishing legal notices is already severe. This plan would have doubled the burden. And for what? The principal purpose of publishing a summons or citation is to reach the eyes of persons not residing in the State. Could anything be conceived less likely to fulfil that purpose than a local professional paper? In 1911 it was suggested, in a pamphlet sent to the members of the legislature, that there was a law journal edited by a close friend and appointee of the Mayor which might benefit by this provision.

And, again, what of the section (§1129) giving the Mayor authority to select a newspaper for the advertising of all auction sales? Nobody could have sold his household furniture or undated securities without tribute to this paper. Nobody could have chosen the most suitable or least expensive medium, or a local sheet: *everybody must have advertised in the publication of the Mayor's friend.*

With the documents before them, should not the voters ask themselves, not what the Mayor has done surrounded by a Board of Estimate representing an anti-Tammany Fusion, but what he would do with a Tammany Board?

Banker-Management

Why It Has Failed: A Lesson from the New Haven

By LOUIS D. BRANDEIS

MR. BRANDEIS STANDS OUT AS THE ONE MAN IN THE UNITED STATES WHO PREDICTED TROUBLE FOR THE NEW HAVEN RAILROAD WHEN EVERY ONE ELSE THOUGHT IT HAD SMOOTH SAILING. IN THIS ARTICLE HE GIVES THE LESSONS TO BE DRAWN FROM RECENT EVENTS

THERE is not one moral, but many, to be drawn from the Decline of the New Haven and the Fall of Mellen. That history offers texts for many sermons. It illustrates the Evils of Monopoly, the Curse of Bigness, the Futility of Lying, and the Pitfalls of Law-Breaking. But perhaps the most impressive lesson that it should teach to investors is the failure of banker-management.

Banker Control

FOR years J. P. Morgan & Co. have been the financial agents of the New Haven. For years Mr. Morgan was the director of the Company. He gave to that property probably closer personal attention than to any other of his many interests. Stockholders' meetings are rarely interesting or important; and few indeed must have been the occasions when Mr. Morgan attended any stockholders' meeting of other companies in which he was a director. But it was his habit to be present at meetings of the New Haven. In 1907, when the policy of monopolistic expansion was first challenged, and again at the meeting in 1909 (after Massachusetts had unwisely accorded its sanction to the Boston & Maine merger), Mr. Morgan himself moved the large increases of stock which were unanimously voted. Of course, he attended the important directors' meetings. His will was law. President Mellen indicated this in his statement before Interstate Commerce Commissioner Prouty, while discussing the New York, Westchester & Boston—the railroad without a terminal in New York, which cost the New Haven \$1,500,000 a mile to acquire, and was then costing it, in operating deficits and interest charges, \$160,000 a month to run:

"I am in a very embarrassing position, Mr. Commissioner, regarding the New York, Westchester & Boston. I have never been enthusiastic or at all optimistic of its being a good investment for our company in the present, or in the immediate future; but people in whom I had greater confidence than I have in myself thought it was wise and desirable; I yielded my judgment; indeed, I don't know that it would have made much difference whether I yielded or not."

The Bankers' Responsibility

BANKERS are credited with being a conservative force in the community. The tradition lingers that they are prominently "safe and sane." And yet, the most grievous fault of this banker-managed railroad has been its financial recklessness—a fault that has already brought heavy losses to many thousands of small investors throughout New England for whom bankers are supposed to be natural guardians. In a community where its railroad stocks have for generations been deemed absolutely safe investments, the reduction of the New Haven dividend and the passing of the Boston & Maine dividend after an unbroken dividend record of seventy-two years comes as a disaster.

"No student of the railroad problem," said Commissioner Prouty, "can doubt that a most prolific source of financial disaster and complication to railroads in the past has been the desire and ability of railroad managers to engage in enterprises outside the legitimate operation of their railroads, especially by the acquisition of other railroads and their securities."

No railroad company has equaled the New Haven in the quantity and extravagance of its outside enterprises. But it must be remembered that neither the president of the New Haven nor any other railroad manager could engage in such transactions without the sanction of the Board of Directors. It is the directors, not Mr. Mellen, who should bear the responsibility for the transactions

LOUIS D. BRANDEIS

"The failure of the banker-management of the New Haven was not accidental. It was not exceptional. It was the natural result of confusing the functions of banker and business man."

of the New Haven that Commissioner Prouty describes.

Close scrutiny of these transactions discloses no justification. On the contrary, scrutiny serves only to make more clear the gravity of the errors committed. Not merely were recklessly extravagant acquisitions made in mad pursuit of monopoly, but the financial judgment, the financing itself, was conspicuously bad. To pay for property several times what it is worth, to engage in grossly unwise enterprises, are errors of which no conservative directors should be found guilty; for perhaps the most important function of directors is to test the conclusions and curb by calm counsel the excessive zeal of too ambitious managers. But while we have no right to expect from bankers exceptionally good judgment in ordinary business matters, we do have a right to expect from them prudence, reasonably good financing, and insistence upon straightforward accounting. And it is just the lack of these qualities in the New Haven management to which the severe criticism of the Interstate Commerce Commission is particularly directed.

Commissioner Prouty calls attention to the vast increase of capitalization. During the nine years beginning July 1, 1905, the capital of the New York, New Haven & Hartford Railroad Company itself increased from \$95,000,000 to about \$417,000,000 (excluding premiums). That fact alone should not condemn the management of reckless financing; but the fact that so little of the new capital was represented by stock might well raise a question as to its conservatism. For the indebtedness (including guarantees) was increased over twenty times (from about \$14,000,000 to \$300,000,000), while the stock outstanding in the hands of the public was not doubled (\$80,000,000 to \$158,000,000). Still, in these days of large things, even such growth of corporate liabilities might be consistent with "safe and sane management."

But what can be said in defense of the financial judgment of the banker-management under which these two railroads find themselves confronted, in the fateful year 1913, with a most disquieting floating indebtedness? On March 31 the New Haven had outstanding \$45,000,000 in short-term notes; the Boston & Maine had then outstanding \$24,500,000, which have been increased since to \$29,000,000; and additional notes have been issued by at least one of its subsidiary lines. Mainly to meet its share of these loans, the New Haven, which before its great expansion could sell 3½ per cent bonds convertible into stock at \$150 a share, is obliged now to issue \$27,500,000 of its 6 per cent 20-year bonds convertible into stock at par. True, money is "tight" now. But is it not very bad financing to be so unprepared for the "tight" money market which had been long expected? Indeed, the New Haven's management, particularly, ought to have avoided such an error; for it committed a similar one in the "tight" money market of 1907-1908, when it had to sell \$30,000,000 of its 6 per cent 20-year bonds at par.

These huge short-term borrowings of the System are not due to unexpected emergencies or to present monetary conditions. They are of gradual growth. On June 30, 1910, the two companies owed in short-term notes only \$10,180,364; by June 30, 1911, the amount had grown to \$39,759,939; by June 30, 1912, to \$45,385,000. And now it is over \$70,000,000. Of course the rate of interest on the loans

has also increased very largely. And these loans were incurred unnecessarily. They represent, in the main, not improvements on the New Haven or the Boston & Maine Railroad, but money borrowed either to pay for stocks in other companies which these companies could not afford to buy, or to pay dividends that had not been earned.

In five years out of the last six the New Haven Railroad has, on its own showing, paid dividends in excess of the year's earnings; and the annual deficits disclosed would have been much larger if proper charges for depreciation of equipment and steamships had been made. In each of the last three years, during which the New Haven has had absolute control of the Boston & Maine, the latter paid out in dividends so much in excess of earnings that before April, 1913, the surplus accumulated in earlier years had been converted into a deficit.

Surely these facts show, at least, an extraordinary lack of financial prudence.

Why Banker-Management Failed

NOW, how can the failure of the banker-management of the New Haven be explained?

No one has questioned either the ability or the integrity of the bankers. Commissioner Prouty attributed the mistakes made to the Company's pursuit of a transportation monopoly.

"The reason," says he, "is as apparent as the fact itself. The present management of that Company started out with the purpose of controlling the transportation facilities of New England. In the accomplishment of that purpose it sought what must be had and paid what must be paid. To this purpose and its attempted execution can be traced every one of these financial misfortunes and derelictions."

But it still remains to find the cause of the bad judgment exercised by the eminent banker-management in entering upon and in carrying out the policy of monopoly. For there were as grave errors in the execution of the policy of monopoly as in its adoption. Indeed, it was the aggregation of important errors of detail which compelled the reduction or passing of dividends and which ultimately impaired the Company's credit.

The failure of the banker-management of the New Haven cannot be explained as the shortcomings of individuals. The failure was not accidental. It was not exceptional. It was the natural result of confusing the functions of banker and business man.

Undivided Loyalty

THE banker should be detached from the business for which he performs the banking service. This detachment is desirable, in the first place, in order to avoid conflict of interest. The relation of banker-directors to corporations which they finance has been a subject of just criticism. Their conflicting interests necessarily prevent single-minded devotion to the corporation. When a banker-director of a railroad decides as railroad man that it shall issue securities, and then sells them to himself as banker, fixing the price at which they are to be taken, there is necessarily grave danger that the interests of the railroad may suffer—suffer both through issuing of securities which ought not to be issued, and from selling them at a price less favorable to the Company than should have been obtained. For it is ordinarily impossible for a banker-director to judge impartially between the corporation and himself. Even if he succeeded in being impartial, the relation would not conduce to the best

interests of the Company. The best bargains are made when buyer and seller are represented by different persons.

Detachment an Essential

BUT the objection to banker-management does not rest wholly, or perhaps mainly, upon the importance of avoiding divided loyalty. A complete detachment of the banker from the corporation is necessary in order to secure for the railroad the benefit of the clearest financial judgment; for the banker's judgment will be necessarily clouded by participation in the management or by ultimate responsibility for the policy actually pursued. It is outside financial advice which the railroad needs.

Long ago it was recognized that "a man who is his own lawyer has a fool for a client." The essential reason for this is that soundness of judgment is easily obscured by self-interest. Similarly, it is not the proper function of the banker to construct, purchase, or operate railroads, or to engage in industrial enterprises. The proper function of the banker is to give to or to withhold credit from other concerns; to purchase or to refuse to purchase securities from other concerns; and to sell securities to other customers. The proper exercise of this function demands that the banker should be wholly detached from the concern whose credit or securities are under consideration. His decision to grant or to withhold credit, to purchase or not to purchase securities, involves passing judgment on the efficiency of the management or the soundness of the enterprise; and he ought not to occupy a position where in so doing he is passing judgment on himself. Of course detachment does not imply lack of knowledge. The banker should act only with full knowledge, just as a lawyer should act only with full knowledge. The banker who undertakes to make loans to or purchase securities from a railroad for sale to his other customers ought to have as full knowledge of its affairs as does its legal adviser. But the banker should not be, in any sense, his own client. He should not, in the capacity of banker, pass judgment upon the wisdom of his own plans or acts as railroad man.

Such a detached attitude on the part of the banker is demanded also in the interest of his other customers—the purchasers of corporate securities. The investment banker stands toward a large part of his customers in a position of trust, which should be fully recognized. The small investors, particularly the women who are holding an ever-increasing proportion of our corporate securities, commonly buy on the recommendation of their bankers. The small investors do not, and in most cases can not, ascertain for themselves the facts on which to base a proper judgment as to the soundness of securities offered. And even if these investors were furnished with the facts, they lack the business experience essential to forming a proper judgment. Such investors need and are entitled to have the bankers' advice, and obviously their unbiased advice; and the advice can not be unbiased where the banker, as part of the corporation's management, has participated in the creation of the securities which are the subject of sale to the investor.

It is conceivable that the great house of Morgan would have aided in providing the New Haven with the hundreds of millions so unwisely expended, if its judgment had not been clouded by participation in the New Haven's management.

OF THIS CLUB"

Back of Third Base

By GERALD MORGAN

Illustrations by James Preston

She used to come and sit in the grand stand of the ball park, on the left field side, a few rows behind the field boxes. She was young and pretty, and she dressed very quietly indeed. But she was evidently a fan, for she followed the game and always applauded the good plays of the home team.

Abie Mendel was the first person to notice her there. Abie was a pimply-faced youth, one of the "peanut boys," and now and then she bought chocolate from him. She always said "Good afternoon," and once she gave him half a dollar and told him to keep the change. That half-dollar was bread upon the waters. Abie told the other peanut boys that she was a "swell dame."

The second person to notice her was Louie Kelly. Louie Kelly did not come boastfully by his name; he had come honestly by nothing that he had ever had in all his life. He was a small, dark, thick-set young man who, with two or three infelicitous, used also to sit on the left field side, where the sun warmed their thin blood. Louie came of a family from southeastern Europe that had been raided for several centuries, often successfully, by gentlemen of Cosack extraction. But in the land of the free he did the raiding himself.

He enjoyed horses, women, power, and

war. He enjoyed horses much more than baseball; but, as there was no racing just then, and as he had a season ticket in part payment of political services rendered, and nothing to do in the afternoons (his profession made no demands of him till after dark), he went to ball games. He enjoyed power over about two hundred of his dependents who voted as he desired. He enjoyed women, both as a profession and as an avocation. As for war, he had been known to shoot a policeman in the stomach even when stymied by a lamp-post, and make a clean getaway afterward.

But Louie had his limitations. He saw a plainly dressed girl, alone and unprotected, but he did not see the difference between the simplicity that costs four hundred dollars and that which costs four dollars.

He bought two bags of peanuts from Abie Mendel, and went down and sat beside her. He offered her one of the bags, and told her that she was a grand little piece of goods. She did not answer him, but he went right on talking.

Abie Mendel saw at once what was going on, and remembered the half-dollar. He scuttled back around the rear of the grand stand, and reappeared on the first-base side. He approached a man sitting at the end of one of the aisles, leaned down, and whispered:

"Say, Mr. O'Brien, Louie Kelly's chasing a decent skirt back of base."

Mr. O'Brien was a stout, moon-faced man, who looked as unlike the plain-clothes detective detailed to the ball park as any one could. He looked up in the direction of third base as if the actual pursuit described by Abie Mendel might be going on there—a pursuit that would undoubtedly have drawn the attention of the spectators from the game.

"All right, Abie," he said.

He went up the aisle, circled the stand, and paused for a moment to spot Louie Kelly. As soon as he had done that, he walked right up to him and tapped him on the shoulder.

"You're wanted at the telephone, Louie," he said. Then he slipped into the vacant seat.

"Thank you," said the girl. "Mr.——?"

"O'Brien," replied the rescuer stiffly. "I'm a policeman. You come up to the games alone?"

"As often as I can," answered the lady, smiling sweetly.

"And there's no blame reason why you shouldn't," he said shortly. "I'll keep an eye on you myself."

"Thank you again, Mr. O'Brien," returned the lady. "I'm Miss Smith. My father's in Wall Street, and I'm working his company. These long evenings afternoons, I always come to ball games when I can."

Meanwhile, nine or ten rows back of them sat Louie Kelly, in a snarl's black rage. "Oh, to hell with you! Scarecrow!" he spit out at one of his gang. "It's not him; it's Peanut. Peanut'll pay for this, and as for the skirt——"

Running true to form, Louie Kelly loved the devil within him fully upon the girl—upon any girl.

"I'd beat her up till she was about cracked," he said explicitly.

"That's the boy," said Mr. O'Brien, continuing the delightful conversation down below—"that's the boy for my money, pitching now. He's certainly going some for his first season. He's the kind that's good when he has to be good. He keeps his nerve right with him."

"Gordon, you mean," said the girl.

"That's right. He's from the colleges. Only looks into the big leagues this year. Watch him."

Cliff Gordon was a big, fair young man, very businesslike, very deliberate in his movements. There were two out, a man on second, and two strikes and two balls against the batter. Gordon was watching him, his hands at his sides, with that grave look so typical of the modern American athlete. Then he wound up, pitched, and the batter struck out on a wide, high ball.

"Outgassed him again!" exclaimed the enthusiastic O'Brien. "He's certainly a good one!"

It was a hard game. Gordon was clearly outpitching the visiting pitcher, but the batting of the home team went for next to nothing. Hit after hit was scooped up by the visiting infield, back of third, over second, liner after liner settled in their hands. The visitors came up for their half of the ninth, with the score only one to nothing against them, where it should have been four or five.

Then followed one of those sudden changes which make baseball the game it is. A bit, a low throw, a ball that just grazed a batsman's uniform, filled the bases, with none out. Not a sound could be heard but the yells of the visiting coaches. Then—a pop fly to the infield—a little grounder which forced a man at the plate—a foul—another—a wide swing, three strikes and out.

"He's certainly good in the pinches," said Mr. O'Brien, with repressed emotion.

He turned to the lady, and a sudden thought crossed his romantic mind.

"Do you know Cliff Gordon?" he asked, as they were going out.

"I wish I did," replied the lady simply.

After that day, Mr. O'Brien moved his seat from the first base side, which he had always much preferred, to Miss Smith's choice place back of third. She did not come to all the games, but it gradually occurred to Mr. O'Brien that she never missed one when Cliff Gordon pitched.

And so, one evening about nine o'clock, moved by an odd emotion, he went down to the café and pool parlor next to the Arlington Club, where Tim Mullane, the manager of the home team, used to have a glass of beer and a club sandwich before going to bed.

"Hello, Tim," said Mr. O'Brien. "How's that young Gordon of yours coming on?"

Mullane looked up. "Why, hello, Bill," he said. "Have a drink! Gordon's coming on all right. He don't watch the bases like he ought to, but he's certainly good in the pinches."

"Say, Tim," said the detective, sitting down, "has he got a girl?"

"How do I know? Why?"

"There's a girl in the stands—" began O'Brien.

"Show Gordon!" interrupted the manager. "I don't want nothing like that at the

"Abie told the other peanut boys that she was a swell dame!"

"The visitors came up for their half of the ninth, with the score only one to nothing against them"

ball grounds. Say, if Mike Tuthill or Pete McGowan—with their faces like the outfield before it was mowed—ever catch the kid at that game, they'll guy just about fifty per cent off his effectiveness."

"Show girl nothing!" exclaimed O'Brien. "Nice girl. Thinks a lot of him. I'd like to have him meet her."

"Well, say," drawled the astonished manager, pulling back his chair, "if you're not a fine old matchmaking Irish landress! Now, just suppose you leave my players alone. You're there to keep crooks and pickpockets out o' the stands, not to run a matrimonial agency. See?"

And Mr. O'Brien, red in the face, withdrew. He had to give it up.

The next day Cliff Gordon pitched. Mr. O'Brien and Miss Smith had scarcely time to relax, when something happened. The first visiting batter took first on an error. Gordon delayed the game, as he always did on such an occasion. Burke—called Lizzie, sometimes (but never without reprisals), on account of his high voice—was umpiring. He told Gordon to hurry up.

Burke called the first one a ball on the second batter, and the two hundred volunteer umpires who sit behind the catcher yelled in derision. He called the second one a ball, too, just because he was getting angry. Then Cliff Gordon turned and said: "Lizzie, your eye's off to-day."

"All the way," replied Umpire Burke. "All the way" meant all the way off the field, without pausing at the bench, and the spectators saw no more of Cliff Gordon that afternoon.

But for the matchmaker it saved the situation. "Three days' suspension under the rules," he said to himself joyfully, as he came into the stands the next day and made sure that Miss Smith was already in her seat. "Cliff Gordon won't be in uniform to-day." And, sure enough, the young pitcher, dressed in his street

clothes, was there in the stand, as close to the home team's bench as he could get.

"Say, Mr. Gordon," said the detective bluntly, "I'm O'Brien from the Central Office. There's a young lady here I'd like to have you meet."

And Gordon got up, not sure whether or not he was going to be arrested. O'Brien led him over to the left field side.

"Miss Smith," he said, "this is Mr. Gordon."

Miss Smith looked up, astonished. Then consternation gave way to amusement.

"Happy to meet you," she said, "but sorry you're not playing. Mr. Gordon. They need you."

Inwardly she thought: "Well, I never! Who'd have thought that old policeman took me seriously? You do see life at the ball park. And, after all, he is awfully nice-looking."

"Mr. O'Brien," she asked, aloud—but O'Brien, the tactful, had withdrawn and was looking upon his work from afar with the emotions of a successful general. So, also, were looking, but with different emotions, a small knot of men high up in the left corner, perched like a horrid swarm of bats—Louie Kelly and his friends.

"Yes, I was suspended," continued Mr. Gordon, in whom the virus was already working as well as O'Brien could have desired. "Just for saying 'Lizzie' to hisumps. Is that fair?"

"No," replied the girl, smiling; "it isn't."

And so they talked, and, while they talked, he thought she was the prettiest girl he had ever met, and she thought that professional ball-players were very nice young men and not the tough brutes they were said to be. And O'Brien resumed his seat back of first, his duty done for the day, resigning all the obligations of a chaperon. And all this was not lost on Louie Kelly.

He was jealous. Jealousy was, as he

would have said himself, his one best bet. Another man was doing what he had tried to do. Abie Mendel had a broken head—no much for justice; now let justice complete her course. To the two men with him he said:

"Be at Cohen's place in Seventy-ninth Street at five-thirty. It's dark at six. I'll be driving the taxi with the skirt inside. The job is to get her out without a holler. See? And fix Cohen."

He ducked out of the grounds quickly. No one noticed him. He crossed Eighth Avenue, and made his way to the vacant lots where the motors and taxis had been parked. It was a long chance, to be sure; but to the drivers of many a New York taxi Louie Kelly was no stranger. He approached one of the chauffeurs.

"You're Sam Stengel, ain't you?" he said. "I know you. Did you drive that skirt from Seventy-ninth Street?"

The man nodded.

"Now, see here, Sam," Kelly went on quietly. "I'm going to drive her back. See? You can have the machine at Times Square, or anywhere you say, at seven. Never mind what I'm doing. You're took sick, and you're going home on the elevated, like a good feller. Now beat it and go somewhere where you'll be seen. See?"

Off went Stengel, with the hope of reward and the fear of punishment working the same way with him—he knew Louie Kelly—and the latter got inside the taxi.

The crowd was coming out. He got there was, with the young man. If he got in, the game was all off.

He did not get in; he opened the door. "But this isn't my driver," she said. "No, ma'am," Kelly answered. "He was took sick. I've took his place."

Gordon shut the door. Kelly turned and saw that. He took a good look at Gordon, then he started. A street-car ahead, two great passenger motor-trucks,

one on his left, one behind, both cursing, absorbed his attention. He neither saw nor heard Gordon reopen the door and get in beside the girl.

"May I go down with you, Miss Smith?" he said. "I don't just like that driver's looks."

"What nonsense!—so far out of your way," she replied.

"Just the same, I guess I will," he said.

Once out on the asphalt, Kelly breathed again. The address he had was on Seventy-ninth Street, near the Park. Straight down to 110th Street, then across to Fifth Avenue, then, say, to Ninetieth Street, turn east to Lexington,—if she asked him, he would say the streets were turn up,—and at Seventy-ninth Street a quick turn east, across Third Avenue, to Cohen's. He went slowly, to let the September darkness increase.

Inside, they were talking. She noticed the east turn at Ninetieth Street, but did not bother. The turn south at Lexington Avenue completely reassured her. They were under the Third Avenue elevated structure at Seventy-ninth Street before she noticed.

"Why, we're going wrong," she said.

Half-way down the block still farther east, Louie Kelly brought his car up to the sidewalk. Now was the time for action. He jumped out. The girl had opened the door. She was just ready to put her foot on the step. Over her mouth Kelly slapped a great hand, jammed her back in the taxi, and whistled.

Louie Kelly's first knowledge of Gordon's presence was a straight right-hander on the jaw. He was knocked back clear across the pavement, and fell sprawling against the railing of Cohen's yard just as two gangsters ran out.

Gordon, not stopping even to look, opened the door of the taxi on the street side, and ran round the back. The two gangsters had lost their presence of mind. They made for the rear door of the taxi, and they did not see Gordon. He took his time, and hit them where he meant to, before they had a chance even to raise their fists. They dropped, both of them, like ninepins.

But Louie Kelly himself was a quicker man. He drew his knife, jumped from the railings, and slipped past the open taxi door with his arm raised. It was a question of a moment only, and the girl's arm, suddenly outstretched from the taxi, stayed his. Then Gordon hit him a second time. An instant later he and the girl were left alone on the street.

"Let's get out of here, quick," he said to the girl. "Let the taxi take care of itself."

He took her arm, and, before the crowd had time to gather, they hurried west across Third Avenue. He felt the pressure of her hand.

"I say," she said quietly, "you really are good in the pinches, aren't you?"

He did not answer.

Across Lexington, Park, and Madison Avenues they went.

"Here's where I live," she said.

He looked at the house, and the hope that had just dawned in him began to sink. For it was not so much a house as a mansion. So far as he was concerned it might as well have been Buckingham Palace—with the portcullis down.

"Miss Smith—" he began.

"And my name's not really Smith," she said.

"Miss Smith," he went straight on, "I'm a professional ball-player. I might as well be a butcher."

"Come in," she said, "and tell my father about it all." She paused. "Not that I have anything against butchers," she added, "but I do think baseball is just the nicest profession in the world."

"You do?" he said.

A MONTH later, as Detective O'Brien was crossing the field on the way to his selected sack back of first base, the manager, Tim Mullane, stopped him.

"Going to look after the presents, Tom?" he asked.

O'Brien laughed.

"No; but I'm going to the wedding," he said.

"He'll never pitch another game of ball," the manager went on. "Don't tell me! And suppose, after this, you leave my ball-players alone! But I say, Tom,"—and his voice, rich with an unaccustomed brogue, rose as high as ever did Umpire Burke's,— "they're a fine pair! Cliff injured me yistahle. He was always the good wan in the pinches."

An Open Letter to Woodrow

Refusing an Unexpressed Invitation to Collaborate on the Currency Bill

By EDMUND VANCE COOKE

DEAR SIR:

Your letter, still unmailed,
Requesting my collaboration
Upon the Currency Bill has failed
To reach its proper destination.
However, when you DO inquire,
I can not do as you desire.

I do not lightly spurn your need;
I have no desire to be embarrassing;
I'd gladly aid you, yes, indeed;
I know the enemy is harassing.
But here's the fact (please do not doubt it):
I don't know one blanked thing about it.

'Tis true, like you, for many a year
I've sweated over it and studied,
'Till it all became as clear
As the Missouri River—muddied;
As the Currency still wears its hobble
And every "standard" made still wobbles.

I've droned the dullness of the schools
Through paraphrased verbosity;
I've counted the wisdom of the feds
Through catechetical aporismy,
I've chewed them, verbal and statistical,
Down to the common taste of medical.

Still Doctor Thus and Senator So
Will take some monetary hour and split it,
But when they're told you all they know
The difference is that I admit it,
They're just as far from Fiscal Science
As Farmer Jones and his Alliance.

So just one thing (or else you're lost)
I warn you, on this point be plastic!
At any pains, at any cost,
The Currency MUST be elastic.
Yes, yes, elastic it must be
To stretch from where it stays—to me!

A NEW YORK SUMMER SHOW

The Morgan cartoon for next week will be "The Rita"

MARGARET ANGLIN

Starting from the Californian coast, she will travel eastward, giving productions of the tragedies of Sophocles, Euripides, and Shakespeare

The Drama Outlook

The Most Interesting Possibilities of the Season

AS New York is still the principal producing center of the United States, what happens there is of interest all over the country. What succeeds in New York in 1912-13 is seen in San Francisco and Mobile in 1913-14.

Will the coming season be as interesting as the last? Since competition has existed in the American theater by the breaking away of the Shuberts from the syndicate monopoly the number of good plays has noticeably increased. The record of the past season added a number of dramas that appealed to the intelligence through their substance or their form. The new plays made a better showing than the classics, but yet English literature was at least as well represented as usual. William Faversham's "Julius Caesar" had an encouraging success, and he is to follow it with more Shakespeare this season. Annie Russell's "Much Ado About Nothing" was one of the most satisfactory productions of Shakespeare given in a long time, and her revivals of Sheridan and Goldsmith also cast credit on her, and gave the young people an opportunity to see that the stage can give pleasure even when it has some relation to masterpieces. John Kellard's long run in "Hamlet" was an interesting feature of the season. Boys and girls found old friends attractively presented in "Little Women" and "Snow White." The Gilbert and Sullivan revivals meant much to lovers of the best qualities in comic opera.

Possibly, among the new dramas, "Fanny's First Play," with Shaw at his pleasantest, aroused the strong interest among those who do not get a grain in the head when they use their brains. "Rutherford and Son" marked the entrance of a new playwright of distinction, and

it was acted extraordinarily well. Mr. Ames' idea of having a small theater devoted to experiments has helped our stage. It is to be hoped that his \$10,000 prize will bring him many good plays. It ought to, for a renaissance of the drama has struck the United States, and dozens of thinking men and women with literary gifts write plays, to every one who did ten years ago. The experiment of having the Princess Theater devoted to one-act plays started out well under the decidedly able management of Mr. Holbrook Blinn.

The new Stage Society of New York furnished in Maysfield's "The Tragedy of Nan" one of the big plays of the time. Pinero was represented by a new comedy as well as by the revival of "The Amazons"; Knoblauch and Bennett put forth in "Milestones" one of the most interesting leading facts in ordinary human history; "The Yellow Jacket" gave charm to a caricature of Chinese ideas, sentiments, and conditions; fresh treatment of more or less new themes gave life to "Hindle Wakes" and "The New Sin"; contemporary interest and dramatic suspense made "Within the Law" enormously popular; Edward Sheldon's well-made play for Mrs. Fiske illustrated the tendency of our reviving drama to reflect on what is really moral as contrasted with the rubber-stamp morality which is subsiding, and his "Romance" presented one remarkable acting part and various effective stage qualities. "Damaged Goods" showed we are ceasing to be idiotic pruders. "Years of Discretion" presented a character study of the era, which is the business of comedy. There were many others wholly worth producing. Take it altogether, the season was a rich one, and there is no reason

that the coming season is to equal the last in the most popular of the arts, which is at the same time the loftiest among the literary forms. If 1913-14 does as well as 1912-13, we shall be satisfied. Here are some of the possibilities.

Margaret Anglin's season promises to be perhaps the noblest feature of the theatrical year. It will offer to at least a certain number of people a chance to see what the greatest tragedy means when it is intelligently presented. She opens her season at the University of California in the Greek Theater on September 6, playing a two weeks' engagement at the special request of the Dean and Chancellor of the University. Her regular season starts in San Francisco on September 22. In her repertory will be four Shakespearean plays—"As You Like It," "Twelfth Night," "The Taming of the Shrew," and "Anthony and Cleopatra." At the University of California her only play will be the "Elektra" of Sophocles, which she will also include on her Coast tour, which begins immediately after the San Francisco engagement. She will then start East, playing through Calgary, Winnipeg, Toronto, and Montreal, and in the larger Western cities. She opens in Boston on February 1, and about March 1 in New York. During the spring she plans to give special productions of the "Medea" of Euripides and the "Antigone" of Sophocles.

The outlook for Shakespeare is unusually good. Mr. Faversham, supported by Cecil de Mille, will give "Romeo and Juliet," "Othello," and possibly "Hamlet." Forbes-Robertson and Gertrude Elliott are coming over in repertory, which will include "Hamlet" as well as an interesting selection of modern plays.

Thoughts About the Theater

John Drew is to give "Much Ado About Nothing," and if one were going to select a character from Shakespeare for Mr. Drew, it could be Benedick. Robert Mantell will play King John. Mr. Frohman has the weakness of announcing a good many things that he does not produce. Nevertheless, we are probably safe in saying that Maude Adams will appear in two plays by Mr. Barrie which throw side-lights on Shakespeare. One is called "The Ladies' Shakespeare, Being One Woman's Version of Notorious Work." This is really "The Taming of the Shrew," with a very few sentences inserted to show that Catherine was really not a shrew at all. The other is called "Roadside," and is an extremely charming one-act play in which the comfortable and impersonal interests of a wise middle age are delightfully contrasted with the qualities of youth.

The average of interest in the new plays ought to be high. "Fanny's First Play" will be followed by another drama by Bernard Shaw, and the best we can wish for it is that it may be as genuine comedy as its predecessor. A new play by Galsworthy is promised at the Little Theater, and if it equals "The Pigeon" it will make a deep impression. Mr. Ames will also produce "Fruella, or Love in a Garden," by Granville Barker and Lawrence Housman, a comedy in which considerable charm is mixed with a conglomeration of mystical ideas not at all easy to follow. The same intelligent manager will give us Arnold Bennett's comedy "The Great Adventure," with Janet Beecher in the leading woman's rôle, and also a drama called "The Clash," by a new British author, Cyril Westworth Hogg.

Among the American plays, three ought to be a number with genuine quality. Mr. Ames' \$10,000 play contest is just closing. Let us hope he turns up two or three geniuses. Augustus Thomas will be represented by "Jadian Summer," a new play with John Mason in the leading rôle. If Eleanor Gates does as well in her forthcoming play as she did in "The Poor Little Rich Girl" she will contribute much that is best to the season. A similar remark might be made about the new dramatic comedy by Rachel Crothers, who seldom puts out anything without lending to it something of genuine art in form and also something of genuine comment on human life.

It happens that two famous American pieces of literature figure in the season's production: "The Raven," by George C. Hartson, tells the life of Edgar Allan Poe, and Longfellow's "Evangeline" has been turned into a play by Thomas Broadhurst.

All this is full of interest and promise, and yet it is wholly possible that the one or two or three things which will stand out as the real contributions of the season of 1913-14 may be entirely unforeseen; for one of the most satisfactory features of the drama as it exists to-day in America is the sudden cropping up of plays like "Kindling" and "The Poor Little Rich Girl," or the occasional importation of a play like "Rutherford and Son"—plays by unknown authors with a powerful grasp on life as it exists to-day and sufficient technique to combine that grasp into genuinely significant drama. N. H.

[Next week's issue will contain an article by Mrs. Fiske, comparing actual stage life with stage life as it is represented in record plays.]

ONCE in a while a genuine tragedy is written in our day, such as Stephen Phillips' "Paolo and Francesca," for instance; but that species of art does not seem at all likely to gain the foothold that it has had in some of the greatest periods of the drama. Speculations about the cause are many. Some have put it on the newspapers, especially on the yellow press, some on democracy and the control of the intellectual life by the majority, some on the lack of training in education. De Quincey, in his essay on the Caesars, says:

"Why had tragedy as existence as a part of the Roman theater? Because, and that was a reason which would have sufficed to stifle all the genius of Greece and England, there was too much tragedy in the shape of gross reality almost daily before their eyes. The amphitheater extinguished the theater."

We have considerable hope that, although tragedy will never be a dominating form again, it will at least revive enough to hold its own with other forms, for it is certainly the highest of them all, and the one in which the profoundest qualities of the human soul are expressed.

Looking Straight

HERODOTUS was the first great muckraker. He not only told about the faults of his countrymen, but took away the credit of some of their most famous victories by explaining that their opponents were not well armed. The Greeks lied, but they did not fear the truth. Their genius was founded on their directness of vision.

This summer has seen the suppression of a play by Hauptmann because it showed appreciation of Napoleon, and the German enthusiasm for him at the height of his power.

Professors are turned out of colleges because their doctrines are looked upon as socialistic. Anti-imperialists were scorned in this country in the Spanish war, and in England in the Boer war. What a contrast to a civilization in which the greatest comic writer the world has known, in the middle of a desperate war for existence, put on the stage plays in which he laughed at the public, at one of the most eminent generals, and at the chief statesmen. We should have a better chance of becoming a great as well as a big nation if we had less fear of the truth, whether in the theater, where we hark against "Damaged Goods," Ibsen's "Any Night," and "Mrs. Wacres' Profession," or in government, where we suppress the truth at Lawrence and Paterson instead of letting the matter be debated out fully in the open.

The Greek, at the great period, was not only willing to have every side presented, but nothing delighted him more than to discuss serious problems from early morn until he went to bed. He was willing, in the words of Keats:

"To hear all sides of truth
And to enlarge circumstances, all sides."

And his playwrights reflected that intellectual calm and love of truth.

Summer Shows

MRS. AUSTIN, in "A Woman of Genius," speaks of "that execrable sort of entertainment which comes up in any community like a weed when the women are out of town." They are out of town now, and that sort of entertainment does not grow nobler year by year.

Sex Morals

THE success of "Damaged Goods" and the amount of educational benefit brought about by its production has encouraged those who manage the sociological fund of the *Medical Review of Reviews* to arrange for the production of an adaptation of François Coppée's play "The Guilty Man." The play will be produced next fall for one performance, and we hope it will be successful enough to lead to its being seen by the general public.

Actors and Character

IN "Why Women Are So" Mrs. Corlidge says:

"The great preacher and the brilliant orator are effeminate, producing their effects far more by the hypnotism of high emotion than by the ideas that they express. Like actors, they, too, are subject to extreme reaction after the culmination of any emotional effort in which they are often as irresponsible as children. It is particularly suggestive that, of all the types of men denominated 'effeminate,' the actor most nearly resembles the type of woman set up as the ideal in the past century. He, like the woman, makes his place in life chiefly by the cultivation of manner and appearance. He, like her, depends for success upon pleasing rather than being admirable. The 'matinée idol' is an extreme example of character—or, rather, perversion of character—by the social necessity of being charming and of trading in assumed emotions."

In the same book it is pointed out that it is one of the ironies of social development that, while ascetic religion has been a most powerful hindrance to women, the stage has become one of the strongest influences to elevate our ideals of pure beauty. "At the beginning of the nineteenth century the drama was generally regarded in America as an evil influence, and an actress as a foredoomed prostitute. But in the last hundred years the stage has drawn to itself the highest productions of literature and scenic art, and the acting profession has produced some of the noblest human beings of our time."

"In addition to the correction and cultivation of taste, the stage has had an incalculable influence upon the standards of health among women. The actress, the dancer, and the prima donna must have, before all talent, strength to endure the training and the hardships of her profession. However sensual and violent her temper may be, to win success she must deny her appetites and work—work incredibly hard. With the never-ending curiosity of the general public regarding the lives of stage people, these facts have become known, and in their dissemination educated every stage-struck girl as well as many feeble amateurs."

"DOWN AT THE CORNER"

The Sloan cartoon for next week will be "The Girl at the Window"

Current Athletics

By HERBERT REED ("RIGHT WING")

WHEN international clashes in sport make for sane criticism and a keener understanding of what the other fellow is doing, they are worth while; and, measured by that standard, this year should be memorable. It is many a long day since there has been an opportunity to see the nations so frequently arrayed in peaceful harness on field and stream. The United States has successfully defended two cups and regained another, which is triumph enough, in all conscience; but the mere fact that our foemen from overseas have been mastered is of little moment in the face of the reasons therefor.

England's polo team was beaten as much by the American spirit as by anything else; her cold, experienced tennis team was vanquished largely because of the typical American pace; and the canoe cup was retained because of the superiority of American boat-building, even when that boat-building was almost down to miniature. Surely an enviable record.

This is the sort of competition that lends to mutual valuation, and there have been lessons for every nation in each one of the international competitions. Our tennis men have learned that sheer brilliance may never again carry them so far; our polo players have learned that the game in this country is in need of reinforcement from the ranks; and our victorious canoeist has learned that the time may come when more than perfect lines in the tiniest of sailing craft may settle the issue.

Our competitors, on the other hand, have learned that in tennis pace, all other things being equal, or even nearly equal, will fetch a Davis Cup; that in polo horsemanship is only half the game; and that in canoeing there may be nearly as much in the boat as there is in the man.

Frequency of international competition leads to tolerant consideration of methods to which one has not been accustomed from the cradle, and to a closer and fairer analysis.

In England manner as well as method counts for a great deal, which explains in some measure the *entente cordiale* between Maurice E. McLoughlin and the British critics, and although an American tennis-player is no longer "roasted" for appearing on the court in black shoes, there is no blinking the fact that the sportsmanship of the American team at Wimbledon, quite as much as its play, has marked a step forward in international competition.

The thoroughly satisfying feature of the work of the Americans has been its tendency to develop the "winning punch" under pressure, notably when B. Norris Williams handled his racket like a veteran after one match had gone against America, and when McLoughlin, perhaps over-tired from two much play at Wimbledon, nevertheless clinched the cup victory with a triumph over a man nearly twice his age, and rich in tournament experience. I like to feel, however, that the acid test came when McLoughlin disposed of Barrett in the British championships, and when Williams mastered such a veteran of the courts as Dixon. I like to feel that these matches were rather a test of American tennis than of American boys.

It was necessary to learn whether the American style of game was sound, and neither the various tournaments that are held in this country nor the preliminary tie with the Australasians—who are temperamentally much like ourselves—sufficed. It was necessary to pit the American game against men who had the habit of winning. A Davis Cup victory in such circumstances leaves no regrets.

At this distance it would appear that we still have something left to learn from the Englishmen in the matter of ground strokes, while "overhead" we are practically unbeatable. It must not be forgotten, however, that the overhead game is the "forcing" game—the type of play that, while making the greatest demand on the player, at the same time makes the greatest demand on his opponent. It is well understood in warfare that the commander dearly loves the attack, and apparently the first light of tennis-players has applied this principle.

It seems unfortunate that the criticism directed against Harold H. Hackett on the other side was so savage, but it must be remembered that a merely steady, sound player, no matter what his value to the team, had little chance for acclaim. Hackett, to my way of thinking, is no less to be honored than the brilliant young men who bore the brunt of the battle, for his was the hardest task, and in the face of it he maintained his poise, played the best game of which he was capable, and even improved in the famous doubles match after a mediocre start.

The real sensation of the college rowing season was the fine work of the two Western crews, Washington and Wisconsin. Both crews were made up of as fine material as any coach could wish for, and indeed the Washington eight was a superb combination physically. The further these men rowed the better they rowed; and when it is considered that they had had an experience in such fast company their showing was remarkable. The Western universities are certainly enterprising. Their baseball invasion of Japan is a fair sample of their energy, and it is to be hoped that in the near future more of these Western teams may be seen in action in the East.

John Paul Jones, probably the fastest mile-runner who ever lived, has put away his spiked shoes and given up competitive athletics. He had inducements, legitimate and otherwise, not to do so. But John Paul Jones is an unusual sort of chap. He cares less, perhaps, for success in athletics than any man who ever kicked cinders. It is barely possible that Jones has gone to the other extreme in athletics. When a man whose record is such that he can not be suspected of any wrong, and who is conceded to have the world's record "in his pocket," abandons the game, it seems a pity. Jones has never been able to run a fast first half mile, for one reason or another. I am inclined to believe that he would do better work against the watch could he be induced to come out again.

Small boat sailing received a new impetus with the challenge and unsuccessful competition recently of Ralph B. Britton of the Gannaco Canoe and

Motor-Boat Club. The Canadian, sailing in a craft that was fifteen years old, and of the flat-bottomed variety, nevertheless proved one of the finest sportsmen that ever visited these waters. While he was doomed to defeat from the start, he called the attention of the committee to a foul he had committed at the first mark in the first round of the first race, and so forfeited any chance of victory. He said frankly, on his first appearance in these waters, that he had come down with little hope of victory, but with the expectation of stirring up interest in one of the best and most neglected of sports.

It is extremely doubtful if Yale oarsmen will continue to pin their faith to English methods. Their experience at New London was most discouraging. When the English coaches took hold of the crew it was not as far advanced as it should have been, and neither the Yale eight nor the Yale coaches learned as much from their English visitors as they had hoped to learn. When Yale allowed John Kennedy to go, it was understood that the coaching would be in the hands of graduates. The only graduate who seems to have kept up anything like a steady connection with Yale rowing is James O. Rodgers, who is undoubtedly a capable coach.

It has been the habit of many oarsmen, especially Englishmen, to maintain that a professional sculler can not teach sweep rowing as well as an amateur. Charles E. Courtney, James C. Rice, and several others have exploded this theory by turning out better crews than any amateur has so far been able to produce. A knowledge of eight-oared rowing—both theory and practice—is not confined to any one country or any one coaching coterie. Common sense is a better aid to a rowing coach than slavish adherence to any particular system. It is doubtful if the English amateur coach understands the temperament of an American crew. The few Englishmen who have coached successfully in this country have simply taught common-sense rowing and have adapted their stroke to the available material. It is to be hoped that Yale will find a solution of the present problem, but there is no doubt that just at present the Elis are on the wrong track.

So remarkable has been the record of the University of Illinois in baseball that a team from that institution would be welcomed throughout the East. There might then be a real test of the type of baseball played by the colleges of the two sections.

In the meantime, there comes flashing from the Pacific Coast, in the person of young William Johnston, another asphalt-court-bred youngster who may yet dispute the premiership of this country's tennis courts with the fiery McLoughlin. Such a showing as he made at Longwood gives promise of triumphs to come, and it may be that from the viewpoint of the building-up process our tennis is on a more nearly solid foundation than that of the Englishmen. That McLoughlin was unable to defeat Anthony F. Wilding, in the challenge match for the English championship is hardly a reflection on his brand of tennis, for Wilding is not alone an exceptional tennis-player but an exceptional man.

Lemuel Loveth His Horse

LEMUEL BOGG was not brilliantly radical, Neighbors admitted and strangers observed. Setting his face against newfangled, faddish notions, to deadly reaction he averred. Airships and battleships Filled him with dread "Rowboats and battleships," Lemuel said, "Used to be fit for our dads. As to wheels, They got along some without automobiles. You may dub me a frump and foggy," said he, "But a horse and a buggy is plenty for me."

Lemuel lived on a prosperous farm, Peacefully, "not wishin' nobody harm," Save and excepting one Hiram J. Scagg, Who, living adjacent, In manner complacent Seemed quite addicted to bluster and brag. If Lem made a joke, Mr. Scagg made a wittier; If Lem got a witch-on, then Si got a prettier. He stood like a specter to Lemuel Bogg— Better land, better clothes, better barn, better hog, "But, y' bet," muttered Lem, "spite of bluster and boss, He ain't got a critter kin touch my old hoast By toneys, Not Pansy!"

Landauet, limousine, racer, and ramboulet, Terrors that whizzed like a shot from a gun, about, Homked by his door With a rush and a roar, Killing the poultry, offending the breeze, And kicking gray dust upon Lemuel's trees. Every morning, when Lemuel Bogg Hitched his mare Pansy and started to jog Over the turnpike to Hippelwhite's store, Sure as he turned around Pettigrew's place One of Them Things round the corner would roar, Shocking poor Pansy again with its roar Till she threw up her tail, Stood on her head, Snorted, turned pale, And sank down as one dead— While overbrought Lemuel ardently swore: "If I ever lay hands on them fillers, I'll catch 'em Deaf, dumb, and blind—but by heck, y' can't catch 'em!"

Lemuel's daughter, a pretty young party, set Firmly on being like one of the Smarty Set, Came to her father and pouted deliciously, "What y' want now?"—Father eyed her suspiciously,

Knowing her actions Bode money transactions, "Pa, I've been thinking— With courage unshrinking"

She came to the topic which drove Lem to drinking, "Most of the girls of MY class are now taught—oh, Up-to-date stunts, such as running an auto, Every young fellow who boasts a Tuxedo Owns a six-cylinder, shaft-drive torpedo, Only ourselves jog our ossified way, Chained to the past in a single-hoast ehay."

Lemuel cried, Touched in his pride: "Care is for city folks, gasolene's flossy, But this here darn neighborhood's always been hoassy. And I'm free to declare That Pansy the mare

Is the swiftest darn critter on any farm near— Unless Silas Scagg has gone bought him a deer." "He ain't!" Daughter's tone was malicious And vicious, "He's got something swifter." "You mean—" "A machine!" "What? Not!" "It's so!

And it looks quite a lot like a Thing that can go."

Like the voice of old Satan on those who discuss him Came to their ears a sardonic "Toot-toot!" And Silas J. Scagg—Lem'll never COULD fuss him— Stopped at the gate in a low, rakish brate Of a modern machine With the sides done in green, "Mornin'!" said Si, "Hoody!" quoth Lem, Remarking, quite dry, "Well, y' got one o' Them!" "Yep," answered Si, well recalling the day When Pansy had beaten his gelding, Old Gray, "It's time for us farmers to scrape off the moss, For only the fassils go round with a hoast."

"Hem!" Chortled Lem, "Since you've counted your losses At racin' And parin', You've found out at last there are hooses and Hooses. Since y' never could win with what feeds upon grass, Ye're right to speed up with yer element—gas."

"Oh, dash!" Snorted Si, With a rash, Speed to high, Toot! Toot! Swift scud—

He was off there and then, Killing Samantha, Lem's favorite hen, While the latter stood, grave as a ghost on the Styx, "Sixty-two ope-power Cannibal Six!"

He muttered, And spluttered, "Everythin' 's goin' to pieces in many ways— What's this here neighborhood comin' to, anyway?"

(TO BE CONTINUED)

"Winds of Doctrine"

A Brilliant Book About Present-Day Conditions

A NEW book by George Santayana* is always an event of importance to a few, because it marks a step forward in the thought of their lives. It means that on some subjects of permanent value they have been helped along to a more finished understanding.

This influence with me began many years ago, and at first Mr. Santayana's verse occupied a larger place in my mind than his prose. He seemed to me then, and he seems to-day, to have written poetry certainly not surpassed by any living American. William James once said to me that he thought the following sonnet worthy of Keats:

Haunts it the heart to wander on the earth,
So patient in her everlasting course,
Seeking us, pain, but hating to be found
That gives distinction and bath gives birth;
Rain tears, sweet fly, to refresh my death,
And plough my sterile bosom, sharp Remorse,
That I grow sick and curse my being's course
If happy one day passes lacking worth.
Dost the sun therefore leave, that I may back?
Or do the dim earth and tireless sun,
That tell not for their pleasure, toil for me?
Amid the world's long staving, wherefore ask
What means were, or what rewards shall be?
The sweetest God gave us in a truth.

I should not care to make that particular statement (and William James was an impressionist to conversation), because I think that Mr. Santayana's verse, even at its best, is not noticeable for exuberance or spontaneity, delightful and permanently satisfactory as it is for purity and intellectual command. As the book to which attention is now invited has much to do with Catholicism, we might go back to a poem that gives very personally his attitude toward that religion:

I love the pious candle-light,
The holy fresh voices, void of thought,
The woman's eyes, inward and serene,
Of what is vain her heart had sought.

I love the victim at the feet
Of Jesus, red with some bloodstain;
I love the cross, and it is sweet
To make a sacrifice of pain.

Some offer hallocks to the altar;
Some, incense, with their dower praise;
He brings the gods what most they prize
Who serve on the altar lays.

I love the Virgin's flowering child,
Her golden crown, her jeweled stole,
The seven diadems which that child
Around her breast, as symbols.

Thus Mother of a suffering race,
Whose pains come to us for our birth,
Rage then for ever, be the grave
Of sorrow, Queen of all the earth!

Perhaps when Carnival is done,
And sin and sorrow go out for us,
Christ will be God, and I the one
That in my youth I used to be.

Things all are shadows, shadows all,
And ghosts within an idiot's head,
A little while, they fade and fall;
A little while, they come again.

Sing softly, choristers; ye sing
Not faith alone, but doubt and doubt,
Ring wildly, Easter bells; ye ring
For Christ arisen, and hope dead.

Mr. Santayana will never be popular either in verse or prose, but he will be re-read often than most writers, and by some highly trained readers he will be read many years after he himself has ceased to exist.

"Winds of Doctrine" is a collection of essays that follow up logically the several volumes that have preceded it. Looking back across this series of books, I remember that my ideas of Browning were fundamentally changed by what Mr. Santayana wrote about him; that

I had never thought sufficiently about the relation of Shakespeare to religious philosophy until Mr. Santayana analyzed it; that he gave me my first sharp realization of what a "Philistine" is; and that my picture of Walt Whitman was, to a large extent, drawn by him. Personally, I believe this country now has no essayist who is his equal.

This book is a study in contemporary opinion. The chapters are on:

The Intellectual Temper of the Age.
Modernism and Christianity.
The Philosophy of M. Henri Bergson.
The Philosophy of Mr. Bertrand Russell.

Shelley: or the Poetic Value of Revolutionary Principles.

The Gentled Tradition in American Philosophy.

Some persons prefer to think hastily about the events of the moment; they enjoy a different perspective and like to contemplate those ideas that do not cease to be when the afternoon paper has been left behind on the street-car. It is to this latter and smaller group of readers that books from Mr. Santayana's pen are important. This volume treats the present age as critical and interesting to live in: an age that keeps some characteristics of Christendom and yet is beginning a different civilization; that feels the value of religious faith, of the pompous arts of our forefathers, of academic architecture, sculpture, painting, poetry and music, of class privileges and family authority, and yet has broken the shell of Christendom, felt the unconquerable mind of the East and of the pagan past, and is confronted by the industrial future, by a new spirit—that of the emancipated, atheistic, international democracy.

We scarcely know what the word Christianity means. A bishop may be a modernist, a chemist a mystical theologian, a psychologist a believer in ghosts. The greatest happiness of the greatest number has perhaps come to mean (I am giving Mr. Santayana's ideas, and often his words) the greatest idleness of the largest possible population. The word reform, which is a magic word to-day, means to shatter one form and to create another, but the two sides of the act are not always equally intended or equally successful.

In the arts freedom is a loose idea that makes many artists like transient children who think their lives will be glorious if they only run away and play forever; their taste, their vision, their sentiments are often interesting; they are mighty in their independence and feeble only in their works.

To Mr. Santayana it is natural that there should not be great heroes, saints, artists, philosophers, or legislators in an age when nobody trusts himself, or feels any confidence in reason, and when the word dogmatic is a term of reproach. Greatness has character and severity, it is deep and sane, it is distinct and perfect. For this reason there is none of it to-day. Reason has abdicated, life is running turhid and full, and we are the sport of vested interests, tribal passions, stock sentiments, and chance majorities. Mr. Santayana's view of the intellectual temper of the age is not a sympathetic one, and yet he is fair-minded.

The chapter on "Modernism and Christianity" will be notably interesting to any

who are endeavoring to understand that subtle conflict which is now going on in the Catholic Church. Mr. Santayana realizes, of course, that contradictions have always existed in religion, that the morality of chivalry and war and the ideals of forgiveness and honor have been long maintained side by side with the maxims of the gospel, which they entirely contradict, and he thinks that the doctrine of Copernicus, although accepted by the Church with some lame attempt to render it innocuous, remains an alien and hostile element, like a spent bullet lodged in the flesh.

Sin has ceased to be the fearful impudence which it seemed to the ancient Hebrews and is now judged on entirely different grounds. Once it was as logical to fight for religion as it was to fight for nationality. The true Christian, to be sure, has always been the exception, and whenever a nation is converted to Christianity, its Christianity in practice must be largely converted into paganism. The nominal Christian, becoming a man of business and the head of a family, will form an integral part of that very world which he will pledge his children to renounce as he holds them over the font.

Even in the golden age of Catholicism, the age of Dante, the world was full of bitter conflicts, faithless rebellions, worldliness, and barbarism. It was a conglomeration of incorrigible rascals. A religion which condemns worldliness is in this dilemma: if it remains merely spiritual it can not affect the world, and if it develops organs with which to operate on the world, these organs become a part of the world from which it is trying to escape. To Mr. Santayana, therefore, a modernist is nothing but a free-thinker with a sympathetic interest in religious illusion. His is the historical attachment to his church of the Catholic who has discovered that he is a pagan.

I always like to have Mr. Santayana on my side, especially when I feel a little shaky, as in my prejudices against Bergson and Herbert Spencer, for instance. Mr. Santayana is never timid. He calls Herbert Spencer foolishly dogmatic and an important part of his philosophy a piece of ignorant self-sufficiency. The chapter on Bergson may be summed up in the admission that his thought has all the charm that can go without strength and all the competence that can go without mastery, and that its fundamental principle is like that of a philosopher at sea who, to make himself useful, should blow into the sail.

As it is more difficult to give in short space an impression of a great artist than to quote a few sentences summarizing a philosophy, I shall not say anything about the brilliant essay on Shelley, although it will probably be the most popular chapter in the book.

The final chapter, on "The Gentled Tradition in American Philosophy," comes close to American life. "To understand oneself is the classic form of consolation; to elude oneself is the romantic." The picture of William James here given is drawn by a man who did not agree with him but very much admired him, and it is the best picture, I think, yet painted of that alluring American.

It will be a long time before a book is published with more general intelligence than this one contains. N. H.

*"Winds of Doctrine," by George Santayana. New York, Charles Scribner's Sons.

What Women Are After

An article which endeavors to make clear what will be one of the principal purposes steadily pursued by this publication

By NORMAN HAPGOOD

One Kind of Education

THE "Feminist Movement" is a poor name for a big thing. The expression is not English; a word ending in "ist" usually suggests theory and dullness; and to the ordinary mind the principal ingredient of the idea is the vote. The desire for the vote no more expresses or sums up the idea than the term "good roads" in itself makes clear to the imagination the differences in civilization which would result from turning bad roads into good ones; or than the term "conservation" paints the immense advantages in ordinary living to the ordinary family when the national resources of the country are properly handled by the trustees for all the people; or than the words "good schools" are sufficient to picture the difference between equality, freedom, and knowledge on the one hand, and ignorance and special domination on the other. Out of one hundred people who favor an eight-hour law for working-men and women, probably not more than one is able to fill in the real meaning of that law in the lives of the families affected by it. Voting is a valuable and a necessary part of the new influence that women are to use in remaking our civilization, but it is merely the expression of a right and a point of view and a powerful weapon for helping along changes that are founded on something much deeper than legal procedure.

The new position of women in the world means that the intellectual and moral standards of civilization are to be changed. They are no longer to be the expression of one sex slightly influenced by the other. They are to be the composite ideals of the two, not of the two acting separately, but of the two as each will be modified by the other as they come into fairer, fuller, and more equal communication. The world is still full of institutions and ideas that are stereotyped and ignorantly treasured, and which, nevertheless, are obstructive to the welfare of mankind.

Already we see the effect of letting loose the criticism of half of the human race on a civilization built up by the other half. The attitude of the world to-day toward all the vices is a very different thing from what it was a century ago, when the thinking on the subject was merely man's thinking. The changing view of what needs to be done in industry is already partly due to women, and will be much more due to them as the moral and human side of industry passes more and more into their hands.

The great underlying institution of marriage is now being subject to criticism, and to women will in the main fall the task of deciding just what alterations shall be made in it, and in the ideas of sex morality that center around it. The opinions of men fifty years hence will be very different from those of the men of to-day, because their education will have been different from the cradle. The time will soon come when all the little boys and all the little girls will not be bent like twigs in different directions, one set of faults and virtues for the boys and another set of faults and virtues being encouraged in the girls. Boys will not be called effeminate if they show delicacy and consideration, nor will girls be called tom-boys if they show physical vigor and enterprise.

In "The Old Fashioned Woman," by Elsie Clews Parsons, just published by G. P. Putnam's Sons, a very interesting addition is made to the remarkable list of books by women about moral civilization brought forward in the last few years. Undoubtedly, the one of these books that has made the deepest impression is Ellen Key's "Love and Marriage," as it is called in the English translation of part of it, although the original "Lines of Life" would have been a more satisfactory name—a book that has probably had a profounder influence in this field than any other book since John Stuart Mill's "Subjection of Women."

en." There have been many others, such as Olive Schreiner's passionately felt "Women and Labor," Jane Addams' "A New Conscience and an Ancient Evil," Elizabeth Robins' "My Little Sister," Mary Austin's "A Woman of Genius," and Mary Roberts Coolidge's "Why Women Are So." No one of these books could ever have been written by a man. In fact, there is only one man writing constantly on the subject to-day who seems to have a sufficiently profound grasp of it to rank with progressive women in influence, and he is H. G. Wells.

The encouraging thing is that the changes are not only very rapid but very agreeable. The girls of half a century ago did not usually become more interesting as the years went by. They were vivacious, pleasant creatures, but they began to lose early in life. As their minds had almost nothing to feed on, they began to grow old at the beginning of their twenties, and often were really old at thirty. Their energetic, developing period had ended, and they had settled down to a routine in which they seemed to expect nothing. They had the manner of having already lived. This certainly is not surprising when we consider their bringing up, which is thus expressed by Calverley:

For really, O my daughter, this world is a wasteland,
And I had made thee out alone, that thou might'st make
Thyself another:
A maiden's heart is an champagne, ever inspiring and strange
And it needed that its motions be checked by the silver
Cock of Prosperity.
He that can afford the grace, his be the precious treasure,
Let him drink deeply of its sweetness, nor grudge it a
Bathel of the cork.

If the fashionable girl was successful, what did she look forward to? She might

in the next morning's papers,
Read by side with rumors of wars and stories of shipwrecks
and drops,
That some day some, and the minister of thy bread-
drive and gettaway.
For an unexpected police to turn upon over their ma-
tured man.

Growth is not likely to continue when there is nothing to stimulate it. Habits are formed when we are young. If a girl of twenty is interested merely in hats, dresses, and what she can get out of her looks, she will be unhappy and uninteresting as soon as her youth begins to pass. A sound education and a sound point of view tend to drive in those habits that enlarge the horizon and stimulate interests which increase with years. They enable a woman to have a broader and deeper and more lasting influence on her children. When her children are grown up, her intellectual interests enable her to be useful to the community in some other way. Her friends among men are not those who are merely attracted by the freshness of her complexion, but the superior men of the community who are interested in her through life for what she feels and thinks and does. Mistle age and old age are very pleasant things to persons who care not merely for physical charm but for facts and ideas. The rising girls of the present feel the truth of what was said by one of the most brilliant women the world has produced:

"The just soul has no moral sex, but is man or woman according to the will of God; the Code is always the same, whether the just soul be the general of an army or the mother of a family."

The changes we have been referring to are the real objects of the Feminist Movement. Let it not be imagined that the support for these changes is mostly among enthusiasts or persons of senti-

mental tendencies. Perhaps the most distinguished man of science alive to-day is Alfred Russel Wallace, and among the most significant books of 1913 is his "Social Environment and Moral Progress." Consider, therefore, his views:

"The foregoing statement of the effect of established natural laws, if allowed free play under rational conditions of civilization, clearly indicates that the position of woman in the not distant future will be far higher and more important than any which has been claimed for or by her in the past.

"While she will be conceded full political and social rights on an equality with men, she will be placed in a position of responsibility and power which will render her his superior, since the future moral progress of the race will so largely depend upon her free choice in marriage. As time goes on, and she acquires more and more economic independence, that alone will give her an effective choice which she has never had before. But this choice will be further strengthened by the fact that, with ever-increasing approach to equality of opportunity for every child born in our country, that terrible excess of male deaths, in boyhood and early manhood especially due to various preventable causes, will disappear, and change the present majority of women to a majority of men. This will lead to a greater rivalry for wives, and will give to women the power of rejecting all the lower types of character among their suitors.

"It will be their special duty as to mould public opinion, through home training and social influence, as to render the women of the future the regenerators of the entire human race."

The Feminist Movement, properly understood, is merely the mural movement in human evolution. It is merely the substitution of modes of thought based on present conditions of industry and education for modes of thought which were built up under a system of constant warfare and general ignorance. The movement of women toward contributions to the world's ethical progress is just as resistless as the march of general education or the movement of industries out of the home into the factories. It is one of the biggest facts to-day, and it will be a still bigger fact to-morrow. The publication that undertakes to express progress can no more leave this movement out of account than it can ignore labor, or the relation of government to wealth, or scientific agriculture, or public schools. HARPER'S WEEKLY, under its present management, wishes nothing more strongly than to become a medium for much of the most adequate thought on social institutions of to-day, as seen by the most intelligent women, who are undertaking to make them better not only for women themselves but for men also, and naturally most of all for children, since in them are determined all the possibilities of the men and women of the future. Mr. Wells did not exaggerate when he said: "Our modern world is burdened with its sense of the immense, now half-articulate, significance of women." Dean Swift said: "I am ignorant of any one quality that is admirable in woman which is not equally so in man. I do not except even modesty and gentleness of nature; nor do I know one vice or folly which is not equally detestable in both." What exceptional men in all ages have recognized all mankind must recognize soon.

Where To Look For Merit

ALEXANDER WINTON makes the Winton Six. He does *not* make any other car. No other car embodies his experience. Mr. Winton founded the gasoline motor car industry in America. He is the world's most experienced specialist in six-cylinder cars. That's why it is unfair to any other car to expect it to show merit equal to Winton Six merit.

SET THE STANDARD

The Winton Six (not any other car) made six cylinders standard, and forced four-cylinder cars from the high-grade market. Supreme excellence did it, and you will find that supreme excellence in the Winton Six.

LOWEST REPAIR EXPENSE

The Winton Six holds the world's lowest repair expense record—29.2 cents per 1000 miles. No other car holds that record, or anything like it. If you want this sort of enduring goodness, look for it in the Winton Six.

KEEPING AHEAD

For seven years Mr. Winton has devoted himself to the perfection of a single model exclusively. He has had just one aim—to keep the Winton Six ahead of all other cars in beauty, comfort, mechanical excellence, and value. No wonder the 1914 Winton Six is the fashion plate of American motor cars.

GET THESE FACTS

Note this: Be careful in selecting a car this year, *more careful than ever before*. There are startling reasons why. We tell them in our Book No. 15. Shall we send you a copy?

The Winton Motor Car Co., 118 Berea Road, Cleveland, O.

WINTON SIX

Long stroke motor, left drive, center control, electric lights, self-starter, finest mohair top, easily handled curtains, rain-vision glass front, best Warner speedometer, Waltham eight-day clock, Klaxon electric horn, tire carriers, four-cylinder tire pump, demountable rims, full set of tools, German silver radiator, metal parts nickel finished. Fully equipped,

Cutting Out the Bad Places—As Applied to Railroad Investments

By ALBERT W. ATWOOD

WHO has not watched a blue-approoned housewife paring away diligently at a painful of big red apples or dingy-looking potatoes? The bad places, the rotten spots, are surgically removed. No rapid process this, but when it is done the apples and potatoes are sound and good. If only she cuts deep enough!

Wander as much as the investor will away from railroad securities, neither he nor the American people can sever the vital connection between national prosperity and railroad solvency. Here is the foundation of the investment—and in a sense the whole financial—structure, and it must be kept strong and sound. If receivership, new management, reduced dividends, and shifting of intercorporate relations are needed to bring railroads to a unity into conformity with law, made either by legislatures or by the hard experience of every-day business, then the removal of diseased parts means health and strength, whatever the temporary pain and uneasiness.

You Are the Railroad Investor

THE owner of railroad securities is a person to conjure with. About his devoted head play much of the oratory of politicians, labor leaders, and those individuals who write letters to the newspapers under classical signatures decaying the socialistic tendency of degenerate times. Somehow, the man one meets is more inclined to buy real-estate bonds or stocks in the newfangled public-utility holding companies. Sometimes the railroad investor seems like a myth.

But the railroad owner is no creature of fancy. His very reality, his firm establishment place in the firmness, order of things, his lack of nervousness and cowardly, all make him less susceptible than the perhaps venturesome owner of a less familiar variety of stock and bond. On July 1 the Pennsylvania Railroad Company had 51,444 shareholders, of whom 40,393 were women. These are real human beings, for the most part. No other railroad has so many, but nearly every large system can point to at least a score of thousands of separate owners.

The law says there are two kinds of persons, real and legal. Mrs. Trask, born and bred in a Massachusetts town, and now the wife of an instructor in mathematics in a New York college, is a real shareholder. She inherited a number of shares of New Haven and Boston & Maine stock, the income from which formerly permitted her to wear as good clothes as the wives of full professors, while her husband's small salary nicely met the rent and groceries. When these two railroads reduced their dividends, Mrs. Trask, being a real person, was annoyed and perhaps puzzled. But the New York Life Insurance Company is a legal person under the law, and incapable of being annoyed and puzzled. And yet, the fact that it is a large holder of New Haven stock is illustrative of the truth that you and I and everybody are railroad investors.

A very large proportion of securities of American railroads are owned by life insurance companies, savings

banks, colleges, universities, charitable and philanthropic institutions. It is hardly necessary to say that these institutions touch the lives of men, women, and youths, millions of them. The New York Life Insurance Company has more than \$530,000,000 of railroad bonds, and it added nearly \$4,000,000 to its list in 1912. The Equitable added nearly \$10,000,000 to its even larger holdings in the same year. Harvard University has 7,351 shares of Pennsylvania stock, and thousands of shares of almost every other well-known railroad. Of a single issue of railroad bonds its books show no less than \$794,000. The savings banks of New England alone are said to hold more than \$100,000,000 of bonds of the New Haven system.

What the Country Has at Stake

RANDOM figures are merely suggestive. Stated broadly, the savings of the people have gone into insurance companies and savings banks. The gifts of the wealthy have gone into colleges and "homes." Our vast steam transportation system, with its 250,000 miles of track and its annual intake of \$5,000,000,000, had been made possible because the savings banks and insurance companies have invested in them the painful accumulations of the humble multitude. The aggregated savings of a whole people have provided capital to build and rebuild America's railways, and if these companies ever come anywhere near to ruin, the people will be impoverished by the certain downfall of their savings and insurance institutions.

Railroads Must be Clear of Taint

THUS the railroad security holds a central and influential position. If these corporations are mismanaged, other corporations are sure to be. Drive the inefficient or over-ambitious railroad manager out of business, and you set up high standards for other companies. Railroad securities are standard to which others conform. As they become sounder and cleaner there is double cause for rejoicing.

There are four great companies where an obnoxious condition has been squarely dealt with. Perhaps the New Haven should long ago have reduced its dividend. But at last the whole one step is taken. For several years, New Haven stock declined more or less steadily, dividends of eight per cent were paid and not earned. Here was clear but unadmitted weakness, striving against the inevitable, all business common sense flouted. But now the stock, at or near 100 and paying six per cent which the company can earn with an aggressive and enlightened new management, is worth considering. Disgusted and critical as many persons believe themselves rightly to be, seen against the New Haven management, the fact should not be hastily dismissed that here is enormous, and as human affairs go, permanent value in the property itself. Said the Interstate Commerce Commission, after a scathing arraignment of New Haven management:

"It seems proper to add that, while the

Harford
New York
London

He was a very good looking and entertaining young man, and consequently a social success.
He was being invited to dinner and so in effect the case of the light board.
"What's your date with us on Monday evening?" the would-be hostess asked sweetly.
"Monday evening," he reiterated slowly and thoughtfully.
"I am very sorry but I am afraid I cannot make it for Monday evening."
"Then Tuesday evening? How will that be?"
"Now can't I make it Tuesday evening? I have another."
"I'm sorry. But Wednesday evening?"
"I'm going down to Boston Wednesday evening."
"My word, but what a popular young man. Then let us see Thursday evening. Surely you can make it Monday evening?"
"Oh, well, and the young man, "suppose we make it Monday evening?"

THE "BLUES"

A Lady Finds Help From Simple Food

Civilization brings blessings and also responsibilities.

The more highly organized we become the more need there is for regularity and natural simplicity in the food we eat.

The laws of body nutrition should be carefully obeyed, and the finer, more highly developed brain and nervous system not hampered by a complicated, unwholesome dietary.

"A lady of high nervous tension says:

"For fifteen years I was a sufferer from dyspepsia. I confess, that an improperly regulated diet was the chief cause of my suffering. Finally, nothing that I ate seemed to agree with my stomach, and life, at times, did not seem worth living.

"I began to take a pessimistic view of everything and see life through dark blue glass, so to speak. My head became affected with a heavy creeping sensation and I feared paralysis.

"Palpitation of the heart caused me to fear that I might die suddenly. Two years ago, hearing Grape-Nuts so highly spoken of by some estimable friends of mine, I determined to try it.

"The change in my condition was little less than miraculous. In a short time the palpitation, bad feeling in head and body began to disappear and the improvement has continued until at the present time I find myself in better health than I have ever enjoyed.

"My weight has increased 20 lbs in the last year and life looks bright and sunny to me as it did when I was a child."

Name given by the Postum Co., Battle Creek, Mich.

"There's a Reason," and it is explained in the little book, "The Road to Wellville," in plain.

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

THE BEST ALL-ROUND FAMILY LINIMENT IS "BROWN'S HOUSEHOLD PANACEA," 25 cents a bottle.

THE BROWN'S Camellia-Infused Liniment (BROWN'S) PRICE for the bottle.

financial operations of the company have resulted in heavy losses, there is nothing to indicate that its solvency has been impaired. The company has expended in the last nine years upon its road and equipment over \$30,000 a mile, a sum almost equal to the average capitalization of the railroads of the United States at the beginning of that period. While this expenditure has been made with a free hand, there is nothing to show that it has not been wisely made, and to indicate that the result has not fully justified the outlay."

Then, too, the Illinois Central, with its unbroken record for dividends since 1868, now finds it wise to reduce the dividend from seven to five per cent, after several years of great losses through strikes, floods, and graft in the car and locomotive repair department. The latter item alone cost \$3,000,000, if common report be credited. This fine property has a new management with no taint of graft connection. When its stock sells somewhat below 100, there will be another indurement to invest.

A few years ago the old and solid St. Paul decided to build a fifteen-hundred-mile extension on a generous scale. The cost was great indeed, and the long-established seven per cent dividend was clearly endangered. Under the aid test of Stock Exchange speculation, the price steadily declined, and at last, in 1912, down went the dividend rate to five per cent. Restoration of confidence, a moderate advance in the stock, and general belief in its present intrinsic worth were the direct consequences.

Last December the United States Supreme Court held to be illegal the ownership of \$140,050,000 of Southern Pacific Stock by the Union Pacific. Negotiations to sell this stock were painfully drawn out, but have at last come to an end, and when the exact details are published a big burden will be lifted off the investment back of one of our best railroad properties. Final compliance with the law will put Southern Pacific stock in a clear and open position.

One of the weakest links in railroad finance has been the St. Louis & San Francisco Railroad, only a short time since placed in receivership. This action does not at once create sound investment securities. Temporarily it makes millions of them worthless. But it is a step in the right direction. Students of American economic history know that railroad reorganization generally has evolved an ever stronger financial type.

It does not follow that those stocks that have been named are necessarily the best available for either investment or speculation. But their cleaning up has put new rivets into the financial structure. Mortgage bonds, debentures, convertibles, and equipment trust certificates are all made the safer for conservative reduction of common stock dividends.

All problems of railroad finance are not forthwith solved as by magic. But the final test of any investment is the earning power behind it. Everything resolves itself into earning power. Assets are worthless unless founded upon it. Judged by this test, the keeping of dividends within the earning capacity of a business is the first and most essential step toward making its securities desirable. Small or irregular earnings and too large dividends are the positive and negative sides of the same evil. Railroad earnings are increasing, and managers are conservative about dividends. The two tendencies work for a common good.

I Am Just A Poor Boy from the Country

Sensitive, avoiding the limelight,
this is the whimsical answer that

O. HENRY

America's greatest short story writer—made when admirers tried to lionize him. "Oh, please! Leave me alone! I am just a poor boy from the country." He preferred the shadows of the street corners where he could gaze upon the hurrying stream of life, and with a vision rarely given even to genius, he gazed deep into the hearts of men and pictured for you the generosity, ferocity, kindness, want, devotion, the laughter and the mystery, the feverish activity and the stark despair—all the complex interplay of human emotions which make life.

All this he compressed into 274 of the greatest stories that ever were written. Packed into twelve rich volumes—your today for a little price and little payments and for a short time only.

KIPLING GIVEN AWAY

And in the bargain, just to spread this edition to every corner of the country at once, you get without extra charge the best of Kipling, in six rich volumes—179 stories and poems and his greatest long novel, "The Light That Failed."

Send Coupon for 18 Volumes, 453 Short Stories 2 Complete Novels

by the greatest English and the greatest American short story writers, for these stories—so one people have rushed to take advantage of this offer. From end to end of this land, we have sent these volumes to homes where the love of O. Henry lived before.

The first complete edition of this work sold at \$125, and every set was taken before the sheets were in their covers. Already O. Henry has become a classic. His biography is being written in books and magazines, his stories are dramatized for the stage and for the moving pictures, the text books of American literature embody them, sculptors are making statues—effigies are discussing his place in literature.

This offer is passing. The mythos on both the Kipling and the O. Henry are heavy and we can't afford to make this a permanent thing. Only the demand of the thousands of disappointed book lovers caused us to extend it for these few weeks more.

O. HENRY	KIPLING
12 volumes bound in green silk cloth and gold tool top; illustrated, 274 complete stories, one long novel.	6 volumes, 179 stories and poems, one long novel, red silk cloth, gold tops.

SEND BOTH SETS BACK

if they're not the biggest, best thing in the covers of a book you ever saw or read. Better than moving pictures—for these are permanent, real moving pictures of life. Better than classics, for these are the living stories of today, from Mandarins on the China Bay to 24th Street and Broadway, and from Piccadilly in London to the ranch on the Mexican border. Send the coupon before it is too late. Get both sets at once, shipped prepaid on approval.

Pin a dollar to the coupon. You get the dollar back if you return the books.

Use a week pays for them. Send the coupon and put the full set on your library shelves and the new joy in your heart. Don't wait till tomorrow and be sorry. Send coupon today and be glad.

WHAT THEY THINK OF US

Life

Since HARPER'S WEEKLY was to be sold, it made a great deal of difference whom it was sold to. We could not have chosen a fitter owner for it than Norman Hapgood. Only will be please remember that business has been dull and coal scarce in Alaska ever since he saved it from the Guggenheims, and that it begins to look like a toss-up whether the New Haven road can survive its rescue by Mr. Brandeis, and will be please make a note that to improve any part of life too much too suddenly is bad for trade and tends to reduce circulation and bring on relapse?

Manchester (New Hampshire) Union

It appears that Norman Hapgood will not take "direct personal charge" of HARPER'S WEEKLY until the issue of August 16. Right in the midst of the silly season, as it were.

Buffalo News

Norman Hapgood has purchased and will edit HARPER'S WEEKLY. The exchange boy will scarcely understand our sudden partiality for the paper.

Utica (New York) Observer

It is announced that Norman Hapgood, formerly editor of *Collier's*, will not take personal charge of HARPER'S WEEKLY until August 16. In other words, Congress will be left to the business of passing a tariff measure without Mr. Hapgood's direction.

Belfast (Maine) Journal

Harper's Bazar has been sold to Hearst and HARPER'S WEEKLY to Norman Hapgood; and people are wondering if they will become yellow journals.

Wisconsin State Journal

No true general would retire from the field of battle to take a chair at West Point. Norman Hapgood is a general in the army that is fighting for the common good. Through him the name of HARPER'S WEEKLY will again stand for the highest and loftiest purpose, as years ago it did under the editorship of George William Curtis. The rich traditions of HARPER'S WEEKLY's richest days could be bequeathed to no better hands than Hapgood's.

Seattle Times

There are thousands of men and women in the United States that will regret to see this splendid old WEEKLY pass from the hands of Mr. George Harvey into the hands of Norman Hapgood.

Philadelphia Inquirer

"Politics," says Norman Hapgood, "is a high spiritual endeavor." We can show Mr. Hapgood some districts, however, where it is merely a high spiritual endeavor.

Portland (Oregon) Journal

Norman Hapgood says that "politics is a high spiritual endeavor." Lofty but useless consolation for the Republican politicians who are endeavoring just now not to part with their stools at the pie-counter.

Brooklyn Eagle

As a compromiser, Hapgood may undertake to ride more horses than the clown, with equally disastrous results.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 30 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will make you independent.

20 Years to Pay

Rich Canadian land for from \$11 to \$30 per acre. You pay only one-twentieth down—balance in 20 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy and improve the land.

We Lend You \$2000 for Improvements

The \$2,000 loan is used only for erecting your buildings, fencing, sinking well and breaking. You are given 30 years in which to fully repay this loan. You pay only the banking interest of 5 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of \$1,000 on a loan basis, so as to enable the settler to get started from the first on the rich lands of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made Farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 30 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land

Finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming. Irrigated lands for livestock raising—some irrigated lands with 7-acre trout all for mixed and grain raising. These lands are on or near established line of railway, near established towns. Ask for our literature. Illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information free. Write today.

Gaynor on Liberty

MR. GAYNOR'S popularity is based in no small degree on his literary and historical equipment. He keeps people from being bored by giving them racy anecdotes about John Calvin, and racy extracts from Epictetus, when they expect him, being a politician, to hand them nothing but rubber-stamp expressions and ideas. When we undertake, however, to elect a Mayor in one of our great cities we have to decide something more than whether he is amusing. We have to decide something more than whether he has ability. It is important to know whether he is honest. Mr. Gaynor is characterized by intellectual tortuousness, he is very subtle, and the positions which he takes are dictated by what he wishes to accomplish, rather than by simple observation of the needs of the city.

Last week we gave an important illustration of this in the evil charter that he endeavored to inflict upon New York. We shall now give a light illustration of the same characteristic, showing him posing as a defender of a free civilization when an attempt was first made to regulate traffic in the congested streets of New York. Justice Gaynor was on the bench at the time. In 1905, there was an application made to him to restrain Commissioner McAdoo from enforcing the same kind of traffic regulations that are now in force throughout the city. A certain real estate dealer thought his business was being interfered with, so he followed the usual and convenient method of getting a judge to interfere with the administrative authorities. Gaynor, in deciding in favor of the real estate man, made the following observations:

Every approach to said square is guarded and picketed by mounted men like the approach to a military camp or headquarters. It is a most extraordinary sight. . . . For the Legislature to place control of the local administration of highways in a constable or the head of the police would be a most extraordinary event. It would be so contrary to the whole course of English and American Law as to excite surprise. . . . Our government is one of laws and not of men. And it cannot possibly endure on any other basis. Those who advocate the changing of our police into a military instead of a civil force and turning the city over to its commander, either do not know what they are saying or else they want to destroy our system of free government.

The law has been amended since then to overcome such objections, and it would be rather difficult, probably, for the most intense patriot to foresee the end of our civilization and freedom because vehicles are prevented by the police from tying themselves into knots at crowded corners.

This is not one of the most important episodes in the Gaynor career, but it is simple and it is clear and it will do as a basis for the conclusion that not all of Mr. Gaynor's high-sounding democracy is to be taken with too much seriousness. The most important question, however, in the New York City election is not Gaynor. It is Tammany. To get a vivid impression of what that venerable institution stands for, refresh your memory with the Nast cartoons in this issue.

A Game That Works

WHY is it that Tammany, after stealing profusely from the city for so many generations, and wasting much more than it steals, and being the cause of burning hundreds of people in buildings, and killing thousands before their time from disease, and making it harder for everybody to keep his family alive, should still be a favorite with the masses? Mr. Amos Pinchot has, in a recent address, put the principle of Tammany success in a homely illustration:

There is a game called "stuss" which, as you may or you may not know, is popular in many sections of New York. From the secret of the popularity of "stuss" may be deduced the cause of an important element in Tammany's power.

The loser at "stuss" is never allowed to leave the temple of chance dead broke. At the door there is always returned to him a percentage of his losses, and the unfortunate one goes on his way with the feeling that he is being taken care of even in adversity.

This bonus, given to the victims of the fickle goddess, acting through the agency of a carefully calculated system, is called "viggrish." The Tammany-Wall Street combination, with its wholesale grafts and its retail charitable district organization work, is the counterpart of the "stuss" joint and "viggrish." Tammany robs the public on a magnificent scale in public contracts, and in enormous profits wrung from the people through Tammany owned and operated gas, electric lighting, and traction companies. Then the Tammany bank, having accumulated a large amount of loot, gives a little back, in chicken feed, as it were, so that the defrauded citizen recovers in the shape of charitable gifts, picnics, the payment of back rents, the opportunities of employment, or even in his funeral expenses, a slight percentage of what has been stolen from him. And he, or his family, is duly grateful.

The American people may not be the easiest people on the earth to bunco. Probably in different directions any of the great nations could put in a strong claim for that distinction. When the Americans put in their argument, however, for first place, probably the patient and innocent stupidity with which we allow our cities to be misgoverned, would be the strongest argument we could bring forward.

A Difference

IN justice to Mayor Gaynor, it ought to be pointed out that his nomination by Tammany Hall four years ago was on a very different footing from the nomination by the same organization of Governor Sulzer. Tammany took Gaynor because it more or less had to. It nominated Sulzer because he was exactly the type of man it likes. All the practices that have been revealed recently against Sulzer are those which are characteristic of Tammany men and thoroughly accepted by them. It is a rather sickening spectacle to see Tammany punishing Sulzer not for those faults of which it approves, but for the fact that after he became Governor, he made a showy effort at independence.

What we think about Sulzer himself can be found in a special article in this issue.

Brains

THIS is 1913, and those bipeds who represent the American people at Washington think it is their duty to protect this country against foreign art. The only objection to them is their lack of logic, or else of courage. Here is HARPER'S WEEKLY, for instance, publishing an article in this very issue by T. P. O'Connor, and thereby helping American writers to starve, and making it harder for this country to raise a crop of writers of its own. Americans are allowed to disgrace themselves and their country by going to see new plays by Barrie, Pinero, Hauptmann and Brieux, and thus getting in the way of native playwrights and stopping the development of numberless American Shakespeares. We listen to Russian, German, Italian, and French composers without a blush, with no young Lochinvar to lead a crusade for the protection of the American composer. Not only ought all of these nefarious practices to be prohibited, but there should be a law preventing Americans from going abroad to look at foreign pictures. What is the use of the American painter slaving along, if his countrymen are going, in the summer time, across the Atlantic to fill themselves up with appreciation of foreigners? What is the matter with the senators and representatives who are protecting American painters against themselves? The American painter does not wish to be protected. He wishes foreign art brought here, but, of course, he does not know anything about his own welfare. Representatives from Oleander and Pig Creek should teach him what is good for him. They should prohibit the American people from the enervating effects of luxury, and they ought not to stop in the middle of their task. Are they afraid to follow their thought to its logical conclusion?

White Slaves?

IT has been held in the notorious San Francisco case that a man is brought within the Mann Act, the so-called White Slave Act, if he merely pays the fare of a woman from one place to another, if they are making the trip for purposes deemed morally objectionable. It may or may not be wise for the government to undertake to regulate all the sex matters in the universe,

but it is certainly idiotic to make no distinction between the real white slave traffic, which is the organized inter-state trade in vice, and those voluntary arrangements between the two individuals concerned. The fight against organized vice as a business has begun in earnest, and has an increasing weight of public feeling behind it. The danger of a statute like the Mann Act is that, in mixing up a cruel business with the ordinary concerns of private individuals, it may bring about a reaction. The Mann Act not only does not confine itself to organized traffic, it does not confine itself to prostitution organized or isolated. It undertakes to bring within the Federal statute, on a technicality, purely individual and non-mercenary matters and thus make the Federal government interfere with the most intimate private morals. Whatever your opinion about human rights may be, you will admit that the law in this instance is undertaking a considerable amount of regulation.

A Question of History

A STUDENT of history not long ago said that Governor Blease of South Carolina was all right, except that he belonged in the sixth century, and that the gunmen of New York were also all right, except that they belonged in the fifth century. A friend of ours, who has traveled much, asked whether an educated Filipino would think that the record of the Illinois legislature at the last session indicated that the citizens of Illinois were fit for self-government. Civilization goes forward, but not all at once. Meantime, it is amusing to watch our public characters, whether they seem to belong to the twentieth century or the third.

What Men Must Do

THE nature of women has been influenced a good deal in the past by what men have wished. The nature of men is to be influenced a great deal in the future by what women wish. Women have a better ideal of the family than men, and therefore men will be compelled to raise themselves to higher standards of self-control and social consideration in the future, and they will be compelled to educate themselves away from conventional ideas that have been standardized largely for the convenience of their own primitive natures.

One Kind of Loneliness

IBSEN makes one of his persons say that the greatest man is most alone. Shelley said of Wordsworth:

Thou wert as a lone star,

and Wordsworth said of Milton:

Thy soul was like a star and dwelt apart.

Perhaps, indeed, greatness has a loneliness which is harder to reach, but surely not more sorrowful, than that of common man. The great man is able to explain his loneliness, especially if his is the greatness of art, and everybody can be made to see it; but what of the loneliness of the most obscure of human beings—some shop-

girl in a great town, some farmer's son alone and dreaming, some child with unkind parents? That loneliness is not less which has not the halo of greatness to give it glory.

Exclusiveness and Love

GENIUS is frequently not the soundest exponent of morals. Schiller went to far as to say:

In every epoch in history when the arts flourished and taste reigned supreme, mankind was sunk in depravity, and it is not possible to find a single example of esthetic culture, at once widespread and advanced, among a people possessed of political freedom and civic virtue, of fine manners accompanied by genuine morality, or of behavior at once refined and sincere.

Those are rather sweeping sentences to handle. The greatest period of Dutch painting came at a time when the Dutch character was wonderful for endurance, independence, and stability. Scholars dispute about the Athenian character at the great artistic period. It lacked some virtues, but it was probably notable for general elevation. The characters of Michelangelo and Dante hardly suggest that Italy at her height would support Schiller. The age of Shakespeare was an age that showed many of the healthiest traits the British have produced. The greatest artist of our own day, Tolstoy, was also the greatest moralist.

Shelley has expressed one aspect of this question frequently:

I never was attached to that great sect,
Whose doctrine is, that each one should select
Out of the crowd a mistress or a friend,
And all the rest, though fair and wise, commend
To cold oblivion, though it is the code
Of modern morals, and the beaten road
Which those poor slaves with weary footsteps tread,
Who travel to their home among the dead
By the broad highway of the world, and so
With one chained friend, perhaps a jealous foe,
The dreariest and the longest journey go.

True love in this differs from gold and clay,
That to divide is not to take away.
Love is like understanding, that grows bright
Gazing on many truths. . . .

Narrow

The heart that loves, the brain that contemplates,
The life that wears, the spirit that creates
One object, and one form, and builds thereby
A sepulcher for its eternity.

With Our Own Eyes

OCCASIONALLY one has the fortune to see a bit of history in the making. Not many weeks ago we were standing of a sunny Sunday afternoon before a flag-draped platform in Hyde Park, listening to an address on Woman's Suffrage by a London school-teacher. She spoke with dignity, tolerance, and courtesy, and a crowd of several thousand dignified and courteous Britons listened with respect. Directly in front of us stood a young ruffian of indeterminate age and unsavory odor. He made comments in disturbingly audible tones, to the great annoyance of a slightly deaf old gentleman who stood in front of him. The old gentleman remonstrated, the youth was impertinent, an altercation followed. Several men interfered, and peace was restored. But the noise had been heard. From various

parts of the crowd, gently, unobtrusively, some eight or ten other young hoodlums converged on their companion. When there were enough of them to uphold one another's flagging courage, they began to shout insults in unison. The bystanders were furious, the speech was being spoiled. A violent wrangle arose. More hoodlums heard the noise and joined the ranks of their fellows. The old gentleman shouted for order at the top of his voice and grabbed one of the hoodlums by the collar. A scuffle followed. The woman who was speaking, seeing the futility of continuing, announced: "It is about ten-time now. You may be getting hungry. The meeting is adjourned till next Sunday." She and her companions then dismounted, picked up their banners, and quietly withdrew. The dispute between the incensed bystanders, particularly the old gentleman, and the hoodlums continued. The youths began to howl in unison. Up rushed six or eight London bobbies bent on law and order. They arrested the old gentleman and dispersed the crowd. The next morning the yellow press had large headlines, "More suffrage riots in Hyde Park. Women teachers incite crowds to riot. Timely arrival of police prevents serious consequences."

The Mary Powell

FIFTY years ago a boat builder (this is imagined, for the facts are not known nor do they in the least matter, for they "have nothing at all to do with the case") was profoundly moved by a queenly, a soul-compelling, and a good-diffusing woman; but he was no poet and could not manifest his devotion in rhyme and rhythm. Yet his imperative ambition was to interpret his inspiration into something that might in turn benefit the world. So he built a poem: he designed a most beautiful white vessel with exquisitely graceful lines; and he named her the Mary Powell. And so transcendently delightful was that vessel, when outlined against the loveliest scenery in the world, so swift and sure her course along its noblest river, dashing the rainbowed spray from her bow, so benignant her existence, that these fifty years past people have never tired admiring her; "many an eye has danced to see" her flags in the breeze, many a heart has throbbed at her passing, and from first to last men have called her, perfectly comprehending her designer's inspiration, The Queen of the Hudson. So from the beginning of the race have superb women moved men to glorious works; and never has such admiration been more justified than when translated into utilitarian achievements. The Mary Powell is going to the scrap heap! that is what it really amounts to, though her owners are trying to break it gently to the many thousands who love her and cherish memories of those with whom they spent hours on her runs. "She will make occasional trips." This, any discerning person can see, is but softening the blow. Soon she will pass away along with such gray heads as began their wedding trips on her sympathetic decks. But that is the appointed course for beautiful women and devoted men, and wonderfully fashioned vessels, as well as for all and everything else in the cosmos.

"He is actuated by two or three fundamental principles that he is endeavoring to make into national policies"

Mr. Lane and the Public Domain

The New Word In Washington

By HONORÉ WILLISIE

MR. WILSON has gathered into his cabinet certain men as alien to the understanding of Washington as if they had come from Mars.

Not only the theories of these gentlemen are strange, but they have a vocabulary that is not easy for Washington to translate into the old vernacular.

Washington is full of talkative gentlemen with large Adam's apples who will tell you what the President eats for breakfast and the age and weight of the White House cook. They call all the cabinet officers by their given names and speak of them patronizingly. But if you ask these same gentlemen to quote first hand the ideas of the men they speak of so fraternally and critically, they have immediate business in an opposite direction.

However, the gentlemen with the Adam's apples are not alone in their ignorance. Ask the average voter what is the work of the Department of the Interior. He can give you almost no information regarding it. Ask the man who is above the average in mental training and political experience. He can decide or praise the President's choice of Franklin K. Lane as Secretary of the Interior, but he can give you no clean-cut idea of the work of the department that Mr. Lane is to dominate for the next four years. And if you speak of the new vocabulary to him, he looks skeptical.

You can find a number of Congressmen who know one aspect of the Department's work. The Congressman who is a conservationist knows where the Department of the Interior touches his work. The member who is for or against Indian land-grabbing knows that sooner or later he must come in contact with Mr. Lane. They know little or nothing about the rest of Mr. Lane's work. They have, however, heard of the new word.

Mr. Lane must make some decisions in the next four years that will affect America's future fundamentally. Two great wars must be fought out in America in the near future. One is the war of State vs. Federal Rights.

One is the war of Monopoly vs. Competition. A favorite battle-ground for both wars will be the Department of the Interior. In deciding the merits of the combatants Mr. Lane is going to use his new vocabulary, and Washington is not going to understand.

The work of the Department of the Interior covers eight unrelated Bureaus; the General Land Office, the Indian office, Pensions, Patents, Education, Geological Survey, Mines, and the Reclamation Service. Each Bureau ought to have a highly trained specialist at its head. The man controlling such a group of unrelated businesses ought to have some remarkable qualities.

He ought to have a thorough knowledge of America, her geography and geology, her Federal and State laws, her economic past and present. He ought to have the capacity for making quick, original, and sane decisions. He ought to have a keen understanding of men. In other words, the Secretary of the Interior ought to have a culture that is general as well as legal and scientific, a mind that is original and fearless as well as deeply human.

THE offices of the Interior Department are in the Patent Building. They are large and light and, in summer, noisy with the roar of street traffic. Mr. Lane reaches his office at 9.15 in the morning. He leaves it at 7.00 in the evening. He takes twenty minutes to half an hour for lunch. He works these hours seven days out of the week. His evenings are filled by state functions or by folk of greater or less degree whose desires the office day was not long enough to cover. The days average something like this.

9.15—Mr. Lane and Mr. Meyers, his secretary, attack an eighteen-inch pile of correspondence. 9.20—A telephone call from Mr. Tumulty, the President's secretary. 9.25—The Senator from Montana calls regarding his Reclamation Projects.

9.30—A tall gentleman with a patronizing manner. He is chairman of a state central committee.

"Mr. Secretary," he says, blandly, "I won't take but a moment of your time. I wanted to get an appointment for Bill Smith. How about the land office in our district?"

The Secretary is gravely scrutinizing his visitor. "It's very warm, isn't it, Mr. Jones," he says. "Is your friend Mr. Smith efficient?"

Mr. Jones hitches his chair forward complacently. "He's a Democrat," he says, "and he deserves something good. He's got a pile of recommendations a foot high."

"That's good," says Mr. Lane. "Is he efficient? If you were in my place and felt yourself responsible to the President and the public for his work, would you appoint him?"

The visitor's look of blandness changes to one of suspicion. "Of course I understand!" he says, rising, red-faced. "You have your own favorites to play. Good day, sir!"

The Secretary sighs, taps his desk, and stares at the electric fan for an instant, then returns to Mr. Meyers and the mail.

9.40—Senator Gore wants to talk to the Secretary about appointments.

9.50—An attack on the eighteen inch pile. 9.55—Gray-haired Senator calls to talk about a bill Mr. Lane wants introduced. 10.00—Man who says he was a childhood friend of the Secretary calls on secret and important business. He has with him a woman dressed in black. Both greet the Secretary effusively.

"This lady is an esteemed acquaintance of mine," says Childhood Friend. "She has been on the temporary list in the Pension Office. Her term ends next week. I am very anxious that you re-appoint her."

Mr. Lane looks from the man to the woman. "You knew, madam, when you took that job that it was temporary?"

"Yes," says the woman, her thin face eager, "but I have three little children to support, Mr. Lane."

The Secretary winces and turns to the man. "There are over a hundred people on that temporary list. A great point was made of making each person who took a job on the list understand that it was temporary when he took it. Yet each one has come to me in dire distress, asking me to create a permanent job for his special case. Nearly every story is quite as painful as your friend's. I have no work for these people."

"Can't you get the President to give her a better job?" asks the man.

"What are her qualifications?" asks Mr. Lane. "Isn't it true that she has not passed the Civil Service examinations? I am responsible to the President and the people. How can I override the rest of the hundred and make a special case here?"

The man and woman rise. The woman, angry-eyed, snarles for the door without a word. Childhood Friend pauses for a parting shot. "I'm sorry," he says, "for her husband was a Democrat!"

At 10.10, a man from Kansas calls to tell the Secretary what he thinks about conservation. 10.30—Another woman from the temporary Pension list.

THE door is closed to visitors at noon. At 2.00, a conference with Mr. Newell, head of the Reclamation Service, involving the expenditure of two million dollars. At 3.00, a conference with engineers and corporation heads to discuss Mr. Lane's new policy regarding Water Power. At 4.00, a conference with the Attorney General. At 5.00, an attack on a chaos of reports and briefs. At 6.00, a last annihilating assault on the eighteen-inch pile that has now grown to a full two feet in height.

The first day with Mr. Lane leaves one with a hopeless sense of confusion. He seems to live in a welter of questionings and importunings, to be all but submerged in a sea of red tape and technicalities. Yet after the second and third days spent with the Secretary, one slowly discovers that he is actuated by two or three fundamental principles that he is endeavoring to make into national policies. The principles are simple and Mr. Lane never

deviates from them. It is only his vocabulary that is confusing to Washington.

On a recent hot July morning, two men were talking in the New Willard Hotel at Washington while they ate their breakfast.

"I've come to make one last kick on the tie-up of Alaska," said the fat man.

"Got anything there, yourself?" asked the thin man.

"Coal mines. Represent some money that wants to build a railroad there. Government's got to quit this dog-in-the-manger business and get out."

"Going to see Lane and put the screws on him, I suppose," suggested the thin man.

"Screws, all right, but there is nothing coarse about my methods," answered the fat man, glancing around the all but empty dining room.

"What's Lane's avenue of approach?" asked the thin man.

"Same's all the rest, I suppose," replied his fat friend.

"What does any one take a government job for? The most thankless job on earth, outwardly. But," he brought his fist down on the table, "I'm in the right! What do the dopes down here know about us in Alaska? All the resources in Alaska belong to us that's up there now. The government's got no business in Alaska."

THAT same morning there appeared in Mr. Lane's office a man with honest brown eyes and the languid manner that usually goes with a frock coat and high hat in July.

"Mr. Secretary," said Mr. Brown, "I just want to tell you my ideas on Conservation. I don't want a job or a favor. I want to tell you where I disapprove of your ideas."

The Secretary eyed his visitor keenly from under his eyebrows, swung round in his chair, annexed his glasses firmly to his right thumb and smiled.

"This is just the sort of help I want," he said. "You are a Westerner and a State's Rights man, I suppose."

Mr. Brown smiled a good, square-cut smile and nodded. The corners of the Secretary's mouth deepened as if he liked the smile.

"You are sure that you have my ideas on Water Power clearly in mind?" he asked. "What I want to do is to develop all the available horse power in America. Congress and America must evolve a clear policy for this development. That policy must embody the idea that the developers of water power must not have too much other kind of power. I have had enough experience with regulating monopolies to know how very difficult it is. You must make your conditions before, not after organization."

Mr. Brown's eyes were eager. "I know," he said. "I'm a lawyer. But let the States have control. The whole West is for State control. If it came to a scratch, we could say to you, 'You own the stream,' but you shan't use a street or a town facility in reaching that stream!"

"You have the idea, with most of the public," answered Mr. Lane, "that Uncle Sam wants to take more and more power. He doesn't. But along certain lines it seems necessary. If the States had not been so neglectful and at times so corrupt there would be no need now for the government to step in regarding Water Power. If we could eliminate from this office, Mr. Brown, land and water matters there still would be more than we could do. The trouble with the people out West is that they think that we in Washington are encroaching on their rights. Why, Mr. Brown, I'm not trying to centralize. I'm trying to de-centralize."

"Just what do you mean by that?" asked the State's Rights man.

"Well, take the Alaska question," said Mr. Lane. "That is the most vital question before the Department to-day. We have there virgin soil on which to try out the new ideals of democracy. Right there we must learn to de-centralize, to make the people of Alaska lean as much as possible on their local government."

"The idea is strong in the West that the Federal government is building up great bureaus that are making rigid rules for the preservation of government rights and property, and that as a result we have bureaucracy which

is distasteful to them because it is removed from them. Everything must be sent to Washington, and there is not enough authority in the local officials.

"There is some truth in the criticism. There is a strong tendency to keep things always centering in Washington. The difficulty is to devise machinery by which greater play can be given to the judgment of efficient local men. I shall try to do that in Alaska. I am trying to do that in the West.

"For example, I have called upon the Salt River Valley Water Users' Association to give me concrete suggestions as to how to operate their plant so that instead of controlling it by fixed rules from Washington, its control can be left to the farmers on the project.

"And I want Alaska for the individual and not for a great East India Company. For that reason, to save the individual from monopoly and from himself, some sort of Federal guardianship seems essential. What have the States done with their own public domain? Think of the wealth they might have saved for the future use of their citizens!"

Mr. Brown did not take his eyes from the Secretary. It was evident that he was adding and subtracting, trying to catalogue Mr. Lane. It seemed a pity that the fat man from Alaska who said that he knew Mr. Lane's avenue of approach could not have been there.

MANY a solid Easterner will tell you that the battle of State's Rights was settled when the slaves were freed. Yet in every Public Lands State in the West, and in the South where the government is seeking to control power made from navigable waters, there is growing an acute resentment against Federal control. Slowly but surely Congress is lining up under various names, Insurgents, Progressives, Old Liners, Stand Patters, Conservationists, for or against government control. Mr. Lane must stand the buffet of most of these attacks.

Mr. Lane is an individualist up to the point where the individual fails to be square to the individual next door. Wherever it is possible for the State to control the greedy individual, wherever there is efficient local control, let it exist. But the States have made bad work of controlling their natural resources. State governments are easier to handle than National. Wherever the State fails to care for the individual, the Nation must.

The Secretary is consistent in this theory in his views on Alaska. This is what he says about the bill now in Congress for the Federal building of an Alaskan railroad:

"I BELIEVE that under this policy, Alaska will develop most safely and speedily, and the resources of the country become most speedily available to the whole people.

"There is but one way to make any country a real part of the world. By the construction of railroads into it. This has been the heart of England's policy in Africa, of Russia's policy in western Asia, and is the prompting hope of the new movement in China. Whoever owns the railroads of a country determines very largely the future of that country, the character of its population, the kind of industries they will engage in and ultimately the nature of the civilization they will enjoy. The policy of governmental ownership of railroads in Alaska seems to me to be the one that will make most certainly for her lasting welfare.

"To many of our people Alaska is little more than a land of natural wonders, here and there dotted with mining camps and fishing villages. If Alaska is to be nothing more it is almost a matter of indifference who builds her railroads. I have talked with many people who know that country well and I am convinced that we should think of Alaska not only as a country of mines and fisheries but of towns, farms, factories, and mills, supporting millions of people, the hardest and most wholesome of the race. If this conception of a possible Alaska is true, then our legislation should be such as to most surely bring about this possibility. And it seems to me that there is less of hazard to Alaska's future if the government of the United States owns the railroads which will make its fertile interior valleys accessible from the coast.

"THIS is a new policy for the United States. Very true. This is a new part of the United States and policies properly change with new conditions. The one determining question in all matters of government should be, is it the wise thing to do? The ancient method of opening a country was to build wagon roads. The modern method is to build railroads. To build these railroads ourselves and control them may be an experiment, but such an experiment does not suggest scandals more shameful, nor political conditions more unhealthful, than many we have known in new portions of our country under private ownership.

"And in the end we shall be able to establish and maintain our own chosen relationship between Alaska and the rest of the United States, unhampered by threats of confiscation or the restraining hand of any merely selfish influences. We can only procure the highest and fullest use of Alaska by making her railroads wholly subordinate to her industrial and social life and needs—true public utilities."

Many people ask why the government should own and run railroads in Alaska and not mines when mines are the competitive units. To this Mr. Lane says:

"It is not necessary, though it might be useful for instruction like the Government's model farms. There ought to be government mining regulations for the protection of life and for the development of the mines that will tend to conserve the coal. The trouble with government experimental farms has been that they have been run to get the highest results from a productive standpoint, and they have been expensive. It would be admirable for the government to show how a mine ought to be run and if this is necessary for educational purposes, all right. My idea is that things that are good can be ingrafted on to existing institutions without the government actually carrying on the work.

"IN this as in everything else, I am in favor of from day today doing that thing which seems best, judged by a hope and an ideal for the future. I am not a narrow opportunist, believing in doing for to-day alone. That is the difference between a savage and a civilized man. The savage acts for to-day alone. A civilized man has enough imagination to see to-morrow in relation to the act of to-day. I don't believe that any absolute philosophy of government can be made to apply to all conditions."

One morning a man called on the Secretary to ask for the job of Indian Commissioner for a friend.

"Is he efficient?" asked Mr. Lane.

"Oh, he's a Democrat, all right," replied the man. "Don't know anybody who has done more for the party in our district."

"Caring for the Indian Bureau is highly specialized work," suggested the Secretary. "What I'm looking for is a ten thousand a year man who is willing to take the five thousand a year of the Commissioniership."

"Shucks," said the man, "I know fifty men at home who would take the job!"

Mr. Lane shook his head and the man waxed indignant. "It's easy to see," he exclaimed, "that Democrats need expect no patronage from this administration."

For just a minute Mr. Lane and his visitor stared at each other. It was plain in the Secretary's face that he felt the futility of making the man see that he had no price. That he sincerely wanted a man who understood Indians, and who was an honest and efficient executive for the Indian Commissioniership. The visitor knew one phase of human nature; that one works always for a reward. But to the visitor, there was but one reward—money. He did not get the idea that the finest reward is "to do the thing as you see it, for the good of Things As They Are."

Efficiency is a difficult word for a politician to understand. It is difficult for any American to understand it as applied to politics. Yet Efficiency is one of the watch-words of the new administration and when it is used as the weapon of a great policy like that of Federal control of Public Utilities, it has a powerful effect on the mind of the average, hard-working citizen.

By HERBERT REED
("Right Wing")

ARNAUD MASSY,
OF FRANCE

EDWARD
RAY
OF
ENGLAND

WHAT a year for the golfing contingent! And the climax is not yet. When these lines appear several famous foreign professionals already will have been seen in action by the great host of amateurs that, for one reason or another, is unable to make the pilgrimage to St Andrews, to Hoylake, to Troon, to La Baulie, and other famous foreign courses. The visit of Vardon, Ray, and Reid of England, and of Telfer and Massy of France can not but be fruitful.

With Vardon's play most of us are familiar, albeit it is an older and perhaps a trifle stouter Vardon we are seeing in action this time. The world of golf has progressed since the first visit of Harry Vardon years ago. It was the fashion then to seek to copy blindly the grip and stance of the visitor, especially the grip. The amateur observer neglected too often to observe that Vardon had unusual hands, and that his grip was hopelessly ill adapted to the average player. There were other features of his play that might better have been imitated. But the "Vardon grip" was the craze. Imitation in golf—imitation without adaptation—is too often the quickest way to pile up one's bills for lost balls.

But the great body of American amateurs has progressed markedly. Even the average player is to-day the thinker that he was not, say, ten years ago. There has been so much clever analysis, so much capable instruction, that there will be no more blind following of an idol, I think. Thus the foreigners (is there such a thing as a foreigner when it comes to the great brotherhood of golf?) will be more keenly and more intelligently watched and studied than ever before, and the amateur should benefit by that study.

I do not mean that anything these experts do should be copied outright, but I do mean that when an intelligent player increases the sum of his knowledge of the methods used successfully in any game, he can not well avoid becoming a better player.

There is a chance that under different conditions the American "pros" will do better in the long run than they did in England and France last spring, when

five of our best were thoroughly taken care of. There are marked differences in the courses over which these matches are played, and these differences, rather than change in form, often mean the difference between victory and defeat. After the defeats at the hands of the Frenchmen the Americans complained (not, however, in any spirit of poor sportsmanship) that the Frenchmen pulled and sliced unmercifully, and were not properly punished for it, while their putting was of the deadly order.

While in this country Massy and Telfer will have to learn to keep on the flag,—the Englishmen may be relied upon to do that—but if their putting continues to be as deadly as it was on their home links, the American "pros" will have to extend themselves from start to finish of the golfing invasion.

This matter of putting brings up the old theory of national temperament—too often confused with individual temperament—in sport. Is there any situation in golf that would seem to put a greater premium on the phlegmatic temperament than playing the odd for a half or better on the putting green from a distance of, say, twenty feet? And yet, here are these supposedly volatile Frenchmen—volatile, if we are to accept the old-fashioned idea—beating the Anglo-Saxon in sheer sang-froid. I wonder if some of those who assume a superior knowledge of national characteristics as applied to sport are not thinking of the attitude off the field rather than on.

It was customary, some years ago, to call this country a "nation of sprinters"—this in the face of the wonderful performances at long distances of the late Willie Day; and one still finds learned editorial writers pointing out that we excel in all sports requiring the sudden expenditure of great nervous energy extending over a brief period. Yet, after we learned how to run the distances, we turned out some great distance men. It is a difficult matter to put the label on a nationality in sport.

Many a critic has stoutly asserted, time out of mind, that the Englishman excelled in all games calling for patience and endurance. Yet we find that in English rowing, in all two-crew races, the theory and practice to-day is to "put the burden of proof on the other fellow," to "kill him off" at once, and then finish as well as possible. In the case of national characteristics in sport, there are so many exceptions that they do not prove, but absolutely destroy, the rule.

But to our golf again. The visitors will have their hands full with golfing engagements. At the close of the Shawnee matches Vardon and Ray will appear in matches against the leading American professionals, not forgetting the "home-herds" at Atlantic City, Wilmington, Deal, Wykegyl, and other lending courses.

With the notable exceptions of Anthony F. Wilding and J. C. Parke in England, and Larned and Wright for

a time in the Longwood doubles, youth seems to have had its will of the tennis world this year, and even the severest critics of the play of the new California star, William M. Johnston, see in this eighteen-year-old a coming champion. The new-comer from the Pacific coast has not made as strong an impression on the New York critics as upon those at Longwood, due largely to weak ground strokes and unsteady back hand; but there is no gainsaying the fact that he is headed in the right direction, and will improve as he grows older, just as did Maurice E. McLoughlin. As it is, three of the big early tournaments have been won by the youngsters, and it must be remembered that the brilliant and wily Touchard, despite his many public appearances, is still young. Washburn, his doubles partner, is only a junior at Harvard, while, as every one knows, R. Norris Williams, the internationalist, is entering his junior year at the same university. Still another Harvard junior, F. H. Whitney, won the Narragansett Pier event, while Clarence Griffin, another one of those persistent Californians who keep everlastingly coming, accounted for the Western title.

Now, in all of these victories by the younger element there has been nothing in the nature of luck. It was sheer good tennis that carried them to the front, for they disposed of veterans who were by no means off their game. Touchard, Gardner, and Clothier, the last named one of the staidest tournament players in the game, fell at Longwood, while Griffin disposed of men like Shelton, Byford, Blair, and Armstrong. These latter are not so well known in the East, but their ranking is on record to prove their class. Truly a youngsters' year, even without the national championships.

By the time these lines appear, the call for football candidates will have gone out all the way from Maine to Oregon. There is promise of a more interesting season even than last year, for the coaches and players have had a full year's work under the latest version of the rules, have studied down to their game, and are prepared to advance along original lines, being sure of their foundation.

Pitchers Who Bat

By ERIC HAROLD PALMER

Big league pinch hitters of 1913 include Crandall, Caldwell, Hendrix, Yingling, Dubuc, Johnson, rivals of Harry McCormick as emergency batsmen—Tradition upset by this development

WHEN Gaby Deslys, the French music-hall artiste whom a press agent under King Manuel made famous, first came to America, the critics were of one mind.

"She can't sing, she can't dance, and she isn't such a beauty," was the unanimous verdict.

Gaby drew \$4,000 a week as salary, however, and therefore reviewers had to agree that from the financial standpoint she was a "riot."

Similarly, there is a player in the National League whom the experts maintain is a slow fielder, a slower thinker, and a still slower runner. The indictment has never been denied by the man who gives this player a berth with the classic team of the circuit, no less a judge of ability than John J. McGraw. Harry McCormick (nicknamed, for some inexplicable reason, "Moose") was able to join the ranks of the "hold-outs" last spring, and sign eventually for a much larger salary than he was offered by the New York Club in its original contract. McCormick draws nearly \$5,000 a season, and will get a full share in the world's series spoils. He has the reputation of being the greatest pinch hitter in the game.

When the Giants started their great July winning streak, McCormick did not have much chance to show his wares. He finally tired of sitting on the bench, and several times asked McGraw to allow him to get into action. Thus, in a contest where the Giants were five runs to the good, the "fans" were surprised to see "Moose" stroll to the plate.

"What's he hitting for?" they murmured, not "Who's he hitting for?"

It was the right way to put it, for the answer was plain. Larry Doyle put it as follows:

"McCormick is batting for exercise."

The peculiar case of this good-natured fellow, who makes an excellent living by keeping cool under fire, brings up an interesting analysis of the 1913 season, relative to the fine art of sending up the right batter when the issue depended on a ball which the fielders could not handle.

Tradition has certainly been getting humps this year in the big leagues as well as in the wider fields of social, business, and political activity, and this is particularly true of the pitchers.

The greatest surprise is that the pitchers are blossoming out as Wagners with the stick—something unheard of,—and the "dopesters" sit silent in wonder.

About three years ago the spectators became so disgusted with the qualities of the average twirler as a batsman that a change in the rules of the game was suggested, to add to the interest. This idea was that another player should be permitted to hit for the pitcher and run bases. By this means, it was hoped, the attractiveness of play from the grandstand standpoint would be increased and the hurlers would welcome the opportunity to rest between innings.

The proposition for a tenth man on each side met with considerable favor for a period, but was finally frowned down as too much of an alteration. "Leave well enough alone," was the decision.

In one of the early games this season, Ames (now of Cincinnati) was pitching for the Giants. When you speak of Ames' batting average, it is in whispers.

The Giants were two or three runs behind when there was a rally. One run had tallied, and anxious runners were on second and third bases, with only one out.

"Who's the batter?" was the exclamation from the grandstand to Coogan's Bluff.

"Good night!"

"Two out!"

"Ames up! O-o-oh!"

These were the yells. How many millions of times has that same wail gone up throughout the various circuits! Who could trust a pitcher to deliver the needed hit?

For some reason that McGraw never took the trouble to explain, Ames stroled to the plate on that dreary afternoon instead of a more certain batter. After two futile swings, "Red" rapped a measly roller to the box, and a double play resulted.

From the bottom up, these were the last thirty names in the standing when the talk of eliminating the pitchers as batters was started: Keefe, Druckie, Ruelbach, McQuillan, Ames, Knetzer, Hendrix, Richter, Weaver, Moore, Loudermilk, Toney, Golden, Bell, Scanlan, Bergen, Ragon, Camnitz, Collins, Cole, Gaspar, Harmon, Richie, Steele, Tyler, Marquard, Salce, Schardt, Alexander, Matten, and Butler. Every one is a pitcher. Butler played the infield part of the time. Butler hit for .178, while Keefe had .086—and Keefe took part in no fewer than thirty-nine games!

But there has been a different story to tell within the past few months.

Who are the great pinch hitters of 1913, forgetting the only McCormick?

Otis Crandall is one of the greatest emergency batters in the game. "Doc,"

as he is best known, is called into the breach frequently. Crandall, a pitcher, is especially noted for his ability to save the game when the other fellow "cracks." He has always batted well. When the Giants came back from the spring training trip this year, the sensation was Crandall's great batting in the exhibition games. He made thirteen clean hits in a row.

In Pirateville Claude Hendrix is demon or hero, according to where you come from. In abusing the sphere, few have it on Hendrix this year. He is wiping out memories of that .098 in 1911. He started to undo the wrong in 1912, when his batting first began to arouse talk.

Who is sent in when the Yankees are trying to get on the winning end? Caldwell, a second-rate pitcher but a ferocious wielder of the stick, as you can see by looking at his record this season.

Caldwell is such a whirlwind on the bags that Manager Frank Chance is trying to convert him into an outfielder. The pitcher once won a game for his dejected comrades by stealing home.

Every once in a while, perusing the Washington box scores, the faithful follower of the sport finds an asterisk before the name of Johnson, and down below are the words:

"Johnson batted for Ainsmith in the sixth."

The star of the Senators slaps the ball on the nose two times out of three.

When the Superbas are in need of a safety, who is called upon? The bleacheries shout for Yingling. Out comes a lithe young fellow who hits from the left-hand side of the plate. The man with the Chinese twist to his name is one of the rising southpaws, but he is hitting nearly .400 at present, and showing daring on the bases.

Other strong hitting pitchers in the big leagues to-day are Hess of the Braves; Riney of the Phillies; Grier of the Cardinals; Harmon of the same team—weak in past seasons; Rucker of the Superbas; Benton of the Reds; Wood of the Red Sox, often used in a pinch; Duker of the Tigers, who is the star extra stickler of the Detroit team; Tesreau of the Giants; Boeding of the Senators; Salce of the Cardinals; Hall of the Red Sox; Wagner of the Superbas; Robinson of the Pirates; Adams of the same nine, and Blanding of Cleveland.

The most amazing reformation in the big leagues is found in the case of Ragon, the big Brooklyn right-hander. Last year Ragon was a really pitiful figure as he swung aimlessly at bat. The "fans" laughed every time he came up. For that matter, so did Ragon. Early this season, when Ragon was winning one game after another, he began meeting the ball hard, and sometimes got two hits a game. So surprised was he, after knocking the ball into safe territory, that he turned handsprings. The "rooters" forgot to grin when his turn came and the eries nowadays are:

"Get a hit, Pat! Look at that hole in right!"

Ragon now has all the confidence he needs.

Perhaps, in 1914, he will join the ranks of pinch-hitting pitchers.

WALTER JOHNSON

"The star of the Washington team slaps the ball on the nose two times out of three"

Plays of Stage Life

By MINNIE MADDERN FISKE

MRS. FISKE

(From the Portrait by Sergius Ivanovskii)

IT is singular that when a dramatist selects for his theme the theater and the people of the theater, almost invariably he misrepresents both. The dramatic author, from the nature of things, ought to know as much, or more, of this subject than he knows of any other. As it is not possible to suppose that his distortions are due either to unfamiliarity or to ignorance, the natural conclusion is that they are deliberate.

Judging from the several plays I have seen that purport to represent the life of the stage and the characteristics of its followers, it is evident that the authors cherish the naïve idea that the public always expects to see one particular phase of them—and that a phase which is neither typical nor venacious, and which degrades both the institution and its calling in the eyes of play-goers.

Since the age of three I have been engaged actively in theater work, and I have yet to see the life of the theater presented truthfully in a play; at least, its life as I have known it. The actors and actresses in plays are, for the most part, strange, unrecognizable creatures—conventional puppets of a disingenuous intention. The dramatists who whittle them out know that there is nothing representative in them. So do the producers who place them on view. They must laugh in their sleeves at the ease with which these threadbare specimens from the old bag of tricks deceive a public that ought by now to be sophisticated sufficiently to recognize their real character.

But it is not this aspect of the matter that is its worst. Usually dramatic authors in plays of this description befool

their own nests. They do not hesitate to draw large revenues from works that traduce and disgrace the allied actor's calling upon whose service they must depend. Dramatic authors and theatrical producers have been willing to reap pecuniary harvests from plays that vilify the stage, projecting its people as wantons or worse, and giving it a fictitious atmosphere of vulgar immorality. This has always seemed to me a low and dastardly thing to do. There can be little question that it is base for authors and producers to seize upon and exploit for money the occasional unsavory features of certain spots in the theater and place them before the public as representative of theater life in general!

Doubtless there are unsavory things connected with the stage in a sporadic way, but many of us who have passed our lives in the theater have never come in contact with them. In "What the People Want" Mr. Arnold Bennett has approached more nearly a picture of theater life as we know it than any other play-writer; but the real play of the theater and of its actual people is yet to be written.

On the other hand, the most distinguished of English dramatists has recently given us a play that depicts the vulgarest attributes of a certain department of theatrical entertainment. It is regrettable that this writer did not employ the better material at hand of which he had ample knowledge. He has had a long experience of the theater, both as actor and writer; he has won a high place in the estimation both of the public and of his own profession; and he has made a fortune through the medium of the stage. A play from his pen dealing with the real life of its followers would have come as from one having authority. Instead, he chose to compose a play that reveals an alleged phase of life with which we actors are utterly unfamiliar. He shows us only a group of hopelessly vulgar, stupid, silly, impossible persons living a ridiculous existence. It is all quite strange to us of the real theater. And one has a strong feeling, in witnessing this play, that, strange as it is, the author has striven successfully to make it even more repulsive and obnoxious than even the slightest excuse of basic fact would warrant.

The theater is not sustained by its weak elements. In all times it has been pillared by solid men and women.

Love in the Dawn

By WILLIAM ROSE BENÉT

*D*AWN, with hallowed flame, seemed to sing your name
Through our open window as the golden glory came,
Ardent thrilled me through; Dawn again—with you!
"Up and at the world again! The world is made anew!"

*Neely on my night flashed the lovely light,
All the ringing roads of fame glittered broad and bright,
On again! with new visions to pursue;
And dawn again, dawn again, dawn again—with you!*

*Other dawns may keep joy as pure and deep
Dawns of greater splendor may awaken me from sleep
Nay! They never can bless a stubborn man
Like the dawn, the wonder-dawn, with which this day began!*

*Oh, my deeds must take triumph for its sake!
Loud my heart shall sing it while the mind remains awake;
Words I never knew could so thrill me through—
Dawn again, dawn again, dawn again—with you!*

Hearing a Play with My Eyes

By ARTHUR HOPKINS

IF a deaf man understands a dramatic performance the actors have a right to feel that their interpretation is adequate. At the Comédie Française I was for the time a deaf man, since I understood no French. Perhaps I was something more than a deaf man, as my enjoyment of the acted performance was somewhat disturbed by the clatter of the dialogue, which at times seemed endless. And yet, I shall always treasure this performance of Kistamack's *L'Enbaucade* as one of the rare treats of years in the theater.

Here were actors who ceased to be actors. They became the persons of the play, each character as clearly marked as a coin fresh from the mint. Where were the actor's tricks, the petty pilferings and smotherings that are valued as a means of personal advancement by our Broadway tricksters?

They have no place at the Comédie Française. Here the performance is an integral.

I HAVE no idea who is the leading man at the Comédie Française, or the leading woman. If there is a second man in the company, he did nothing to show it. They were all leads, down to a frowny workman who played a three-minute bit in the second act with such distinction that he accompanied me home side by side with the three members who were assigned the big scene of the play at the end of the third act.

And how independent were these three of the big scene! They had been scoring steadily all through the play. Every task assigned them up to that point had been handled with a cleanliness and precision that marked them as masters.

THE big scene may have been necessary for the author; for the actors it was superfluous. But how they handled it when it came! No holding back—no jockeying for place—no backing up stage for an advantageous position—no preliminary distortion of face or body to signal the audience that the big moment was approaching; just a rational, easy playing until like a shot the big moment was upon them, striking them as fully unawares as it did the audience. Like an echoing shot the big moment was passed; the curtain was down; and an electrified audience found personal relief in storms of applause hurled at three artists who almost effaced themselves against the back walls of the scene. Even in the acknowledgment of applause the individual did not step on the neck of the character.

ONE is ever fascinated by the accomplishments of an honest student. The members of the Comédie Française are honest students. Their work is energized by thought—thought—thought.

And what superb direction! As the players were submerged, so was the stage business. It came so naturally, so incidentally, that it never seemed to be at all. The entire machinery of the performance was so concealed, so suffled, that one never knew machinery was necessary to it. And, after all, if there is any art in the theater, it is the art of legerdemain. The audience must

never catch any one acting, must never see the hand of the director, and must never know there was a scene-painter.

IT follows that this result can only be accomplished by the very finest acting, the most sympathetic and far-seeing direction, and the most imaginative scene-painting.

The acting and general performance have answered for the cast and the direction, and now we come to the production, as we term the scenic, property, and light equipment.

THE first scene showed a view of the Mediterranean at Nice. In the foreground was a chateau and small private park. There were trees painted on cut drops, a form of stage equipment not at all approved by American artists and producers, who believe that good trees must be real trees. But the real trees have not arrived at the Comédie, and I pray that they never may, because real trees never do look like real trees, since their roots run into a ground cloth and their branches into border lights, while the cut drop trees at the Comédie looked like a Corot. So well were they pointed that they did not look like scenery. How can the real tree on the stage ever look anything else but a prop? Once you strike detached realism, you stifle imagination; and there never was an artist or a property maker who could make a tree to compare with the glory of a forest that any child can imagine.

The cut drop trees were merely a suggestion, but a suggestion so well directed that the audience supplied a park that could not be surpassed in nature.

The second scene was the office of an automobile factory—with large windows looking out on to the grounds, one factory building showing across the way. Here, again, the artist surpassed himself. The only concrete suggestion of a factory was a mammoth steel crane, standing erect at one side just outside the windows. That crane told the whole story of the size and importance of this factory. It was a stronger suggestion than thousands of whirling wheels. And yet, the whole set seemed very simple—in fact, would have been nothing at all without the crane.

THE third act was the library of the automobile manufacturer. Here, again, was the suggestion of refined living. A few pictures, two tapestries, a frieze, several sets of books, each different from the rest—no long rows of ponderous volumes—just as much furniture as space and good taste would permit—no cluttering and choking of the scene with objects that conveyed nothing to the play. Again suggestion was applied, and in that library the auditor felt the entire life and tastes of the occupant.

The last act, showing the factory after it had been wrecked by a bomb, was again a masterpiece of cut drops—a few twisted pulleys and shafts hung in the air. The shafts were broken. One pulley sagged down below the rest, seeming ready to drop on the people below. A battered lathe was the only set piece, and this was profile scenery. The sug-

ging scenery, with holes torn through, was shown by borders. It was as complete a wreck as one might ever witness, yet it consisted of fewer than seven hanging pieces of scenery, and was doubtless built and painted at a cost that would seem trifling to those producers who gravely include in their announcements the amount of money spent on a production—as if money spent were ever a recommendation for anything.

SO the scene-painters at the Comédie were fully in the spirit of the institution when they suggested the settings of *"L'Enbaucade."* But scene-painters must have help, and most of all from the electrician. For lighting can make or kill the best scene ever painted.

The conspicuous feature of the lighting at the Comédie is again simplicity and suggestion. Here there are no batteries of arcs and floods and spots, no hazy spots lighting up faces in dark places. If the scene be dark, the faces remain in darkness—which is exactly as any sane audience would have it, since here again we come upon suggestion. The audience, already familiar with the faces and with the situations of the play, needs no guide to the expression of the face. If the characters be groping about in the ruins of his factory, they are reasonably sure that he is neither yawning nor grinning. They see an expression on his face which he himself could not possibly improve.

DAY is breaking on the factory ruins. In the background is an opaque mountain. A slight streak of pink rises above the mountain. It grows almost imperceptibly, never with a single jump. As it grows, objects in the factory begin to take on form. Finally the lathe is bathed in a faint light. Now objects on the mountain itself begin to take form, and finally we discover a second and lower range of mountains. On this range the vegetation begins to appear; but never once is there a shaft of light from any place. The entire lighting is done by borders and strips on dimmers, and the effect is complete.

NOW the greatest part of all. The last act is short. It begins with day-break. The theatrical producer's temptation would be to have lights fill up by the end of the act, in order to give the audience the full force of the wreck. But again at the Comédie they credit the audience with some imagination, and also a little brain. They don't attempt to give full daylight in twelve minutes. At the end of the act only a natural amount of light has appeared, yet it is enough to outline the scene; and so convincingly it is done that, when the curtain has descended on that last act, you feel that the light is still growing on the mountain. It does not seem possible that a dawn so legitimate could be suffled out by the mere ending of a play.

So it is at the Comédie Française. They have brains and imagination, and they credit the audience with as much. I didn't understand a word they said, but never before was I told so much in three hours.

*Miss Hallroom probably feels that she makes a pretty picture seated at her window,
but over the way they think the two flat-irons she has left on the
window-sill spoil the effect*

*The Sloan cartoon for next week will be
"HIS DAY'S WORK OVER"*

Taxing the Cost of Living

By DAVID STARR JORDAN
President of Leland Stanford University

THE rise in the cost of articles of necessity began about 1897. It is world-wide, rather greater in high-tariff countries, because of the shelter and leverage offered by protection. In general, this rise is about fifty per cent; the fall in the purchasing power of gold about the same. It is enhanced and aggravated in different countries by special conditions. These elements are not causes of the rising cost of living, but modifying circumstances. According to Sauerbeck, the "Englishman's dollar" of 1897 is now worth seventy-eight cents, the "American dollar" but seventy. Index tables of wholesale prices of many articles leave the American dollar at 1913 as worth sixty-one cents in the value of 1897. Of actual causes leading toward this change, three may be recognized:

1. The great increase in the world's stock of gold (from about \$7,500,000,000 to about \$11,000,000,000). This increase has now passed its climax. As the amount of gold at the best is very small for the credit resting on it, the bonded war debt and municipal debt of civilized countries exceeding \$60,000,000,000, it is believed that the importance of this factor is greatly exaggerated. Including bonds of private corporations, there are upwards of \$150,000,000,000 in evidences of debt in circulation in Europe. It is, however, an element of unknown importance in determining the value of gold as stated in terms of other products of labor and capital. In so far as this goes, it is a cheapening of the actual value of gold.

2. The improvement of the processes by which gold is extracted, and the consequent cheapening of gold as measured in terms of labor. The cyanide process has made it profitable to work low-grade ores and old dumps, and a new dollar obtained from a gold mine costs, in labor and capital, much less than the old dollars cost. Whatever value may be assigned to this factor, its influence is long since spent. It is not likely that the gold market will soon be disturbed again by new discoveries of mines or by new processes. So far as it goes, it means an actual cheapening of the value of gold.

3. The increase of taxation the world over, due to (1) the waste of actual war, (2) the extension of armies and navies, and (3) the increase by one hundred to two hundred per cent of municipal and other local indebtedness of the world. "Instead of living beyond our means, we are living beyond the means of the fourth generation." These extra taxes correspond to excise duties. They are laid more or less directly on the industries of the nations, and their effect is to increase the selling price of products. In so far as this influence goes, it is not a cheapening of gold, but the pushing up, through taxation, of other values.

ROUGHLY speaking, the taxes of the world have been doubled since 1897. Supported by these additional taxes, millions of men have been drawn from productive labor. In 1911 the bonded debt of the world for past expenditures (pawn checks for wars already fought) amounted to \$37,000,000,000. The annual interest charge on this was over \$1,400,000,000. The annual naval expense of the

seven most "progressive"—that is, most wasteful nations rose from about \$450,000,000 in 1897 to \$649,000,000 in 1911. The total military expenses of these same nations doubled in this time, with a corresponding withdrawal of men from industry to militarism. Meanwhile, municipal and other local debts everywhere are two or three times as great as in 1897. For example, San Francisco had in 1904 a budget of \$6,500,000 annually. For 1913 this budget is \$13,000,000. The valuation of city property was, in 1902, \$413,000,000. It is now \$510,000,000. It is estimated that in 1921 the valuation will be \$735,000,000, the tax \$27,000,000.

THE bonded debt of British cities rose from \$1,500,000,000 in 1897 to \$5,800,000,000 in 1912. A similar increase is seen in Germany and France. In the United States the total of State and local taxes has risen from \$1,090,000,000 in 1901 to \$2,505,000,000 in 1911. The fact that these sums are raised by indirect taxation makes the burden the greater. They must be paid in the increased price of commodities—in other words, by a rising cost of living. All taxes, however levied, constitute a confiscation of private property for public purposes. A nation is a huge corporation, which differs from other corporations in its power to levy assessments without limit on its bondholders. The dealer accustomed to a certain percentage of profit adds his tax burden to this percentage. In doing so he must lower his purchase price or raise his selling price. What he does or can do depends on the relative power of resistance of producer, dealer, and consumer. The stress and incidence of taxation fall on the less resistant elements. Any one of the three groups may combine to throw off this stress. The dealers are more often successful in this. As production is more or less limited, the consumer is the weakest of the three groups, and finally bears most of the burden. Some part of the consuming group being also producers may roll the burden back, but in any case an increase of taxation is a burden on the people, and they can only shift it among themselves. There is no foreigner they can plunder to make their losses good.

AS each dollar must bear the tax burden, its value is diminished. Taxation lowers the purchasing power of money. As the purchasing power is likely to fall farther in the future, the rate of interest rises. Bonds will be paid at their maturity in still cheaper dollars. Hence the fall in value, the world over, of "gilt-edged bonds."

In this connection it may be noted that the price of most stable and staple commodities is fixed in London, the clearing-house of the world trade. Our exports have, in general, in New York the London value minus the cost of handling. Imports have the London value, with the addition of the cost of handling and the tax on imports. The value of non-exportable or perishable goods depends on local conditions, and is subject to much greater fluctuations. Thus potatoes are now very dear in California, and onions are excessively cheap. But this is a local matter of supply and demand.

I am a dealer, let us say, in Palo Alto.

I allow a margin of fifteen per cent gross profit on my dealings. I have some taxable property, and I feed my family. My taxes, direct and indirect, amount to \$300. With time my government, municipal, State, and national taxes raise this tax to \$1,800. I must increase my profits by \$700. I allow a margin of twenty-five per cent on my transactions. Those from whom I buy have raised their margin also; they were obliged to do so to make both ends meet. I find that I can not secure a margin of twenty-five per cent—my competitors cut under my prices. We lose money. Then we form a secret or private combination to hold up the Palo Alto prices. Our customers, largely professors, can not increase their stipends. They find that a salary of \$4,000 in 1913 is equivalent to one of \$2,500 in 1897. The cost of living has risen; the purchasing power of money has fallen. It has fallen mainly because all consumption has been over-taxed. The United States has done her part in this; but all over the world, from Osaka to Manchester, Buenos Aires, Palo Alto, and Istanbul, the same story is told with local variations. The suffering is greater on those nearest the bread-line. In my experience, I have found the pressure greatest in Italy and in Japan, and least in the United States, although here perhaps most fuss is made about it. The more you take away from the people the less they have left, and the higher the price they will set on what is left; and the more unpleasant it is to be poor, because the man lowest down is the man who can not set his own prices.

IN this view, the primary factor in the rise of the cost of living is the fall in the purchasing power of gold, due to the excessive and growing exactions of the governments of the world. In other words, it is produced by the steady encroachments of the government on the individual the world over, through the Indirect Tax and the Deferred Payment, the two instruments of tyranny in the past now used by democracy for self-oppression.

There is certainly a dangerous portent in a prosperity that rests on taxing the future, and in the steady inflation of values, because we waste so large a percentage of all our increments of effort.

The debtor world is growing annually rich at the expense of the creditor world; but a large part of its apparent wealth is due to the inflation of prices, and these in turn to administrative waste, not to real additions in value. With the financial management of even the best of the "progressive nations," no private corporation could escape insolvency. Leroy-Beaulieu has lately declared that the world has rarely before been so badly governed. Its financial affairs are "in the hands of incurable prodigals and improvident experimenters."

And the sign and evidence of this is in the steady rise in staple values, the steady increase in the cost of living.

Referring to the migration of people across the Rhine at Basel, from high-taxed Germany toward freer and more prosperous Switzerland, the so-called "Pilgrims of Hunger," Professor Paolo Goldini says: "In ten years we shall all be Pilgrims of Hunger."

Tammany and F

THE WAITING VULTURES—"LET US PREY"

This is one of Nast's most famous cartoons, and it is particularly alive to-day, because the fact that Tammany preys on the community is just as real a fact to-day as it was when Nast led his crusade. It is still true that Tammany is not a political organization, but a machine for obtaining plunder.

"STOP THIEF!"

"They no sooner heard the cry than they issued forth with great promptitude; and, shouting 'Stop Thief!' too, joined in the pursuit like Good Citizens."—"OLIVER TWIST."

ONE of the brilliant pages in American history tells of the fight against Tammany at a time when Tweed was at the height of his power. Nothing is so clearly remembered about that campaign to-day as the work of Th. Nast, which appeared in HARPER'S WEEKLY.

We republish certain of the more famous among them for two reasons: First, in taking over HARPER'S WEEKLY it gives us pleasure and stimulation to remember the glories of its past. Second, these cartoons have a direct and essential bearing on the fight going on in New York this summer.

When Nast began to attack Tammany, Tweed held the position now occupied by Charlie Murphy, and he also controlled a working majority in the State legislature, just as Murphy does. To attack him seemed so hopeless then that even some of the bravest and best elements in the community urged him to desist. Fortunately about that time the New York Times changed hands and rendered tremendous service in the fight. Newspapers go up and down, and as one reads American history he sees

THE TAMMANY

"What are you going to do?"

(The first use of the word "Tammanny".)

The above cartoon, "The Tammanny," was published five days before the election of 1871 in HARPER'S WEEKLY. It represents, of course, the Tammany band watching the Tiger at the door.

Nast had been attracted by this little boy, he had seen it on a fire.

The printing of the picture did not stop for all time. It asks the question, "What are you going to do?" A few days later the paper published a cartoon about it was to turn the Tweed Ring.

Harper's Weekly

a paper with the same name performing great public service at one time and the opposite at another. The New York Sun was among those which threw ridicule and discouragement on the fight against Tammany. Nast's part in that fight was recognized in an amusing way when a bill was introduced in the State legislature, containing a protest against "an artist encouraged to send forth, in a paper that calls itself a journal of civilization, pictures vulgar and blasphemous, for the purpose of arousing the prejudice of a community against a wrong which exists only in their imaginations." That, you see, was a long time before Mayor Gaynor, in trying to put obstacles in the way of Mr. Whitman, spoke of those who wished reform as having their heads full of vice and crime.

It is hard to say which cartoon of a number is the most famous or the most powerful. Perhaps first place should be given to the one in which the famous Tiger symbol was first fastened as a term of reproach upon Tammany, the picture that bore the equally famous question, "What are you going to do about it?"

TIGER LOOSE

What are you going to do about it?"

(The famous Tiger symbol)

The "Tiger Loose," was used two as a double page in HARPER'S WEEKLY, with Tweed and his work of greed.

The emblem twenty years before, when, as an engine.

ified the organization with the Tiger. "What are you going to do about it?" declared that what they would do is get out of office.

CAN THE LAW REACH HIM?

The question asked by this cartoon is a question that in recent years is most frequently associated with the term "The Man Higher Up." The little man is easily caught. The public almost loses hope at times of getting the men most responsible for those misdeeds that do the greatest damage.

THE AMERICAN RIVER GANGES

In this cartoon Nast summed up the Ring's attempt to retain power through concessions to the church. It was Nast's sternest arraignment of sectarianism in the public schools.

"Liberty, Equality, Fraternity"

WE can see no reason for not making a literary department interesting, and it ought to have a better chance of being interesting if it deals almost exclusively with significant books, and takes some of those from the past.

A singularly interesting book to read for those who believe in the value of democratic government, and perhaps particularly for those who do not, is "Liberty, Equality, Fraternity," which we take the liberty of reviewing this week, although it was published in 1873.

Most of us are accustomed nowadays to take these three words as if they were always words of praise. That is not the point of view of Sir James Stephen. He has a great distrust of humanity in general, and of all those movements that tend to put the government of the universe in the hands of the majority.

"Upon all the subjects which mainly interest men as men—religion, morals, government—mankind at large are in a state of ignorance which in favourable cases is just beginning to be conscious that it is ignorance. How far will free discussion carry such knowledge as we have on these subjects? The very most that can be hoped for—men being what they are—is to popularise, more or less, a certain set of commonplaces, which, by the condition of their existence, cannot possibly be more than half-truths."

Stephen looks upon most people as selfish, sensual, frivolous, idle, commonplace, and wrapped up in petty routine and habit. The effect of increased liberty for them, he declares, "would not in the least degree tend to improve them. It would be as wise to say to the water of a stagnant marsh, 'Why in the world do not you run into the sea? You are perfectly free. There is not a single hydraulic work within a mile of you. There are no pumps to suck you up, no defined channel down which you are compelled to run, no harsh banks and mounds to confine you to any particular course, no dams and no floodgates; and yet there you lie, putrefying and breeding fever, frogs, and gnats, just as if you were a mere slave!' The water might probably answer, if it knew how, 'If you want me to turn mills and carry boats, you must dig proper channels and provide proper water works for me.'"

OUR effort to produce a kind of universe in which there shall be a certain standard of comfort to all and effort shall be applied mainly to the working out of other ideals has no acceptance from this vigorous critic. He says of it: "Habitual exertion is

the greatest of all invigorators of character, and restraint and coercion in one form or another is the great stimulus to exertion. If you wish to destroy originality and vigor of character, no way to do so is so sure as to put a high level of comfort easily within the reach of moderate and commonplace exertion."

This distrust of what people would do with an established standard of comfort is, of course, closely connected with the belief that most people are incapable of being interested in anything connected with the higher life. Stephen states this over and over again in many racy ways. For example, this: "The great mass of men is not capable of this kind of disinterested passion for anything whatever. On the other hand, they are open to offers. They can be threatened or bribed into a more or less nominal adherence to almost any creed which does not demand too much of them. Indeed, they like it rather than not; but some degree of consideration is essential. The real leading motives of the mass of mankind are personal prudence and passion."

THERE is a tendency in our day to look with disapproval upon punishment, partly on the ground that the faults which are punished are caused by society itself. The kind of swift logic that this critic indulges in is well shown in this brief remark: "It does not follow that because society caused a fault it is not to punish it. A man who breaks his arm when he is drunk may have to have it cut off when he is sober."

A somewhat related point of view is found in the answer to those who think that the law can not do very much to improve people: "The huebody and world betterer who will never let things alone, or trust people to take care of themselves, is a common and a contemptible character. The commonplaces directed against these small creatures are perfectly just, but to try to put them down by denying the connection between law and morals is like shutting all light and air out of a house in order to keep out gnats and blue-bottle flies."

Of course, Stephen is too intelligent to carry his disquisition far enough to put him at a disadvantage, and on this last point no one sees more clearly than he certain limitations to what the law can effectively deal with—for example: "To try to regulate the internal affairs of a family, the relations of love or friendship, or many other things of the same sort, by law or by the coercion of public opinion is like trying to pull an eyelash out of a man's eye with a pair of tongs. They may put out the eye, but they will never get hold of the eyelash."

One of the things that has made Stephen so favored a writer with a few very attentive readers, among whom was the late William James, is the graphic picturesqueness that finds itself in unusually close association with sharp logic. In discussing this relation of law to freedom in the regulation of the vices, he says: "If freedom does not like it, let her go and sit on the heights self-gathered in her prophet mind, and send the fragments of her mighty voice rolling down the wind. She will be better employed in spouting poetry on the rocks of the Matterhorn than in patronising vice on the flags of the Haymarket."

WHAT we call progress in humanity seems to Stephen a decrease in general vigor of character and an increase in mere nervous sensibility. "Equality," to him, is a big name for a small thing, and the enthusiasm about it has grown mostly out of the invidious position of the French privileged class before the French Revolution and the enormous development of wealth in the United States. In our country, he doubts "whether the enormous development of equality in America, the rapid production of an immense multitude of commonplace, self-satisfied, and essentially slight people is an exploit which the whole world need fall down and worship."

As to fraternity, he knows hardly anything in literature so nauseous as Rousseau's expression of love for mankind when read in the light of his "Confessions," and feels inclined to advise him to keep his love to himself and not dash it on the author or any person in whom he is interested. It is not love, according to Stephen, that one wants from the great mass of mankind, but respect and justice.

THIS humanitarianism of the day makes people hate the very thought of pain and discomfort, and disposes them to talk about one another's affairs in the way of natural sympathy and compliment, and now and then to get into states of fierce excitement about them, but does not increase the our talent which our author thinks worthy all other talents together; namely, that of judging right upon imperfect material—the ability to see things as they are without exaggeration or passion.

It ought not to be necessary, perhaps, to say that the present writer disagrees with Sir James on almost every point, but that does not interfere with a belief that Stephen is one of the most stimulating critics of the prevailing tendency in the world that can be found anywhere in English literature.

The Night

By WITTER BYNNER

*I HAVE no lovel life that when night is deep,
I shall but fall asleep,
As a lover's eyes gaze at us
With his beloved lying close to him.*

PEN AND INKLINGS

By OLIVER HERFORD

The Faith Clock

*Through the dim-lit church, like a drowsy bell
The voice of the Parson rose and fell.
"Put not your trust in Works!" he cried,
"By Faith alone are we justified.
Works are unstable as watery waves;
In Faith alone is the Grace that Saves!"*

*But the Shepherd reckoned without his Sheep.
They had wandered away to the land of Sleep,
And over the heads of his slumbering flock
His words were borne to the Belfry Clock.
"So Faith is better than works! Dear me!"
Cried the Belfry Clock. "I'll try it, and see!"*

*These words momentous were scarcely said,
When something snapped in the Old Clock's head,
And a weight he'd felt since his earliest day
Nose all of a sudden dropped away.
He listened in vain for his heart's "tick-tock."
"It's time I tried Faith!" cried the Belfry Clock.*

*Next morning, the Squire missed a date,
And Parson Jones was an hour late
For a wedding party, and Deacon Brown
Lost the four-thirty train to town,
While his daughter 'Mandy waited in vain
All afternoon for a tardy swain.*

*A vestry meeting at once was called
And the Belfry Clock was overhauled.
His works they decided were past repair,
But they all agreed his old face to spare.
So they put in a patent electric chime
And wired the clock for "Standard Time."*

*Ere long, through the veins of the Belfry Clock
There tingled and thrilled an electric shock;
And now, as he marks the passing hour,
He feels the throb of an unseen power,
And he chimes aloud in exultant might:
"That darned old Parson for once was right!"*

"A critic should never, never, look or write as though unqualifiedly pleased with anything—except, of course, himself"

Confessions of a Reformed Dramatic Critic

By JULIAN STREET

Illustrations by James Montgomery Flagg

DURING my second season as critic, it became my duty to review a comedy from the pen of a young playwright who was a friend of mine. Frequent rumors of critical corruption and prejudice had been reaching me, and I was more than ever determined now to "stand straight," cost what it might. I wanted my friend's play to succeed; but, more than that, I wanted the world (which didn't care) to see that my character rose like a tower above the petty influence of personal feeling. In my fear lest it be said that I had erred on the side of leniency, I wrote a harsh review. It was the worst to appear in any paper. When I realized this, I felt sorry and ashamed. My friend was hurt. I tried to explain, and I am glad to say he forgave me. This should have taught me a lesson, but it did not.

Later in the season, another friend spoke to me of a young actor who was making his New York debut in a small part. "Try to give him a little send-off," said my friend. It was the worst thing he could have done. Again I tried to stand erect against the tug of personal feeling, and again I learned my lesson. Several of the other papers gave the young actor a send-off, but I did not.

him his deserts, but really gave him less, for I "hunched" him with a group of minor players whom I pronounced "adequate." That word was a favorite of mine. It is a favorite with many critics. They love it for its fine Olympian ring. Adequate! It dismisses, with a majestic wave of the hand, the poor, struggling, scrambling, hopeful, eager, human ant to whom it is applied, while at the same time it sheds a reflex glory upon the ink-hurling Jupiter who pronounces it.

Yes, that young man was adequate. Had not another young man described him as such? I, the critic, I, the important and imposing youth whose pockets, if they did not bulge, at least swelled gently each Saturday with the fifteen dollars that he earned—or was it eighteen, now? Yes, if memory serves me rightly, the newspaper had recognized my critical abilities by increasing my emolument. But what does it matter—fifteen or eighteen? Suffice it that my pay was "adequate."

I recall a case in which another writer tried, as I did, to play "straight." He had been a press agent, but had long wished to become a critic. At last, with the help of the manager who had employed him for several years, he obtained the desired position on an influential news-

paper. The manager liked him well, enough even to lie about his salary, thus securing him an increase of pay. Now, it happened that one of the first plays that the new-made critic was called upon to review was a production by his former employer. It is fair to suppose that the manager had a comfortable feeling that at least one paper would be favorable. The play appeared, and the review came out. All but one praised it. The exception was that newspaper from which the most had been expected! The critic, however, had developed a terrible integrity. He meant to show that there were no "strings" on him. No, sir-ee! Even the manager who was the victim of this young man's "uprightness" saw the joke, and laughed.

Another manager—a powerfully built and usually determined gentleman—had long known that a certain Chicago critic was hostile to him and his productions. Uncomplainingly he put up with repeated injustices until, one day, an article appeared in which the critical venom was spilled upon a certain gifted young actress whom he was starring. He might have even stood that, had she been any other one of his stars, but his interest in her was twofold, for he was in love with her.

When, later in the season, the star was booked to reappear in Chicago, the manager was determined that she should not again be attacked as a means of satisfying personal dislike for him—not, at least, without immediate reprisal.

A day or two before the first performance, the assistant of the offensive critic called at the theater for photographs.

"Will you take a message to Mr. Blank?" asked the manager.

"Certainly."

"You tell him, from us, that if he says one word against this lady I shall go to his office, and if I can't find him there I shall go to his house and camp on his steps. I'll certainly find him, and, when I do, I'll beat him to a pulp!"

In due course came the first performance, and next day the newspaper reviews. With blood in his eyes, the manager took up the particular paper in which he was most interested at the moment. The criticism was distinctly unfavorable. Unmercifully it "roasted" the play, the playwright, and the performers. But among the latter there was one distinguished exception: the star was not attacked. With punctilious regard for the wording of the warlike message, the critic had avoided "saying one word against the lady." Thus—much to the amusement of a manager, who, though pugnacious, is blessed with a sense of the ridiculous—a threatening situation ended without bloodshed.

WHILE there is, in my mind, no doubt that most critics are honest in the primary sense of the word, there is one form of journalistic dishonesty that is practised by almost all of them. They pose. Their posing is done with the harmless and ridiculous purpose of making their readers believe them to be men of erudition—which, as a matter of fact, few of them are. Having posed myself, I know about it. The scholarly pose is called into play quite frequently in any theatrical season, but never so forcibly as when European players act here in their native tongues.

Can you imagine a critic reviewing a performance by Sarah Bernhardt, Coquelin, or Réjane, yet having no knowledge of the French language? It has been done times without number. I am one of those who have done it. Sometimes I understood a good deal of what went on upon the stage through having seen the play before in English or having read a translation. Sometimes not. But in the theater during the performance, and

applause; but at French plays I gave knowing smiles and nods of appreciative sagacity when the audience laughed or applauded. In my criticisms, too, I performed similar feats, in a journalistic way. In reading over my reviews of performances by Bernhardt and Réjane, I am astounded to-day at their apparent understanding.

It was with a very simple, human purpose that I posed: I did it to preserve my self-respect. And I am confessing to it, here, for the same purpose. This may seem paradoxical, but it is not: the truth is that my views on self-respect have changed of late years, much in the same way as my views on plumbing. Now I like the open kind.

Not the least droll part of my pose, in those critical days, was the fact that, more than any one else, perhaps, I was deceived by it myself. Because I wished to be a very scholarly young man, I began to think I was one. I even entertained, for a time, the idea of purchasing a pair of those large, round-rimmed spectacles that give the wearer such a look of owl wisdom. An optician said that he could fit me with a pair, in plain glass, which would not obstruct my vision; but somehow, they did not fit my juvenile visage, and I was forced to content myself with some extraordinary and almost useless fuddling opera-glasses, worn upon a broad, con-

spicuous black silk ribbon, about my neck.

It was at about the black-silk-ribbon period of my intellectual growth that I reviewed a performance by Mme. Réjane, in "L'Irondelle." Unlike most French plays given in New York, this drama was new to the critics. Nor were translations to be had. It was a trying night for the critical fraternity, but we appeared as usual, and sat in judgment on that play that most of us could not dimly comprehend.

Driven to desperation, one critic went out to the manager and asked point-blank:

"What's this play about, anyway?"

The manager outlined the plot.

"Well," said the critic, in a last feverish effort to maintain his pose, "I don't think much of it, anyhow!"

He wrote accordingly. Most of us wrote in a similar spirit. And, because it was the only thing we really understood, we united in a vigorous critical assault upon the scenery!

During that engagement Mme. Réjane also played "Zaza," in which Mrs. Leslie Carter had previously appeared in New York. Many of us considered Mrs. Carter the superior artiste of the two, and said so flatly. After all, what are the French? They're not so much! Why, you can't even understand what they're talking about!

There were two critics of my time who

knew French, and, as it happened, they were leaders among us, each in his own field. One of them was a really eminent poet and scholar, a man who I think was, without exaggeration, the largest figure, in a strictly literary sense, then

or since connected with any newspaper in the United States.

The other was his antithesis. An Englishman who wrote for a yellow journal under a fanciful pen-name, and was—so far as I know—the dean of the school of "flippant" ("flippant") critics. He is still writing, and, while there is indisputable "Smart Alec" cleverness about his work, it is also characterized at times by unparalleled audacity, coarseness, and brutality.

Each of these critics had his following among the younger men. Some of us, as I have said, attempted erudition. Others used the slap-stick, the blunder, or the tomahawk. At least one critic of the latter school has been assaulted by the husband of an actress upon whom he made a vulgar and unwarranted personal attack. Perhaps he has been assaulted more than once. Perhaps the others have. But that these critics are not perpetually black and blue is to be wondered at.

Among the rest of us there were, perhaps, two or three more or less independent thinkers; the remainder trailed along. We—for I was one of the trailers—not only wished to think as the best known critics thought, and to write as they wrote, but to go where they went. Many times, in the course of each New York season, several new plays open on the same night. The critics must select between them. Sometimes, when confronted by such a case, I would advise with other minor critics, in hopes of hitting on the play the major critics would attend. I have even known one critic to telephone to the office of a more important confrère and inquire his intentions.

CRITICAL etiquette, in New York, has its well-established rules. Critics may, for example, talk with one another in the entr'actes, but may not, with propriety, speak to the manager about his play. Once, in the days of my novitiate, I broke this rule; indeed, that is how I became aware of it. I was acquainted with the manager, and when, between the acts, I saw him pacing up and down the lobby with a nervous step, I had a sudden impulse to tell him that I thought his play was good.

Moisture welled into his eyes. Gripping me convulsively by the hand, he told me that, although he had been a manager for twenty years, such a thing had never happened before; no critic had ever spoken to relieve his tension on a first night.

in the review that I wrote later, I posed as understanding everything. Indeed, as I look back, I think I must have seemed to understand plays in French better than in English. At the latter I sat in critical solemnity, without laughter or

His gratitude was touching, but it made me feel vaguely that I had blundered. Then I became conscious of the disapproving gaze of a pair of older critics, and began to understand. I got away from the manager as quickly as I could, and never again let a feeling of humanity get the upper hand of me on a first night.

The ideal critic rests upon his seat like a brooze Buddha with a poker face. Practice before the glass will help the young and inexperienced critic to some extent, but without natural immobility of countenance he can hardly hope to become great. If his face is expressive, he had best take refuge behind a perpetual frown. Otherwise he may be caught with a pleased expression on his face, which is the one unpardonable thing. A critic should never, never, look or write as though unqualifiedly pleased with anything—except, of course, himself.

One of the first little tricks to be learned about the critical trade is the way to make little jokes about the names of plays. Look over the theater advertising in a newspaper, and consider the possibilities there presented for puns, twists, and inversions. Suppose, for example, that James Forbes' comedy "A Rich Man's Son" had been a failure instead of a success; what critic would not seize the chance to apply to it the word "poor" by way of contrast with the word "rich" in the title? A play called "The Rack" offered a splendid opportunity; obviously there was "nothing in 'The Rack' but the tickets." In the case of "Electricity," it "failed to give off sparks." I know nothing of the musical piece called "The Red Petticoat," excepting that many a brilliant critical mind would be glad of a chance to say that it "should be taken off."

Another critical trick is that of writing quotable catch-lines. These should be brief and emphatic: "A Roaring Farce," "Every Line a Laugh," "Big Hit," "Scores," "A Success," "A Triumph," etc. The critical object in the writing of such lines is not to advertise the play, but the critic. More and more, managers are quoting, in their newspaper advertisements and on their bill-boards, such lines as the above, with the names of the critics duly appended. This not only influences the public but flatters the critics. I know, because it flattered me. Never shall I forget the splendid sensation of seeing my name upon an "eight sheet," with the legend "A Great Success!" But, alas! I left the field too soon! It is not unusual, to-day, to see a critic's name outside a theater in electric lights—nor by the way to see the critic standing there beneath the sign, like a lady before her portrait at an exhibition trying not to look too pleased.

IN the majority of cases the morning-paper critics do not witness the play on a first night. Owing to the pressure of time, they are usually forced to leave, like commuters, during the last act. But if there is pathos in the early flight of the commuters, there is majesty in the exit of the critics. Their exit has the dramatic flavor of the exit of the jury at a murder trial. What is in their minds? Will they acquit or convict? Within an hour their decisions will be written. Within two or three hours their imperishable thoughts will be whirling madly on the cylinders of swift rotary processes. And when a little later, you sit down at the breakfast table, you will find them there, in print—to spoil your meal, perhaps, if you are a manager, a playwright, or a player.

I remember a drama that ran on,

uneventfully, through two and a half of its three acts. Then, suddenly, just near the end, there came a big, redeeming scene that saved the play from mediocrity.

I met one of the morning-paper critics the day after this play was produced. He had reviewed it unfavorably and without thinking that he had probably left the theater early, I mentioned my surprise.

"No," he said, "I didn't think much of it."

"But didn't you like that big scene in the last act?"

"Oh," he answered, "Was there a big scene in the last act? I didn't see that. I had to get out and write my stuff."

If I were asked to set down an account of what I considered my most remarkable critical achievement, I should not hesitate, but should refer you to my printed notice of a musical comedy that was produced some years since at the Casino Theater in New York. After sitting through the first performance with critical attention, I decided that the piece did not deserve to live, and wrote accordingly. I called it a failure. It was "Floradora!"

Despite my unfavorable opinion, "Floradora" kept on. It played all over the world. Great fortunes were made from it. Everyone connected with it became rich. Brokers took "flirt" for the chorus girls; millionaires married the beauties of the famous double sextette. I would not be surprised to know that somewhere "Floradora" is still going on. But I am not going on. That is, I have stopped writing dramatic criticisms. I do not claim any credit for stopping. I was told to stop, so I did. I simply left the drama to its miserable fate. And look at the result! What result? I can't see any, can you?

Orators Who Have Influenced Me

By T. P. O'CONNOR, M. P.

DISRAELI

AS with Gladstone, so with Disraeli, there is one particular moment in which I see him most vividly. It was on a Sunday afternoon in summer; and it was in the height of the great deal between him and Gladstone with regard to the Eastern question—a controversy the vehemence of which it is difficult to get this generation to realize. Gladstone was thundering in Middletham and many other parts of the country against Disraeli for his support of the Turks against the Christians, and the Balkans; and he had excited feeling to such an extent that many good people regarded Disraeli almost as if he were an embodied Anti-Christ; and party passion ran higher than at almost any period in my recollection. You must realize this atmosphere around him to understand why this sight of Disraeli excited such an imperishable recollection in my mind. For Disraeli seemed singularly calm and detached amid all the cyclone around him. Never have I seen an English figure so strangely dressed: He wore a short overcoat, cream colored, and gay—the kind of coat that you would expect to find on a young dog going to the race-course or with his sweetheart to a hunt; his trousers were light in color; he carried a cane; and his waistcoat was embroidered. With

his black ringlets, the black tuft on his chin, and his swarthy complexion, he looked to me just like a King of the Gipsies, who had wandered for a while from his caravan and was walking among the Georges with his dress only partially concealing his Oriental love of color and finery. And he was all alone, walking through that London of which he was then the greatest figure as if he were but a country yokel taking his first view of the wonders of the metropolis. This solitude and this silence amid the tumult and the multitudes seemed to me in weird contrast with the millions of voices that were raging around him either in praise or in reprobation.

IT was a curious instance of that atavism that brought back a man in old age to the habits and tastes of his youth. Disraeli was born into the epoch that had just succeeded that of Beau Brummell, as Brummell was born into that which had succeeded the Marston and the other fops before the Regency. It was the age of the dandies, and even the most brilliant men—Byron among the rest—were proud to take a place among the dandies; and Count D'Orsay, one of Queen Victoria's earliest friends, was by sheer force of good clothes able to command the attention and dictate much of the

life of London. In those far-off days Disraeli outdid even the most fastidious dandies; for he is reported to have worn green breeches; and certainly he did adorn his shirts with lawn cuffs, and adorned his waistcoat with multiform and lengthy chains. And there he was now—an old man arrived, after all the storms and scandals of a very hot youth, to the greatest of human positions, and he was dressed as if he were a gipsy king out for a holiday!

IT was not, of course, the first time I had seen him. He was then no longer a member of the House of Commons; he had hidden his odd strange picturesque and arresting name in a coronet and the title of Earl of Beaconsfield. I had seen him, off and on, for years in the House of Commons, watching him from the conning-tower of the Press Gallery, and fascinated, as every visitor to Westminster was, by his strange appearance and manners. I have already described his face, with its olive complexion, its dark hair, its perfectly impassive expression, and its statue-like stillness. It was part of that brilliant pose by which, all through his life, he was always able to arrest attention, and to stand out from whatever company he was in, however large or however illustrious. Gladstone drew

your attention and held it, and constantly made you more attentive still by his restlessness of movement and his changeability of expression. But even Gladstone's wondrous and noble figure had not the same weird and unconquerable fascination of this great rival of his.

AFTER all, Gladstone was essentially English. He was English in his strong build, in his face, singularly handsome as it was, in his frankness of look, in his suggestion of the athlete who loved the open air and the long walk. Disraeli, on the other hand, was the Eastern in everything: in his looks, in his beaked nose, in his complexion, above all in that almost unearthly stillness that suggested to every chronicler the sphinx or the mummy. And when he did rise and walk—a thing that sometimes seemed impossible in one so still—there was a certain panther-like slowness and shuffle in the walk that did not seem European at all; it brought up before your inner vision those dusky beings that puzzled the Englishman and left him unable to go behind the expressionless eyes and impotent in spelling out the mysteries of the dark soul underneath.

If anything were wanting to make the contrast of Disraeli with his environment more conspicuous, it was the florid faces, the comfortable and prosperous forms of the squires around him, with their telltale faces of wide acres and rural life, of whom this strange Eastern was the trusted leader and all-powerful chief. You couldn't, accordingly, keep your eyes off Disraeli as long as you were in the House of Commons: he stood out, strange, remote, silent, motionless, as much in contrast with all around him as a blackbird in the midst of a crowd of white doves.

WHEN, at length, this immobile figure rose to his feet, there was again the same sense of his loneliness and his remoteness from all around. The language was, of course, English, but it was English of quite a different kind from that you had heard from the others. It was glittering; it was luxurious; it was often pompous and bombastic; it was the language of a literary man with poetic gifts, and yet with a certain richness and extravagance of taste that seemed to be like glittering gold on a coat of corduroy, so little did it resemble the ordinary businesslike and unadorned words you heard from the average member of Parliament.

The delivery was also quite different from that of any other speaker. The tones were deep—often they were apocalyptic. There used to be a saying in the days of Disraeli that he spoke like a man with a plum in his mouth. The voice was deep and penetrating, but there always seemed at the same time to be something muffled in it. And as a rule, too, it was somewhat monotonous, as if Disraeli had cultivated a curious mannerism of speech—as used to do parsons of the old school who either sang or intoned their sermons. When you compared this style of speech with the pleading range of Gladstone's voice,—each note in the whole gamut of the wonderful flexibility of that musical organ attuning itself to the particular character of the different passages

in his speech,—Disraeli seemed to be colorless and funereal and—I must again use the word—pompous.

AND yet, there were few men who ever sat in the House of Commons who had used his voice with such terrific effect. Even to-day one can read, with all the delight in any piece of literature that brings you into a magic land, the speeches in which Disraeli wrecked the omnipotence of Sir Robert Peel, and dragged him down from the dictatorship of a great party, and left the place vacant for the despised Jew whom Peel had so foolishly flouted. The brilliant satire, the held images, the racy anecdotes—all

"Disraeli was Eastern in everything, in his looks, in his beaked nose, in his complexion, above all in that almost unearthly stillness that suggested the sphinx or the mummy."

these things shine out still from even the cold and closely printed pages of Hansard; and you can almost hear the deafening applause, the thunders of laughter and gratified hatred, that greeted these powerful attacks on a great Parliamentary figure, the Goliath slain by the sling of the Parliamentary David. Yet, if one reads the contemporary accounts, one finds that even then the speeches must have had in their delivery some of those very faults that seemed to spoil Disraeli's speeches in the days of his maturity.

In the late Mr. Muncey's biography of Disraeli, one of the most impressive passages is that which he quotes from a writer of the time, describing Disraeli's manner and method as he engaged in this tremendous duel, in its way the most dramatic and thrilling in all the annals of even the House of Commons. This is the passage:

As an orator Mr. Disraeli can not be pronounced highly eloquent. In both voice and manner there is much monotony. He wants variety in action, gesture, expression, and elocution, always excepting when he breathes his sarcastic vein. . . . His action, where he has any, is ungraceful; nay, what is worse, it is studiously careless—ever aggressively so. With his supercilious expression of coun-

tenance, slightly dashed with pomposity, and a dilettante affectation, he stands with his hands on his hips, or his thumbs in the arm-holes of his waistcoat, while there is a slight, very slight, gyratory motion of the upper part of his body, such as you will see ball-room exquisites adopt when they condescend to prattle flirtation. And then, with voice low-toned and slightly drawing, without emphasis, except when he strings himself up for his points, his words are not so much delivered as they flow from the mouth, as if it really were too much trouble for so clever, so intellectual, in a word, so literary a man to speak at all. . . .

So much for his ordinary level speaking. When he makes his points the case is totally different. You can then detect the nicest and most delicate inflexions in the tones of his voice; and they are managed, with exquisite art, to give effect to the irony or sarcasm of the moment. . . . In conveying an innuendo, an ironical sneer, or a suggestion of contempt, which courtesy forbids him to translate into words—in conveying such masked enmities by means of a glance, a shrug, an altered tone of voice, or a transient expression of face, he is unrivaled. Not only is the shaft envenomed, but it is aimed with deadly precision by a cool hand and a keen eye, with a courage fearless of retaliation. He will convulse the house by the action that helps his words, yet leave nothing for his victims to take hold of. . . . And all the while you are startled by his extreme coolness and impossibility. . . . You might suppose him wholly unconscious of the effect that he is producing; for he never seems to laugh or to chuckle, however slightly, at his own hits. While all around him are convulsed with merriment or excitement at some of his finely wrought sarcasms, he holds himself, seemingly, in total suspension, as though he had no existence for the ordinary feelings and passions of humanity; and the moment the shouts and confusion have subsided, the same calm, low monotonous but yet distinct and searching voice is heard still pouring forth his ideas while he is preparing to launch another sarcasm, hissing hot, into the soul of his victim.

I WAS fated, quite by accident, to hear Disraeli's last speech both in the House of Commons and the House of Lords. In the Commons the speech was addressed to empty benches at the end of a Parliamentary session. Sir William Harcourt, who was a great personal friend though a strong political opponent of Disraeli, led the attack; and he did so in a voice the softness of which seemed to strike me, though I had heard not a whisper of the coming change. It was on the then burning question of the Bulgarian atrocities.

Disraeli, in reply, spoke in the same, curiously subdued tone; it was in that speech that he used the afterward famous phrase of coffee-house babble. And thus quietly he slipped out of the great arena where he had built up his fortunes from peasantness and contempt to the Premiership of the greatest of empires.

The Autopilgrim's Progress

II

Lemuel Smelleth Gasoline and
Loveth His Horse Less

*S*O wapped the world with the smoothness of taseline;
Lem, still defying the Demon of Gasoline,
Drove faithful Pansy to town, the long way,
Seven hours' trot in the heat of the day.

One August morning,

Without the least warning,

Round Filkins' Pump whizzed a little gray car,

Striking Lem's gig with so breathless a jar

It tore off a wheel.

And the Automobile

Paused while its owner removed his cigar.

"Sorry!" he drawled, though his tone was polite,

"I'll pay the bill. I'm G. Whillikins White.

And say! If the crash has delayed you, look here—

Jump in my car and I'll carry you clear

To town, do your shopping, and hustle you back again."

Lem paused, confessing

His errands were pressing,

So he leaped in the auto, which, taking its track again,

Charged like a cannon-ball puncturing air;

And now he was in it

(Though dead set ag'in it),

He had to admit and declare

This rubber-wheel riding

Was sort of coaxing—

Much more so than driving a mare.

"And the way he can handle

Them brakes is a scandal,"

Thought Lem as he flew and held on to his hair.

Just one solid gray streak—AND, BY GOSH, THEY

WERE THERE!

*L*EM, getting down

In the heart of the town,

Purchased a shrimble, a ham, and a hat;

Then, like a lord,

Fitted 'em aboard,

Got in himself and expectantly sat.

Somewhere, as White thumb'd the fly marked "Magneto,"

Buzzed on the spark like a humming mosquito,

Lem felt a twitching,

Sort of an itching

Yearning to wrench from the driver his seat,

The wheel in his hands, and the clutch at his feet.

Man, ever changeful, ungrateful as royalty,

Where is thy constancy—where is thy loyalty?

Lemuel, where is thy faithfulness now,

Surviving to Pansy a horse-loving rout?

Gone, or departing with monstrous rapidity!

Lem, leaning close with a hectic avidity,

Thus spoke to White:

"Say, if I might,

Couldn't I help you to ran 'er until—"

"No, no, my man—

We'll, yes—you can

Jigger that oil-pump awhile, if you will."

Whillikins White pushed a jig with his
thumb:

Inside the car was a desperate hum,

Then the engineery shook with an anger profound

As Whillikins backed 'er.

Then, turning her round,

Back down the roadway she flew like a

windard—

Giddy sensations made Lemuel's gizzard

A roid, so to speak.

Again a gray streak

Of fast-flying fence-rails and dust flung

like foam.

Lem closed his eyes. AND, BY GOSH, THEY

WERE HOME!

*W*HILLIKINS looked at his watch, whistled
low:

"Twenty-six minutes, round trip—

rather slow!"

"Slow!" gurgled Lem, for response at a loss.

"Say, Mister Man, how'll you trade for my horse?"

Daughter Katurah and mild Mrs. B.

Noted the change, and were worried to see

Lem's abstracted

And semi-refracted

Look. They were fussed by the way that he acted.

He was remarkably silent at supper, most brief

Brief of response when a topic came uppermost.

After the meal he spoke, bitter as tannoy:

"Shucks! I'm tired feedin' that old critter Pansy!

Her only able

To stand in the stable.

Eatin' the hair off 'er—

Any good feller

Give me a fair offer,

Dash it, I'd sell 'er!"

Mother gasped, "Father!"

But daughter sniffed, "Bother!

Dad's waking up to the Modern Ideal."

*R*IGHT after supper, as stern as King Lear,

Lemuel strode to the barn, whence a skiving

Told him that Pansy, the faithful old ninny,

Stood at her manger, where some one had led her,

Tied her securely, but never had fed her.

"Simple old critter!"

Speaking quite bitter,

"Type of a race

Passin' away

Off o' the face

O' the earth, so they say!"

Lem stroked his chin, which was getting some gray.

Then, going aloft

Where the fodder was left,

Picked faithful Pansy a forkful of hay.

Hard upon sunset, the night being hot,

Lem snatched away to the old cedar lot,

Sat on a log by the side of a brooklet,

Further, his glances—

Then, taking chances,

Pulled from his pocket a Motor Car Booklet,

Turned to the page labeled "Center Control."

Y'es, the Gasoline Microbe had entered his soul!

(TO BE CONTINUED)

The Dr. Cook of Politics

By N. H.

THAT William Sulzer was a cheap demagogue had been widely known for many years. That he was weak on the money side had been suggested by previous speculation, but this side of his nature received little attention, so uncharacteristic did it seem compared to the incomparable vanity of the man. Never did a person out of an asylum show more grotesque symptoms of megalomania. A few persons asked, "Is Sulzer crooked?" but nobody took much interest in the answer. Instead they told stories to illustrate the incredible conceit of the creature. At the inauguration in Washington his behavior near the President convinced beholders that Sulzer thought Mr. Wilson a subordinate figure in that little celebration. And he got away with it. Thousands applauded him. He was the very Dr. Cook of politics. The masses took him at his word. He said he was the people's friend and they thought he was. He called the executive mansion the People's House, and this shell-game imitation of Abraham Lincoln worked successfully on unsuspecting myriads. In not Dr. Cook still lecturing in the land? And is Barnum really dead?

SULZER has never done an unpopular thing that I know of. He never had any morality except to seek cheap success at any cost. A Tammany Hall Congressman for years, he differed from the other Tammany Congressman in being more spectacular and more demagogic. His whole life was spent in flattery. Read his speeches. Conceit and subservience are mixed in equal parts. He speaks everywhere, and everywhere he flatters those from whom he hopes advancement.

Tammany Hall cannot take all the blame for furnishing such a product. The American people must take some responsibility for accepting him. It was only a little while ago that he exploited falsehoods against the admirable Commissioner of Immigration, William Williams, because Sulzer was toying to recent immigrants; and soon after the people chose him for Governor. Tammany Hall was satisfied, but after all, the people chose him. Tammany was satisfied because it usually prefers a weak and vain product to a stronger man. Dix suited Murphy. He had a "front" behind which Tammany could hide. He was said to be "respectable." He was certainly dull and subservient. Murphy liked him, and the great American people preferred him to Henry L. Stimson, who ran only out of a sense of duty and who was ideally equipped.

WHEN Sulzer loomed on the horizon, Murphy had good reason to rejoice. He had had a narrow escape. He had come within an ace of seeing Wm. G. McAdoo nominated for Governor. Had it not been for a personal complication at just the wrong moment McAdoo would be at Albany to-day. We should then have been without his brilliant services at Washington, but there would have been a Governor who would have done Tammany just as much harm as a strong Democrat at Albany could do, and that is much. No wonder then Murphy was

relieved. Of Sulzer no doubt his reflections were much as follows: "Here is a fine old five-spot coming down the pike. Let him come. The people seem to want him. Let them have him. He's good enough for me. We have sent him to Congress a good many times and he hasn't done any harm yet. He is an ass, of course, and he likes to shake his ears and bray, but he will stand without hitching, and if he doesn't we will bitch him."

MURPHY can hardly be criticised for the one mistake he made. He underestimated the power of vanity and ambition in high office. It sometimes makes a lion of the silliest lamb. William saw himself as a future president. He imitated not only Abraham Lincoln but Governor Hughes. He took up the excellent cause of direct primaries, as Hughes had done, and tried to use it to show that he had become the boss of his former masters. He used hundreds of telegrams and long distance telephones at the public expense. He made a whirlwind campaign, but he too overlooked one thing. If you are going to have a falling-out with your fellow-statemens of Tammany Hall, you must be careful about campaign contributions and stock-gambling debts, and also about any affidavit. That is one of several practical morals to be drawn from this eventful history.

Of course, Sulzer thought he had the story covered up. Adventurers usually think they have their stories covered up. Sulzer supposed the brokers with whom he gambled, and to whom he turned over various funds, would protect him. But those brokers and the stock exchange, like all of us, have felt the changes in the atmosphere. They recognized that, if they owed something to their client, they owed something also to the law and to the public. They delivered him up to justice, or, if you choose, to the revenge of Tammany Hall. It is a grotesque and even tragic history, but it will not be without its uses if it makes it a little harder for our mighty nation to choose cheap professional politicians, thinly disguised, in preference to the ample, available number of first-class public servants who have nothing to recommend them but their ability and their independence.

POOR old Sulzer!—He has lived all his life in a struggle for appearances. He did not try to be. He tried to seem. He probably half deceived himself. A friend of mine called on him not long before the exposure, and it turned out in the conversation that she was sister-in-law to a well known man named B——. "What?" exclaimed the Governor, shaking her hand with great effusion. "You a sister-in-law of my dear friend B——! Well, I am glad to see you." To the best of B——'s recollection, he and the Governor have never met. It wasn't all conscious falsification. Part of it was the histrionic temperament gone mad. And it was so over-done that nearly everybody had begun to laugh at it. A politician a few weeks ago brought me a message from the Governor asking if I would go to Albany. "No," I said, "I certainly shall not. Why should I? He doesn't want to see me. He is just urging people

up there for effect and then making them sit around for hours until he gets ready to come out and do the 'great man' act." Was the messenger angry? Not he. "I am glad to hear you say that," he replied. "I agree with you." Every person I know laughed at him—and yet he won the people. He fixed his hair and his face like the mask of tragedy, and talked on the platform like a last-generation Fourth-of-July orator. He let it be understood he was a Jew, and let it be understood he wasn't a Jew according to political exigency. He never in his life went to work quietly to do good, without seeking noisy acclaim. He never stood up for his opinion against his immediate advantage. He never relied upon reason, but placed his trust in pose and rhetoric. He had no element of superiority, and yet the people trusted him. He posed and screamed, and the people took him at his word.

WELL, enough of him, perhaps. Let us sum up the lessons and salubrious. "From excess of evil, evil dies." The event is so disgraceful it may do something to make the people think. The case looks to me about like this:

1.—Look out for the professional-politician type, and don't trust one of them merely because he tells you he has stopped playing with the machine. Also don't believe him when he tells you, with loud cadences, that he lives only that a suffering people may be a little less wretched through his efforts.

2.—Insist on moral character. Some strong men are without it, like Gaynor. Most standard demagogues are without it, like Sulzer. Hughes had it. Wilson has it. Keep your eye out for it always. Choose your public servants for their experience, their ability, and their morals, and don't believe that anybody who year after year has represented Tammany Hall is ever going to be worthy of your confidence. Tammany Hall must be destroyed before the citizens of New York will have an even chance to get and keep adequate men in office, in the City and in the State.

3.—Don't try to get rich in a hurry. Don't yearn after money you do not earn. Don't gamble. It is a national vice and it destroys every year many far better men than Sulzer.

HIS career is finished. Heaven knows what will happen to him. I for one am sorry for him. He is a mere symptom—nothing but a product. We shall learn on November fourth whether the people have learned anything from this choice lesson in professional politics. They will then choose, in Sulzer's home city, between the tricky, ignorant, and plundering politicians on the one hand, and a ticket carefully made up of independent citizens on the other. Four years ago a fusion movement gave us Mitchell, Whitman, McAneny, and Prendergast, and they are running all together on a ticket against Tammany this summer. On the other side is the ticket dictated by Murphy. The choice will show whether the disgrace of Sulzer has been used by the people for their enlightenment, or whether it has passed unheeded or misunderstood.

"THE RITZ" BY WALLACE MORGAN

How Men Look to Women

By MARY ROBERTS COOLIDGE, Ph.D.

THE proper study of womankind is Man—wives and daughters learned that long ago in pursuance of domestic administration; but women in general are learning it anew as they make their first modest essays in politics. The feminine lobbyist doubtless practices now, as ever, the wiles of the manageress or the adventuress, as her temperament may dictate, and sizes up mankind accordingly. But the women of the Western States who have quite recently come into political recognition have come to a more direct and personal interest in the membership of the legislature.

In California they have had the good fortune to be swept in on a wave of political reform and have found their presence and their ideas received at the Capitol with surprising cordiality. The twenty or more women who, as representatives of women's clubs, and civic, charitable, and social-reform associations, constituted an informal council at the Capitol have not found it necessary to lobby in order to get a hearing. For the most part they have been met by the legislators with courtesy and their suggestions and demands, particularly on behalf of children and youth, have in many cases been accepted. And yet, while sitting day after day within the rail, whether as advocates of some reform measure or simply as spectators bent on getting an education in political tactics, they have suffered a certain disillusionment concerning their political representatives.

INCREDIBLE as it may seem, and in spite of all the recent mock-raking, which might have led to the supposition that most law-makers are either stupid or crooked, the idealizing feminine mind has clung to a school-girl's dream of public officers both intelligent and patriotic. Although in the relaxation of the family circle their own men-folk-might be a little peevish and personal at times, might practise a repulsive wit, and were even astonishingly egotistic and illogical when they wanted their own way, nevertheless, every woman has assumed that her Man was great—or, at any rate, worthier than other men in public life.

Indeed as they were with these simple and old-fashioned ideas, it has been something of a shock to the women attending the legislature to see these professional patriots behaving on the floor just like plain folks—four-fifths of them, like men in other walks of business, more or less incompetent, and sometimes rather ill-educated and crude in speech and manner. A good many seem to be there because a thousand dollars and mileage for four months' work looks good to them; quite a number are there to groom themselves by a little legislative experience and advertising for some salaried post in the appointment of the government; a still larger number enjoy the game—such men as a century ago might have been leaders of daring deeds, or hunters, or possibly pirates. The fractional minority are all that sustain the feminine observer's faith in democracy, for they seem to belong to a competent order of men who, having been successful in business, journalism, or the law, honestly wish to put their efficiency to the use of the State. They are not conscious reformers, but

they don't like to see the country run badly and they itch to set things right.

After a few days of observation, the herd of men begin to differentiate into groups according to their manner and physique. There is the type of well-groomed, gentlemanly persons with broad brows, thin lips, and quiet, incisive voices—of the city rather than of the soil—who have endurance and a considered pace, and are, as the spectators afterward learned, more pugnacious than they look. The country contingent with hawk-like eye, sun-browned cheek, thick, grizzled hair and high nose, represents the pioneer ranchmen, miners, and mountaineers. There is, too, a group of men who, by their look, might be ward politicians, successful liquor-dealers, or ex-pugilists; with their rosy color, developed muscle, and comfortable flesh, a little low of brow and narrow between the eyes, but wide of jaw and evidently genial good fellows among men. As for the minor types, there are a few who personify caution—they look to the right or left before they come out into the open, and run no unnecessary risks; and a considerable body of new men of the athletic, young-lawyer sort—clean, clear-eyed, very dignified, but as yet of unknown capacities.

TO the feminine onlookers these legislators afford more sensations than any two-ring circus; for in debate they are by turns amusing, revolting, pitiful, and at times thrilling and admirable in their display of raw or disciplined human qualities. In committee most of them behave like sane, business-like creatures, but as soon as they get upon their feet on the floor many of them assume a striking pose, either to impress their constituents, to furnish newspaper copy, or merely because they have an habitual affectation.

There is the chronic humorist who never fails to lighten business with witticisms, whether the subject be puerile or important; and the chronic legal-objector who prides himself on teaching law to his colleagues, young and old alike; and always the old-fashioned arguer who has "grave doubts as to the constitutionality" of any measure for which he does not wish to vote. But most in evidence of all are the orators-by-instinct—the campaign politicians who bellow forth the most commonplace ideas and obvious facts as if patriotically inspired. Their sentences burst forth frequently with the startling unexpectedness of a safety-valve.

ON almost any day these explosions may occur. Perhaps a solid business man, who is ordinarily mild-mannered and reasonable, will rise to his feet and assure his colleagues that he did not intend to speak, but he must explain his position on this bill. Although the measure may concern any trivial practicality, the speaker will suddenly and without apparent occasion, make it an agitating affair. His voice takes on a fierce, rounded volume, and with trembling gesticulation and convulsed countenance, he will pour forth a stream of torrential eloquence, while his colleagues peacefully read the newspapers, smoke with half-closed eyes, or write letters and send them out by the mess-

sengers as if nothing at all were going on. They evidently mean no disrespect, but they seem to know that the orator can not stop and most of them have already made up their minds how to vote.

Whenever the perpetual tourist or a band of school children in charge of teachers, wandering through the marble corridors, hear this continuous, bellowing sound, there is a rush for the galleries that they may learn how their country is governed; but the women apprentices in politics ask each other in bewilderment: Why does he do it so *ridiculously*? For if any woman at a club convention should carry on like that she would be removed and treated for hysterics. The only answer is: They can't help it. Long ago these politicians acquired the habit of campaign oratory and they know no other way of expressing themselves—at least on their feet. It is, as the French say, "Tu orate or to be silent!"

THERE is something amazing to the conventional feminine mind in the unconscious self-exposure of these men. We have been taught to suppose that it is only women and children who talk about themselves in public, or use the personal instance by way of illustration. But here on the floor fond fathers explain about "my five children" and "my little daughter" in the presence of their brother politicians and the curious crowd behind the rail with a shameless intimacy that makes a woman shrink. If the measure up for discussion relates to the liquor question or gambling or vice, they "turn on the tremolo" by instinct, as part of the oratorical effort with which to confuse the issue. Now and then the speaker "fakes" his emotion pretty well, but usually there is an insincerity of tone which brings a look of horror on contempt to the faces of his auditors. Many of the women in attendance upon this legislature had also attended the National Federation of Women's Clubs in San Francisco last year, and they could but contrast the reticent dignity of speech, the restrained emotion, and the earnest resort to facts displayed there with the egotism of naked masculinity exhibited by their political representatives.

IN almost every legislative debate there are two or three old-time bogies that continually pop up. If the bill has any relation, however remote, to certain well-known corporations, some gentlemen feel obliged to get up and whack them—regardless of personal obligations. This kind of bogeyism is supposed to look well. But to the spectator it seems very like the automatic whipping of a dead-eyed teamster which has ceased to produce any effect whatever. Then there is that yellow bogie, the Oriental, who has had the stuffing knocked out of him regularly for thirty years, but who must be dragged out at every session in order that the astute politician may set himself right with certain labor interests. The most ancient shade of all is the States Rights Alarum—warranted to go off as promptly as a clock whenever there is an issue between the State and the Federal Government, and the State happens to be in a mood to dare the President and his minions to come on.

Among other old-fashioned but more staid and revered figures are the Platitudes—moral and otherwise—which, like marionettes, punctiliously appear and play their parts while their masters pull the strings and furnish the voice. Whenever a senator wishes to "crawlfish" he usually begins by declaring that "the motives of every gentleman on the floor are above reproach"—he is perfectly sure of that—and then he produces a prim little puppet, whom he calls "My Conscience," who explains how imperative it is that he should vote "as he thinks best." Everybody within hearing may know that this is merely an excuse for voting some other way than he has promised or than his constituents demand, but, if maintained with sufficient skill, it is unanswerable.

But all this play-acting is not so out of place as it might appear. The fact is, these gentlemen are not talking to their colleagues or even to the galleries, but to the newspaper correspondents. Professional politicians always need advertising, and every legislator wishes to be presented to his constituents in the morning papers as a highly moral and energetic

Those legislators, particularly, who wished to sidetrack the moral measures definitely urged by the feminine electorate, referred with resentment to the pressure brought to bear upon them by their women constituents. One assemblyman, in a very violent manner, called "God to witness" the awful day when the mothers of the country descended to threaten their accredited representatives. To the amusement of his auditors, he then revealed that among hundreds of letters from women he had received one from a "good lady" who, after asking him to vote for a certain measure, had concluded with the terrible statement that "the women will remember their enemies as well as their friends!" Another gentleman complained openly of the political menace of the organized women's clubs, temperance unions, and civic leagues of his district. He doubtless knew how to meet the pressure of corporation and machine interests, but he had no idea how to escape this feminine coercion. All he could do was to stand up and shout that these women did not know what they wanted, nor what they were talking about. One senator asked

thousand other harmless, decent, domestic ladies such as these leave out of account when bent on their private errands. These women were all over thirty, some of them gray-haired, serious-looking, quietly dressed and unmistakably ladies, and a little shy at being marked out as there "for something."

What these lawmakers did not comprehend was that this row of innocent-looking middle-aged women had been working for years in charities—for the aged and infirm, the defective, the unemployed, the sick of body and soul, the young on the roads of perdition—and that they represented an amount of competence and accumulated information on these matters not possessed by most politicians. While these gentle-seeming creatures sat there with that look of disciplined docility which is the mark of women of our day, the cock-sure legislator told them what they ought to wait, as if their legislative demands were vagaries of children. A pretty, gray-haired lady whose whole leisure had been given for years to work among defective children, said one day, lazily, to another woman of the circle: "If I could show these men the horrible,

fellows. For, if it should inadvertently happen that he can not deliver the goods that he promised before election, he must still be able to convince the people that he tried very hard to do so. Indeed trite moralizings and sentimental hum-combe seem to be a sort of steam let off to cloud the issue.

Men used to do this wholly by means of platform oratory, but nowadays to roar and to quaver and to shake your fists or point the trembling forefinger is getting out of date—is even a little ridiculous—and the newspapers must be relied on to create the necessary atmosphere of approval in the orator's own district. Thus, whenever the modern legislator finds it desirable to vote against the demands of his constituents he takes refuge in posing as a martyr to his conscience and explains at length (for the benefit of the reporters and his home town) why he must do so even at the risk of political suicide.

At this session of the California legislature one wholly new note was sounded—one that frequently lightened the murky air with humor. For the first time in the experience of these representatives the "good woman's influence," about which they had been wont to spout, had become a concrete thing to be reckoned with. Those quiet, innocent-looking ladies within the rail represented thousands of silent voters whose temper in politics had not yet been tested; and behind them were other thousands quite unknown but no less sure, negligible. Whether a man scorned or approved of their power, it might well make him uneasy.

a colleague whether he was going to vote for a certain bill that the women were urging; the other replied, whimsically: "Don't I have to go home?"

In the debate on the Red Light Injunction and Abatement Bill on the floor of the Senate, the leader of the opposition expressed himself as distressed to see "the blushes and looks of horror" on the faces of the twenty or more middle-aged women who were there to represent various reform associations. They ought not to be there, he said; it was quite improper and they had only themselves to blame. He was only one of several men, otherwise highly intelligent and capable, who instinctively took the traditional attitude toward women, and were quite unaware that the conspiracy of silence between men and women on certain vital subjects has been finally and completely broken through. They seemed not to grasp the idea that women, however limited in political experience, know perfectly what they want, especially in matters relating to the welfare of children and youth.

The legislators were constantly referring to "the good women" and by implication setting others over into the category of "bad women." They have not yet found out that this classification is offensive to "the good women" themselves, nor do they perceive that women are already differentiated into many varieties, requiring varied treatment. Inside the privileged rail, in those sedate red plush chairs, there have been sitting through the whole session a coterie of women who looked, no doubt, to the un-discriminating male eye, just like a

misshapen, disordered babies in an institution within a mile of this Capitol, they might realize a little what we are here for—and what they should be here for." And the others could but feel with her that it would be a long time before the average man would see what they can see.

But if those women in waiting sickened sometimes at the primitive man there exposed to their gaze, they were, nevertheless, acute enough to grasp the political significance of a body that, while falling so far below their ideals, was yet better, perhaps, than the constituency from which its members came. They said to themselves: This is concrete democracy. We have legislators behaving like that because we, The People, are like that. They might have said—to paraphrase a famous criminologist—that every community has the legislators it deserves.

As the days of the session hurried on and moments of crisis became more frequent, exceptional men began to stand out—a good many of them; and this fractional minority became, to the feminine imagination, the saving remnant of the State. They were the younger men, or those not so long in public harness, for the most part, who had a premonition of the approaching and clearer order; men of better education who bring to the struggles of practical legislation higher ideals absorbed in an academic atmosphere; men who don't drink so much nor talk so blantly as the old-time politician; men who are willing even to listen respectfully, and do not resent the claims of women citizens.

The women within the rail soon came

to understand that the real work of a modern legislature is done in committees and that what they were hearing upon the floor was, in part, copy for the newspapers, but chiefly the natural unconsidered talk of the mischievous, irresponsible, unmoral boy that survives in every normal man and must blow off. They began to judge them less by their public behavior and more by the results in the shape of legislation which was the serious business for which they were commissioned. Considering the noise, the inattention, the lack of system and facilities, and the inexperience of many of the legislators, the laws that at last emerged and went on the statute books were surprisingly good.

It was a great education, for the women, in the nature and methods of man outside of domestication; while to many of the legislators these women were probably mere eccentrics or reformers—not to use

less respectful terms. Yet that polite, critical, docile-looking circle was also shrewder than it looked. However untutored in politics, these women knew how to stand obstinately against the comfortable creed of Things-as-they-are, and, in their very ignorance and idealism, would continue to exact a higher standard. Every man began unconsciously to recall his mother's, or his wife's, or his often-pooch-pooched sister's point of view; while each woman went home saying to herself: women can get anything they want from the legislature if they attend to the representatives in their own districts. They have all but done it once—they can do it better next time. At the next session there will be another circle, larger, more assured, more obstinate, and with more experience in the psychology and practice of legislators; and in two years or four, with women voting, the exceptions among legislators may become the rule.

"I Like It"

Like Most children do

INSTANT
POSTUM

—the new food-drink.

But the big fact is that children, as well as adults, can drink Instant Postum with fullest benefit.

Little folks are commonly denied coffee, "because it hurts them."

The delicious, mild, Java-like flavour of Instant Postum pleases all the family and no harm can result because it is made entirely of choice wheat and the juice of sugar-cane—pure and free from the coffee drug, caffeine, or any other harmful substance.

No Boiling

A level teaspoonful of Instant Postum in an ordinary cup of hot water dissolves instantly and makes it right for most persons.

A big cup requires more and some people who like strong things put in a heaping spoonful and temper it with a large supply of cream.

Experiment until you know the amount that pleases your palate and have it made that way in the future.

Postum comes in two forms. Regular (must be boiled).

Instant Postum doesn't require boiling, but is prepared instantly by stirring a level teaspoonful in a cup of hot water.

"There's a Reason" for

POSTUM

Finance

The Passing of the Pioneers

By ALBERT W. ATWOOD

THE owner of securities who is not directly connected with large affairs can not fail to be puzzled at times by the rapidly changing personnel of the country's financial leaders. He has but to read the biographies of men like H. H. Rogers, E. H. Harriman, Henry M. Flagler, J. P. Morgan, and Anthony N. Brady to realize that these men were the very life of many of the great corporations they created.

The old leaders brought about what has been called a "hundred million dollar era." Concentration and centralization of industry, while having other than personal causes, were at least championed and led by men such as these. Already this year three of our greatest "captains of industry" have died. In less than ten years a whole generation has left the stage. Who will succeed them on one can tell. Perhaps they will have no successors, and there may be no need of any.

In the nature of human life men must die, that being one of the chances of business and investment just as it is of everything else. But a few years ago, somehow, not much thought was taken of what would be the results of the passing of an entire group of financial giants. The intimate part which certain daring geniuses played in building up the corporate structure of this country clearly raises a problem now that so many of them have gone. What will be the effect upon investment securities? Are either temporary losses in market prices or is permanent values to be expected?

What Brady Stood For

TAKE for instance Anthony N. Brady, whose death was so recently recorded. Perhaps there are many readers who never heard of Brady. His name certainly did not arouse the newspaper headline writer to such pitches of enthusiasm as did those of John D. Rockefeller, J. P. Morgan, and E. H. Harriman. He was a quiet man who escaped publicity. But he was one of the Titans all the same. Beginning life as a small tea

merchant, he came to be what is known as a power in finance, and his fortune must be all the way from \$40,000,000 to \$75,000,000. Not that the fortune means much in itself. It is mentioned more by way of incident than because of its intrinsic importance. It is not the riches he accumulated that essentially matters, it is the master influence that he and many others like him possessed in shaping industry into what it is to-day.

From a successful tea merchant in Albany, Brady eventually became interested in the local utilities (gas, traction, and so on) and later entered the same field in a broader way. Although in time he became a dominating figure in one of the country's largest trust companies, an important figure in rubber companies, and the holder of an immense quantity of stocks (said to have had a value as high as \$31,000,000) in tobacco, yet this man always devoted his talents mainly to gas, electric light, and street railway enterprises. He was one of the chief factors in the gas company in Chicago and he was the man in the abnormally rich electric lighting company in New York City and the traction lines in Brooklyn. The latter he improved and built up to an appreciable extent, and mainly through his efforts a concern, which ten or fifteen years before had very poor credit, was able to command more than two hundred millions of dollars for new subways designed on a liberal scale for future generations.

Good Work Lives On

AS men like Brady pass away conditions affecting their enterprises must change. Is the new order of things disquieting or reassuring?

It is much easier to ask broad questions than to answer them. Time alone fully satisfies such queries. But it may be noted that even in the daily stock market, where fluctuations depend largely upon sudden and unexpected happenings, and the unaccountable personal equation, no disturbance resulted from the death of Harriman, Morgan, and Brady,

vast as their interests were. Men are not as indispensable as they seem.

One sound lesson to draw from these facts is that those who build sound structures need have little fear of the fate of these creations after death. No doubt many enterprises depend largely upon one man's ability. A sanitarium in the Catskills which is said to have insured the life of the remarkable physician who founded and conducts it, for the full amount of the capital stock, is not an exception. Most investors will do well to keep their hands off a concern where the personal equation is absolutely essential. Conservative securities are based upon more than any one man. The Pennsylvania Railroad would not have been what it is to-day without Scott, Thompson, and Cassatt. But who doubts the ability of Rea to continue the work which an almost military organization has set in motion?

It is perhaps safe to say that the work of the future calls for hard industry and plain, ordinary, efficient workers, rather than for daring and genius. Indeed the men who have gone are not only not indispensable for the present and future, but are perhaps not best fitted to meet the new problems which have arisen. This is a radical statement, but it bears close inspection.

Clearly the railroads do not call for either a Harriman or a Cassatt. Indeed they do not seem to call for a Mellen. An executive for the immense structure which E. H. Harriman built up would have been sorely out of place in the last year or two if he had been of the plunging, ambitious type. From the point of view solely of the owners of stocks and bonds the men to head the Harriman railroads must be both conservative and sensitive to public opinion. Ruthlessness simply would have made the trouble into which their properties had fallen because of the government suit against their merger all the worse. The same is true also of the New Haven system. What will give value to New Haven debentures and stock in the next few years will be conservative bookkeeping and finance, and the ability of the new executive to get close to boards of trade and local granaries. A giant of finance, bent upon colossal amalgamations, would simply throw the New Haven with its scores of thousands of security-holders into bankruptcy.

The Trusts No Longer Supreme

THE last few years have witnessed a remarkable movement toward decentralization in industry. In the banking field alone the tendency has been otherwise. Whether this will continue now that Morgan is dead, and public opinion and the party in power alike oppose the movement, is at least questionable. But the big transportation and manufacturing industries are decentralizing rather than combining. Enforcement of the Sherman Law has broken up many of them. The mammoth Oil and Tobacco Trusts have been split into many parts, and there are several new tobacco companies of prominence, and a dozen new and ambitious oil concerns. Under the same decree the Powder Trust has split into three, and the Harvester Trust has to an extent anticipated an unfavorable decision by voluntarily separating into two segments. The Sugar, Shoe Machinery, and Steel Trusts are now being sued and it looks as if the Telephone and Smelting Trusts would come next. A

score of smaller combinations are under similar attack.

Moreover, it has begun to dawn upon men that perhaps after all bigness does not mean efficiency. Stockholders want officers who will conserve and make efficient rather than aggrandize. The new president of the American Sugar Refining Company is an amiable and accomplished gentleman, but to compare Charles H. Allen with Henry Havemeyer, autocrat of sugar, would be to provoke a laugh. Havemeyer was a man of singular force of will, but if he were living to-day and trying to operate his company as he did fifteen years ago, it would be crushed and ruined by sheer force of public opinion.

Thus while business to be successful needs efficient operators to-day as much as ever it did, it does not require the same type of masterful Titans. The big corporation to-day demands an executive who will conserve its resources, take an enlightened view of public as well as private rights, and employ the soundest and most scientific methods. But more significant still is the fact that an entirely new group of business enterprises, calling upon the public for their investment savings, has grown up along with the decline in the power of the big combinations.

Even if the compulsion of law, public opinion, and doubts as to their real efficiency had not begun to break the grip of the giant combinations, another power has arisen to check them. Wholly new groups of enterprises have come into being to command executive talent and investment capital. It has been said that the old autocracy of business has gone and a new democracy come in its stead. This statement is rather "high falutin'" and remains to be proven. But it is at least true that two of the greatest of these new industries, the automobile and public utility, have grown up without any large combinations or trusts. Until a comparatively few years ago the only important public utility companies were in the large cities and were in the hands of the same men that controlled railroads and industrial trusts. But the business of gas and electric lighting and power and interurban railways has long since expanded far beyond the large cities as well as away from any limited group of financial autocrats. An entirely new generation of men has come forward to build and manage these concerns.

It has been well said that this is an era of little things and little jobs in the financial world. That is because so many new industries have grown up to a point where they demand capital from the public at large. A few of the executives of these newer industries are fairly well known, such as Henry Ford of automobile fame and George Eastman of kodak renown. But for the most part the newer leaders of business do not figure in the public eye as did the financiers who have gone.

Thus the passing of the Old Guard does not seem on the whole to threaten the stability of our investment structure. Now and then the newer promotions lack stability and are ballooned too high by their over-enthusiastic backers. Some fairly big bubbles will have to be pricked. Some mistakes are being made which the older generation would have avoided. But altogether a fairly sober time seems promised, and less will be heard about the High Finance and The Interests. And a very fortunate thing that is for the owner of securities.

"Coney"

A Drawing by G. O. Coleman

The Whens of Life

When The Last Child Leaves

*For half your life, you've labored with "the children" in your mind,
Sometimes a little step ahead, sometimes a mile behind,
And many a night you've pondered on the whenceness of the how,
But you did it, yep, you did it! raised 'em one and all, and now—*

*There's a good deal of that feeling when the baby went to school,
Or the big boy went to work (as independent as a mule!)
Or the girl went off to college, with a happy, hurried kiss,
But always there were cowings-back. It never was like this!*

*Lordy, but it's lonely when the last child leaves;
The year is at the autumn and the very weather grieves;
The skies are gloomed and raining,
The whipped trees are complaining
And there's sobbing in the chimney and a weeping at the eaves.
For oh! it's lonely, lonely, when the last child leaves,*

*So, oh, it's lonely, lonely, when the last child's left.
The living-room has suffered loss, the bedroom cries of theft.
And eke the cheerful dining-room
Becomes a sad, repining-room.
For every room is lonely when the whole house is bereft,
So, oh! it's lonely, lonely, when the last child's left.*

*You can not change the universe, you wouldn't if you could;
Your link is in the chain of life, and somehow that is good,
But you were first to them so long, in all their joys and cares,
And now the last one's left you to remembrances—and prayers.*

*So, oh! it's lonely, lonely, when the last child's gone,
Seems 'most like a waste of time just living on and on,
With no one left to do for,
To huddle for and stew for,
And you know the dusk around you is the twilight, not the dawn,
So, oh! it's lonely, lonely, when the last child's gone.*

EDMUND VANCE COOKE.

What They Think of Us

New York Globe

Who may be just the guy to take a moribund gazette, and make the same as lively as a London *suffragette*? Who may be just the guy to wage a nation-wide crusade and show the demons up who dope the circus lemonade? Who may be just the guy to put a night shift on the press, and shoot the circulation to 1,000,000—more or less? Who may be just the guy to put old Colonel Harvey hep to how to ginger up his rag and fill it full of pep? (But can he call the turn on who will be our President and rule the land four years from date?) That Norman Hapgood gent.

Savannah (Georgia) Free Press

Norman Hapgood may strike a happy chord in HARPER'S WEEKLY.

Oakland (California) Tribune

We are sorry to lose Colonel Harvey's scintillant lucubrations. He discussed men and measures with engaging frankness and rare good temper, and he displayed keen penetration in his estimates of the movement of popular forces and the trend of public opinion. He is no enthusiast, like Norman Hapgood, and he never tried to make the WEEKLY popular by appealing to prejudice or fanning popular excitement. Hapgood is an adept at both.

Fort Worth (Texas) Record

Norman is a great molder of public thought. It takes him months to fully make up his mind, and then he acts. Wouldn't he be a valuable man on the staff of a daily newspaper, where a star man is given five seconds to make up his mind and is canned if he doesn't deliver the goods?

But Norman is a journalist, and the workers in the morning or afternoon field are mere men.

Fort Wayne (Indiana) News

What the WEEKLY will be under its new management remains to be seen, and it may be that an effort will be made to popularize it by the introduction of hysterical sensationalism and by a pandering to the multitude inoculated with the social and economic heresies of our day.

Fort Worth (Texas) Telegram

The name of the magazine will not be changed, at least for the present; so the subscribers will have to judge for themselves when it casts the rusty shell of worldliness and begins to dabble its butterfly wings in the divine afflatus fresh from the altruistic knole.

Syracuse (New York) Herald

If McReynolds thinks this is hard going, though, just let him wait until Norm Hapgood gets back into editorial harness again.

Life

Absent the recent change of owners of HARPER'S WEEKLY, we find the *Springfield Republican* discussing weeklies in general, and saying:

Of course there are politics and literature which keep a number of strong English weeklies going. But for some reason the English type of weekly has thrived even less in this country than the

English type of monthly review. But it is a big public, and one never can tell what it may take its fancy.

Yes, it is a big public, but at present it seems to be very imperfectly assorted. There must be a great many readers who don't know where to get the precise thing they want. There is great diversity of taste and need. A good many periodicals seem now to be constructed on a sort of blunderbuss plan and aimed at the whole company of readers, in the hope of reaching everybody with something. But that is a large contract, and does not promise to make effective publications.

The more inviting method is for the editor or publisher to settle in his mind what kind of readers he wants, and do his best to sort them out of the general mass and make friends with them. That is something that can not be done in a minute. It is a long process, but when you have accomplished it you have something worth having: a body of constituents who know you, and care what you say, and who will be helpful to you as long as they find that you are helpful to them. There is a difference between periodicals that is of the same sort as the difference between Delmonico's, say, and a travelers' lunch counter.

Boston Truth

Mr. Hapgood's notions . . . comprehend muckraking, exposure, the divorce of the editorial page from the counting-room, denunciation of social conditions and financial methods, and the whole saturated with socialism. Mr. Hapgood is high-headed and opinionated; he would not hesitate a moment to accept a position as general manager of the universe. He is a super-muckraker. We regret he was not present at the creation.

Unity

Unily is glad that Norman Hapgood obtained possession of HARPER'S WEEKLY rather than start another paper; for now we have plenty, but we would have been one short without an organ for Norman Hapgood. Now old associations will be reinforced by new inspirations, and the sagacity, the wisdom, and the culture of George William Curtis be justified in his succession.

Phoenix (Arizona) Republican

The new WEEKLY will appeal to an entirely new class of readers, and probably many more of them, bringing them into closer touch with the world as it is rather than as it ought to be.

San Francisco Star

How can HARPER'S or anything else so reach and help the average reader that he "must have it"? We think that Hapgood knows or will find out.

Columbia (South Carolina) Record

Norman Hapgood is an enthusiastic admirer of President Wilson, and he believes the South is the coming section of the country—two points very much in his favor.

Rockford (Illinois) Star

Unless we are much mistaken, Editor Hapgood will put HARPER'S WEEKLY in the list of oft-quoted periodicals.

La Crosse (Wisconsin) Tribune

Norman Hapgood will make the WEEKLY welcome in American homes.

Bloomington (Indiana) Times

What Will Hapgood Say?

President Wilson and friends of his administration, as well as many other publicists, are rather anxiously awaiting the first appearance of the new HARPER'S WEEKLY within a few days. They are curious to see what attitude Norman Hapgood and his associates, new owners of the WEEKLY, will assume toward the administration.

Important changes are contemplated both in the appearance and nature of the contents. In discussing the appearance of this newcomer among the McClure publications, Mr. Hapgood has already announced that the editorial policy of the publication would be favorable toward the progressive policies of the present administration; but, since he also intimated that their attitude toward progressive policies of all kinds would be one of hearty support regardless of the party which may be leading, the President and his advisers are anxious to know just what he does mean.

Waco Morning News

Mr. Hapgood's writings not yet have puzzled us so, shot over our heads so, that we have had to take refuge in inane characterization thereof as "classical." However that be, we are not interested in the return of Hapgood. We do not class him with Colonel Harvey in any regard, and that Harvey is still with us as editor of the *North American Review* is all that concerns us and all we are glad for. And we consider HARPER'S will lose a deal of its influence and friendship in the South and Southwest with Harvey gone, and Hapgood, outcast of *Collier's*, injecting his Bull Moose fads and unstable comment on the times viewed with Roosevelt's myopic vision, where for so many years was Harvey's sterling writing on men and measures, times and customs.

Extract from letter of Senator Wm. E. Borah, May 22, 1913.

I sincerely congratulate you and more sincerely I congratulate the country. I have been for many years one of your readers and I am glad of an opportunity to be so again.

There never has been in the history of this country a finer opening for a journal which will voice the sane and permanent principles of modern progress—which will refuse to yield to the demagogic demands of those who would build up classes and which will defy those powerful interests which through another process would create classes.

Extract from a letter from Miles Poindexter, dated May 22, 1913.

The underlying popular impulses and spirit of the times, I think, are more intense and persistent and far-reaching than even we progressives generally appreciate. It will make a great field and opportunity for you with such a powerful instrument as you can make of HARPER'S WEEKLY.

\$2.00 a Year]

The Limit

GOVERNOR SULZER can not excuse himself by showing how bad is Tammany Hall. He must stand or fall by his own performances. It is true, nevertheless, that what seems to strike the ordinary man most forcibly in this latest national scandal is the incomparable hypocrisy of the Tammany Hall politicians, who attack a governor of their own selection on pretended moral grounds, when everybody knows that the real grounds are that the Governor, when he got into office, didn't prove as easy to manage as Murphy and his lieutenants expected him to be.

Push It Along

GOOD for Dayton, Ohio. Whether we should properly add "Good for Springfield, Ohio," can not at the moment be said, because of the mechanical fact that this issue of HARPER'S WEEKLY goes to press before August 27th, 1913, on which date a more or less attentive world can know how Springfield decides on a matter of intelligence. A little later, Sandusky, Ohio, is to pass upon the same subject.

The most important and sacred concerns of women and men are passed upon necessarily by a few individuals chosen to office. They decide how much it shall cost to live in a city, and to be furnished with asphalt, and policemen, and firemen, and parks, and electric light. They decide whether building laws shall be so written and so enforced that a few hundred working girls shall be burned up every once in a while; and whether the schools shall have systems fitted to help in life, or outworn and valueless. They decide whether the police shall make ample fortunes out of vice, and whether the inside speculators in real estate shall get the benefit of the big improvements for which the working citizens pay. New York entrusts these questions usually to a pack of predatory and ignorant sports from Tammany Hall. Chicago has an almost equally perfect system. We have seen the struggles against it recently in Philadelphia, San Francisco, Seattle, Denver, and sometimes there is a little gain and sometimes a little loss. The fundamental gains, however, have been in the smaller cities. Since Galveston began it, a number of towns in this country have been putting an end to the system. On August 12th, Dayton took a step, well tested in Germany, but not existing heretofore in any American city larger than Sumter, S. C., where the plan is in successful operation. It adopted by a large majority the city-manager plan of government, by which the city, like any corporation,

hunts up the best man it can get anywhere and hires him as General Manager. Dayton puts all the powers of the city in one small board, and this board hires the general manager, who controls all the city departments, except schools and courts, and is paid what he is thought to be worth, and kept in office as long as he is satisfactory. A lean outlook for patronage this! A system which would not nourish a "Tiger," or any other predatory animal. The American people will adopt it as they become wearied of being bled, demoralized, and rendered ridiculous by a system devised for the exclusive use of leeches.

A Contrast

THE biggest cities in the United States will sooner or later have to show themselves as intelligent as some of the smaller ones in the way they govern themselves. As New York is having the liveliest trouble this summer, we may take that as an example. Is it not unspeakably absurd that a voluntary association of citizens should have to interfere, without any legal basis, in order to bring any non-partisan element into the situation? If that town adopted a short ballot, abolished its Board of Aldermen, increased the powers of its Board of Estimate, secured real direct primaries in place of the present Tammany-made variety, and abolished party columns, the legal machinery of government would assist the choice of the best men, whereas now it is framed to assist spoils. A general manager might come later, or might not. The city is not ready for him yet, but it is ready for the other reforms and would pass them instantly if a fair expression of opinion could be had. Of these reforms, the most important are the short ballot and the abolition of party designations at elections. Think of the necessity of a committee of citizens, after working for months to focus the opinion of the city on the few essentially responsible positions, being then compelled to go ahead and choose coroners and sheriffs, and other officers who ought either to be abolished or appointed! Equally ridiculous is the necessity of voters casting ballots for these minor officers, about whom they can know nothing, instead of selecting the few men about whom they can form responsible judgments, and holding those men to the selection of their proper subordinates. The present system makes democratic government a farce. It keeps the machine alive. It makes everybody pay good hard money needlessly for dishonesty and waste. It helps nobody except those who live by getting their feet into the trough and passing a share of the swill to their supporters.

The Most Interesting City

IN all the world, what city contains the most varied and intense interests? That depends, of course, upon the nature of the mind judging it, but a certain few stand out above the rest. Paris is frequently selected. It is not difficult to see why London seems the most interesting to many. We have heard New York chosen for obvious reasons. Constantinople seems the most interesting to at least one of our friends. Italy is richest in this respect, no doubt. Venice has a combination of beauty and uniqueness which can scarcely be matched; Florence seems the most attractive city in the world to many lovers of finished art forms; and our own choice would be Rome. Of that city, Mr. Bryce says:

"To half the Christian nations, Rome is the metropolis of religion, to all the metropolis of art. In her streets, and hers alone among the cities of the world, may every form of human speech be heard; she is more glorious in her decay and desolation than the stateliest seats of modern power."

It would give us pleasure to get some points of view from our readers about the interestingness of cities; and especially about small towns and villages that they have visited.

Heroism

SOME philologues would have us believe that the German noun *könig*, king, is derived from the verb, *I can*; others derive from the same root the word for artist, *künstler*. Romain Rolland, in his novel "Jean-Christophe," has one of his characters use the phrase, *Als ich kann*, as his motto. Like a modern stoic, he laughingly remarks to Jean-Christophe: "Why be angry because of what you cannot do? We all have to do what we can. . . ." "It is not enough," growls Jean-Christophe. "It is more than anybody else does," corrects the older man. "You are a vain fellow. You want to be a hero. That is why you do such silly things. A hero! I don't quite know what that is: but, you see, I imagine that a hero is a man who does what he can. The others do not do it."

All success comes, according to Gaynor's friend, Epictetus, from discriminating between what is controllable, and what is uncontrollable. "Two rules," the philosopher continues, "we should have always ready: that there is nothing good or evil save in the will; and that we are not to lead events, but to follow them."

The Soul of Happiness

THERE had been a flood from the neighboring river; a man stood and watched the ravages it had wrought upon his cultivated land and the basement of his little house; and a passer-by consoled with him, exclaiming about how sad it was. "What would you have?" said the owner. "What does it matter? We are unhappy in this world only if we choose to be."

Inspiration and Drink

USUALLY liquor is either celebrated by the poets because they think it cheers and inspires them, or else its ravages are seriously

considered. It is seldom treated ironically; hence the unusual quality of these lines from "A Shropshire Lad," by A. E. Housman:

Oh, many a peer of England brews
Livelier liquor than the Muse,
And naught does more than Milton can
To justify God's way to man.
Ale, man, ale's the stuff to drink
For fellows whom it hurts to think.

We do not happen to know any place where the drink question is put more impartially. It is perfectly true that liquor is more lively than poetry in its effect, and that it frequently, for a little while at any rate, justifies the ways of God to man; but the essential point in the whole question is that put in the last line, that its special value is for fellows whom it hurts to think.

Justice

WHY do we say, "Poor but honest"? Would not "Poor and honest" do as well and considerably better? Remember that Marcus Aurelius says, "Even in a palace, life may be lived well." It would be just as reasonable to say, "Rich but honest," as "Poor but honest."

And these words represent a point of view that lies under all our institutions. Well we remember the figure of a certain man.

He scudded out of the road, as the horseman approached. He was named to such a degree that he had hard work to move, but he got well away to the side, leaving the whole roadway to the man on horseback. The cripple smiled and nodded pleasantly as the rider passed, and the horseman reflected upon the make-up of a universe in which he, who could turn aside without effort, rides right on, while the cripple laboriously makes way.

What Is a Nation?

THE Philippine question is upon us, the immigration question presses, and what are the general principles that should fill our minds as we study these specific problems? What is a nation? The most brilliant answer we know is Renan's. First he tells what it is not. Race? France is Celtic, Iberian, Germanic. Germany is Germanic, Celtic, and Slavic. Italy is the most mixed of all the leading European nations—Gaulic, Etruscan, Greek, and much else. In the British Isles, the Celtic and Germanic mixtures are beyond analysis. Language? The United States and Canada are two nations; New Zealand, with her three languages, is one. Prussia talked Slavic a few centuries ago. Religion can no longer be the basis, as it was when religion and patriotism were one, when the religion of Athens was the worship of the Acropolis. Community of interests? Like the other conditions we have mentioned, this counts, but only as one element, ever changing also. Geography? The Rocky Mountains, the Mississippi, the Loire, the Seine, might be "natural frontiers," as easily as the Great Lakes or the Rhine. A nation is a state of mind. It is a spiritual principle. It is created by a history of effort, sacrifice, devotion—to have done great things together in the past, to wish to do great things

together in the future—that welds millions into a nation. Past defeats count even more than past successes, perhaps, as we see in our Southern States. *A nation is composed of the sacrifices which its people have made and of those which they are willing to make.*

Renan selects Goethe, Schiller, Kant and Beethoven as the true founders of German unity. What kind of patriotism had they? Certainly not the kind that consists mainly in boasting about the greatness of one's own country and emitting noisy defiance to all other races. The best patriotism is consistent with a broad interest in all the world. No one was ever more cosmopolitan than Goethe. The best that a man can do for his country is not to make himself offensively partisan, but to get the best mind product and character product of which his nature is capable.

It was Schiller who called himself a citizen of the world, and said that wherever life was found there was sunlight pleasant to him, and mankind dear. His only enemy was evil, his banner the azure of his dreams. Where right or pence ruled, where art smiled and beckoned, where beings were beautiful and kind, there he naturalized his heart, and his compatriot was man. Was he, therefore, less devoted to Germany, in any sense that helps? He was one of the very creators of her national spirit, that burns so brightly now, and he did far more to create it than if his patriotism had been less enlightened than it was.

Vox Populi

MR. JOHNSON said, or at least DeQuincey remembered his having said, of a man who had succeeded without desert: "Why, I suppose his nonsense suited their nonsense." It would be a fallacy to think the crowd had an invincible habit of being right, but it is a much worse fallacy to think there is any minority which can decide for the crowd better than it can decide for itself. The most satisfactory arrangement is the state of society in which the majority makes the decision but in which the most intelligent and best educated members are constantly expressing themselves. One of the virtues of the crowd is that it likes to listen to leaders, and on the whole it shows good common sense.

Baseball English

THE French, who have lately become partisans of the ring, print in their newspapers accounts of battles by Carpentier, Sam Langford, and Bombardier Wells which, for classical purity, almost match the fables of La Fontaine. No more do the best of Paris sporting editors interlard their narratives with English words and phrases, though now and then a neologism does creep in, as when one reads of a certain well-known combattant as being *mis knock-out*. Much less argot enters into the French history of a ring-battle than you will find in an American record of the mildest of baseball games. For that matter, how do you like your baseball news writing? The Chicago *Record-Herald*, which is trying to find out, prints varying testimony. Charles A. Comiskey, owner of the Chicago

Americans, declares "in favor of a clean, plain English story of the game. When the facts are covered up with a lot of useless words the reader is likely to grow tired." A member of the University of Chicago faculty holds, on the other hand, that "it would be pretty tame to report baseball in plain ordinary English." "There is a species of humor on the sporting page," Professor Butler continues, "which is enjoyable. We want the picturesque." Mr. Comiskey and the Chicago professor are one, however, on the point that a baseball writer is at fault when his frivolous narrative haffes the lay mind. Then it is that the proverbial "Old Subscriber" has good reason to write a letter of complaint to the editor, quoting the baseball bard who sang,

"Play ball!" Again the summons runs
Through city, hamlet, town, and State.

It is usual for people to defend slang on the ground that it expresses shades of meaning that can not be so well expressed by any established method of speech. This remark was made to William James once, and he said: "Give me an instance." The defender of slang started with some confidence to explore his mind, but finally had to give up. We have tried the same experiment frequently, and always with the same result.

Beauty

THERE is a line of Alfred de Vigny's poem "The Deluge":

Et la beauté du monde attendait son enfance—

"And the world's beauty bore witness to its youth." This verse finds expression for one kind of beauty, that which belongs to all in nature that is fresh and unsullied. Fortunately there is another beauty than the transitory one found in the uninhabited island and the maiden of seventeen springs. The first charm of civilization was long ago tarnished. It is the privilege of the future to evoke a more sophisticated yet no less satisfying order of beauty: beauty in institutions; beauty in developing traditions; beauty in human ideals.

Instinct

THE Maha-Bharata was written about 1500 years before Christ. It says:

For a woman's troth endureth longer than the fleeting breath,
And a woman's love abideth higher than the door of death.

It was some time ago that the highest and truest ideals of the human race were started.

This is perhaps connected with the fact that much of our best safe-guarding comes from nature. For instance, frequently a woman, even of full natural instincts, has no special desire for progeny. Then a strong love comes, and to what was only a vague general idea before, that she naturally would have children, is added a real longing, an intense imagining of how pleasant a little creature would be, and of what a solemn and joyful possession it would be *together*. Desires grow when the ideal surroundings are prepared. Nature takes care of us. She is often careless, but judge her by her best, and wonderful is she in harmony and depth.

Mr. Lane and the Public Domain

II. "The New Freedom" in Washington

By HONORÉ WILLISIE

THE new administration represents the last stand of individualism in American national politics. This is what certain members of the administration say and what many persons well versed in economic history believe.

A group of men came to plead an irrigation matter before the Secretary of the Interior. Mr. Lane's face was inscrutable while he listened for five minutes to an impassioned speech. Finally he interrupted calmly:

"We will waive the oratory," he said. "What I understand is that you are asking me to imperil the water-supply, during dry seasons, of one of the government projects, by permitting your company to get into a watershed where they have no right to be."

"Oh no, Mr. Secretary!" exclaimed the man, "you misunderstand! It wouldn't imperil your project. And what is to become of our project during a dry season? Have the farmers on a government project more rights than those on a private enterprise? Is this government going to get more and more paternal, to hamper free enterprise more and more, to stifle freedom of initiative? What is to become of our opportunities when the government controls them all?"

"The individual must be protected from himself," replied Mr. Lane. "But that ought to increase, not injure opportunity. It should add to a man's self-confidence. And the most distinguishing characteristic of an American is self-confidence. Governed by a knowledge of what has been done, the American is not overawed by tradition or convention, or by learning of a physical condition. He feels that there is a possibility for realization for the man that has a will and a purpose. He feels that, because in so many cases he has known it to be true. That means that opportunity can not be shut against him. In trying to save opportunity for the future, for the coming manufacturer to have a free field, for the young men to have a chance to get at the land for farming and at our natural resources, we are fighting to save the spirit of the American people."

"The American is not resigned to a mediocre lot, because he believes he can do for himself. And he always will believe that, if the government—and by that I mean all the people—concerns itself now in giving the boy a tangible, economic basis for the belief that he can do what his father has done. It is a new freedom that we are trying to bring to America, a freedom that means a fair chance for every man to live and best serve himself. It is from this point of view that I must look on all the business that comes to this office."

The irrigation man fingered his brief thoughtfully. He was an intelligent young man. It was not only what Mr. Lane said that challenged his attention. It was also the clean-cut sincerity and simplicity with which the Secretary spoke of this new freedom. There was a quality of direct purposefulness about the Secretary, a sense of his force and singleness of direction that made the young man eye Mr. Lane keenly.

ONE of the most important matters now before Congress and the country is the control of water-power. Electricity developed from water-power is going to play an enormous part in the industrial and social life of America in the immediate future. Some of the great monopolies are realizing this fact much more thoroughly than the general public, and are quietly directing their efforts toward water-power monopoly. The use of electricity grows daily. Developed from water-power it can be made so cheaply as to be brought within the reach of factories and homes, down to the simplest detail of cooking and cleaning. Already some of the great transcontinental lines are beginning to electrify their equipment, serving it with hydro-electric power. Natural

gas may be exhausted, oil wells may cease to flow, coal beds pinch out. Still the water will run in our streams, an inexhaustible power-supply, an enormous opportunity for trust-building.

What shall be the water-power policy of the government, both with regard to streams on the public domain and navigable streams not on the public domain? What shall be the relation of the state and the national government with regard to water-power control? How shall they co-operate so as to make rules liberal enough to encourage vigorous development and yet fully protect the public interests?

There is an almost endless number of points to be considered in formulating such a policy. Shall the Department of the Interior which controls the streams on the public domain attempt to derive a revenue from such streams? Inasmuch as the government does not attempt to undertake the development of water-power, it ought to offer to private concerns who do undertake it enough profit and protection to encourage them in the undertaking. But the consumer must be protected. Hitherto the policy has been that the only way to protect the consumer was to provide that the permit to the power-producer might be revoked at any time by the official that granted it. But this has been found a serious obstacle to encouraging investment.

If the state or the national government is called upon to spend money in protecting or improving the stream and the stream can be made to procure a revenue, ought it to be compelled to do so? Shall the state or the federal government grant water-power permits and collect the compensation? How shall the monopoly by private interests of the public utilities developed from the streams be prevented? Shall the permits be used as a source of revenue to the state or the federal government?

THESE are a few of the questions that faced Mr. Lane when he undertook to formulate a water-power policy. He began by laying down a basic principle. This is that the greater the benefits the consumer derives from the development of resources, the less the government should tax the individuals and corporations receiving concessions. For such concessions, Mr. Lane has laid down the following conditions.

1—The greater the development of horse-power, the lower the charge per horse-power to be made on the part of the government. This is intended to assure the full use of the stream.

2—The lower the rate to the consumer the lower the charge on the part of the government.

3—No charge whatever for a period of five to ten years, during which the power-company is finding its market.

4—Acceptance as a public utility of the states' jurisdiction over intrastate rates and service and of federal jurisdiction over interstate rates and service.

5—Absolute prohibition of combination and monopoly and the right of revocation on the part of the government in the event that it is established to the satisfaction of the Secretary of the Interior, or the courts, that such combination has been made, or that prices have been fixed by the agreement of competing companies.

WHEN he had outlined this policy, Mr. Lane asked hydro-electric men who had solid engineering and business reputations to confer with him in Washington as to the practical working details of his ideas. It was a most interesting group of men who gathered in Mr. Lane's office.

"I want," said the Secretary, "criticisms and suggestions regarding the water policy this department has developed. I want to know where it is to your mind

practical and where impractical. Mr. Gorham, what do you think of it?"

"Mr. Secretary, I can say frankly that my people are well pleased."

"But how are we to arrange it," insisted Mr. Lane, "so that the consumer will surely get the benefit of this? How, for example, can I prevent your company, after it has fulfilled the conditions I have made, after it has developed the full capacity of the stream and has put a reasonable price on the power—how can I keep you from selling it to yourselves, under the name of another organization as a distributing company, at this very reasonable rate, and then selling it to the consumer at an exorbitant rate? You know that in the Salt River Valley the people of Phoenix pay a high rate. It is not a strict analogy, but I think you get my point."

"Well," the water-power man smiled, "Mr. Secretary, after we have given the power at a reasonable rate to a distributing company, I don't see what more you can do to us that will not be confiscatory in its nature."

Mr. Lane looked at a lawyer who was listening keenly. "Do you get what I want to avoid?" asked the Secretary.

"Yes," replied the lawyer, "but it seems to me that your Public Service Commissions must attend to that detail. Where there is no Public Service Commission, the Secretary of the Interior must be called upon to regulate."

"That last is not a good idea," said Mr. Lane. "You can't get men to loan money for a development company under conditions that are contingent on one man's judgment. We must standardize as much as possible."

"But," suggested the lawyer, "competition ought to regulate the price to the consumer, particularly the sort of competition provided for by this policy."

"No government," returned the Secretary, "attempts to regulate anything on the basis of competition, and you can't raise money to swing a proposition that is constantly open to regulation. We must have freedom for the investor, but a new sort of freedom, the freedom of protected opportunity."

The water man from the Northwest who had been fanning himself and listening intently spoke for the first time.

"My idea," he said, "is that the public under this new policy will just about do its own regulating. This policy is going to force a complete openness on the part of the power-producing company. It will have to keep a very careful account of the per cent of possible horse-power it develops and of costs. These accounts will be open to inspection and the public can keep itself informed about them. Even if the producing company makes itself the distributing company under another organization you still have this entire publicity. You have forced, as far as accounting and publicity go, a separation between the power-producing and the distributing business that will give the consumer the discrepancy between the cost of making and the selling price and when he once gets this, the consumer will do the rest. He always does, once he knows."

A grin and a nod went round the circle of power-producers. The Secretary's eyes twinkled and he adjusted his glasses to his right thumb, which is a sign that he is glad that one of his ideas had got across.

"We want," he said after a moment, "to make

conservation popular. We don't want to make money for the government out of conservation. We want to save the country's natural resources for the people and put them where the people can get them."

The group of men listened courteously. One could only guess at what interpretation they were putting on Mr. Lane's words. These men were highly trained in business and in law. How highly trained they were in the type of economics that Mr. Lane was making into policies, one got no inkling.

"I want," the Secretary went on quietly, "the function of the Department of the Interior to become more and more that of a great constructive department. There should be no friction between the state and the federal government on this score. We should co-operate. We must look out for the interests of the public and for those of the concessionaries. We must not permit monopoly. We must keep the individual free."

THE Secretary held a hearing in May to allow the water-users of the Reclamation Projects to lay before him personally their complaints against the service.

Everything about that hearing, except the quality of human nature involved, was unusual. The mere fact that Mr. Lane had thought to have this kind of a hearing was unusual. The great import of the matter to America was unusual.

Ostensibly the people who were on trial were the engineers of the Reclamation Service. Yet really they were not. The people of the United States were being tried as to whether or not they were capable of undertaking and handling the magnificent experiment known as the Reclamation Service. To get the import of Mr. Lane's acts after this hearing one ought to understand pretty well what the Service is and what are its problems.

The Reclamation Act was passed in 1902. Its idea was to bring water to the arid regions of the country, through money raised by the sale of public lands in the various States and Territories. Its originator, Major Powell, did not want this work to be done for the real estate man or the land-speculator or the land-hog. He

wanted the reclaimed land to be divided into tracts just large enough to support a man and his family and he wanted this man to be the man who could not get land without government help.

The framers of the Act were wise. They said: "If you go on a project you will make a better farmer; if you have to pay for the dam, we will build for you. We will give you time and ask no interest on the nation's investment. But you must consider each of your acres in debt to Uncle Sam until it has paid for its share of the dam. We do this that you may water your land not as an object of the nation's charity, but as a business man doing business with his government."

As soon as the Service was organized it was inundated with plans from the various States for the starting of a project in their arid regions. The Service responded to the limit of its capacity. By 1910, twenty-five projects had been started. By 1912, nearly seventy million dollars had been invested. The business of the Service became huge and complicated beyond what any one had foreseen. Not only was each dam a colossal engineering problem, but each had a unique business administration to be worked out. The Service had to develop concrete-manufacture, hospital, and amusement

"There is a quality of direct purposefulness about the Secretary, a sense of his force and singleness of direction."

and police service. All the details of administration that could belong to a great manufacturing and construction business and to the camp town of thousands of humans had to be worked out by the director and engineers of the Service. And these problems were in addition to the problems of actually administering the water, of taking care of the farms and the farmers.

People did not wait until water was on the land. As soon as a project was undertaken they flocked on to it. Sometimes they had to wait five years before the water got to them. Building a dam and canal is a slow job. These people were hard up and unhappy, and blamed the Service. Irrigation is an intricate art. Many people on the projects were strangers either to farming or to irrigating. Many people made good. Many didn't. Some found it difficult to make their yearly payments. Land-hogs and speculators raised the price of land in some places so that even good crops were not profitable. People blamed the Service.

Every Secretary of the Interior has been swamped with letters of complaint about every detail of every project. Congressmen have investigated the Service. But the complaints keep on coming. When Mr. Lane took office he planned a short cut to find the heart of the trouble. He asked the farmers on the projects to come to Washington and tell him their troubles man to man.

The hearing was a most significant incident in Mr. Lane's career as Secretary of the Interior. He had before him a remarkable group of men. There was Senator Newlands, one of the fathers of the Reclamation Act. There were other Congressmen who frankly suspected the Service of dishonesty. There were project-farmers, bronzed and (for the most part) discontented. There were project-engineers, bronzed and on the defensive.

MR. LANE must be a lawyer, and judge the legal claims of all parties. He must be an irrigationist, and understand the efficiency of the project-farmers. He must blend the information that he received from this hearing into a policy that should be fundamentally right in its bearing on governmental activity. He ought to so formulate his policy that the farmer will be protected from his own ignorance; that the engineers' neglected powers of administration will be developed; that the insidious workings of private interests who do not like the water-power development on the projects will be offset by the content and well being of the citizens on the projects.

The hearing began with a statement by the water-users of the Salt River project of their complaints as to the cost and the administration of the Roosevelt Dam. The atmosphere was peaceful at first. But it was not long before Senator Newlands was asking questions, questions that always bore on the feasibility of the Reclamation idea. The different Congressmen joined in and the hearing resolved itself into an almost common denunciation of the Service engineers, who sat quietly listening.

Mr. Lane sat calmly, his face inscrutable except for an occasional half smile. He put the engineers on the stand and allowed both them and the members of the hearing to talk freely. He did little questioning himself, but there was not a face in the room that he did not scrutinize. He sat for hours, composed and intensely concentrated on the matter in hand.

After the hearing was over, the Secretary said to the abashed layman, "The real Reclamation problem is a human one. Here we have two types of minds, the engineer's and the farmer's, that must learn to do teamwork. Both are fine types. Both are used to dealing with primitive forces. A man with a true engineering mind can not be dishonest. Nothing but a real love of his work would keep him fighting such overwhelming odds. He has to fight both nature and man. He risks his life every day. He isolates himself from the amenities of life. The man that does that hasn't the mind that works along the line of getting rich quick. Undoubtedly our engineers have made mistakes. They are human. But the engineering mind is not a dishonest one. Did you ever read 'The Sons of Martha'?"

The abashed layman had not.

"It came to me during the hearing," Mr. Lane went on, "that if the farmers could get the engineers' viewpoint most of the difficulties between them would be smoothed out. I took the poem down to read to them but I didn't get to it."

The abashed listener looked up the "Sons of Martha." Part of the verses go this way:

They say to the mountains "Be ye removed!" They say to the lesser floods, "Run dry!"

Under their rods are the rocks reproved. They are not afraid of that which is high.

Then do the hilltops shake to the summit, then is the bed of the deep laid bare,

That the Sons of Mary may overcome it, pleasantly sleeping and unaware.

They finger Death at their gloves' ends when they piece and re-piece the living wires;

He rurs against the gates they tend; they feed him hungry behind their fires.

Early at dawn ere men see clear, they stumble into his terrible stall.

And hale Death forth like a haltered steer and goad him and turn him till even fall.

They do not preach that their God will rouse them a little before the nuts break loose.

They do not teach that His pity allows them to leave their work whenever they choose;

As in the thronged and the lighted ways, so in the dark and the desert they stand.

Wary and watchful all their days that their brethren's days may be long in the land.

"It is a problem of human adjustment now," said Mr. Lane, "and after the project is completed it is a problem of teaching the farmer to help himself. It is the man who makes a farm and irrigates it that I am interested in, not the land speculator. We have been making money for land speculators, not homes for the farmers, on some of our projects. The man who irrigates his land should have the easiest terms from the government, because he is the one who is giving the public the benefit of that land. The people of the United States have invested \$75,000,000 in building irrigation works, to irrigate farms—not to raise the value of lands held out of use.

"The man who chooses to hold his land from use has a right to speculate on his own resources, but not on the advance loan of the government. I think that conditions fully justify special considerations being given those farmers who have gone upon these reclaimed lands and have done their best to cultivate them. It should be said in justice to the water-users that at the hearing not one of them suggested a desire that the government should waive its debt. All said they were prepared to meet their obligations to the government if terms somewhat more favorable were made. Less than one half the water-users have paid the building charges that were due December, 1912, and which will be delinquent December, 1913. At this time it becomes necessary to pay building and maintenance charges which should have been paid last spring and were deferred owing to the pending of the 'Swigart vs. Baker' case in the courts, in which the right of the government to collect such charges has now been upheld. In view of all these conditions it seems a wise and just thing to reduce all present building payments, giving credit to those who have paid. I shall urge upon Congress the passage of some act, giving a further extension of time for the payment of building charges under proper limitations and conditions.

"The great difficulty on the projects is the matter of payment. It is probably the root of the discontent. My policy is one of leniency toward the debtor who is in difficulties. He must be given every chance to make good. He must pay eventually, but he must have freedom to work without his debt oppressing him. A man must have a chance to hope, in order to thrive. And a man can not hope unless he has freedom to act."

A LADY OF LEISURE

By STUART DAVIS

"Of course the respectable guardians of public morals will do all that they can to prevent suitable costumes from being used in public recreation places"

Modesty in Women's Clothes

By Francis R. McCabe

concerted attack upon its much-vaunted purity; also from the citadels of conservatism—the pulpit and the school—alarm-cries are being sent out against this tendency. A general degeneracy of modern life is prophesied, if the women continue to reduce their clothing.

Whenever a practice steadily gains ground against a theory, we can feel pretty sure that the practice is right and the theory wrong. That freedom from unnecessary and restricting clothing is an essential part of freedom in other respects, persons who have never found it necessary to wear the clothing, considered entirely adequate by the conservative friends of feminine modesty, may not appreciate.

The principal objection to light clothing, even in summer, seems to be that it is immodest for a woman to allow men to see any part of her anatomy uncovered, on the general theory that nakedness is immodest and likely to excite sexual passion, and that clothing has the opposite effect. The whole idea is founded on a fallacy. Take the custom of the Mohammedans, who insist, with a great deal of reasonable argument to support their theory, that it is the face, not the body, that is most exciting.

"Familiarity with the sight of the body abolishes petty prurience, trains the sense of beauty, and makes for the health of the soul"

MOST persons would perhaps agree that a woman should not appear in public in a state of nudity, but how far short of that happiness propriety makes it necessary for her to stop seems to be an undecided question. A costume which some women would think perfectly proper and modest might subject them to severe criticism and even arrest. Women should have some way of knowing what kind of dress they can wear.

It is very interesting, as well as significant, to observe that the modern craze for wearing as scanty clothing as possible is exactly coincident with women's emancipation in other directions. Many are the supporters of the feminist movement who deny with vehemence that modern fashions are in the slightest way connected with other forms of freedom, and those most addicted to airing their persons in public are the last ones to label themselves suffragists or free-thinkers. Nevertheless, the fact remains that the two things have come together and hid fair to stay together. The persons most alarmed at the awful tendency in women's dress are the ones most in danger from it. The masculine portion of the community seems to be genuinely concerned at this

The Mohammedan woman, who, says Nisbet in "Marriage and Heredity," "can not be persuaded to unveil her face in the presence of men, will think nothing of displaying the whole of her leg or bosom," is more nearly right than the Christian woman who drapes her form but will freely let men see her face.

"There ought to be no question regarding the fact that it is the adorned, the partially concealed body, and not the

absolutely naked body, which acts as a sexual excitant," says Havelock Ellis ("Studies in the Psychology of Sex," vol. vi, p. 97). "I have brought together some evidence on this point in the study of the 'Evolution of Modesty.' 'In Madagascar, West Africa, and the Cape,' says G. F. Scott Elliot ('A Naturalist in Mid Africa,' p. 36), 'I have always found the same rule. Chastity varies inversely as the amount of clothing.' It is now indeed generally held that one of the chief primary objects of ornament and clothing was the stimulation of sexual desire, and artists' models are well aware that when they are completely unclothed, they are most safe from undesired masculine advance. 'A favorite model of mine told me,' remarks Dr. Schufeldt ('Medical Brief,' Oct., 1904), the distinguished author of 'Studies of

"Let us sincerely hope that, before many years have passed, this costume may be adopted as the standard street dress"

"The prejudice against trousers as being unfeminine is being slowly undermined by our contact with the Oriental"

the Human Form," that it was her practice to disrobe as soon after entering the artist's studio as possible, for, as men are not always responsible for their emotions, she felt that she was far less likely to arouse or excite them when entirely nude than when semi-draped. This fact indeed is quite familiar to artists' models. If the conquest of sexual desire were the first and last consideration of life, it would be more reasonable to prohibit clothing than to prohibit nakedness.

"Lohman tells us," says Westermarck ("The History of Human Marriage," p. 195), "that among the Sallos, only harlots clothed themselves, and they did so in order to excite through the unknown."

"The native assumption that men were ashamed because they were naked," says Prof. William L. Thomas ("Sex and Society"), "and clothed themselves to hide their nakedness, is not tenable in the face of the large mass of evidence that many of the natural races are naked and not ashamed of their nakedness, and a much stronger case can be made out for the contrary view, that clothing was first worn as a means of attraction, and modesty then attached to the act of removing the clothing."

"OLD women among the natural races," says Prof. Thomas (*Ibid.*, p. 210-211), "often lose their modesty because it is no longer of any use. Bonnich says that the Tasmanian women, though naked, were very modest, but that the old women were not very particular on this point."

"But while we find cases of modesty without clothing and of clothing without modesty, the two are usually found together, because clothing and ornament are the most effective means of drawing attention to the person, sometimes by concealing it, and sometimes by emphasizing it." (*Ibid.*, p. 215.)

Geoffrey Mortimer ("Chapters on Human Love") says: "There seems to be no doubt whatever that clothing was adopted for warmth and decoration, and not from motives of decency. Drapery has always served to inflame sexual passion, and some tribes have regarded all garments as indecent. Mr. Wallace

found the Brazilian woman who put on a petticoat almost as ashamed of herself as civilized people would be if they took theirs off. As Westermarck says, 'It is not the feeling of shame that has provoked the covering, but the covering has provoked the feeling of shame.'"

Girls have in recent years become so accustomed to wearing waists with sleeves which come only to the elbow that a girl now would probably be as much surprised to be told that that is immodest as she would be to be told that it is immodest to allow a strange man to see her face.

Recently a girl was surprised in just that way. A farmer advertised for a wife, and after correspondence with the young woman, agreed to marry her, but when he met her at the railroad station he declined to carry out his agreement because her waist had short sleeves. He said he wanted a modest woman for a wife. "Am I not modest?" asked the girl. "What! Modest with those bare arms?" exclaimed the farmer.

"Concealment is not modesty," says Lady Cook, "else would the Turkish woman be the most modest, whereas they are the most depraved."

"CHILDREN," says J. M. Crane in "Lucifer," "are natural logicians, and they see no reason why one part of the body should be concealed more than another. To tell them that to expose their persons is 'naughty' or 'isn't nice' does not appeal to their logical minds. They want to know why it is 'naughty' and it is that word 'why' which is the terror of conservative people."

But human beings are likely to finally come to believe anything that is incessantly drilled into their ears from early youth, and then it appears to them to be perfectly natural and proper, though they may not have looked at it in that way when they viewed it with unprejudiced minds.

"The old fashioned riding habit had a full draped skirt, high stiff derby hat and other uncomfortable features"

"For walking and for many other purposes the good old style of women's clothing is absurd and barbarous"

From these examples it is obvious that custom alone determines the modesty or immodesty of any garment, and that all that is necessary to make any article of wearing apparel perfectly innocuous to the masculine beholder is for enough women to wear it enough times for it to become a customary sight. Take, for instance, the riding habit. The old fashioned riding habit had a full draped skirt, a high stiff derby hat, and other uncomfortable and ridiculous features. Through the divided skirt this costume has evolved into one of the most sensible and promising of all dresses for women. The young girl who now rides horseback in our parks and in the country wears knickerbockers and a Norfolk jacket and a soft felt hat, as like her brother's as her figure permits. Let us sincerely hope that, before many years have passed, this costume may be adopted as the standard street dress. The prejudice against trousers as being unfeminine is being slowly undermined by our contact with the Oriental. The Chinese women are the most modest and feminine in the world. They all wear trousers and would be horrified at the immodesty of the skirt.

Of course the respectable guardians of public morals will do all they can to prevent suitable costumes from being used in public recreation places.

IT is generally recognized by physicians that it is beneficial to have the air come directly into contact with the body, and many of them recommend air baths to their patients.

In "Diet in Relation to Age and Activity" (p. 18), Sir Henry Thompson, the famous English physician and hygienist, says: "With our usual habits of life, the skin is never uncovered or exposed to the surrounding air except for a minute or two when taking hot water baths; hence it becomes soft and flabby, loses its healthy surface and more or less its ability to resist cold, especially what is called 'catching cold.'"

"The hygienic value of nakedness is indicated by the robust health of savages throughout the world who go naked," says Havelock Ellis. ("Studies in the

Psychology of Sex," p. 105.) "The free contact of the body with air and water and light makes for the health of the body, familiarity with the sight of the body abolishes petty prudencies, trains the sense of beauty, and makes for the health of the soul." (*Ibid.*, pp. 105, 106.)

The sentiment which tends to prevent women from allowing men to see them in a state of nudity, or in clothes that show the lines of their forms, causes women to wear clothing which is uncomfortable, inconvenient, embarrassing to their movements, unnecessarily expensive, injurious to health, and dangerous to life in various ways.

"A woman does not know what freedom of movement is," says Delos F. Wilcox ("Ethical Marriage," p. 138), "until she has tried physical exercise without corset or skirts in a gymnasium or elsewhere."

PERHAPS the most serious thing about women's dress from the standpoint of health is the matter of impeding or interrupting the circulation of the blood. Dr. Mary E. Walker says ("A Woman's Thoughts, Love, and Marriage," p. 62): "Scarcely a woman can be found old enough to marry who is not affected with some ailment produced by wearing an unhygienic dress."

"A woman gets tired and exhausted after the slightest exertion, because she is improperly dressed," said Dr. E. C. Dudley, in a lecture before a class in Northwestern University Medical College, at Chicago.

"No wonder her circulation is poor; no wonder she is unable to stand any exercise or exertion to amount to anything. The upper garments are usually of some thin material, and, according to the caprice of fashion, may not cover the arms, neck, and upper part of the bust. A profusion of skirts are worn loosely around the lower extremity of the body, and the feet are held in a vise-like grip of this high-heeled covering which resembles stilts more than shoes."

"In strange contrast to such inadequate protection of the upper and lower extremities, the waist and hips are swathed and compressed in a 'torrid zone' of whalebone, corset, belt, steels, and the bands of the various under and outer garments worn by the women of today."

"The average woman wears a total of seventeen layers of bands of some sort around her waist. Allowing twenty-four inches as the average waist circumference of a Chicago woman, although there are many with larger waists, it means that each woman has a total of thirty-four feet of bandage tightly wrapped around her."

Dr. Dudley told his class that the only way the woman of to-day can become

strong and hearty is by banishing the numerous tight bandages about the waist and giving more care to keeping the upper and lower portions of the body warm.

If a woman falls into water, if her clothes catch on fire, if she is caught in a panic-stricken crowd, long skirts embarrass her movements and endanger her life, and may do the same for others. If, as they often want to and sometimes need to, women run or jump or climb, they can not do so with the same facility with long skirts as they could without them, and in many cases they can not do without embarrassment what they could do without any embarrassment if they were clothed in a different manner.

"But many women are over-modest in fires," says former Fire Chief Edward F. Croker, of New York. "They will take time to argue the point of putting on more clothing before permitting a fireman to rescue them. No one should resist a fireman at a time of rescue. At the Windsor Hotel fire this was one of our greatest difficulties."

Because no one has invented a costume so obviously perfect that all women are willing to put it on and wear it at once, regardless of the comments it may at first excite, and because no one has organized a thorough campaign for dress reform, those who have attempted it confining themselves to wearing the costume individually instead of inducing some several hundred women to put it on simultaneously, no sudden change has ever been accomplished in women's clothes.

Some years ago Dr. Mary Walker, attempting to introduce a reform, suggested and herself wore a costume consisting of trousers and a coat practically the same as worn by men. She had a few followers for a time, but has none, or practically none, at present, I think.

WOMEN'S clothes have always been the despair of the physician, the educator, and the artist, as well as the woman who has to wear them, and now, behold, a sudden unaccountable movement among all women of all kinds, in all walks of life, guided by the usually irrational leader, Fashion, toward the very object which has been agitated by high-brow reformers for so many years.

For horseback riding, for shopping and walking, for playing games that require running or jumping, and for many other purposes, the good, old style of women's clothing is absurd and barbarous.

The persons who most need clothing reform are those who have to work for their living. But the factory girl and the shop-girl and the working girl in general will never adopt any article of dress on

her own account that has not already been adopted in fashionable circles. All fashions start at the top and work down. In our aspiring democracy a distinctive working costume is unthinkable, but the working woman is very clever in adopting quickly any costume which the rich may wear, for whatever occasion it was originally designed. For instance, when certain summer girls took to wearing what is commonly known as the "middy blouse" for certain rougher forms of sport and tennis, the same costume suddenly bloomed out in great profusion in all the factory districts of all our towns. It was a comfortable, loose-fitting, and easily cleaned substitute for the shirt-waist, which is so apt to get out of order and requires such careful adjustment about the waist. Moreover, it eliminated the necessity for corsets. The craze for sports among modern English and American girls bids fair to evolve a number of sensible and comfortable costumes which will be adopted for street wear by the working girl.

A MOVEMENT or evolution that has continued steadily in the past is very likely to continue in the future until it can go on further, so that the disposition which women in Christian countries have been showing for many years to wear less and even less clothing in public is very likely to continue until they get to the point where they will wear none at all, or practically none, when it is for any reason desirable and the temperature is such that it can be done without discomfort.

Notwithstanding somebody's protests or notions that a thing is unwise or immoral, people are very apt to do that thing if they find by experience that it is agreeable or beneficial to them to do it, if the doing of it does not infringe upon the rights of others. For women to wear little clothing or no clothing certainly does not infringe upon the rights of others.

Dr. Elsie Clews Parsons, in her delightful book "The Old-Fashioned Woman," one of the most charmingly satirical books ever written on the woman question, says:

"Where belief in the magical relation of clothes to personality persists, or where the suspicion is strong that sex left to itself may vanish at any moment and dread of this disappearance precludes toleration or any deviation from sex type, sex labels in dress will be made to stick. If, on the other hand, variation in personality ever comes to be considered more important than artificial distinctions of sex, of even an unvarying natural distinction, dress together with other sex labels or earmarks will soon wear off—and nobody will notice."

CONTRAST

BY

WILLIAM SCOTT

AWAY with the smells of the city,
With odors that arise from the street,
With hustle and bustle of traffic,
And the treadings of thousands of feet.

Away with the smells of the city,
With its places of smoke and of grime,
With its rivers of filthy waters,
And its sewers of sickening slime.

Oh, give me the smells of the country
With the songs of the birds and the bees,
And views of the hills and the valleys,
And the comforting shade of the trees,

Where fragrant are ripe fields of clover
And are acres of tall growing corn,
And glorious scent of wild blossoms
Inhaled with the halm of the morn.

Oh, give me the country forever,
With its woodland and valley and plain,
Where Nature and Man are as brothers
To the Power that ripens the grain.

PEN AND INKLINGS

By OLIVER HERFORD

A Tammany Garden of Verses

THE STATESMAN

When I was young, a long frock coat
And soft hat caught the people's vote.
Now folks is never satisfied,
They wants to see a *MAN* inside.

SYSTEM

Election day, it's up to me
To vote as often as can be.
And, if I fail to land the bluff,
I get a lemon sure enough.

The guy that hasn't lots of dough
On eats and drinks and smokes to blow,
He's got the double cross for sure,
Or else his politics is pure.

RAIN ON ELECTION DAY

The rain is raining all around,
The swell guys shun the polls,
But Tammany is on the job,
In boots with rubber soles.

HAPPY THOUGHT

The world is so full of a number of votes
I'm sure that we all should be fuller than goats.

Musings of Hafiz

The original of the "Rubaiyat of a Persian Kitten"

WHEN I was invited to write for "Pen and Inklings," it was understood that I should have a perfectly free paw to express myself on any subject that I might choose to discuss.

Nevertheless it is with regret that I feel called upon in this, my first article, to criticize most severely the work of a fellow-contributor.

PARODY is at best a pastime for the feeble-minded, as profitless as the pursuit of an imitation mouse contrived to simulate life by the agitation of a piece of string to which it is attached. Only when a parody points a moral or aids a cause is it excusable, and in the case of the speci-

mens printed on this page I see no excuse whatever.

POLITICS, beyond its possible effect on the high price of liver (a year ago a portion of liver was given away with the family meat order, now it has risen to ten cents), has no interest for me; but I have sufficient family pride to be sure that my relative the Tiger, who is made light of in this doggerel (what an appropriate word!), can stand only for what is brave and righteous.

As for the "Tammany Garden of Verses," it is nothing more than a frivolous parody of a collection entitled "The Kitten's Garden of Verses," printed in a book and very properly dedicated to me, since I furnished most of the ideas and sat for all the

pictures. I was present when these shameless parodies were written and did my best to suppress them, but so unfriendly was the reception of my well-meant effort, I nearly lost one of my lives in my haste to absent myself from the scene.

I have learned since that there is still another collection entitled "A Child's Garden of Verses" by one Stevenson. It is said to be exceedingly well written, but not having seen it I am in no position to judge.

THE LITTLE WHITE DANCER

By BEN ALI HAGGIN

Foreign Lessons for American Playwrights

By ARTHUR HOPKINS

ON a very rainy, dismal day, when I was a very small boy, I heard a man opine that, on that sort of a day, the Germans bought rope. The observation that puzzled me not a little was later interpreted to me, and for a long time I had a strong impression that the Germans were a melancholy race prone to gather about cellar rafters and barn doors.

As I sat in the Lessing Theater, Berlin, observing the brilliant torture of characters in Hauptmann's most recent success, "Rosa Berndt," the rope-buying observation was again recalled. Hauptmann is surely the greatest influence in the German theater to-day. He has rescued it from its heavy-classic over-acting period, given it the modern, natural touch which has resulted in making it, in many respects, the most advanced theater in the world. He has found his subject matter in every-day life. He has taken his characters from close at hand. He has depicted human conflicts so intimately that the simplest-minded could recognize their verity. He has brought the stage from the remote to the adjacent. His influence, so great in Germany, has been felt in all other countries. For all this he deserves the great position he has won, but in spite of his achievement Hauptmann will never be a world dramatist, and the reason lies in his racial melancholia.

HE has developed into a dramatic vivisectionist. He smuggles comparatively happy and healthy characters into his study and then proceeds to cut off their legs, pour molten metal into their brains, lacerate their hearts, or remove them altogether, and, while the victims writhe under his diabolical tortures, he coolly records their actions. Since he is a highly trained observer, his records are very accurate and when read from the stage these observations impress one as being true to the last gasp. In another branch of Hauptmann's laboratory he indulges in bacteriological research. Having extracted virus from each writhing soul, he smears specimens on glass slides, and with the aid of his microscope proceeds to classify the elements of which the virus is composed.

This is followed by pathological inquiries with Dr. Hauptmann unfolding the brain layers, seeking out the lesions, tracing them back to their causes and there revealing the final registrations of all the preceding tortures. Approaching a play in this manner, the dramatist at once subjects theme, story, and plot to the demonstration of what a collection of characters will do under certain stresses, given certain tendencies to begin with. As witosa, "Rosa Berndt."

The entire vivisection of this play is precisely performed. One feels that Hauptmann understands his subjects, but when it is all over one is forced to wonder the need of it all, the object of all that laceration. Is it not a morbid practice, research without a resultant; vivisection that produces no method of cure; just probing and scalding and roasting?

This form of play-writing does not

begin with a theme, a plot, or a solution. It begins with so many people placed in such and such predicament, brought into this and that collision just to see how they will take it. If the play is the thing Hauptmann's method is wrong.

But in Hauptmann's method much has been discovered. He has shown the possibilities of character-drawing. He has achieved perfection in establishing motives and he has relentlessly followed motives and acts to their logical conclusions, no matter how bitter. For that the future theater will always be indebted to him. The ideal playwright will be an optimist who can see life as clearly as Hauptmann, but who can extract from it formulas and reasonings that will help every auditor in the solutions of his own problems, that will help him see more clearly the philosophies of life which bring the greatest achievement, the deeper tolerance, and the completer happiness.

FRANK WADEKIND in his plays tries to bear messages. I saw his "The Awakening of Spring" at the Kammertheater. I had read it several years before and wondered if it were possible to give it the semblance of a coherent, connected play. It was not. The play so lacking in continuity, motives, and clearly defined conflicts never for once maintained any of the illusions of good drama. The auditor knew he was being preached to, and, while the message was a tremendous one, it is one that might better be read.

"The Awakening of Spring" is not a play. It is a series of sketches all seeking to draw the same conclusion. Had Waedekind possessed Hauptmann's constructive skill he could have delivered his message in play form. He needed only one set of characters instead of several—he needed only one incident of child ignorance instead of many. It is not necessary for an author to summon substantiating witnesses and corroborative evidence. If he tells his story well enough, one case will convince his audience that there are many such.

Yet Waedekind marks an advance over Hauptmann. He at least aims to point out a condition that should be remedied. But in doing so he erred in discarding all that Hauptmann has taught.

I believe the future great plays will possess the insight and technique of Hauptmann and the protest of Waedekind. This seems the ideal play of the future. Joined to this must be optimism, for the public seeks constructive thinking and it is only the optimist who knows how to tear down in order to build better.

Since optimism seems to be found only in the younger countries, I believe the future great plays will come out of America; for here we can think and wonder without deciding that the scheme of life is a failure, and a rainstorm now and then does not send us off inquiring the price of rope.

IN France one does not find the introspection of the German theater. Here playwrights seem chiefly concerned with developing tense situations. The French

audiences are thrill-seekers. Theme and characterization are subjected to big moments. Two of the most successful plays this spring were Kristiansecker's "L'Ambuscade" and Bernstein's "The Secret." Neither play had anything to recommend it in the way of theme or character-drawing. In plot, each play had taken very old ideas and twisted them to a new angle wherein it was possible to bring out a big dramatic situation that was somewhat different.

In the projection of this situation both plays were superb examples of the dramatist's skill. In construction and development they were almost flawless. Each play reminded me of an exhibition train-wreck I once witnessed. As the trains started from opposite directions we knew there was a tremendous thrill coming. Breathlessly we watched them gain speed as they approached each other. When the collision came one's heart gave a tremendous jump. Our knowledge in advance that the trains would collide seemed to make the incident none the less thrilling.

So it was with these plays. Soon after the curtain was up on "L'Ambuscade," we learned that the wife of the loving and prosperous automobile manufacturer had an illegitimate grown son of whose existence the husband had not been advised. Further, to complicate matters, the loving mother induced her husband to give the young man employment in his firm. The young man, unaware of his mother's identity, pitted himself against his employer by leading a strike of the workmen. There were the two exhibition trains, hurtling together. Every auditor knew the crash was coming, yet when it came the moment was breathless, and the throbbing audience, having had its great thrill, voted the play a success.

IT is another phase of the German laboratory method of play-building. Given certain characters under such and such conditions, how will they collide and just where will the pieces fall? Though this method is not productive of great and living plays it has served a valuable purpose. It has shown the possibilities of big dramatic moments and the way of their development. It has demonstrated just how to bring the two trains together for the greatest possible thrill.

Yet, like the analytical plays of Hauptmann, it gives one little to take home. Its effects are but momentary. It offers no new light on any problem of life with which many of us are confronted. It treats with unusual conditions instead of every-day problems.

If the theater is to be a reflector of life it should reveal it at angles which are elucidating, not merely recording or thrilling. The German theater records: the French theater thrills; but neither is in the best sense constructive.

The American playwright should study the methods of both. If to their great specialized perfections he can add significance of theme, he will write masterpieces.

TIONS

AM GLACKENS

ISAAC

By JOHN AMID

Illustrations by J. R. Shaver

"Through the whole three miles the steady, flinging gallop never faltered."

"GOOD morning, please!"

It was Ganda Singh's customary salutation. The turbaned, classically featured young Hindu had just finished the chores, and came out of the barn to satisfy his curiosity concerning the voices of the white men.

"Good morning, Ganda Singh." Chet Russ, as always, returned his devoted employee's greeting with equal courtesy. He was standing feet spread, hands thrust deep into the pockets of his dirty, big-hipped corduroys, regarding the venerable wreck of a big farm horse, of that delectable color sometimes known as clay-bank, that mourned existence with drooped head and dejected tail, at the end of a musty picket rope.

Herrmann Gifford, Russ's guest for a day or two, having completed an investigating circuit around the old plug, stopped beside him.

"Some horse, what?"

Chet spat disgustedly at the fragment of a baked loaf of alfalfa.

"Some horse—him? He's no horse; he's a detective. All he's good for is to gum-shoe the harley-barrel—everlastingly gets loose and goes snooping around until he gets his head in the feed. That is, when he can stand up, he does. Some days he's too tired to get on his legs at all."

Gifford grinned, and the Hindu edged closer. Seeing the white man in apparent good humor he ventured a query.

"Yea sellum?"

Russ tutored.

"Him?" He jerked a contemptuous thumb at the yellow horse. "No. Not any sellum. Not any good now. Maybe fifteen, maybe twenty, maybe ten dollars. No good. Other men all time beatum. Too much whip. Not any sellum."

The Hindu smiled his approval, showing dazzling white teeth.

"Do you often break out in language

like that, Chet?" It was Gifford's first morning on the ranch. "That's certainly some classical for a once—was Phi Beta Kappa. You're becoming proficient with the mother tongue, old man."

"Oh, don't mention it, don't mention it!" deprecated Russ. "I can talk more languages now than they'll ever teach at the university—Pidgin English, Greaser English, Hindoo English, Jap-talk, and plain American for use on the folks from home."

The Hindu interrupted again.

"Pretty soon rain, more better. Horse all time let go walk. Not tie up so much. You hope so?"

"Lord!" said Gifford, "Please pass the interpreter."

"You're sort of slow in the brain," said Russ, commiseratingly. "Find it hard to understand English, do you? He just asked me if I thought it wouldn't be better, when the rains came, to untie this Isaac plug and let him roam the gray desert instead of buying feed for him. But I have a better scheme than that. It calls for an outlay of one thirty-fourty cartridge and two hours' work with a shovel." He turned to the Hindu again.

"When rain come not any horse more, maybe."

A look of horror crossed the Hindu's face.

"You killum?" he asked in amazement.

"I guess so," Russ nodded indifferently. "All time too much eat hay. Not any work. Too much lie down. All time too much tired. Not any good live now—not happy any more. Pretty soon die, then maybe pretty happy." He dilated on the matter, consciously stung by the look of repulsion that showed on the Hindu's strong features.

"You killum?" repeated Ganda Singh, scarcely believing his ears. "Shootum?"

Russ nodded again and started away, signifying that the incident was closed;

but the Hindu was rapidly crying himself up to a pitch of incoherent excitement.

"Mis' Russ!" he expostulated. "Wait a min'!" He groped for words in that difficult medium of expression, the half-learned speech of the English. "Wait a min'! Not any killum. Pretty soon die, all right. Not you shootum—no good."

"I understand," answered Russ, patiently, as if reasoning with a child. "You not understand. You think sellum all right—then other man too much whip. I think better shootum. Pretty quick go sleep—not anybody whip. You understand?"

"All right understand." The Hindu nodded his head vigorously. "Wait a min'. You savvy God?" He pointed a dramatic finger at the sky. "Bimby God killum. You not killum. My country not any killum. My country pretty good. This country too much all time kill—kill cow, kill mule, kill dog." He pointed at the white man accusingly. "You kill cowboy! No good. Not any more kill!" He pointed upward again. "God not any like."

"Well, well!" expostulated Russ. "We'll see, Ganda Singh, we'll see. Maybe not any killum. Maybe killum. Bimby we'll see." He walked away.

"You not any killum!" the Hindu called after him warningly. "First money buy all time feed! I pay!"

But Russ merely waved his hand.

"Good Lord!" said Gifford as they approached the house. "Do you let the crazy niggers order you around like that? If it was my outfit I'd give the guy a gun and order him to go shoot the plug himself. Say," he added as a thought struck him, "what cowboys have you been killing around here? Always knew you were a bad lot."

Russ only chuckled.

"Can't you understand what a cowboy is? That merely refers to a bull-call. I marketed one a couple of weeks ago, and the rag-heads haven't quit jabbering about it yet. Ganda Singh is the worst one in the bunch. He went away all that day—and cried over me when he came back. Said he'd have to tell God I did it! What do you know about that?" Together they entered the house.

At the breakfast table Gifford brought up the subject again. "Your husband must be a pretty husky man, Mrs. Russ," he said, "with all these Hindus around here—if he has to do what all of them want."

"Oh, don't tell me anything about that!" exclaimed Mrs. Russ, putting down her fork with a little clatter of impatience. "I think Chester is absolutely crazy about his Hindus. What is it this time? That Ganda Singh again?"

"I think," admitted Gifford gravely, "that was the Rajah's name. It seems his plans for the disposal of one of your colts differ slightly from your husband's intentions in the matter."

"Chester Russ?" The lady glared at her husband. "Are you going to let that black India man change your decision about old Ike? That horse," she explained, turning to the guest, "has been clattering this place for years! He is absolutely useless. He is so stiff that when he lies down the boys make bets about whether he will ever get up again. It is awful—that's what I say! Chester has been getting ready to put that horse out of his misery for ages, and now if that Hindu—" Words failed her.

"Poor old Ike!" said Russ regretfully. "He has outlived his usefulness, for a fact. With the two machines there really isn't

the slightest use of keeping him now, even for an emergency."

"If we ever could get him hitched up," augmented Mrs. Russ, "he would balk. He is the meanest old thing!"

"He is an awfully interesting old brute," said the owner of the ranch. "He used to be a cow-pony once—you would never believe it from the size of him; he looks more like a yellow elephant. But it would surprise you to see how nimble that old plug is when you get a saddle on his back. Even now, stiff as he is, he could wheel on a dime."

"You mean to say that that whole of an old plug was ever a cow-pony?" asked Gifford incredulously.

"That's what. If you had looked on his back when we were out there this morning you would have seen scars from old saddle-sores. He must have been shamefully used once upon a time. He's sore there yet."

"He must have been a funny looking cow-horse!" commented Gifford.

"I'll bet he was a dandy!" said Russ warmly. "There is a lot of sense in that sleepy old head of his; but oh, Reuben!"—he drew a long breath—"it must have been a long time ago!"

"How old do you suppose he is?"

Russ shrugged his shoulders.

"No telling," he said. "He's a long way past the age when you can even give a guess. Maybe eighteen years—maybe twenty—maybe thirty. Do you know," he added, "horses live a long time out in this climate—longer than in any other part of the country, I believe. I wouldn't be surprised if that old brute is all of thirty years."

"He is old enough to be put out of the way!" said Mrs. Russ emphatically, "that's rare. And now if you let that old Ganda Singh go and wheedle you out of your decision with his idiotic superstitions—Oh! he makes me mad! He dropped a garbage-can right in the middle of the yard the other day, because he said there was a cow-bone in it."

"Was there?" asked Russ, grinning. "There was not. He makes me tired. I had to get out there and kick the crazy bone out of the yard and keep saying to him: 'Sheep! Sheep make bone—cow out make bone!' until he believed me. It was a perfectly harmless little mutton-chop bone."

"Did he apologize when you had convinced him?" laughed her husband.

"Oh, as soon as he was assured that it wasn't any dreaded remains of cattle he got right down on the ground and scraped up the whole pile with his hands, and put it back into the pail;

but he couldn't get every little bit. There was a lot that was all ramp. Vera had put in some sour milk or something, and it called the flies just awfully. Chester, you have just got to fix those screens to-day."

"What is all this mystery about cowbones?" asked Gifford. "Me-thinks I smell a ghost."

"That is another of his crazy ideas," said Mrs. Russ, tossing her head.

"Cattle are beasts of burden to India," explained Russ briefly, "so they mustn't kill 'em—at least that's what I make out from his conversation. It is bad enough to kill sheep and pigs; beasts of burden are exempt."

"Would you believe it!" said Mrs. Russ. "Chester had some real to ship the other day, and there was nobody around to help him load it in the wagon but that Ganda Singh. Would he help him?—Not he! He wouldn't lift a finger. Chester nearly broke his back getting the big thing in the wagon. He has the craziest ideas."

"They're not so bad," expostulated Russ. "They're part of his religion. They seem funny kinks to us, but some of our ideas, I suppose, look equally funny to him. Whenever I can conveniently, I certainly prefer to let him have his own way about those things. I wouldn't like it very well if I had to take orders from some guinea who kept ordering me indifferently to commit what I consider blasphemous acts."

"Well, about this Isaac matter," argued Mrs. Russ. "You certainly can't let him have his way. That old horse is awfully in the way, and it costs a lot to feed him."

"My dear," said Russ, "that poor guy offered to buy the horse and feed him himself, rather than have me shoot him."

"Let him, then!" retorted Mrs. Russ vindictively.

"Tut, tut, my dear!"

"Chester Russ! if you try to 'tut, tut, my dear' me, I'll—I'll throw something at you."

So the subject was dropped.

At the end of the week Hermann Gifford went away; but the old yellow horse, Isaac, stayed on.

"Maybe he will drop off one of these days of his own accord," said Russ hopefully, when his wife expostulated with him. "He is liable to go any

"Half a mile down the road they met Ganda Singh."

time now. No horse can live forever, you know."

"He will live for decades! I just know he will," said Mrs. Russ, "just to be mean and spiteful."

Except as a plaything for the children, who occasionally led him about in make-believe games of Indian warfare, the old yellow horse indeed seemed to have outlived his usefulness. Even in the children's games he was useful only for lead-purposes. The old saddle-sores on his back made him touchy about being ridden without a saddle, and the only saddles on the place were two old Mexican, carved leather affairs, almost too heavy for the children to lift.

Once Vera, the hired girl, saddled him and rode him a mile or so to the foot of the hills and back, but vowed that she would not repeat the experiment. She had been unable, she reported, to get the stiff old beast out of a walk, dig him in the ribs much as she might.

"It was different before we had the machines," Mrs. Russ complained. "You had at least the shadow of an excuse for keeping him then. Now there isn't any."

In their early days on this outlying ranch, which in time, they hoped, was to become a portion of the great California orange area, they had relied upon horses for trips to the railroad and town, four miles away. In those days old Isaac, though used mainly for hauling in some phases of the rock-clearing work, had made many unexpected trips on short notice for medicine or the like. With increasing prosperity, however, Russ invested in an automobile, and, after a couple of years of satisfactory service from the first old, second-hand car, had bought a second machine. He had a natural taste for mechanics, and developed into a very good driver, doing his own repair work and keeping both machines in excellent condition. One (and usually both) was always in shape for an instant start. The older machine was a heavy, two-cylinder affair, with the power of a truck and the voice of a locomotive. It had, however, the tractable kind disposition of a big family bond. The other machine was a snappy little runabout that could, if necessary, make the trip to town and back on a single one of its four cylinders. With the two serviceable machines continually on hand it seemed indeed that the end of equine transportation for the Russ family had come forever. But the plans of mice and men—!

One chilly December day, shortly after

"A look of horror crossed the Hindu's face."

the first rains, Chet Russ was working in the barn overhauling some spare harness. Suddenly he became aware of a commotion in the direction of the house, and an instant later heard his wife calling his name, hysterically. Intuitively sensing calamity he jumped from his place and started from the barn with a speed undreamt of since college cinder-path days. Rounding the corner of the structure he caught sight of his wife as she rushed into the house, carrying in her arms their seven-year-old boy.

The mule team was standing beside the low fence that surrounded the house, left there for a moment by Ganda Singh while he went to carry out some request of Mrs. Russ.

Russ hurdled the little fence with the speed that had won him the captaincy of his college track-team, and dashed into the kitchen. He found his wife inarticulate with terror and sympathy, trying with trembling, futile fingers, to ascertain the extent of her boy's injuries.

"Oh my baby! My baby boy!" she was babbling, over and over again, as every touch drew screams from the half-delirious child.

Attempting to retrieve a tennis ball, the lad had ventured too near the business end of one of the staid-appearing but touchy mules of the team, and without warning the beast had suddenly lashed out at him. The iron shoe had caught him where neck and shoulder meet, grazing and cutting open the chin, and throwing him against a wheel of the wagon.

With the self-possession that never deserted him, Russ directed the girl, Vera, where to find the necessary bandages; and while trying to stanch the flow of blood attempted to quiet his hysterical wife.

"It will be easier for him as soon as we get him bandaged a bit," he said above the boy's screams, "and then I will go for the doctor. Pull yourself together, my dear, pull yourself together! It's not as bad as it looks." But his own shaking fingers belied his words.

The instant he dared leave the boy, having exhausted the expedients of first-aid-to-the-injured service, he jumped for the barn and the autos. The nearest telephone was three miles away on the outskirts of the little town. He thanked Heaven for the swift machines.

A moment later he was face to face with one of those queer incidents that sometimes change the currents of human life.

Two automobiles, each capable of more than thirty miles an hour, each in good running condition, and each left at its moment of emergency, by a trick of fate, useless because of lack of fuel.

Chet Russ was one of those individuals equipped with a mind that in an emergency ran neither above nor below its normal capacity.

Without haste, but also without a single lost motion, he took saddle and bridle, and started around the barn, noting mechanically that the heavy-haired quirt hung from its place on the saddle horn. With long strides he

approached the old yellow cow-pony. Ike, considering even as he approached how most quickly he could saddle and bridle the venerable horse.

At the first blow in his ribs the old horse grunted, then stopped dead.

"No time for that now, old man!" said Russ in a pleasant voice. "We can't have any balking now. It's you or the boy, I'm thinking."

At the assured, accustomed tones the old pony again started forward with his stiff walk. Urging him continually, but carefully avoiding a repetition of the first break, Russ quickly had him in a clumsy, loose-footed canter. Then, and

months had been so stiff he could only rise from the ground with extreme difficulty, seemed to limber up and become young again. The years sloughed off him like a slipping blanket. He reached out like a three-year-old.

"Good boy!" whispered Russ, coaxingly, leaning low over the saddle horn. "Good boy! Now you can do it! You can do it!"

Through the whole three miles, the steady, flinging gallop never faltered. Caressing the yellow neck with the hand that held the reins, Russ reserved the swing of his right for the terrible quirt, which the running pony scarcely

seemed to feel. Favoring the horse with every muscle of his body, in so far as it could be done, Russ brought him into the neighbor's door-yard at the same frightful clip that had dwarfed the miles. Once there, he reined hard and did him to the porch steps on his frayed old stump of a tail, flinging himself from the saddle through the dust before the old horse could regain his feet.

At the phone it seemed hours before the doctor's familiar voice came over the wire. "Hurry, please!" drawled the physician, "I'm just going out."

"You bet you are!" said Russ. "You are coming to my place, quick! This is Chet Russ. My boy's been kicked by a mule, and he's hurt—bad! Pick me up at Cubberly's as you go by, Dor, and make it fast! I'm afraid—" his voice faltered—"I'm afraid the lad's about all in."

But he was not all in, although, as the doctor admitted a couple of hours later, "That certainly was a pretty close squeak."

"It's a lucky thing," he added, "you got me before I got away. That's what gasoline will do." He nodded sagely.

"It wasn't gasoline," said Russ. "It was an old yellow horse that's been sticking around ever since I can remember. Nobody knows how old he is. But a machine couldn't have made any better time over these roads."

"You don't say so!" commented the doctor. "Where did you leave him—Cubberly's?"

"I sent a Hindu for him as soon as I got a chance," said the rancher. "He ought to be here by now. Guess I'll get in and ride with you a piece until we meet 'em, Doc. I'm kind of anxious to see the old plug and apologize for the way I treated him on the way down. There's nothing more I could do here for the boy, is there?"

"Nothing now," said the doctor. "He'll sleep until the drugs wear off, and the nurse'll be here by then. Get in!"

Half a mile down the road they met Ganda Singh, lugging on his shoulder the heavy breaking-saddle.

"Where's Ike?" asked Russ quickly. "Not any come," said the Hindu, indifferently. "Pretty good now, he dead. Not any shootum," he added with satisfaction, nodding his head. "God killum. Pretty quick. Pretty good."

"No good. Not any more kill. God not any like."

not until then, he reached for the heavy quirt with itching fingers. First slipping the noose over his wrist, he closed his hand firmly on the loaded handle.

"Now, old boy!" he said—and the quirt descended.

When a temperamentally kind man is of necessity cruel his blows carry weight. Each time the quirt descended a welt arose on the old pony's withers, simultaneously, it seemed, with the descending leather.

But the strokes were not frequent. Even as he restrained his arm, Russ thought, grimly, of a line from Izaak Walton, wherein the great angler issues instructions for impaling a live frog on a hook—"tenderly, as though you loved him, that he may live the longer." Russ knew that he had between his legs only the wreck of an old cow-pony, and the telephone was three miles away.

At the first blow the old horse put in real effort and doubled his gait; but with his stiff old joints it was fearful work, and Russ half expected each succumb to feel him trip and crash headlong. The second blow fell only when the wise old pony slurred signs of moderating his speed.

Then a rather wonderful thing happened: the old yellow horse, that for

Labor Day Orison

A Morning Prayer for Workers

By HIRAM MOE GREEN

O GREAT Father of all men,
In humble acknowledgment to Thee our knees are bowed.
We thank Thee for the day again,
Refreshed from sleep to join the moving crowd;
Grateful for work, for each to know his task;
To do this well and honorably, O Father, Lord, we ask.

O Thou Great Master Workman,
We ask Thy guidance for our faulty hand,
To sin not, nor to err, to honest be and true,
To guard, and keep from jeopardy those few
In our care.

Keep our hearts pure, our minds and lips unsullied,
And to command
Of each no more than from each one is due;
To love our brother-workman and no one despise
For his poor part, nor judge, nor criticize.

And when the day is o'er, and we go into night,
Let us come home and be grateful in Thy sight.

AMEN.

Orators Who Have Influenced Me

By T. P. O'CONNOR, M. P.

CHARLES STEWART PARNELL

I REMEMBER almost the first moment I heard Parnell's name. I was discussing with a well-known Irishman a recent election in Ireland; it was for the county of Dublin, and the year was 1875. And my friend said that the defeat of our candidate had been expected; he was such a hopeless creature; scarcely able to string even a few words together. The poor creature was Parnell. It was the second time he had abjectly failed; at a great meeting at which he was asked to appear, and where Isaac Butt, the kindest and gentlest of men and then leader of the Irish movement, said everything in his favor, he had failed to get through even a short speech. Stammering, slow, unable apparently to get out of his breast anything he thought or felt, the young politician had to resume his seat with the sense of utter failure.

And to the end of his days, Parnell retained a good deal of this fearful hesitation and slowness of speech. So well was this known that even his most faithful supporters never saw him rise without a certain trepidation. For, in addition to this slowness of speech, he was one of the most casual of men. He never could keep his papers in order; he was a very slow worker; and he had no quickness of grasp either of legal points or of figures; and often within five minutes of the moment

when he ought to be on his legs in the House, he would be found trying to collect laboriously certain statistics in the library; a huade of papers would be scattered around him; then messages would come, each more urgent than the other; and at the last moment he would rise, try to gather his papers together and possibly lose some of them in the short distance that separates the library from the floor of the House. And then there was always a little uncertainty as to what he would say. He would stumble into a blunder from sheer nervousness or the absence of that easy command of words which belongs to the born speaker. Once during the Parnell commission, when, before three judges, his life and the life of his party were at stake, he made every friend in the court icy cold when he said quite simply that some statement of his might have been meant "to deceive the House of Commons."

SO well are most of these facts known that it is almost an accepted legend of Parnell's life—in which, as in the lives of so many remarkable men, there is any number of legends—that he was the only Irish leader in all Ireland's history who was an incurably bad speaker. People knew his power over men; how millions of his race, scattered all over the world,

obeyed his single word as though he were a prophet or a despot whom to disobey would mean either blasphemy or death. And people always wondered why it was that a stammering speaker, with no fluency, diction, grace of style, nor power of logically arranged argument, could exercise such omnipotent sway.

There is some truth in this legend; but it is not altogether true. Parnell's power was mainly due to the force of personality. Don't ask me to explain what personality is, for it is the subtlest and the most indescribable of human things. But, though we would find it hard to define personality, we all know what it means; we all know that some persons have a power over us, and some have not. Parnell could really hypnotize almost anybody who came at all near him. It was partly physical, for he was an extraordinarily handsome and impressive figure. He was very tall, very slight, and beautifully proportioned; and his face was at once attractive and awe-inspiring. Imagine a perfect oval, with a brownish beard, a mouth compressed, and then, surmounting this, a forehead of perfect shape, and all this illumined by strange eyes, red-flint in color, with a strange glitter in them so that, when suddenly he turned them on you, you felt almost as if a dazzling and blinding electric light flashed

out of the darkness and half blinded you. Add to this that there was always about the expression an almost uncanny look of aloofness, and of a pride, fierce, almost arrogant and unrequitable. And the impression of this pride was true; it was pride that helped to make Parnell; it was pride that destroyed and killed him. The best description I ever heard of Parnell's appearance was given by Sir Lewis McIver, a stout Unionist, who differed in toto from Parnell in policy, but admired the man. Parnell, he said to me once, looks like Lohengrin.

EASY-GOING, tolerant, a splendid listener, studiously polite, unpretentious, Parnell's potent personality only came out at odd and infrequent intervals. He would yield, sometimes against his own judgment, to his friends; he would appear disinterested and indifferent even when many important things were being discussed. He often submitted to things and to men he did not like; but a moment came when you felt that you touched adamant, and that you could no more move Parnell than you could the Matterhorn. And, though he had extraordinary self-control, there were moments when his anger was palpable, though even then controlled; he would give a stern straight look from those strange eyes of his, and I have seen even bold men shrivel under the gaze.

His power, then, rested mainly on personality; but was it true that he was a bad speaker? It was not. But again I must say that when Parnell spoke well—and he did often speak badly—it was when this tremendous personality behind the speech revealed itself. He was a man of action, and words to him meant action, not mere words. All his pursuits, all his reading was in practical things. The only paper that he seemed to take regularly, and that he could not do without, was an engineering weekly. Talk to Parnell about poems or novels, he could say nothing—he had never read one. The only occasion on which he tried a poetical quotation he misquoted, although it was one of the most hackneyed tags of Irish oratory. Of history, even of Irish history, he knew little; and the little Irish history he did finally acquire was during the long hours of his imprisonment for six months in Kilmainham Jail.

But, on the other hand, he often astounded his friends by the depth and width of his knowledge in other things. Discuss with him, for instance, American railroads, and he could pour out facts as to their development, their traffic, and their prospects. And I have heard him say things about the development of electricity at a time when its abundant use of to-day was undreamt of, things that appeared to me dreams at the time; and now, long years after Parnell died, they are commonplace and frequent realities.

TO bring out, then, the powers of Parnell as a speaker, you had to confront him with a situation where he had to deal with facts; still more, where he had to deal with difficulties; most of all, where he had to deal with resolves. When such occasion arose, you might rely on Parnell rising immediately to the

situation. Then there was no hesitation; the words came out, not slowly or with any hesitation as to the particular form they should take; they were like shells sent hurtling from a Maxim gun. And when he was in this mood the whole man seemed transformed. The lassitude, the embarrassment disappeared, and you saw a man erect, proud, fierce, who shot out his sentences as easily as if he had been the most fluent and the most practiced of orators. Every word, too, represented an idea or a fact, and I have seen the whole House of Commons, which, like all bodies of men, is impressionable and infectious in its emotions, almost cower as they heard from this man's lips words which backed

associate Parnell with physical any more than with intellectual weakness; but he knew better, and in his inner mind not all the delicious shouts of tens of thousands of worshipping admirers could ever still that warning voice of an early death. It accounted for some of his mannerisms, even in dress. When he was still a young man he appeared in the House of Commons, even in fairly good weather, in a long, wooden waistcoat known, I think, as a cardigan. For years his friends regarded all these things as part of his hypochondria; it was only when he appeared, after a long absence, in the House of Commons pale, languid, and glassy-eyed, that they began to realize that Parnell was mortal, and perhaps doomed, as he always thought, to a brief career. Joseph Biggar, a sturdy, stout Ulsterman, who was one of Parnell's earliest associates, but who would have sacrificed Parnell or anybody else to his cause,—he had the fanaticism of a Marat,—saw Parnell at one of those terrible moments, and he had to go away and weep in secret.

He had his divine and he had his poor moments; he required the stimulus of great emotion or of great peril, or a great occasion, to bring him out

by his tremendous personality, sounded as if they were the words of some irresistible being, of some implacable doom.

Once I heard him make an attack on a strong political opponent. He rarely made such attacks; he had a dislike, unless he was driven to it, for personal attacks; but when he was driven to it, there was no man more ruthless. And in this speech every word felt like vitriol on a wound; and even the strong nerves of his opponent for once seemed to give way, and the speech visibly disconcerted him.

ON another occasion, when Parnell was roused to one of his fits of cold fury, he astounded his followers by delivering a speech which was so direct, so fierce, so defiant that he looked no longer the cold-blooded and self-controlled individual which he was usually supposed to be, but a revolutionary prepared to play, like the Revolutionaries of France during the Terror, for his own and for other people's heads. It was one of the unknown factors of Parnell's personality that he always lived under the shadow of a conviction that he would have but a short life. At every moment in life there stretched across it this long, bleak shadow. This accounted for things which used to appear to his friends as sheer hypochondria. When you saw the erect form, the flashing eyes, the powerful limbs, you could not

THE speech of Parnell which I remember best was never reported, and never will be. It was a private meeting, and I believe no reporters were allowed to record it. It was at the terrible moment when, against the judgment of all his colleagues, he insisted on the election of Captain O'Shea for the town of Galway. Every one of his followers hated O'Shea as the worst form of political enemy; and some of them, without positive knowledge, surmised the hideous nature of the power that he was able to exercise over Parnell. When Captain O'Shea's candidature was announced for Galway there was a popular revolt, and the whole town went mad. I was with Parnell when we reached the railway station in the town, and never have I seen an angrier or more determined crowd. It looked as if we could not escape with our lives. Parnell remained calm throughout all the tumult, and in the end it was agreed that he should address a private meeting of our supporters and try to reconcile them to the candidate they hated with such deadly fury and with such just suspicion.

It was a small and a squalid hall, and the audience was so fierce, so uproarious, that it seemed impossible that anybody could get a hearing, and least of all Parnell, who was held to be responsible for the whole dubious transaction. And, when Parnell rose, everybody knew that he was fighting for his life. But he was equal to the occasion. He took no notice of the deadly insults that were flung at him, but went right on to the description of the situation. He was too adroit to discuss the question on its own merits, but he raised it to the general issue of the prospects of Ireland. And then he pointed out that at that moment he had an Irish Parliament within the hollow of his hand, but that if they opposed and beat him the great prospect would be lost. Ireland, he said, will be lost when Parnell is beaten; Ireland will no longer have a leader. And these words were uttered with such tremendous emphasis that the crowd was awed and silenced and conquered, and Captain O'Shea was allowed to be elected.

A Discussion of American Beliefs

By CHARLES ZUEBLIN

Illustration by C. R. Weed

"Is the Constitution so superhuman that we must worship it?"

I

IDOLATRY

MR. VOTER, do you worship your Constitution, or do you understand it?

Idolatry is a serious handicap to life, and the worst of it is that the object of idolatry is generally a blunder, shrouded in myth. For the first time since the Constitution was hammered into shape and interpreted for the American people, serious study is being given to the science of politics. Even when the country was torn by the contest over states' rights that resulted in the Civil War, slavery was so overpowering an issue

that men were driven by prejudice or passion, instead of by reason. Now, men and women all over the country are asking themselves, "Is the Constitution so superhuman that we must worship it?"

When it comes to the majesty, has the German emperor had anything on the United States Constitution?

MR. VOTER, do you do your own thinking. Are you up on history?

When "Alec" Hamilton got a tip from "Charlie" Montesquieu that there

was infallibility in a system of checks that separated absolutely the executive, the legislative, and the judicial, did "Alec" doom the American people to surrender their thinking faculties to him till the crack of doom? Montes broke the Ten Commandments before he got down from Mt. Sinai, but the stand-pat American has insisted that we obey "Alec" as though Montesquieu were Jehovah. Does the old-fashioned American know that a French count, inspired by the British aristocratic system, guided Hamilton and his fellow aristocrats in the formation of the document which Mr. Gladstone graciously called "the most wonderful work ever struck off at a given time by the brain and purpose of man"?

Mr. Gladstone was a subtle statesman, Mr. Voter. He used to acknowledge books of budding authors by the formula: "I shall lose no time reading your book."

TALLEYRAND said that Hamilton had divined Europe, never having seen it. The same aristocratic temperament and insight certainly enabled him to bedevil America. Hamilton wanted to give the propertied classes an unassailable position in the government. He succeeded beyond his dearest dreams. Mr. Voter, who are your heroes? To whom do you feel indebted for founding the Republic? When we seek the influence that determined the character of the Constitution, we must note that Samuel Adams, Thomas Jefferson, Thomas Paine, and Patrick Henry did not sit in the Constitutional Convention; that only six of the fifty-six men who signed the Declaration of Independence were admitted to the deliberations that resulted in a constitution devised to avoid the excessive democracy of the colonial governments—a constitution which not only tolerated but supported slavery, and which to-day is the chief opiate to make statesmanship somnolent.

As Emerson said of creeds, we may say of constitutions, "they show how high the waters once came."

HAS not the time come, Mr. Voter, when we may probe the foundations of our government without scandalizing those who have never made such an examination? Has not the time come when patriotism demands that every citizen be prepared to give a reason for the faith that is in him? Has not the time come when the true American must have his own private opinion of the philosophy of Montesquieu and Hamilton, as the true Lutheran has of Luther or the true Methodist of Wesley? Did Montesquieu and Hamilton give the world the greatest system of government ever devised, or did "Alec" and "Charlie" flim-flam a busy and complacent people?

"The sins of the fathers shall be visited upon the children unto the third and fourth generation."

Current Athletics

By HERBERT REED
("Right Wing")

OLD boats, it seems, are, like old friends, the staunchest. And deep-sea racing in a wind that buries the lee rail is like old wine to the amateur skippers who are veterans of many a New York Yacht Club cruise. Since the latest challenge of Sir Thomas Lipton for the *America's Cup*, there has been a deal of talk about "racing machines," but the recent smashing race around Cape Cod to Provincetown for the Tod Cup—and Mr. Tod will be in action next year with a new Herreshoff boat—proved that the old designers, whose names in the days of the International Cup Races were household words, were not always given to "over-sparring chips" and could produce upon occasion boats that could weather half a gale when necessary.

It is many a long year since the cruise has provided a test of design and seamanship such as was furnished by the race "outside," won by the old *Corona*; and in these days of the "one-design"—a natural and healthy development of yachting—it is, nevertheless, a pleasure to find a new deep-sea test of the work of such designers as Edward Burgess, Herreshoff, C. H. Crane, A. Cary Smith, and the amateur, A. Cass Canfield.

THERE were six entries in the Tod Cup Race—all veterans. The winner, the *Corona*, was built in 1893 by Herreshoff, her owner aspiring to the defense of the *America's Cup*. She was christened *Colonia*, but with the change of her suit of sails and spars, her name was altered to *Corona*. The *Constellation*, which allowed time to all other contestants in the recent race, was built in 1889 from designs by Edward Burgess, and is now owned by Francis Skinner of Boston. C. H. Crane designed the *Endymion* for George Lauder, Jr., of Pittsburgh. She was the record-holder across the Atlantic Ocean until 1903, when the schooner *Atlantic* set a new mark in the Emperor's Cup Race.

The *Sea Fox*, the beautiful old schooner with the graceful black hull, and the flagship of Commodore Pratt, was built as far back as 1888 for her designer, A. Cass Canfield. In the following year she won the Golet Cup. A. Cary Smith designed the *Arctid*, which was built in 1893. Last of these old friends and seaworthy craft comes the *Katrina*, the smallest boat in the fleet. She is another product of A. Cary Smith, and was first in commission in 1888. She was sailed by the famous Larchmont Corinthian sailor, A. H. W. Johnson.

There have been many races around Cape Cod. The New York Yacht Club has held half a dozen of them, and the Eastern Yacht Club has held four events of the kind in the last seven years. Never has the journey around this particular peninsula been without stirring incident. In 1897, the New York Yacht Club fleet made a run of 225 miles from Vineyard

The *Corona*, built in 1893 by Herreshoff, and winner of the recent Tod Cup Race around Cape Cod to Provincetown

Haven to Bar Harbor which included a run down the wind of 175 miles, in which every entry carried a spinnaker for twenty consecutive hours.

The record around the Cape is held by the *Constellation*, both to Provincetown and to Marblehead. There is nearly always a blow "outside," and the old-timers seem to stand up under it the best.

IN the meantime the old yacht *America*, for which the greatest sporting trophy in the world is named, lies moored alongside the draw of the Summer Street Bridge, over Fort Point Channel, Boston. Here is the famous racer that sixty-two years ago captured the world's yachting supremacy. Her deck has been rooled from stem to stern, and there is nothing in the present aspect of the original cup-lifter to single her out from a fishing schooner. Yet she is still a staunch craft, and there are old-timers who believe that, with all her vicissitudes, she still has a race left in her.

About the only achievement of the old *America's* that the yachtman of to-day remembers is her famous race around the Isle of Wight. Yet, twenty-five years after that achievement, she was good enough to outsail a fleet of fast and far more modern craft in a five-hundred-mile ocean race in connection with the Centennial Exposition at Philadelphia. In the following year she outsailed the defender of the Cup, the *Madeleine*, in the race with the challenger, the Canadian yacht, *Conceda* of *Dufferin*. She was not a regular contestant, nor was she in racing trim, but General Butler, who then owned her, could not resist the opportunity to show that she still ranked with the best of them.

WHAT'S in the name of an athletic field? It all depends upon how you look at it. It depends whether you are an old-timer, an undergraduate, or a recent graduate. The old-timer still is stirred by the mention of Forbes Field at Harvard, of Percy Field at Ilfracombe, and of Brookline Field at Princeton. All have been the scenes of hard-fought gridiron battles and all mean something to the man who followed the great games of years ago. Now Marshall Field, at Chicago, is to give way to "The University of Chicago Athletic Field." There is

no change of site, merely change of title. Doubtless in due time we shall become accustomed to the new mouthful, but many an old Chicago man will sigh for the days of "good old Marshall Field."

It seems that, contrary to popular opinion, the site for Marshall Field was not presented by the late Mr. Field, hence the rather tardy decision to change the name. But there was another and a deeper reason. The plan, it seems, was to rename the field for the man who would complete the work on the interior of the stand, and at the same time provide locker rooms, hand-ball courts, and other facilities for the University of Chicago athletes and their guests. The sum required was in the neighborhood of \$100,000. However, no Chicago alumnus came forward to perpetuate his name with a gift of such dimensions, and "The University of Chicago Athletic Field" will be dedicated with considerable pomp and ceremony early in October. It is expected that the foot-ball team of Purdue will provide the victims for the Chicago holiday.

But while no one volunteered to supply the immediate needs at the field, Harold McCormick provided funds for the installation of racquet courts, and these should prove an unmixing blessing. Here is a game that, for sheer pace, rivals them all, but that, because of the expense, has been beyond the reach of any save the wealthiest undergraduates, East or West. And yet there have been racquet courts in the great English schools for I dare not say how many years.

BOB DIBBLE, of the Don Rowing Club, of Toronto, has set a pace that other oarsmen will find it difficult to follow. The Canadian star not only won the two senior singles races at the recent N. A. A. O. regatta at Boston, but also struck the winning senior pair. His greatest triumph came late in the day, when, despite the fact that he already had sculled in two winning boats, he rowed down E. B. Butler, who has twice won the Diamond Sculls at Henley. Dibble looked to be a beaten man at the turn, but he finished in front fresh and strong, with the former title-holder thoroughly rowed out. If there is ever such an event as a Sculling Marathon, Dibble will certainly go to the post a great favorite.

Women

By BERTON BRALEY

There's pretty girls in every port
That fronts upon the foam,
For I've made love in Labrador,
In Cairo, and in Rome;
I've kissed the girls of London Town
And sweet to kiss were they,
But Burmah girls are just as sweet
And Frisco girls as gay!

There's always eyes to sparkle bright
And hearts a-beating warm,
There's lips the man who's bold may kiss
And waists to fill an arm;
The maids are fair in Argentine
And dainty in Japan,
There's girls to love in all the world,
If you're a proper man.

And who's the fairest of the fair?
Well, hang me if I know!
Sometimes I think she lives in France,
Sometimes in Callao;
But take 'em north and take 'em south,
And take 'em east and west,
Of all the girls in all the world!
The last one is the best!

Strindberg and the Anglo-Saxon Mind

By EDWIN BJÖRKMAN

"SOON I shall have the distinction of being the only one in this country who has brought out nothing by Strindberg," I heard a publisher say the other day. He may almost claim such distinction now, for hardly a week passes without an announcement of some new volume by that writer, and the name of the publisher is rarely the same twice in succession.

I wish, indeed, that the introduction of Strindberg to the English-speaking nations—the last ones to discover him—might have come about in a more gradual and more natural fashion. Forced doses of anything are bound, sooner or later, to produce satiety and reaction. Yet—seeing how largely our getting anywhere depends on temporary acceptance of what is in place of what should be—I prefer this deluge of ill-prepared Strindberg volumes, many of which reach us only at second-hand by way of Germany, to the previous lack of any such volumes at all.

THE average American and Englishman dislikes Strindberg at first sight because he seems so different from themselves. But once their initial resistance has been overcome, it is very likely they will find that, just because of his differences, he possesses something in which they are lacking. There is in particular one feature of Strindberg's work which I have heard one American after another speak of with actual laudation: his appalling frankness in revealing undesirable and disgusting traits both in himself and in his fellow-men.

Of course, in the last instance, all poetry is self-revelatory. And Latin writers have more than once ventured as far as Strindberg in mere statement of detail. But, strange to say, they tend almost invariably to be as restrained in their mode of utterance as they are unrestrained in the facts uttered. And there is about them an objectivity that serves as an opaque screen to the innermost soul. One of them could never give us such a sense of ultimate nakedness as does the ruthlessly self-centered man from the North in so much of his work—as, for instance, in the series of autobiographical novels beginning with "The Bondswoman's Son." Strindberg was after all a Teuton, and, as such, of the same blood as the Anglo-Saxon. Like all the rest of the race, he was at heart a mystic, full of those sky-shaking passionate potentialities that have forced the Anglo-Saxon to develop his armor of reserve, lest he be swept into utter chaos by the flood of feeling from within.

The morbidity with which Strindberg is so frequently charged on the western shores of the North Sea and the Atlantic is an integral part of the Anglo-Saxon as well as of the Scandinavian mind. At its root lies the tendency to introspective brooding which is characteristic of active souls when submitted to prolonged isolation. The heart-searchings on which Strindberg seemed to waste so much precious energy might just as well have

August Strindberg at 13 years of age. From the Swedish edition of "The Bondswoman's Son"

spring from the over-sensitive conscience of some seventeenth-century New England divine. They were the logical manifestations of a puritanism that would have felt at home in a group of Cromwellian Ironsides. And the only point at which he really differed was in his literalness of expression—a quality which I hold to be one of the main foundations of his originality and consequent superiority as a writer. The deeper and clearer our self-knowledge grows, the simpler and homelier will the terms be in which we are capable of expressing it.

STRINDBERG was a premature and strangely precocious child of that new understanding of ourselves which is only just now finding its scientific formulation through such men as Professor Sigmund Freud of Vienna. His works teem with observations that seem as startling to us as they will undoubtedly seem matter-of-course to our descendants two or three generations hence. Philologists tell us that mankind had approached the beginnings of historical times before it had learned to distinguish all of the primary colors from each other. The colors were existent all the time; the machinery for discerning them was ready in man's eye and brain; but that machinery had not yet been practised up to the point where conscious discernment was possible. Blue and green, once identical with the general idea of dark, as red and yellow had been identified with light, had to remain unnamed, and therefore unknown, till some day a man gifted with more vision and more expressive power than the rest, cried in poetic ecstasy some term that forever after became inseparably connected with that aspect of sky and sea which nowadays any child recognizes as their bluesness.

In the same way there have been, and are, in the human soul, a host of colors and a larger host of subtle shadings that have had to wait through eons for the

man of keener perception and more flexible tongue who would name them so that thereafter they might be seen and known by the whole world.

BEING a pioneer, Strindberg frequently went too far. Being a child of our own hypersensitive time, he whined and whimpered when the process became very painful. But he didn't stop the operation on that account. In this respect we may well profit by his example, no matter how much the whining may offend us. And in following him, we may also benefit by the mistakes he had the courage or misfortune to risk—escaping them on our own account because he has made them for us.

It will not be a question of writing autobiographical novels like "The Bondswoman's Son." But it will be a question of writing in the general spirit that was Strindberg's, with his realization that the evils of life, as of self, can be conquered only after the searchlight of human reason has been turned on them. In their private lives, as in their politics, Americans (more than Englishmen, I think) have inclined to the delusion that whatever seemed unpleasant could be disposed of by ignoring it, or making fun of it.

The unpleasant has been tabooed in this country, which, on that account, has found it possible to compliment itself on the "wholesomeness" of its life and poetry alike. But the moment of change has come, I think. Strong forces are at work rendering the old self-complacency untenable. Whether or no Strindberg so far has figured among these forces, is hard to tell. That he will come to do so hereafter, I believe. The generation of tomorrow will not ask concerning his work, "Do we look pretty in it?" but, "Has it anything to teach us about ourselves?"

Strindberg did not always tell the truth, because he did not always see it. But he strove always to tell the truth, and he told it as he saw it.

"The Son of a Servant." By August Strindberg. Translated by Charles Field. New York, G. P. Putnam's Sons.—The title of this translation is unfortunate. The original title refers to the Bible story of Ishmael and should be rendered as I have given it above.

The Autopilgrim's Progress

By WALLACE IRWIN

III

Lemuel Tradeth Horseflesh for Horse-power

GOOD Mrs. Bogg, searching Lemuel's coat
(Mending a sleeve the error that she gave),
Found on a bill-head the following note:
"Buy the light, runabout kind and you'll save
Money on tires." Mrs. Bogg, roused pro tem.,
Faltered, "Why, Lem!
Dare tell! Are you goin' to git one o' them?"
"Goak, I detest that there method o' travel—
But say! them gas-buggies DO scratch up the gravel!
And I just been a-thinkin'—his manner was sheepish—
"If I could find somethin' a little mite cheapish
(For Pansy the mare
Is a good deal a' care,
Stiff in the withers and gittin' some odd;
In my estimation she ought to be sold);
And I been a-thinkin' a deal could be made
With some auto-feller that wanted to trade
A gasoline rig
For my old hoas and gig." So Lemuel strode
Forth to the stable behind his abode,
Hitched faithful Pansy, and took to the road.

DOWN the long turnpike, past Diggle's barn
Lemuel plugged as he muttered, "O'warn!
Look at that runabout
Passin' my waggin!
Cracky, I've done about
'Nough o' this drappin',
Slow-pokin' funeral—giddap, old nag!"
Lem looked again and observed Silas Scagg
Stopping his natty torpedo machine.
Si's look was mocking
As Lem did the talking.
"Say, want to trade?" "For THAT crossbate, y' meant?"
Si gave a hoat
Like his horn's horrid toot.

"I'll swap my machine for that sparin' old brate
If you'll throw in yer hat and three thousand to boot."
"So?" whistled Lem. "Well, I always DID hear
Y' dealt in old pig-ir'n and held it too dear.
Well, I better be joggin'."
The gig with Lem Bogg in
Started to move when Si Scagg shouted, "Hey!
Nathan McCurdle, up Centerville way,
He's got an auto he's willin' to change
For a horse or a dog or a gasoline range."
"Thanks, Mister Scagg!"
Lem slapped up his nag,
Remarking, "It's like takin' tips from the Devil,
But FR look up that trade, though it wa'nt
offered civil."

NATHAN McCurdle, up Centerville way,
Stood by his car with a handful of hay,
Wiping the oil as it dripped from the cap.
'Twas such a machine as professors dig up
From Pompeian ruins. It creaked in its sockets;
From junk-piles assembled,

Its cylinders trembled,
Its drive-chains hung loose from its broken-toothed sprockets.
Its sides were all scratches,
Its tires were all patches.
It looked like a juggernaut sired by a hack,
With an old-fashioned door that hooked up in the back.

With eyes pessimistic Nate gazed on its rust,
Then spied Uncle Lem as he jogged through the dust.
Said Nathan, "How do?"
Said Lem, "Same to you!"
See here! How'll you trade?"
Nate paused. "I'm afraid
Yer little red mare is a little mite lame."
Quoth Lem, "Serna to me,
As far's I can see,
Yer little red car is afflicted the same."

MY Muse, I confess, is a bit
at a loss
To sing when two Yankees swap
"hoas-power" for "hoas."
Suffice it to say that, ere set
of the sun,
The weighty transaction was not
only done,
But Nathan the Wise
Had taught Lemuel Bogg
The lofty empiric
By which fly-wheel and cog,
Maddened by gasoline, fired by
magneto,
Buzzing a song like a monster
mosquito,
If carefully triggered
And prayerfully jiggered,
Would start the old cart down
the roadway, by heck,
At nine miles an hour and the risk of your neck.

'T'WAS sunset at home, and the good Mrs. B.
With daughter Katary, at peace on the porch,
Awaited the husband and father for tea.
Serenely old Phoebe displayed his last torch
When HONK!
What was that?
With a brouch-
-ial, fat
Sort of rat-a-tat-fat-ering,
Howling and clattering
Noise, like a cannon-bell shouting at pans,
Or a dog-fight confused in a pile of tin cans,
Or a desolate dinosaur dying in pain,
Or the up-blowing roar of the battleship Maine,
Straight down the road—who could tell whether bug or no!—
Lemuel, driving the little red juggernaut!
"Oh, Ma,
It's Pa!"
Cried Katary
In fury.
The Vision, approaching midst puffings majestic,
Turned at the gate with a ehug awapastical,
Bore down the hatching post, tore down the fence,
Swore down the lawn with a hatred intense,
Went for the porch—and stopped suddenly dead,
Pitching poor Lemuel over its head.

Lemuel, prone at the gate of his house,
Rubbing his bald spot, confronted his spouse.
"Ma, I'm back home," he declared with
a yith you
Can not deny.
Quoth the lady, "My, my!
So I see—but good land! what's that
Thing y' brought with you?"

(TO BE CONTINUED)

Finance

By ALBERT W. ATWOOD

Socialism and Serial Repayment

THE sorry plight in which the express companies find themselves appears to suggest that no investment has permanent value. Land is often spoken of as fundamental, but certainly its investment aspect would shift amazingly if the single tax was generally in force. Indeed any one who follows from week to week the Sunday real estate sections of metropolitan newspapers discovers practically no reading-matter except agonized moanings because of the spread of confiscatory taxation. Toll-roads, canals, and ferry-boats were once regarded as excellent media for investment funds. To New Yorkers at least, the extinction of property in the form of bonds based upon ferry-boat lines is a recent memory.

Assume for the time being that socialism gradually will extend. Is any form of investment safe? Is there any kind of property which will not be confiscated in time? There is one practical answer to these and many other similar questions. It may sound technical. But while the words are formidable their meaning is simple. The safe and logical form of investment is the one which is paid off serially, a certain amount each year. Serial repayment is the most practical safeguard against confiscation of property. A corporation which pays off its bonds in series, out of earnings, say in the course of twenty years, is protecting the bondholders against pretty nearly every conceivable contingency.

Decline of the Express Companies

NOT many years ago express-company stocks enjoyed a wonderful measure of repute. In perhaps five years their standing has utterly changed. Not that values have been totally destroyed. Far from it. These processes of investment evolution are seldom rapid. Property does not disappear overnight. There is still an immense amount of vitality left in the express-carriers. The express has been intimately connected with commercial life in this country for sixty years. Fortunately for its owners, such large surpluses have been created that, if the companies were driven out of business to-day, most of them could pay off their stock at its par or accepted face-value. The Adams Company some years ago distributed to its shareholders, as a form of extra dividend, bonds to the extent of three hundred per cent of the stock outstanding. Not only have these bonds always been salable at eighty per cent of their face-value or more, but they have paid regular interest of four per cent a year. Or take Wells, Fargo & Co. as another illustration. An extra dividend of three hundred per cent was distributed in 1910. The American Company has been less generous, but it has paid large regular cash dividends and only a few weeks ago presented to each owner of four of its shares one share of Wells, Fargo stock.

Express officials assert that they can not be driven out of business. They say there are many transportation activities which lie open to them and which a governmental agency like the Parcel Post

I Am Just A Poor Boy from the Country

Sensitive, avoiding the limelight, this is the whimsical answer that

O. HENRY

America's greatest short story writer—made when admirers tried to lionize him. "Oh, please! Leave me alone! I am just a poor boy from the country." He preferred the shadows of the street corners where he could gaze upon the hurrying stream of life, and with a vision rarely given even to genius, he gazed deep into the hearts of men and pictured for you the generosity, ferocity, kindness, want, devotion, the laughter and the mockery, the feverish activity and the stark despair—all the complex interplay of human emotions which make life.

All this he compressed into 274 of the greatest stories that ever were written. Packed into twelve rich volumes—your ready for a little price and little payments and for a short time only.

KIPLING GIVEN AWAY

And in the bargain, just to spread this edition to every corner of the country at once, you get with-out extra charge the best of Kipling, in six rich volumes—170 stories and poems and his greatest long novel, "The Light That Failed."

Send Coupon for 18 Volumes, 453 Short Stories 2 Complete Novels

by the greatest English and the greatest American short story writers. Half a million dollars is what these writers would have been paid for these stories—so one people have rushed to take advantage of this offer. From end to end of this land, we have sent these volumes to homes where the love of O. Henry lived before.

The first complete edition of this work sold at \$125, and every set was taken before the sheets were in the covers.

Already O. Henry has become a classic. His biography is being written in books and magazines his stories are dramatized for the stage and for the moving pictures, the text books of American literature embody them, schoolboys are making verses—colleges are discussing his place in literature.

This offer is passing. The royalties on both the Kipling and the O. Henry are heavy and we can't afford to make this a permanent thing. Only the demand of thousands of disappointed book lovers could so extend it for these few weeks more.

O. HENRY

12 volumes bound in green silk cloth and gold. Gold top; illustrated, 274 complete stories, one long novel.

KIPLING

6 volumes, 170 stories and poems, one long novel, and silk cloth gold top.

SEND BOTH SETS BACK

If they're not the biggest, best thing in the covers of a book you ever saw or read. Better than moving pictures—far there are permanent, real moving pictures of life. Better than vaudeville, for these are the living stories of today, from "Mandalay on the China Bay to 24th Street and Broadway, and from Piccadilly in London to the ranch on the Mexican border. Send the coupon before it is too late. Get both sets at once, shipped prepaid on approval.

Pin a dollar to the coupon. You get the dollar back if you return the books. Send 25c a week pay for them. Send the coupon and get the full set on your library shelves and the new pay in your hand. Don't wait till tomorrow and be sorry. Send coupon today and be glad.

because of confusion, but from obscurity, new inventions, and change of custom. The man who buys a bond of a shaving-soap company would be foolish unless the bonds were paid off in large instalments, because a new variety of shaving soap with a newly imported perfume might quickly drive all others off the market. A bond issue for half a century ahead simply flies in the face of the unknown and invisible.

It is not a common practice for steam-railroad companies to pay off their mortgage bonds in series, or by sinking fund. Their property is justly regarded as perhaps the most permanent of any. But what of the well-known railroad-bond issue which comes due in the year 1961? Who cares to predict what changes will have come over railroad-investment values by that time? The case is extreme. But owners of express stock did not feel a tremor less than ten years ago. To-day they are utterly distraught as to the value of these securities. But the Postmaster-General admits that these companies may continue to do business for almost a generation. Thus one might buy express securities even to-day if they were repayable out of earnings, year by year.

The Safety of Serial Securities

[I]T is perfectly clear that the early maturities in a bond series possess a peculiar element of safety, but how about the later maturities? How can the last of a twenty-year series be any safer than bonds of an issue all of which mature in twenty years? The answer is obvious. The gradual extinguishment of debt makes the remaining securities safer in proportion as the corporation has less debt to meet. One reason the short-term notes, now so widely used for financing purposes, are so safe is because they usually represent an extremely small part of the company's total indebtedness, and being a prior charge, are sure to be met. From the very nature of things a small issue of securities against a large amount of assets insures safety. A corporation will strain every nerve to pay off \$300,000 of notes or bonds to maintain its integrity and solvency, but it will give up the ghost when confronted with the payment all at once of an entire ten million dollar issue, not to mention larger amounts.

Public as well as private corporations are benefited by the serial repayment principle. The rapid creation of debt by countries and cities in recent times has been due to a commendable desire to better conditions of life, but at the same time a huge burden is being prepared for the backs of future generations. Public corporations have long recognized the sinking-fund principle, but its proper management offers many chances of error to the official not experienced in ways of finance, as recent experience in New York State indicates. The serial repayment of municipal indebtedness is not only simple but results in a net saving in taxation.

Finance is regarded as a technical subject, but analyzed it is little but money common-sense. Those who employ common-sense as a guide to life never stake everything on the future.

Business common-sense has gradually crystallized a new principle; namely, that few enterprises are "good" for more than a generation, or at least are good enough to be mortgaged ahead for more than that period. Securities issued in accordance with this principle must of necessity become increasingly popular.

"This is one of the six pairs of Holeproof you gave me last Christmas, Julia—and not a hole in them yet."

The new Mercetried Holeproof Socks for men at \$1.50 for six pairs, guaranteed six months, are produced by our own exclusive process.

And we use the finest yarn obtainable, costing an average of 74 cents per pound. That is one reason why Holeproof are stylish and yet have this almost unbelievable wear.

We know every hosiery-making method

"They often out-wear the guarantee. I'll tell you now what I paid for them—\$1.50 for the six pairs."

that gets the best result. And we have every machine to employ it.

Every stitch is protected, not merely heels and toes. We replace free every pair that wears out in six months.

The genuine Holeproof, bearing this signature, *Holeproof*, are sold in your town. Write for dealers' names. We ship direct where there's no dealer near you, charges prepaid on receipt of price.

Holeproof Hosiery

FOR MEN, WOMEN AND CHILDREN

Holeproof is cotton for men, most from \$1.00 to \$1.50 a box of six pairs. For women and children, \$1.00 to \$1.50 a box of six pairs. For infants, \$1.00 a box of four pairs. All the above being guaranteed six months. *Holeproof* for men, \$1.00 for three pairs. For women, \$1.00 for three pairs. These prices are guaranteed three months.

Write for free book that tells all about them.

Silk Gloves
FOR WOMEN

Write for the illustrated book that tells all about them and write for the name of the dealer near you who handles them.

Every book is, in an intimate sense a circular letter to the friends of him who writes it. They alone take his meaning: they find private messages, assurances of love, and expressions of gratitude, dropped for them in every corner.

—Robert Louis Stevenson.

HARPER'S WEEKLY is to be Norman Hapgood's book, and thus its pages he hopes to strengthen his many friendships, for he will be interested in the discussion of measures and men, and will sound at all times a literary note of human interest to those who believe in progress, based upon evolution rather than revolution.

The Advertising in HARPER'S WEEKLY will be sold entirely on the reader conviction created by the Editorial policy of Mr. Hapgood. It will be a selected list of only the more dependable and representative American manufacturers and business houses whose merchandise will stand the most discriminating test and whose presentation is clean, wholesome, and true.

We believe that the refined and intelligent American understand the economic necessity of good things to eat, to wear, to enjoy, to live in, if he is to get the fullest value out of life, and we shall seek to win his friendship through our advertising columns by giving him friend's recommendation on his every-day purchases.

As an humble endeavor in the field of illustration—comic, alas!—permit me to congratulate you on the pictures in the first edition of HARPER'S WEEKLY under your management. I've felt that we were to break away from the Leyden-decker type some day, and I rejoice that we have found an editor with the courage to do it.

"Take one consideration with another. A reformer's lot is not a happy one." But not let's care.

STOPPED SHORT

Taking Tonics, and Built up on Right Food.

The mistake is frequently made of trying to build up a worn-out nervous system on so-called tonics—drugs.

New material from which to rebuild wasted nerve cells, is what should be supplied, and this can be obtained only from proper food.

"Two years ago I found myself on the verge of a complete nervous collapse, due to overwork and study, and to illness in the family," writes a Wis. young mother.

"My friends became alarmed because I grew pale and thin and could not sleep nights. I took various tonics prescribed by physicians, but their effects were of shortly after I stopped taking them. My food did not seem to nourish me and I gained no flesh nor blood.

"Resolving of Grape-Nuts, I determined to stop the tonics and see what a change of diet would do. I ate Grape-Nuts four times a day with cream and drank milk also, went to bed early after eating a dish of Grape-Nuts before retiring.

"In about two weeks I was sleeping soundly. In a short time gained 20 lbs. in weight and felt like a different woman. My little daughter whom I was obliged to keep out of school last spring on account of chronic catarrh, has changed from a thin, pale nervous child to a rosy, healthy girl and has gone back to school this fall.

"Grape-Nuts and fresh air were the only agents used to accomplish the happy results."

Name given by Postum Co., Battle Creek, Mich. Read the little booklet, "The Road to Wellville," in page. "There's a Reason."

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

The Best All-Round Family Laxative is "BROWN'S HOPKINS' PANACEA." 25 cents a bottle, 4 for \$1.

The BROWN'S Compound Laxative is "BROWN'S DENTIFRICE" for the teeth. Delicious. 25 cents per jar, 4 for \$1.

What They Think of Us

F. F. A. in *The Evening Mail* (New York)

Doubtless a better first number could be issued than the initial Hapgood one of HARPER'S WEEKLY, but doubtless none ever was.

Richard Harding Davis

Heartiest congratulations on the first number. May they all be as good.

Mary C. Wakefield (Columbus, O.)

We have your new HARPER'S WEEKLY, and have examined it with the greatest enthusiasm. People are speaking of it as "epoch-making." It is all we had hoped for, and more.

We want you to believe that in your work for a finer America thousands of readers are "holding up your hands" with their sympathy and appreciation.

Special thanks for the "feminist" championship.

Calvert Smith (Brooklyn, N. Y.)

The first issue of the WEEKLY under editorship of Mr. Norman Hapgood came to-day, and I hope you can do better in the future, especially in the art end of your magazine.

Minor Chipman (Boston, Mass.)

HARPER'S WEEKLY, of August 16th, is truly a Hapgoodian publication. Not only new in form, but daring in its physical arrangement. To my mind it is the most attractive weekly paper on the market. I prophesy success for HARPER'S.

Sidney Rogers Cook, editor and publisher of the Weymouth (Mass.)

I have just finished reading your first issue and I can't resist telling you how much I have enjoyed it. If it is a sample of what is to come, you should have no fear of the circulation manager's statements.

Of course I knew what to expect on the editorial side, but the rest of the contents assures me that you have in that office sufficient ability to furnish the paper I want.

Thomas F. O'Connor (Waltham, Mass.)

It is very gratifying indeed to behold you in a position of such strategic importance as the editorship of what promises to be a national weekly journal for earnest Americans.

The program described is inspiring and richer indeed than we could hope for. In your grasp of what you must call "The Feminist Movement," particularly, you are far in advance of journalism to-day. It is a new note altogether, yet I confidently believe it will not be unappreciated by those who are reaching for.

Isaac Adler (Rochester, N. Y.)

Accept my congratulations on the first number of HARPER'S WEEKLY under your editorship. It is admirable—full of interest from cover to cover, which cannot be said of many publications.

Guy Du Val (New York City)

The first number of HARPER'S WEEKLY has filled me with great happiness and I enclose my check for \$5.00 for a year's subscription.

Please keep the price ten cents. I am not afraid to spend that sum for the paper I like.

J. G. Berries (New York)

The first issue looks clever, sophisticated—snappy. You're delf and cocky

with the conical-headed anti-vivisectionists, anti-baseballists and all the other old antics. I like a paper like this. Success attend you!

New York Tribune

Mr. Norman Hapgood seems to have "fused" HARPER'S WEEKLY into something very like a live wire.

Winthrop Ames (New York)

Congratulations! The first HARPER'S is mighty good reading; and the form and appearance delightful.

R. G. B. (Railroad Young Men's Heathen Association, Springfield, Mass.)

I am not a sickly sentimentalist, but a hard-working fireman on the B. & M. R., with a wife and two kiddies to support. I have at times a great admiration for Mr. Hapgood, but wish he wasn't so damn (pardon the damn) cock-sure about everything.

Robert Sterling Yard (New York City)

I congratulate you heartily upon a significant start. Your first number disentangles itself from the crowd, instantly and easily. It shows purpose and personality of high degree. It suggests and promises.

W. B. Parker, The Churchman (New York)

Please accept my congratulations on the first number of the WEEKLY under your editorship. I think the change in form is a great improvement, and I think you make a strong start with Brandeis's article.

The Wisconsin State Journal

It is wise—the new HARPER'S WEEKLY with Norman Hapgood as editor. Its appearance is wholly good. The old *Journal of Civilization* headpiece crowns the editorial page on the insignia of progress and humanitarianism, borrowed from the stirring days and inspiring leadership of George William Curtis. The typographical make-up is everywhere strong, clean, and clear, in keeping with the nobility of its editorial purpose. Greetings to the new weekly. An old paper that endeared itself to Americans for its battles for the good has come into life again, to once more stoutly battle for the common good. Get it. Rejoice in it. It is a paper for every American to own and abide by. It can have no greater recommendation to high minded citizens than that Col. Blethen's Seattle Times condemns it.

John Graham Brooks

It's good to get it in hand. It looks the part from the word go. As one of my farmers says: "It's gut er sort a sish to it, right along."

Judge Ben. B. Lindsey (Denver, Colo.)

Just a line to wish you all the success that you so richly deserve in your new venture. We need you, and your absence from the editorial sanctum has been felt.

J. J. Hogan (Masonia, Iowa)

I see you have an editorial marked "Sassing America," and take from this that the *Monitor* has no right to an opinion on this song, "America." If your man Norman Hapgood narrows down to this kind of stuff, I for one will quit this paper of yours.

MARGARET ANGLIN AS VIOLA

Miss Anglin is to play Viola throughout the United States this season. She asked for a costume without any waist, but theatrical costumers are so used to making women look as much like women as possible when they play boys' parts, that her orders were not carried out. They will be, however, before her performance. Apart from that detail, this picture represents Miss Anglin as she will appear as the heroine of Twelfth Night

HARPER'S WEEKLY

A Journal of Civilization

\$3.00 a Year]

Secretary Lane

WHEN we undertook to secure for the public the full program of the Interior Department, we knew it would be interesting, but we did not expect quite so dramatic a combination of philosophy and practical importance as Mr. Lane was able to give to Mrs. Willie. He is a man whose work on the Interstate Commerce Commission proved his bigness. He dominated that Commission and settled large and complex problems in a way that aroused the admiration of the most competent progressives. He is a Californian, and no one knows the West more thoroughly. He sympathizes with the farmer, the investor, the promoter, the taxpayer, and the future. He settles each big question which comes to him with coolness and experience, and these separate questions all stand out against a background of philosophy adequate to the mighty issues that are at stake. His plans are an important part of current history.

Our Artists

ONE group of men who are doing much of the drawing on this paper, including Bellows, Davis, Sloan, Morgan, and Cesare, represent the point of view that seeks not merely pleasantness or decorativeness or the suggestion of a sympathetic anecdote, but rather the sincere representation of life as seen by men of character, humor, and insight. Being artists, they seek their expression in drawing and composition, rather than in appeals to sympathies lying outside of their art, but they always seek to express something and to express it truthfully. In a famous French play, a half-educated bourgeois has for his favorite picture a dog on the seashore baying across the waves. He liked that picture, not for what it expressed, but for what it suggested outside of its artistic merits; and a more sophisticated person in the same play hurled him by suggesting the picture of an onion on a platter and praising it by saying that, though but a little simple onion, it nevertheless had the power to bring tears to the eye.

The group of men we have been speaking of are men of talent, who stand apart from Philistine conceptions that still dominate a large portion of an inartistic people, a portion, however, which grows every year less as Americans become acquainted with the whole world and free themselves from the traditions and the point of view which have made against real art. Into a phase of this change of civilization we pass in the succeeding editorial.

Puritan Decay

THE old morality of the Puritan is passing. In its place are beginning new ideals, more related to the permanent facts of our time. One influence working against the Puritan survival is the great influx from continental nations mixing their blood and their ideals with those which were here earlier. But there is a greater influence. The American people is a practical people. Ours is not the kind of nation that has effective ideals born merely of thought. The only ideals which move it to action are connected with business. The big questions of the day are the distribution of material goods, the methods of production, and the relation of capital to labor. This is what is meant by the social movement. And it is the social movement which is changing all of our ideals, including those of morality. Not many years ago, a discussion such as that on Unmarried Mothers in this issue would have been looked upon as not only indecent but as wholly wrong. The Puritan had his strong points, but his view of sex was not one of them.

Dangerous Interference

IN the white slave case in San Francisco, Judge Van Fleet, in instructing the jury which found Diggs guilty, very likely interpreted the Mann Act correctly. It is the act itself rather than the interpretation of it which seems to us so extreme that it is likely to do a great deal of harm. Judge Van Fleet interpreted the act as providing that "any person who shall knowingly transport in interstate commerce any woman or girl for the purpose of prostitution or debauchery, or for any other immoral purpose, shall be deemed guilty of a felony." He also said: "It is immaterial what the character of the two girls involved in these charges was at the time of the acts charged."

Of course we may be mistaken, but if we have any right estimate of the attitude of the American people, or even of general human nature, the position that the United States Government shall punish as a felony any loose relations between the sexes is a stand that will certainly have to give way. The serious side of it is that we are now in a great fight all over the country to make an intelligent improvement in sex standards, and that fight will be interfered with by any such grotesque exaggerations of the functions of law as is represented by the Mann Act. Law ought to hit traffic in immorality wherever it can, but traffic is one thing, and the ordinary personal choice of two individuals is another.

Thaw

OUR relations to Mexico interest many; the tariff bill interests a number; so does the currency; a few care about whether we shall retrograde in our treatment of foreign art, or about public affairs in Ohio or Alabama, or any State or city; but a wider appeal than in any of these things lies in the fact that a rich degenerate has escaped from prison, and, being rich, will be able to occupy public attention some more.

An Early Feminist

SINCE our issue of August 16th appeared, there have been a number of discussions of when the feminist movement began. The New York Tribune places it earlier than any one else, maintaining that Adam had the essentials of it. Great men and women from time to time have spoken in as intelligent a way against the hampering traditions concerning women as anybody could speak to-day, but the first person we think of who has written extensively and repeatedly what would be called distinctively feminist literature in the contemporary sense is Richardson.

Listen to this from "Clarissa Harlowe":

I think there is not one man in a hundred whom a woman of sense and spirit can either *honour or obey*, though you make us promise both, in that solemn form of words which unites, or rather binds us to you in marriage. . . . Well do your sex contrive to bring us up fools and idiots, in order to make us bear the yoke you lay upon our shoulders, and that we may not despise you from our hearts (as we certainly should, if we were brought up as you are) for your ignorance as much as you often make us do (as it is) for your insensibility.

And here is another quotation from the same book:

To be given up to a strange man; to be engrafted into a strange family; to give up her very name, as a mark of her becoming his absolute and dependent property; to be obliged to prefer this strange man to father, mother, to everybody, and his humours to all her own; or to contend perhaps in breach of avowed duty for every innocent instance of freedom—surely, sir, a young creature ought not to be obliged to make all these sacrifices, but for such a man as she can love. If she be, how sad must be the case—how miserable the life, if it be called *life*!

Probably the predatory male has been handled with more influence on public opinion in this novel than in any other book ever written. In "Pamela," Richardson drew in his first heroine a girl of much the same class as the heroine of "Marie Clare," so much commented on a while ago. In treating the relations between parents and children, he shows that same determined humanity of point of view, and is amazingly modern in his almost contemptuous attitude toward parental bullying. All through his works you find notes characteristic of the feminist movement to-day merely because you find a great instinct for just ethics.

Is This Alarming?

IN rural schools in Missouri, girls are organized into Pick and Shovel Clubs, under the direction of the National Congress of Mothers, to aid in the Good Roads Movement. Would Senator Tillman look upon this activity as threatening the foundations of the Republic?

The Fright of a Senator

THE biography of Senator Tillman of South Carolina does not need to be rehearsed at this time. He is known to be a violent man, who has been through much rough experience. He lacks civilization and certain other attributes that we might wish him to have, but we never happened to come across him in a state of intense alarm until we read his speech on woman suffrage. Most people who become violently frightened over having women take part in public housekeeping, and public economy, and public education, draw some dull analogy to the later Roman Empire. Of course, the position of women in the later Roman Empire was exactly the position that the feminist movement is trying to change. Women then had no serious responsibility and no multimform duties and powers that might give them stability. They were a parasitic race, depending for their success on their personal influence over individual men, and the first effort of the feminist movement is to get away from that. However, anybody who wishes to make a row about the safety of the Republic will bring in the Roman Empire. Senator Tillman says:

We had better endure the evils of corruption in politics and debauchery in our government rather than bring about a condition which will mar the beauty and dim the luster of the glorious womanhood with which we have been familiar and to which we have become accustomed all our lives.

Perhaps it is permissible to doubt whether this "glorious womanhood" the Senator is so excited about would be dimmed by having a voice in such questions as whether the age of consent in South Carolina is just and wise, and whether the employment of children in industries is on the best possible basis, and whether Mr. Blaise is an ideal governor, or even whether Mr. Tillman is an ideal Senator. One of the prettiest touches in this epoch-marking speech is this:

As Hannibal gazed mournfully on the bloody head of his dead brother Hasdrubal and prophetically exclaimed, "Carthage, I see thy fate," so I, looking at the growing craze of woman suffrage and the rapid increase in the number of divorces granted in this country, sadly think, if I do not say: "America, thy race is almost run, unless something is done to check thy headlong speed."

Does the Senator's reading of history also lead him to conclude that Carthage was led to its fate by the craze for woman suffrage?

Divorce seems to him an unmixed evil, and therefore South Carolina, where all divorce is impossible, the happiest commonwealth in the American Republic. He is worried because the watering-places and hotel resorts in the mountains "afford opportunities for getting acquainted with other men's wives and other women's husbands." He states that among the rich the women are just as bad as the men, which seems to be a terrible admission for a man engaged in pointing out that the Republic is safe so long as women do not vote and absolutely lost as soon as they do. The rich at whom he is pointing the finger of scorn live mostly in New York and Newport, and women vote in neither New York nor Rhode Island. Forget it, Senator, and get a good book on logic—say William Jevons's.

Those Who Care Most

THOSE who are most interested in the outcome of the election in New York City are the men whom District Attorney Whitman has put behind the bars. They are the gunmen and Becker, in peril of their lives; and, next to them, the police inspectors now in prison. Nothing could suit the criminal classes and the corrupt members of the police better than to have as Mayor a man who is an absolute rubber stamp for Murphy. McCall has never been anything but a Tammany man. Apart from that he does not exist. He was made a judge only because of his subservience to the machine. He was taken off the bench and put in charge of the subway matter because Tammany looks a long distance ahead and he was being groomed for the mayoralty. The city will spend \$250,000,000 on subways during the term of the man who is elected Mayor next November, and Charles F. Murphy cares more about building contracts than he does about anything else on earth. With McCall Mayor, those contracts will go to the right people, on the right terms, and Mr. Murphy, who is not a poor man now, will not be any poorer at the end of Mr. McCall's administration. If Mr. McCall is Mayor, there will not be one moment during this four years when he will take one single step that is not satisfactory to Fourteenth Street. During his whole career he has been a pawn in the tiger's game.

When Sulzer selected McCall for his present position, he was playing with Tammany and doing what Tammany wanted him to do. Later he became "fresh," and was punished accordingly. McCall will never be "fresh," and any punishment that is coming to him will not come from Tammany Hall. There does not exist a more typical "front" for that organization than he is. Anybody who has ever seen him must carry away a vivid impression of the type of man. He is one of the higher up in the organization, although not one of those highest up. Coarse, unspiritual, servile, he has no separate existence. He takes orders, and then he acts with a reasonable amount of ability on the orders he receives. He would be about as fit a Mayor as Van Wyck. Mitchell, McAneny, Prendergast, and Whitman are the high lights on the Fusion ticket, and their services are well tested, as are those of Pounds and Cromwell, while the new nominees to the Board of Estimate are most admirable selections. On one hand, the city has probably the best all-round ticket ever offered to the voters of New York; on the other hand, it has a ticket that represents the united uncompromising program of the Wigwam. It is up to the so-called intelligence of the voters.

Are We Advancing?

WILL modern times ever equal in intellectual and artistic flights the past age of Greece, the Renaissance of Italy, the England of Elizabeth? It depends on whether money remains the principal standard of success. The acquisition of wealth calls for industry, frugality, exactness, and prudence; it does not require the higher wisdom or insight, or the noblest development of the character and the human soul.

War and Conscience

ALTHOUGH recent events indicate we are yet a long day's journey from universal peace, they yet emphasize a marked advance. The rising standard of intelligence renders wars for trivial causes less and less probable. Very ignorant and suspicious men fight and kill each other over imaginary slights or trivial values. For thousands of years nations fought over the most insignificant differences. In the future wars will not be fought unless something big is at stake.

Another significant advance is the development of world conscience. Every nation tries to set itself right before the world when entering into conflict. In the old days, just as corporations were supposed not to need souls, so governments were supposed to have no conscience toward other nations. Pride and bitter resentment were supposed to be their only emotions. Any concessions, even when just, were considered a national disgrace. If a nation took a stand, right or wrong, it must fight. The world conscience is removing that ridiculous standard. It is becoming a matter of national honor to concede what rightfully belongs to another, and even to yield minor points merely to avoid trouble. And even after wars have begun this conscience play a part in bringing it to a close.

Disease Superstitions

THE belief is common among primitive and unlettered people that there is a specific remedy that will cure every disease of the body, if it can only be found.

Ignorant and superstitious people are peculiarly and pathetically susceptible to the persuasion of quacks who profess to have found the healing herb for their particular disease, and will go on squandering money and health after being defrauded a dozen times, because in their simple and pitiful faith they think each time, "Now, maybe, this man has found the real herb that will end my suffering."

This credulity is a matter for patient teaching. The health of the people is a national asset beyond the measure of dollars, but even the economic loss from avoidable sickness and death runs into unbelievable figures. The people must be carefully taught—not casually told—that disease is not an accident, not a dispensation of Providence or the infliction of an evil spirit, but the result of environment and of the mode of living. They must learn that health does not return by magic or by magic compounds; but it must be restored by a personal battle against disease.

Generous physicians, newspapers and journals, and social workers who are giving their time and means to fight the powers that prey, and to spread the gospel of health, realize that education is slow. Thousands are saved every year, but it will take a long, strong effort to reach all the people with the truth. If ever there was an unselfish effort, and one of supreme importance to the country, it is the battle for national vitality.

What about the national health department at Washington?

Mr. Lane and the Public Domain

III. *Young America in Washington*

By HONORÉ WILLISIE

MR. WILSON says that what a man is, is less important than the direction in which he is going. In analogy one might say that the most important aspect of the handling of our Public Domain is not so much in the value of the domain itself. The greatest import of the handling is that it shows the direction in which the administration is going. And the administration ought to represent the philosophy of government of most of America.

Washington itself is the last place that takes an administration seriously. It is being slow to understand Mr. Lane and his cabinet. It has its eyes focused on details. It is of paramount importance to Washington whether Mr. Lane appoints a Democrat or a Republican to a land-office in the West. It is eager to accuse Mr. Lane of playing politics. It does not seem to attempt to get his big, fundamental policies; that is, the direction in which he is going. To any one outside of Washington, however, it does not take a very delicately attuned ear to catch the new vocabulary and its general significance.

For the past twenty years there has been growing in America a new order. This order has no formal ritual, no secret grip, no yearly conventions. Yet it is a permanent and constantly augmented society. It is recruited mainly from one class; from the graduates of our great American universities and colleges.

Twenty years ago politics had little relation to college life. But lately college training has been more directly for living. It has had the direct ideal of making citizens. And it has begun to make them! Year after year the colleges are turning out young men and women whom they have fitted for citizenship by training them to earn a living and to understand the economic and social condition under which they will have to live and work. Year after year thousands and thousands of such youngsters are being turned into the rack of our competitive system. And latterly American politics has begun to feel the effects of this Young America.

MEMBERS of the new order are to be found everywhere and everywhere they have the same hallmarks. It doesn't matter whether you talk to them in Los Angeles or New Orleans or Boston, they show the same traits. They want to know "why," and they have trained minds with which to accept or reject the answer. They have a keen interest in economics and they know how to compare a party platform with an economic principle and how to apply both to the existing need. College, catching them young, forced on them ideals that they can't lose. They like light and they like a fair deal, and they believe that it's not sportsmanlike to be dishonest.

Until very recently this vast, rapidly growing order has had no leaders. And Young America is so young that it has needed leaders. It has needed men over forty-five who have kept a capacity for understanding youth and who have the wisdom that only forty-five can bring. The election last fall suited a good many different types of people. No type was better suited than Young America. And Mr. Wilson's choice of certain members of his cabinet showed that he knew pretty well what Young America needed.

No one has caught more keenly than the new Secretary of the Interior the significance of the new order. He realizes that a new order demands new answers.

"The traditionalist," he said, "who believes that the last word in politics or in economics was uttered a century ago, is as far from the truth as he who believes that the temporary emotion of the public is the stone-carved word from Sinai. A railroad-people are not to be controlled by ox-cart theories.

"The foundation of government is man. His institutions, whether social or political, must come out of his

wants and his capacities. The problem of government therefore is not always what should be done, but what can be done.

"The only real traditions of a people are those beliefs that have become a part of us like the good manners of a gentleman. They are really our sympathies; sympathies born of experience. Subjectively they give a standpoint; objectively they give a background, a deep rich background like that of some master of light and shade, some Rembrandt whose picture is one great gloomy mystery of darkness, save in a central spot of radiant light, where stands a single group or figure that holds the eye and enchants the imagination. History may give to us the one bright face to look upon, but it is in the deep mystery of the background that the real story is told; for therein to those who can see are the groping multitudes, feeling their way blindly toward the light of self-expression."

THIS capacity for thinking in terms of humanity is characteristic of Young America. It is this characteristic, modified by his wide experience, that marks Mr. Lane's policies. Mr. Lane dominated the Interstate Commerce Commission and he dominated it by his balanced attitude. The owner is a human to the Secretary, as well as the employee. On the Commission, he stood for the shipper and the passenger, but at the same time he proposed that the railroads should have their chance to make every cent that was justified by their investment. It is this sort of balance that is needed by Young America.

In dealing with the problems of the Public Domain, this quality is especially necessary. One ought to consider always the element of risk. The Government can assume the risk of money loss better than the individual in the development of natural resources, but how much this ought to be considered in handling our resource problems with the ever present antagonism of private interests and public welfare is a problem for the balanced mind.

The position of a Secretary of the Interior on the matter of land is peculiarly difficult. The policy must be formulated then the General Land Office gotten into shape for administering the policy or it is futile. The General Land Office is overworked and underpaid. It is constantly accused of having a graft system. The forming of policies is a gigantic task; but, added to this, the Secretary must organize his administrative force into effective service. In the face of every sort of pressure, he must find men who will carry out his ideas, or else the real results of his policies are nothing.

ONE of Mr. Lane's most pressing questions is what system shall be applied to lands and resources that come under the Withdrawal Act. This Act allows public lands to be withdrawn for water-power sites, irrigation, classification, and other purposes. Once withdrawn, however, the problem is how to get them back into such public service as will promote development and prevent mere exploitation. Not only lands for tillage are included in this problem, but also lands containing oil, gas, potash, and nitrate. Shall the government give these to the public under a leasing system, or shall it allow small holdings with their attendant probability of growth into monopoly? If Mr. Lane follows his land-policy with regard to these he probably will favor the small holdings wherever it is possible to safeguard against monopoly. This is what Mr. Lane said about land:

"The land-question in the United States is the question of how best the land that the government owns can be put into public service and what is the highest service to which it can be put. Some people think the government should maintain entire indifference as to the hands

into which these lands fall; that, although this immediately will lead to land monopoly, it ultimately will lead to small holdings and full use. As far as the government has indicated a policy, it is that land shall become the abode of householders. We wish to do whatever we can to prevent land monopoly. That is the theory of the Homestead law, always to limit the amount any one person can take up. In passing the Reclamation Act, units were decreed. Our land policy is to get families on to the land not as tenants in the European sense but as owners, identified with the soil.

"This becomes a great social problem. In fifty years we are to have a nation of more than one hundred and fifty millions of people. Uncle Sam wants as many as possible of these to be tied to him by land interest and to be contributing to his wealth by actual productiveness. The only real land problem is to retain for families the opportunity to get land and to keep these lands from corporations or those who wish to hold them for themselves regardless of their contribution to the general welfare."

WHEN the Secretary of the Interior has problems such as this to solve it seems to the observer a stupid waste of time that he should be constantly interrupted by visitors and their personal needs. This is the conclusion the abashed layman reached the first day in Mr. Lane's office. At the end of the week that opinion was very much modified. These visitors supply the Secretary with continental gossip. It is his constant sorting and cataloging of this gossip that gives the human side to Mr. Lane's policies. It is in this sense of proportion, a quick getting of the bird's-eye view that comes only with the years that Young America needs.

One morning a stout woman came into the Secretary's office. Her face was the face of impassive grief. She did not smile as the Secretary greeted her. She did not take the chair he offered her.

"Why," she said in a toneless voice, "have you taken the roof from over my head?"

The Secretary's ordinarily inscrutable face showed surprise. But before he could speak his visitor repeated, "Why are you taking the food from my children's mouths?"

"Madam!" exclaimed the Secretary, "you must not talk in this manner!"

The woman's toneless voice interrupted him. "Why," she said, "have you taken the roof from over my head?"

"Madam! You—" began Mr. Lane again.

"Why are you taking the bread from my children's mouths," said the visitor. "Why are you depriving me of my chance to support my family?"

The Secretary capitulated. "Madam," he said, leading her gently but firmly toward the door. "You shall keep your job. As long as I live or have influence, you shall keep your job. I shall recommend to my successor and to each succeeding successor that you have a life position!"

The woman did not smile. The Secretary closed the door upon her and came back to his desk wiping his forehead, while his eyes twinkled.

"I can heed the voice of suffering humanity, as well as any one," he said. "But this is the last time that I shall attempt the spoils system where a woman is concerned. This is my unalterable decision."

The Secretary signed documents and listened to callers for two hours after this incident and then in a moment's lull, he said:

"It was ludicrous yet it was tragic. This procession of women to my office, fighting for their jobs, is a terrible thing. A woman ought not to have to do such a thing. Yet here they are, untought, utterly unprepared to take care of themselves, and their jobs hold on the caprice of one man. We train our boys. But the way we give our daughters to life utterly untrained is appalling. We have lived two thousand years since Christ and yet we have not learned how to take care of our women. Two thousand years and we have a city like Washington, containing conditions like these. The thought of that woman haunts me."

THE Secretary's quality of human sympathy should be valuable to the Indian in the formulation of a policy for the Indian Bureau. Mr. Lane looks on this not only as an important bureau, but as the most interesting in many ways of all his departments. It is also the most difficult one for which to make an adequate policy.

In commenting on Mr. Lane's Indian policy one must take into consideration the extreme complexity of the Indian situation. All the questions that confront the Department of the Interior in general with regard to Public Domain appear in the Indian Department but in a highly complicated form. Indian lands in America are valued at half a billion dollars. They contain water-power sites, timber, coal and gas, oil, asphalt, and thousands of acres of rich tilling soil. The Indian lands must support the Indian. They ought to be safeguarded so that his children's children may hold them. They are his.

Now if there were no other conditions than these and the Indians, with their lands, were segregated so that only the white administrators could come in contact with them, that administration would be a tremendous undertaking. The Indian is not to be administered to the Indian's satisfaction by the white. The white has the commercial type of mind. His theory of life, of government, of society is the theory of the trading mind. The Indian is inherently uncommercial. He has no sense of values as the white understands them. It is impossible, for example, to make an Indian understand that land is permanently salable; that it can stay sold. He thinks that it is as impossible to sell land as it is to sell air. He believes that land and all that pertains to it belongs to the tribe, but to the tribe only in trust for the unborn. His mind will not assimilate the white's ideas of money measurements.

This quality of the Indian mind would make the white administration of Indian affairs difficult if the Indian were segregated. But he is not segregated. Moreover, he has something that the white man wants. And the white will cease to try to get this, by fair means and foul, only when the Indian ceases to hold property.

THE Indian office must stand as a buffer between the Indian, who can not understand, and the white, who is greedy. It is obvious that the work of the Indian Office calls for highly specialized training. The Commissioner of Indian Affairs receives a salary of \$5,000 a year. His assistant, \$3,500. No one else on the statutory roll of the Indian Office at Washington gets more than \$2,250. The men who handle Indian affairs ought to have an intimate knowledge of the Indian mind. That alone requires years of difficult study. They ought to be skilled in the handling of large sums of money. They ought to have a far seeing humanity. They ought to understand land values and the developing of natural resources on the lands. They ought to have a clear knowledge of the obligation of the nation to the Indian, and sufficient intelligence to apply a broad and fundamental policy to existing daily conditions. And they ought to be honest.

No man, unless he happens to be a "Son of Martha," is going to give these qualifications to the Indian Office at the salary offered. There are efficient men in the Indian service. But these are not in the majority. The Indian Office has long been a labyrinth of inefficiency and graft, whose intricacies it has been impossible for the competent man to disentangle in the short time allowed him in office. The system of Indian spoliation has extended from congressmen to the man who sells groceries on the reservations. The problem of the Indian is the problem of finding the right policy and then of finding men to interpret that policy.

This is Mr. Lane's Indian policy:

"The best hope that I see for the Indian is to allot his property to him as rapidly as possible. A portion of this property he should not be able to alienate so that it will remain to him and his children as a permanent insurance against the greed of the whites and his own incompetence. The greatest service that we can do for

the Indian is to set him free, and the Indian Bureau should be a vanishing bureau.

"We should have a permanent Commission of Inquiry into Indian matters. An examination should be made into Indian affairs and it should be most searching. I am satisfied that it will be easy to discover that a large number of wrongs have been done the Indian and that there are serious defects in our methods of handling them.

"I am satisfied that there are tens of thousands of so-called Indians, whose property to a greater or less degree is under the control of this Bureau, who are as competent to attend to their own affairs as any man or woman of the white race. The mature, full-blood Indian who is without education or ability to care for his own affairs must remain a ward on our hands. The children of these Indians, however, should within a generation be a part of the American people, living outside of reservations and taking up the burdens of all other citizens. Their education should be such as to bring this about and end the Bureau."

IN a way all the problems of the Interior Department are human problems. But with the Indian problem more than all others it is essential that the Secretary put himself in the other man's place, to see and feel with the eye and heart of an alien race. We owe a debt to the Indian that it is too late to pay. The best we can do is to show a tardy honesty toward the fragment that survives our commercialism.

It is not easy to pay an old debt. It will not be altogether greed that will urge us toward ignoring the Indian's rights. It will be difficult to urge Young America to look backward long enough to recognize America's obligation to the Indian. New ideals are too prone to make us forget old obligations. Here Mr. Lane's leadership is valuable. New trails, cleared, but modified by old traditions, is his motto:

"Yet, with all our seneschals and our probings," he said, "who knows more of the human heart to-day than the old Psalmist? And what is the problem of government but one of human nature?"

"We may not follow the supreme tradition of the race to create a newer, sweeter world, unless we give heed to its complementary tradition that man's experience cautions him to make a new trail with care. He must curb courage with common sense.

"Let me illustrate by a description of one of our western railroads. When you or I look upon that stretch of steel we wonder at the daring of its builders. They were great men who boldly built that railroad, great in imagination, greater in deeds; for they were men so great that they did not build a line that was without tradition. The route that they followed was built by the buffalo and the elk, ten thousand years ago. The bear and the deer followed it generation after generation, and after them came the trapper and then the pioneer. It was already a trail when the railroad engineers came with transit and chain. The track was laid up beside the stream and along the ridge. But there was no thought of following the old trail down into the cañon. There the spirit of the new age broke through tradition. The cañon was leaped and the mountain heart was pierced that man might have a swifter and safer way to the Land of Heart's Desire."

WE put a tremendous responsibility on the man who is made Secretary of the Interior. His is the most heavily loaded office in the Cabinet. Beside the great bureaus already mentioned, the Secretary has charge of the National Parks, which comprise over

4,500,000 acres of land which Congress has from time to time set aside as national play-grounds. But Congress has at the same time made no adequate provision for their administration. Congress makes separate appropriations for the care of each of the parks. The rest is up to the Secretary of the Interior.

The Geological Survey with its annual expenditure of a million and a half of dollars, its work of inestimable value to the public domain, also its inadequate rented quarters, belongs to the Department of the Interior.

The Pension Office with its appropriation for 1913 of \$164,500,000 and the Patent Office are in Mr. Lane's Department. The Bureau of Education, American Antiquities, Superintendent of Capitol Buildings and Grounds, Government Hospital for the Insane, Freedmen's Hospital, Howard University, and the Columbia Institution for the Deaf and Dumb are in Mr. Lane's care. If each department were not of itself so important the grouping of their direction in the hands of one man would be laughable. As a matter of fact such a conglomeration of businesses under one head is stupid and unfair.

No department of government is criticized more than that of the Secretary of the Interior, nor is there any department of which we know less. One can not sit in Mr. Lane's office for any length of time and not realize how hard it is for a man in the Secretary's position to get his ideas across to the public, the people in whom he is honestly interested. The little is too little to say, the much, too much. Every statement and act must pass through many hands before the report of it reaches the man at the cross-roads or the shoe-machine, or Young America.

In the heavy stress of the Department's work mistakes must be made, and it is usually the one foolish appointment or decision that reaches the public and not the ten wise ones.

It gives one a renewed sense of the permanent rightness of human endeavor when one discovers that men with Mr. Lane's ideals of public service are not isolated phenomena, but that he typifies a breed; new to American politics, indeed, but a breed that always has lived and always will, simply because it is human. One suspects that Mr. Lane is himself one of those "Sons of Martha" for whom he searches so diligently!

"The Sons of Mary seldom bother, for they have inherited that good part;
But the Sons of Martha favor their mother of the careful soul and the troubled heart;
And because she lost her temper once and because she was rude to the Lord, her Guest,
Her Sons must wait upon Mary's Sons world without end, relieve, or rest.

"It is their care in all the ages to take the buffet and cushion the shock,
It is their care that the gear engages, it is their care that the switches lock,
It is their care that the wheels run truly, it is their care to embark and entrain,
Tally, transport, and deliver duly the Sons of Mary by land and main.

"Lift ye the stone or cleave the wood to make a path more fair or flint,
Lo! It is black already with blood some Son of Martha spilled for that!
Not as a ladder from Earth to Heaven, not as an altar to any creed,
But simple service, steady given, to their own kind, in their common need."

CATS

BY STUART DAVIS

*The Davis cartoon for next week will be
"HAY-FEVER"*

the Eltings, the Cort, the Forty-fourth Street Roof, the Palace.

The Palace, though a vaudeville house, plays to 84, and so belongs among the first-class theaters. It brings the complete list to forty-four.

LONDON, which is as large as New York and Chicago combined, has but thirty producing-theaters. And what is still more significant, London thinks it has enough—at least no one dreams of building any more for a while. However, this may be merely British conservatism!

In New York, on the contrary, there seem to be persons who imagine the city is ill supplied with theaters. At any rate, the building activity continues unabated. From all indications there is an excellent prospect that next year will break the record.

At present, among first-class theaters, the Amos and the Shubert are almost completed. The Thirty-seventh Street, for which the foundation is already excavated, has been abandoned for lack of a tenant, according to the latest report. A production-house will be started at once on the west side of the Candler Building, on Forty-second Street, on a block where there are now eight theaters. Besides these there is Oscar Hammerstein's new opera house on Lexington Avenue.

A theater is building on Twenty-third Street and Sixth Avenue. A theater is building at Forty-seventh and Broadway (the Strand). Plans have been filed for a theater at Crotona Parkway and Elmsmere Place. In the Bronx the Royal and the Bronx Opera House are projected. And on upper Broadway, within twenty-seven blocks, the following sites have been offered to producing-managers with the assurance that theaters were to be erected thereon: southwest corner Eightieth Street, northwest corner Eighty-fourth Street, southeast corner Ninetieth Street, southwest corner Ninety-fifth Street (Vincent Astor's theater), Broadway near Ninety-seventh Street (next to the Riverside Theater), southeast corner One Hundred and Third Street, southeast corner One Hundred and Seventh Street, west side of Broadway between Ninety-fourth and Ninety-fifth Streets.

Probably some of these theaters will not be built. On the other hand, as there is no means of determining the plans of individuals before they become a matter of record, I do not pretend to have offered a complete list of projected theaters. However, the nineteen mentioned above would suggest that the market for theaters could hardly be described as torpid.

BUT why, if the demand has already been met—why, if there are already enough theaters, do they keep on building more? Ah, that query probes the quick of the whole matter! As the promoter is undoubtedly the most potent influence in the present building activity, his point of view will throw considerable light on the question.

Building a first-class theater calls for an investment of approximately \$450,000—\$300,000 for the land and \$150,000 for the structure. The gross rent runs about \$45,000, which means a profit on the investment of \$15,000 a year, increasing as the interest on the mortgages and loans subsides.

In order to get the same rent from a loft building a structure costing \$350,000 would be required. It is to be presumed that the land will increase in value in

twenty years, necessitating a more remunerative building. Now a theater which originally cost only \$150,000 can be torn down, but an owner will hesitate a long time before he orders \$350,000 to the junk pile. Moreover, as a capitalist often owns lots adjoining that on which he plans to build, the effect on those of the structure he erects is of considerable interest to him. A theater with its thronging crowds enhances the value of adjoining business properties as nothing else will. A specific instance of this is to be found in a small candy store next to the New Amsterdam Theater on Forty-second Street. Nine years ago, when there were but three theaters in the vicinity, this was leased for \$2,500. Today, when there are eight theaters in the same block, the lessee pays \$4,500. The owner of a theater in the heart of the play-going district informs me that a church property across the street from his house was in the market ten years ago for \$225,000, while last year the price had risen to \$480,000.

POPULATION is also a favorite topic with the promoter. Within a radius of fifteen miles of Times Square, says he, there are 7,000,000 who come to Man-

This area, which is a little over half a mile long and a little under a third of a mile wide, contains forty theaters

hattan when they want to see "a good show." In addition there is the city's 300,000 floating population, mostly composed of pleasure-seeking "show shoppers." Besides this there is the normal increase in the population of 140,000 a year. This looks like fairly fertile ground to the man with a Broadway theater of only 1,000 capacity.

Then, of course, there is the argument of the tremendous returns assured by a success. Certainly two and two sometimes seem to make forty in the theatrical game. "The Spring Maid" is a typical case. According to Mark A. Laescher, that dainty operetta coined \$160,000 for the theater during its run at the Liberty and half as much for the producers (their expenses being heavier). That totals \$240,000—almost enough to buy a theater outright, lock, stock, and box-office! The combined net profits

of "Peg o' My Heart" would have been sufficient to pay for the new Cort Theater if John Cort had produced the comedy. "Within the Law," with its phenomenal metropolitan success and its six companies on the road this year, will pay for the new Eltings Theater and leave a handsome margin. And yet there are managers who remember the time when banks looked on theaters as much the same sort of security as livery stables!

EVERYBODY knows that against these golden dreams of the producer are to be set black nightmares of ruin. Charles Frohman once said that any man who stuck to producing would die broke. But, asserts the promoter, that need not worry the lessee of a theater. In New York the house gets fifty per cent of the gross proceeds of a show and the play is considered a failure unless it brings in \$5,000 a week. However, the rent is only \$1,000 a week, and operating expenses do not amount to more than another \$1,000. Suppose a play is such a calamitous failure that it closes after eight performances. Though the producer may lose an investment in scenery and costumes equal to the annual rental of the theater, the lessee can not lose more than \$2,000 and has forty more chances to recoup during the season—one chance a week. Then there is always the overflow from the successes on Saturday night, which often provides capacity attendance for a show that during the rest of the week is in the same condition as the proverbial church mouse. Indeed, hints the promoter, even failures may tide things over to a better day. The Harrie Theater, previous to the advent of "The Master Mind," housed twelve consecutive offerings in reduced circumstances, yet remained open and presumably paid the rent.

Naturally, this is the rosy side of theater-operating. But so folly has it been accepted in New York that any one who will put up a year's rent can find somebody to put up a theater for him. The statement seems absurd, but it can be verified in the office of any producing-manager. The promoter, or go-between, kindly attends to everything from the finances to the finishing touches. He gets his commission and gets out. If the lessee "quits broke" at the end of a year the owner takes his chance of interesting some one else. There is always a new producer willing to gamble on the lucky hit.

The theatrical situation in the metropolis is being rapidly reduced to a real-estate scramble of capitalists speculating in theaters and managers speculating in leases. And let it be understood that it is not so much the theatrical men who are seeking to achieve new theaters as it is the real-estate men who are seeking to thrust theaters upon them. This spring a beaming real-estate operator rushed into a manager's office and proudly announced that he had secured the northwest corner of Broadway and a certain cross street for a theater that would "pack 'em in." He was guided gently but firmly to the door. Within an hour another operator popped in with the glad tidings that he was going to put up a theater immediately on the southwest corner of the same intersection. Neither had heard of the other's brilliantly original plan.

THE ideal arrangement, of course, is where a producer of plays, requiring a workshop, conceives the idea of erecting a theater and either puts in his own money

or interests friendly capital. It is perfectly safe to assume that none of the eight theaters opened last year (with possibly one exception) was erected on that basis. It isn't necessary. The real-estate man is right at the manager's elbow, poking theaters under his nose. And though some contrive to resist the lure, it is a very tempting proposition for a producer to have his name carved over the door of his own playhouse with nice pieces in the papers about Mr. So-and-so's growing prominence on Broadway.

To show the extent of this inflation I may state that I saw two hundred letters on file at the United Booking Office, all containing offers from real-estate men to lease or build theaters. The two letters from operators to B. F. Keith herewith reproduced are typical of the rest and clearly illustrate the speculative aspect of the matter. Every producer I have seen has been offered the Thirty-seventh Street Theater; the proposition as written out by the agent for Messrs. Werba and Luescher is given here. This firm, by the way, received fifty separate offers to build theaters for them after the prosperity of "The Spring Maid" had been established. Sol Bloom, one of the most energetic and efficient of the promoters, frankly stated that he had no tenant for the new theater he is putting up on Forty-second Street, but asserted that his playhouse would be so attractive he would have no difficulty in securing one. Arthur Hopkins says that he has been offered the leases of several theaters even in the short time since he produced "The Poor Little Rich Girl."

Yet, when Werba and Luescher reject all the fifty proposals they receive, and Henry W. Savage, one of the biggest of the producers, steadfastly refuses to have a theater in New York, there must be some argument on the other side. There is. There are now in New York ten legitimate production-houses either closed or turned over to stock or the "movies." They are: The Academy of Music, Daly's, the Berkeley, the New York, the Garden, the Park, the Bijou, the Broadway, the Herald Square, Wallack's.

Some of these, it is true, are old, dilapidated, and off the highroad. But none is as old as the Drury Lane Theater in London, which was considered good enough this year for the farewell season of Forbes-Robertson. And not all of them are ancient relics; several are strictly modern and exceptionally favored by location. It is to be observed, also, that the last five on the list dropped out of the running only this year, though eight new production-houses were opened. All of them struggled along against odds, only to be eventually closed or invaded by the film-operator. Those that have become picture-houses, of course, still furnish a certain amount of competition for their former peers.

These are extreme cases. Usually if a theater encounters stormy weather the public hears nothing about it, for it is a cardinal principle in staidland to advertise only the silver lining. Theaters and apartment-houses do not go into the hands of receivers; they merely pass from one lessee to another. There is an item in the papers, "The Pegasus Playhouse will be run next season under the management of A. Newcomer," and that is all. Theatrical leases of the better sort will not be peddled about at a reduction, for no matter how lean the past has been, with a new season all the production-houses start with a fairly even chance.

But it would be an easy matter to name several theaters which passed through perilous times in the last twelve months. One of the newest changed hands within a month after it opened.

THUS far all this discussion of the building mania has applied to the theater regarded as a business. Before going on to inquire into the matter in its relation to the art of the theater, it may be as well to admit that even an over-production of playhouses has certain advantages. Here and there are managers who claim there are not too many theaters. Among them is Arthur Hopkins, interesting as a young producer who made a success of his first big Broadway venture. "What chance," he asks, "would a person named Hopkins have had several years ago to get into the Hudson Theater? One case like 'The Poor Little Rich Girl' is bound to bring others into the field." But his comparison with the past makes his statement merely relative. Certainly nothing worse could exist than conditions in the day of the Syndicate, when terms excessive enough to amount to extortion were exacted of the outside producer. It is true, however, that an excess of theaters does tend to make new producers (and break them), to curtail the life of poor plays forced in New York with a view to rewards on the road, and in an indirect way to prevent the shipment of inadequate companies into "the provinces," as theatrical folk are beginning to call everything that lies beyond the Five Boroughs.

But it is quite necessary to draw the distinction between enough and too many. Up to a certain point theater-building is a good thing for everybody concerned; for the lessee, the producer (these two being generally one and the same), the owner, the actor, the playwright, and the public. Continue to build and conditions become bad for the producer, the playwright, the public, and possibly the actor. Go beyond that point and the producer, the playwright, and the actor are all at sea; the public is robbed of much of its choicest entertainment; and even the owner and lessee begin to pay the piper. New York is plunging toward this last turn.

IF the public were not affected it would not care how much speculation were going on—whether there were fifty theaters or five hundred in Manhattan. But the public is directly affected. An unhealthy activity in the building of theaters in New York makes a distinct difference in the quality and kind of drama purveyed all over the United States.

An exception should be made of the so-called "big" successes—entertainmenters of last season's crop like "The Whip," "The Lady and the Slipper," "Within the Law," and "Fog of My Heart." If there had been a theater on every street corner in the city it would have made no difference in the success of these shows. Indeed, the excessive number of theaters doubtless made business for plays of this type, as the ticket agencies "center" on them for the sake of maintaining the speculator's rake-off. This naturally withdraws patronage from less favored offerings.

It is the play of special appeal, the play of moderate success, and the play which does not happen to square with the distinctive taste of New York which suffers. This is largely due to the splitting up of patronage. No theater has a chance

any more, not even the Little Theater with its tiny auditorium. Stars are losing their loyal supporters. Mrs. Pike used to say she had about a ten weeks' following in New York. She can not be sure of that under present conditions. Diffuseness is the order of the day—except at the ticket agencies. There used to be a special public for the play of limited appeal, which may mean the play of unlimited stimulus. Now they are circumscribed in half-a-dozen directions. Indeed, though the critical faculty is developing among theater-goers and the play of modest charms might under ordinary circumstances win its meed of appreciation, the well-known "intellectual public" is largely lost in the shuffle.

THREE plays of the past season materially affected by the scattering of patronage were "The Yellow Jacket," "Rutherford and Son," and Annie Russell's revivals of classic comedies ("farces by dead authors," as Pinero calls them). "The Yellow Jacket" was wholly unprecedented on our stage and called for an unusual quality of imagination on the part of its audiences. The critics recognized its worth at once and it was given the benefit of extensive and clever advertisement. But it battled vainly against the tide. Other houses attracted just enough patronage of the sort that would have relished its quaintness to make the difference between an artistic and a financial triumph.

ENOUGH has already been said to indicate in a general way what effect all this has on the country at large. New York is, and for a long time will continue to remain, the producing-center of the United States. It has always purveyed dramatic entertainment to the rest of the nation, but formerly the partialities of the rest of the nation used to be considered a little. Now very few productions go out that are not stamped "O. K., N. Y." What New York doesn't happen to care for, remains in the city for a quiet little burial near Forty-second Street.

This is a good thing or not, according to the esteem in which you hold the critical acumen of the metropolis. Some people believe that in spite of the magnificent support it gives many fine plays, New York often exercises a suppressive influence on much that is best in the drama.

HOWEVER, this is largely due to conditions for which New York in the mass isn't in the least responsible. It does seem odd, though, that just at the time when the Shuberts and the Syndicate have found it necessary to come together in agreement to close theaters all over the United States, the speculative theater-building craze should be at its height in Manhattan.

Here is what Lee Shubert, the quick yet quiet "little brown man" of the theater, who knows the business end of it backward, has to say about the situation:

"There was just too much property lying around loose and the owners didn't know what to do with it—that's all. But all this building makes it bad—bad for everybody.

"Everybody knows, or rather, anybody ought to know, there's going to be a big crash if this building doesn't stop!"

And the Shuberts, with their eighteen theaters in Greater New York, are commonly credited with being the most successful real-estate operators in the business.

TRAGEDY

How It Feels to Act It

By MARGARET ANGLIN

IT may appear paradoxical that a work or series of works demanding the greatest concentration and mentally exhausting study should be joyous and enlivening, but many of the Greek plays seem to me to be not academic but on the contrary simple, human, and most of all splendidly flawless drama. I am not a propagandist, and, whatever I may say or think of the plays of Euripides, Aeschylus, or Sophocles as offerings for the modern theater, I shall go only so far in my statements regarding them as can be and has been actually demonstrated. I do believe they should be more often acted, that they have been too long on the book-shelves, and for too long a time the object of suspicious venom in the sophomore and the freshman.

Too long have they been left in the clutch of some of the venerable, if not venerated, ones who will not have the plays disturbed by modern actors, and will only have them done, if at all, as closely to the original mode of presentation as possible. That would, of course, mean no women, and if consistently followed, lead to the corbush and mask and other ancient accessories, which, while they might be of interest as archaeological curiosities, could hardly be relied upon to make a general appeal. I have found that a reverence for the text and a beautiful yet austere mounting and presentation preserved fully the quality and character of at least one Greek play, *Antigone*, and brought it within the appreciation and enjoyment of several thousands of modern Americans. I can not believe that I put too fine a point upon it, when I say that this performance *held* these people for over two hours in the deepest interest, and this is more than can be said of many of our modern successes. It is too early to say what *Electra* will do in the same theater, but I am more than confident as to the effect and result.

REINHARDT, in Berlin, worked wonders with *Oedipus Rex*; light and shade played in constant sympathy with the varying moods of the principal characters; the people of the mob stood, not still and intoning, but, in volume, movement, and in gesture, terribly real, a vast mass of living, starving people. They were not merely actors obeying an inflexible tradition, or formally reciting the reading matter of hardly accessible text-books.

This production should be seen in New York, in English of course, with some great artist, say Otis Skinner, in Madison Square Garden, or some place which offers capacities for reconstruction along the lines of the theater of Dionysius. New York is unfortunate in not possessing a climate which insures us against meteorological disaster, so we must lose the open sky. It is my hope to accomplish, even soon, a festival of Greek plays, with this as one of the important offerings.

THE experience of playing in that wonderful theater in California is, I believe, the greatest mental intoxicant that an actor can feel. For myself—and I have played many parts—I have never known anything to equal the thrill of the performance at Berkeley three years ago. Nature, always kind in the wonderful, golden West, was prodigal that night. The air was so still and so heavy with perfume, and the stars so bright, and so near the earth, with one radiant planet hanging just above the altar, that it was no great task to span the centuries and believe oneself beneath Attic skies; or to feel in the harsh decrees of Creon, the pure protests of Antigone, or the fiery resentment of Hecuba, very present realities, and this same exaltation (I don't know how else to name it) seemed to seize the whole company. Their spirit was remarkable.

So untiringly had the whole per-

formance been rehearsed, the "two-and-two-make-four" part of it entirely disappeared, the usual "first-night" hysterical excitement was utterly absent, and in its place came an extraordinary calm which seemed almost religious. When it was all over, I believe I was happier than I had ever been before in my work.

As I watched the vast audience filing out, I felt that if failure had met us instead of success (and the success was great), I would do it again, for it would always seem better to fail trying for such a goal than to succeed aiming at some lesser one.

AS I have before protested, I am not a propagandist, though to be one in its best intention is no mean thing; but to play Greek plays on an ambitious scale involves much, if not of opposition, yet of lack of ready understanding. For that reason I feel that to do them almost places one in the propagandist ranks, although I know that it has so far proved profitable. Commerce and Art most at times be introduced to each other, though we are given to believe that visiting cards are rarely left willingly in the empyrean halls of Art by Commerce.

Perhaps, one may not yet make of Sophocles a weekly offering, but it will not be so long a time before this is possible and demonstrable. It is all a question of doing these plays in a simple, effective, and beautiful manner. When the strophe and antistrophe become tedious to the modern ear, have them partly sung, partly spoken. Have the parts acted with fervor and understanding, have the action suit the words—not the word alone, devoid of action, however—as are told that the restrictions of the Athenian stage prohibited might but stately striding. Did they? In short, treat them as great and wonderful poetic dramas, but always dramas, despite their poetic dress, and then do the best you can with the drama.

MARGARET ANGLIN IN GREEK TRAGEDY

This represents Miss Anglin in "Antigone." The picture on the opposite page shows Miss Anglin rehearsing, and shows the size of the theater in California that was crowded by "Antigone" and is probably about to be crowded again by "Electra"

Polo Prospects

C. C. Rumsey, one of the star members of the Cooperstown Four, as it played at Narragansett

BY the time arrangements have been completed for the next international polo match—and England will never abandon the quest of one of the trophies dearest to the English heart—it may be decided definitely that the famous "Big Four" of Meadow Brook will not again take the field. A year ago that contingency excited consternation, and would have done so in any previous year. With other followers of polo I believed last June that only Captain Whitney, Devereux Millburn, and the Waterburys could save the cup. I think the result of the matches proved it. At that time, too, the statement that outside of the Meadow Brook four and the two slashing substitutes, Stevenson and Stoddard, there was not the making of a real cup-defending team in sight was hardly to be challenged.

No man could have foreseen, however, the effect the internationals were to have on the work of the men of what might be called a second string, and who keep up the game after the great matches are over. However, after getting a glimpse of the recent play at Narragansett Pier, I am prepared to make the flat confession of faith that any English team that heats a team made up of this so-called second string will have accomplished the improbable, provided, of course, the men who bore the brunt of the brilliant games at Narragansett make even reasonable improvement on their present form.

THE Cooperstown four alone—as it played at Narragansett, made up of S. von Stade, C. C. Rumsey, C. P. Brentlestone, and Malcolm Stevenson—I believe would have given a picked English team all it could handle despite the discrepancy in present rating; and there are other players, notably J. B. Thomas, Morgan Belmont, René Lamontagne, and E. D. Morgan, Jr., who are improving so fast that there will soon be a change in the handicaps or trouble for the very first flight of American players.

A great deal of this improvement has, of course, been individual, but after

all the keynote of the stirring play at Narragansett was the plainly evident tendency to build up great fouls, just as Meadow Brook has been doing for so many years. So, in a short time I believe that not only will the so-called second string work up within striking distance of the best in England, but will produce more than one four capable of defending a cup. This may be accounted for from a conservative view, and based too much on very recent matches, but the team improvement has gone so deep into the roots of American polo, and the individual improvement has been so much along the lines of the wonderful hitting that we saw in the last two international matches, that I can not believe otherwise than that the American game is rapidly finding a rock foundation.

We have already proved to the world that, so far as our methods were concerned, we were right. We have not yet proved that those methods can be carried on, not by a half dozen players, but by a score; and it remains for the next international match to sink this thing home, not alone to the invader, but to our own people.

ALL that America needs now, I think, is enough play, and enough play as teams that are working out their type of game. The rest is safe. It would seem, however, that Point Judith had had its share of the championships, and that at least one of these really national events might well go to the West for a change—to the West, where such events are needed. The astonishingly good play of the Army four, and the way they improved under fire, was the last proof needed of the value of encouraging the game in the service, and looking some day to Uncle Sam for an internationalist or two. Fort Riley and Fort Sam Houston are a long distance from Narragansett, and it would seem as if the soldiers had ac-

quitted themselves well enough to warrant the holding of a championship in a spot more accessible to them.

It has been said that polo is a "rich man's game." In a way this is true enough. But when it possesses the international atmosphere that has surrounded it in recent years it becomes everybody's game, and what is more natural than that Army officers should some day be called upon to defend a cup that is no longer a mere club trophy? Then the man in the street will feel that there are men on the field who in a way represent the mass of good sportsmen who for one reason or another can not build up their own bulwark of defense. However, the game was never in a healthier condition, even in the matter of financing the next defense of the cup, and while there is yet time there should be opportunity to witness all over the country the class of play that has been on tap at Narragansett.

The sporting public owes a debt to Meadow Brook, of course, but it will not be long, I think, before the burden of defense will have been passed on to hands almost equally capable even now, and some day perhaps to be quite as great and quite as bewildering to the invader.

THE long-expected has happened again. The world's record for throwing a piece of wire attached to a leaden ball of a certain weight has again been broken. The event is called "throwing the hammer," and is familiar to most of us, although occasionally the contestants have to adjourn to a vacant lot to compete. At the intercollegiate this year special pains were taken to prevent injury to the spectators, which, however, has nothing to do with the foolishness of the event. There is no sense in the event, and never has been, in my way of thinking. Perhaps some day the college men, at least, will have the courage to drop it.

René Lamontagne, whose recent dashing play forecasts trouble for the first flight of American contestants

When the Bases Are Full

How the Great Pitchers of the Big Leagues Cope with an Emergency—Speed is What They Consider the Chief Asset

By ERIC HAROLD PALMER

"With no one on the bases to take advantage of his dazzling wind-up for steals, Rixey looks unhittable"

THERE was once a baseball "fan" of the thirty-third degree who dreamed that he had become a great pitcher. Most young Americans entertain that notion at one time or another in their lives, but this particular individual just imagined it.

Everything had gone along swimmingly until one day he was ordered to twist against the Detroit Tigers. The first man reached first on an error, the next chap singled, and then old "Wahoo Sam" Crawford waited for a base on balls—as if that demon slugger even lingers for a gift, except in dreams. Nobody out and Ty Cobb up!

"Then what did you do in your dream?" asked a friend.

"I resigned on the spot," responded the "fan." "It was a wonder I did not take to drink."

Three men on bases and a safe wallop almost certain to win the game—there is a problem that a hundred big-league pitchers must face at one time or another.

WHAT do they do in an emergency like this? Thoughts of the yellow peril sink into insignificance beside this momentous and most debatable issue. The President of the United States, Senators, Congressmen, and Governors are just as much concerned as the office boy, who no longer speaks of "grandma's funeral" in order to get a chance to watch Johnny Evers tell the umpire what he really ought to be doing for a living.

"Put everything you have on the ball!" comes the message from the eyes, not the mouths, of the volunteer managers as they watch "the breaks" go the wrong way. They need not fear. That is just what is in the slab artist's mind as he fingers the ball gingerly while the third baseman and first sacker rush over for a consultation, mainly for the purpose of its steady influence, not for the conception of any markedly brilliant scheme to head off impending disaster. In the distance two team-mates are "warming up."

The crowd is roaring wildly in the event that it is the home team which has the bags clogged; if the visitors are getting on their toes for a mad sprint towards the plate, there is grim silence, even more nerve-racking.

A sign comes from the catcher. The pitcher shakes his head. Another follows and there is no dissent. The wind-up, slow and studied, is the cynosure. The next second the ball is on its way, perhaps never to reach the gloved hand behind the bat, but be driven far to the fence.

What does the pitcher rely upon in a case like this? What does he think is the hardest ball for the anxious batter to hit safely?

OF thirty-five major-league mound-experts who were asked the question, so interesting to fandom in all parts of the world, no less than thirty responded alike. The sum and substance of their declarations, representing the wisdom of hard experience, can be found in a single word. It is all very simple, just "speed."

In the days of Asa Brainerd, whose mutton-chop whiskers were not considered out of place on the field of action when the Cincinnati Reds were beating everybody in sight away back in 1869, the only way to fool the man with the willow was to send the ball in as fast as possible, high or low, and the same thing held true a long time afterwards, when Amos Rusie was in his prime.

Ever since Arthur Cummings started the supporters of the Stars of Brooklyn with his first roundhouse curve, the legion of red-blooded individuals, who can tell Joe Jackson's batting average from memory at any stage of the season, have been discussing the wonders of the in-shoot, the drop, and the raise. This last was christened "Old Sal" by Joe McGinnity, the iron man, who could throw it better than anybody else. Then there are the "spitter," the slow ball, the knuckle ball, and other famous inventions of the diamond wizards. Where do they come in?

ONE of the favorite haunts of the rabid rooter is right behind the home plate, where he can watch the ball in its freaky course. The artist with the sharpest break to his curves is generally credited with the finest pitching skill. But the curve ball is not the "real thing," according to the testimony of men best qualified to speak, although they hastily add that it serves its purpose. It isn't that they do not resort to stunts at any stage of the game. The invariable rule is to "mix 'em up," the kind of bender being dependent upon the particular bludgeon-wielder.

The main point is that curves are to an amazing degree (viewed from the standpoint of general belief) relegated to the rear on occasions when, to the ordinary mind, it seems that they should be called into service most of all.

The "steam" age has come upon us again in the baseball world. Veterans are talking of a revival of "the good old days" (that we talk about but dread seeing again). Then the slabsmen wear their games by sheer force of muscle, rather than by the exercise of cunning; for the pitchers who have the most creditable winning averages for the present season state openly that they have their main reliance in a "pinch" on what is technically known as "a fast ball with a jump." Of course, there must be curves now and then, but eight times out of ten the power-clutch will be put on.

BATTLE-SCARRED artists of the center of the diamond, like Christy Mathewson, upon whom Father Time lays a heavier hand as each successive call to spring practice goes forth, are still depending on steady nerve, cool courage, and careful judgment to keep them in the big show; but the newer stars are shooting the sphere over the plate with apparent abandon, just as the wiry pitchers used to do when the late and lamented Chris von der Ahe was beginning to know what the great excitement was all about. They are confident that the chances of defeat are minimized by their ability to make the ball look like a pebble.

The most striking illustration of this renaissance is found in the person of Walter Johnson, the big Swede from the Middle West. Believing with J. Faversham Tinker that no one can hit what can not be seen, except by accident, Johnson goes in, day after day, pouring a fusillade of bullet-like corner cutters at whatever nine has the misfortune to draw him against it. Ball-players in the select set concede that "the Old Master," "Big Six," or "Matty," as you choose to call him, leads the procession when it comes to calm calculation. He has developed the study of hitters into a fine science. On the other hand, when they are asked for a statement regarding the most effective system, they hand the honors to Johnson without reserve.

PITCHING in a pinch is the true criterion of excellence. It is no secret in the case of "Matty," who possesses in the "fade-away" a drop which really sinks; a marvelous deceiver; but he saves his arm as much as possible and uses that famous "hook" only in critical moments. He trusts to his unparalleled control and classy support.

The style of delivery resorted to by the others in a ticklish moment is practically unknown to the average "fan," no matter to what degree of expertness in the fine points he lays claim.

Only the pitchers themselves are aware of the way they cope with emergencies. Their declarations, when I asked them, proved surprising. Almost to a man the leading twirlers of the American and National Leagues confess that with the paths crowded with runners, they discard the newer tricks and go back to "smoke."

There are those who are even more frank. Vann Gregg of the Clevelanders, for example. The sterling southpaw, who was a sensation in his first year in the élite class, waxed facetious in his rejoinder to the question: "In a pinch, what do you most rely on, a fast ball, drop, cross-fire, etc.?"

Gregg paid tribute to the ability of the

hatsmen by stating that he principally put his trust in "prayer" when the time of trouble arrived.

Russell Ford of the New York Americans leads the field in acknowledging the superiority of Walter Johnson. Ford has a bewildering assortment of slants, but he holds that the speed counts for most. Ford's confession of faith was very concretely but emphatically expressed.

"What do you consider the most effective style of pitching?" he was asked.

"Walter Johnson's," was the reply.

"Which do you believe is the hardest ball to hit?"

"Walter Johnson's."

Asked to tell what kind of a delivery he resorted to in the hour of stress, Ford said it was the fast ball for his.

It will be remembered that Johnson once shut out the Yankees three games in a row on their home grounds, on Friday, Saturday, and Monday; so Ford has visual evidence of Johnson's gun-fire to back up his statements.

THE star of the Senators is making a greater record than ever in the whitewashing line this year, but his most scintillating performances were the blanking of the hard-hitting Athletics on two occasions, after the other Washington twirlers had got their bumps, good and plenty. Those who are wont to quote figures and facts in arguing that Johnson is entitled to the hurling crown of all time have a most conclusive addition to their briefs in his behalf this season.

Alexander and Seaton, who kept the Philadelphians up in first place in the National League so long, depend on a fast ball on the inside corner of the plate with a drop to vary the delivery. Marquard, the prize left-hander of the Giants, has phenomenal speed when he is right, which, under proper control, is all he says he needs.

Nap Rucker, the brilliant port-sider of the Brooklyn, has also speed to burn at his command, but the Georgian does not use his terrific cross-fire until danger arises. When he is going along smoothly, Rucker's exhibition is really marvelous, for he simply seems to lob the ball up; yet it has a wide, bending curve that almost invariably floats up for a strike. The knuckle ball of Rucker's has been slammed to all corners of the field this year in several games, however, and to an extent more than customary he has

been forced to fall back on speed. He has excellent control for a southpaw.

ANOTHER left-hander who has the hitmishis stepping away from the plate is Harry Sallee of St. Louis, who once boasted that he was the best side-wheeler in the National League. The next time out he was hatted out of the box, while Rucker, opposing him, had one of his best days.

Eppa Rixey, Jr., the elongated college offside pitcher from the South, who was a world-beater shortly after he joined the Phillies in 1912, contended that he had not been playing long enough to be well-informed. Some professionals are really modest. Rixey gave us his view that a fast ball with a jump on it, preferably over the corners, worried the batters most. He believes that the eyes of the professionals are too trained. In the college ranks, the hitters "bite" at sweeping curves, but Rixey has found out this year that he might as well discard them. With no one on the bases to take advantage of his dazzling wind-up for steals, Rixey looks unhittable. His length of arm gives him terrific speed.

"Marty" O'Toole, the Pirates' \$22,000 acquisition, declares a "spitter," delivered with an overhand motion, is hardest to fathom. When he is right, O'Toole can shoot the ball over the edge of the plate with a marked degree of expertness.

William James, the new giant pitcher of the Boston, whom National League critics say will soon be one of the foremost, can whip the sphere in with unusual violence. With men on the bases he gets added impetus to his fast one.

Big "Jeff" Tesreau of the Giants, about whose spithall so much is said, relies upon his speed in a pinch. So does "Chief" Johnson, another big fellow, who won the first four games the Reds copped this year.

"Joe" Wood of the Red Sox has earned the nickname of "Smoker" because of the terrific speed he relies upon in a tight corner. Like Johnson, he is always worrying for fear of being responsible for the sudden demise of some one. When either Johnson or Wood "bean" a batter, modern medical skill can do little.

Edward Hank, the old-timer, who was never quite so good as now, in spite of his thirty-nine years, says a speedy corner clipper is most effective. Edward Walsh,

the Chicago king of the mound, mixes in a spitter with his fast ball, but constant use of saliva has ruined his stomach and he may never be his old self again.

Connie Mack's great slahman, "Chief" Bender, has blinding speed. He can go in cold in a pinch and unknown what might be well spoken of as chain lightning. "Cy" Falkenberg, the human stepladder out in Cleveland, is another with the same forte. Suggs of the Reds and Moore of the Quakers are two curve-ball pitchers who have not been at their best this season.

OF the successful strictly curve-ball pitchers, Pat Ragon of the Superbas is a shining example, but then, Don Carlos Patricios, as the local critics call him, is quite different from any one else. He never worries, no matter what the score is. He keeps on chewing a cud of tobacco and sending wide benders over the center of the plate, just as fast as he can work. Delays are unknown to Ragon. The only time he gets his dander up is when he is asked to vacate the box for some one else.

Carl E. Zanolch started the season under Hugh Jennings. Zanolch is one of the minority. Here are his answers to questions:

"What do you consider the most effective style in pitching?"

"A good slow ball, mixed in with fast and curve, is most effective."

"Which do you believe is the hardest ball to hit?"

"A low, fast ball on inside of plate."

"In a pinch, what do you most rely on?"

"A curve ball breaking away from the batter and down."

Zanolch ventured the opinion that "a spithall pitcher with a good curve ball and also a fast ball is almost unbeatable." Zanolch has been sent to the International League by the Tigers for further development.

In a talk on pitching, Mathewson not long ago maintained that no pitcher can be effective without having a fast ball at his command, and he particularly commended the side-arm snap.

"Matty" says that the fast ball is wicked, especially when a twirler has an attack of wildness; but not all pitchers are as conscientious as he, and engendering fear in the hearts of the enemy is half the battle on the diamond as well as anywhere else.

The Catcher

By Porter K. Johnston

LOW crouched and tense,
Criterion of the batter's prowess,
He gives the steady signal.
A twisting sphere, the air is riven
In vain attempt, mocked by
The echo of that stirring sound,
The kiss of ball and glove.

A wrist of steel,
With aim as deadly as the cobra
Matched with the speed, the daring of the runner.
A flying start, a sweep of sinewed arm
Arching the ball in swift requital—
A headlong plunge—and from the scarf of dust
The umpire's hand goes out against the sky.

Scornful, taunting,
Fighter from spike to mask-strap,
He bears the brunt of battle.
From the careening foul that wheels aloft
And falling, spurns his effort
To the man with three and two
Who, unnerved by caustic yet, fails his part.

A NEW YORK STREET BEFORE DAWN
By GEORGE BELLOW

Unmarried Mothers

By EDITH LIVINGSTON SMITH

The underlying meaning of the so-called "Feminist Movement" is that a better world can be made if women generally cooperate in our moral and social problems. This movement will inevitably be victorious. Various aspects of it will be discussed constantly in this paper. The most difficult sex problems must be solved, in the main, by intelligent women. The one treated in this article is extremely important, and it is also one that must appeal strongly to the sympathies of every right-minded person.

I HAVE been working among girls and women in the Massachusetts General Hospital, and in factories and department stores, where I have investigated somewhat the conditions touching sexual morality—in other words, wherever I can find girls gathered together and may talk to individuals among them.

In a hospital one deals, necessarily, with the sick, with those who have come through the mill of temptation to downfall; but one would not be human if one did not ask, "While we care for the wounded, shall we not endeavor to stop the wheels of circumstance or fate that have caused this catastrophe?" Is there no cure for the Social Evil?

IN 1903 Dr. Richard C. Cabot originated Hospital Social Service in the Out Patient Department of the Massachusetts General Hospital. It was evident to him, as it has since become to every thoughtful physician, that busy doctors in the clinics have no time to deal with the social side of disease; that here were many people suffering quite as much mentally as physically, whose home conditions, requiring careful readjustment, might be the whole background of their difficulties and their ills, and that, until these conditions were altered radically, there could be no cure. This was the job for the trained social worker, and thus it was that she fitted logically in the gap between the patient's visit to the clinic and his life at home.

The work is no longer experimental. It has proved its value all over the country, and the field of its opportunities is ever broadening. Because this is so, it follows naturally that the work should be subdivided. Workers in the children's clinics must be experts with children; social service in the Nerve Department must be based on definite knowledge of mental disorders; and so in each department specialists take charge of the social problems that are presented to them, as, in a greater degree, the physicians in the clinics deal with their own special field of medicine or surgery. Therefore, physicians now send from the clinics to the department dealing with sex problems cases of unmarried pregnant girls, and also girls suffering from venereal diseases.

These are the girls and women whose lives I have come to know. They are typical of humanity as it exists all about us. They are neither better nor worse than thousands of other girls who do not come to the hospital; hence one is at liberty to draw from their experiences of life, as they tell them, certain conclusions.

WHEN a girl comes to me from one of the clinics with a diagnosis of pregnancy, her condition of mind and body would melt a heart of stone. She has come to the hospital, to be sure. Now certainty has taken the place of worry, her worst fears are realized, and terror has succeeded to a vague but persistent hope that all may yet be well.

With the usual unwillingness of conventionality to face the issue, society has always sent these girls to a Maternity Home. We are sorry for the girl's mother; we are somewhat, but less, sorry for the girl; we condemn nature; we are indignant with the man who is responsible, and when the child is born we shall be inclined to pity it and see that it is given half a helping hand, because it has only half a chance.

To maintain this attitude, we have to walk the difficult tight-rope of charity, and we are likely to topple over on one side or the other. Either we err on the side of sentimentality, or we throw stones. We forget the one great fact that as part of society we are responsible for this girl's condition.

I DO not believe in Maternity Homes. Like many consciously good things in the world, they have to be recognized, and like many virtues we use them.

Sentimentality they approach perfection. Practically I would criticize them on three points:

1. The atmosphere of such "homes" is abnormal, and the effect of any departure from the normal is demoralizing.

2. A prospective mother needs hospital care at the time of her confinement, or the advice of expert obstetricians, and it is difficult to combine medical efficiency with professional charity.

3. Economically these homes do not yield the best result for the money expended—they are inefficient.

The teaching in these "homes" is concentrated religion of a sort, the teachers having acquired a wholesale institutional pity which deals with "cases" rather than with individuals. There is talk of "fallen women," "erring girls," and "first and second offenses." The Pharisee is quoted in spirit and in truth, rather than the real Christian teaching of which the world disapproves: "Has no man condemned thee? Neither do I condemn thee. Go and sin no more."

If a girl has been leading a life anything but religious, and is suddenly plunged into obligatory prayer meetings and psalm-singing, she is either a hypocrite, hating it all but professing to obey the rules because she does not dare to rebel, or she is wrought up to an artificial state of emotional excitement which is as bad for her future as is any abandonment of herself to ungodliness. If a girl is of a religious temperament, her religion will help her to true womanhood; if she is not, no amount of preaching will affect her character. The impress of truth, the sympathy of real understanding, the developing of each individuality, is the only help one can give these girls.

The best influences are not to be obtained by placing unmarried pregnant girls with others of their kind. As in reformatories and prisons the water of evil passions finds its lowest level, so where many girls are gathered together there is danger that most minds will acquire knowledge that cruder natures

have possessed to their destruction. The meaning of motherhood dawns slowly over the mentally immatured girl. Because she has no protector, she loves the stirring life within her more intensely. It is the one pure thing that is to come forth from her travail, and she is the only person in the world who knows the full meaning of this suffering and experience. Such a girl must not know people worse than she. She must not know that there are moral depths to which she never sank. She must be kept from the knowledge at any cost, if our philanthropy is not to be reduced to the lowest terms of hypocrisy.

Maternity Homes are a sort of cross between a home and a medical institution. They have student nurses and a visiting doctor, sometimes two; but obstetrical cases are best cared for at a Lying-in Hospital where facilities are at hand for any emergency.

"Child-birth is a medical experience, not a religious ceremony," a doctor said to me not long ago. I agree with him.

Economically, Maternity Homes have seemed a necessity; but the same amount of money, if expended in caring for these girls in a different way, would help them better to a life of efficiency and morality.

I speak, of course, of the normal girl. There is also the type of the mental defective who needs institutional care. The state must care for the feeble-minded and the morally deficient, for they are a menace to the community and to the welfare of the race. Segregation throughout the period of child-bearing seems, at present, the only solution of the tremendous problem of the mentally unfit.

I TRY, if possible, to keep a pregnant girl in her own home until she can go to a Lying-in Hospital for her confinement. Her own mother is at least indirectly responsible for her condition, for it is generally the result of reckless indulgence, the danger of which she never knew, the culmination of the strange, fierce hunger and craving of her sexual nature which she was never taught to acknowledge or control.

The girl's mother is afraid of the world and of the neighbors. I try to tell her we must be brave enough to look over the cold shoulder of the world and to defy the neighbors. Our reproach has been in leaving truth untought. We should never be ashamed of the result of our sins unless we are ashamed of the sins. Stevenson said it was only the sins of omission that mattered greatly. Surely they are the ones that concern us to-day. At any rate, the world can not throw stones—straight.

If such a girl can not stay at home, she should be placed in the home of some good woman, herself a mother, who can awaken in her the qualities and instincts of maternal responsibility inborn in every normal girl.

The financial situation is bound to trouble us—does trouble us, for charity has endowed refuges for the mind, and we have to bespeak help for the mind when, but progress must not be hampered by

lack of money or beliefs silenced because of custom. We have an analogy in the problem of the handling of orphan children, now and in the past. Institutional care for these children failed. They had no mother. Obviously, one matron could not be like the wonderful woman of nursery love; so it was deemed best to board the orphans in families. Nourishers were found, and the little waifs, with the belief of simple hearts, found the delusion comforting and the homes not so "make-believe," after all.

What has been done with orphans should be done with the unmarried mother and then she too would have a better chance for new life under improved environment. Institutional care for her may be said to be a failure, for the effect of institutionalism is a habit of dependence easily acquired and one not to be considered lightly, as it is destructive to that valuable state of mind—the realization of personal responsibility. In families under state supervision these girls would have the best opportunity for individual development.

A TYPICAL case is Louise—pretty as a picture, impulsive, and outspoken. When she first came to me from the clinic, and realized that I was sympathetic, she took my breath away with her candor.

"Oh, yes, I have been bad," she began, "and I am dead sick of it all." She had been "up against it." It was hard to have a mother who "trusted in the Lord to provide," and Louise was only earning six dollars a week.

This girl looks so ladylike that her tough slang comes as a shock; yet she is never guilty of bad grammar. Here, again, the mother is weak and foolish, and the father had been wild and intemperate, though of a good family. She had been tempted on every side. "Geel but all men are bad," she told me frankly. In fact, this girl's story of the struggle to make a living in a city held me spell-bound. When I told her that all men were not bad, she looked at me pityingly, though with the tolerance of respect. "Perhaps not the men you know, but the men we girls meet in the factories and the shops, they are all the same. Perhaps they are all right the first time they take you anywhere in the evening, but they always end up with the same request. They want one thing, and one thing only."

Louise has both syphilis and gonorrhea, and is pregnant. The father of her child is a college graduate, and she loves him, although he is much the type of man her father was. Another man, James G. (there is always another man with Louise, she is so very appealing), wanted to marry her. He wished to save her from her fate, to protect her and her unborn child. I could not but believe such a tale, and I sent for "James." I was fearful that he might be a white slave procurer. He came to see me without delay. He was frank and sincere regarding his love for Louise. "She would be on the street soon," he said to me earnestly. "I must save her from that. I will not live with her until she is cured, if it takes three years; but I will wait for her as her husband." This man is an electrician with a good business record and a clean personal reputation, and shows a complete readiness to enter into any plan for the betterment of his wife's body and soul.

I warned Louise against marrying a man she did not love; even a saint like "James;" but she was afraid of the world.

It had not known her weakness until she was pregnant. Now every one would know. For the sake of her child she must marry, and John, the father of the child, would not marry her. So she married honest James, and she comes to me in terror and self-denunciation.

"I married for the child. Oh, what have I done?" she cries. And I can only be silent. "I love John, and I can not help it, no matter what he is."

I try to point out to her that she can not really love him, because she can not respect him. It is the world's convention, even with Louise, that has driven her to hide her shame.

What is morality? Living with a man one does not love, because of a wedding ring upon the finger? Bearing the child of a man she does love who will not shield her from their mutual folly?

Poor Louise! Meanwhile, James waits and adores his little wife. I like this girl. She has fine characteristics. Yet she is impossible. I tried to get her to go to church.

"No; for the stained-glass angels would laugh," she said bitterly; "a piece of the ceiling would fall down on me."

"Not to pray, then, Louise," I urged; "just to be quiet—to rest."

"I would think of John," she said hungrily. "I would have to think of John if there was music. I know it's all a fearful mess—but have you ever been in love with any one?"

I SEE shop girls and waitresses, factory girls and maids, chorus girls, stenographers, and governesses, each with a different story, each with the same terror of the consequences of their folly.

"I never knew," they tell me. "I never knew there were such temptations."

One girl said to me, not long ago: "I have married sisters. Why couldn't they have told me something about the world? Why did they let me go to work, knowing nothing?"

Let us go back to the question of sex education of the public. Silence has been the policy in the past. We have taught our children biology and natural history; we have taught them physiology, carefully ignoring the organs of reproduction; we have warned the young to make use of their senses and their brains, but we have refused to recognize the very force that guides all these instincts, the vital power of sex. Yet, in the face of this stupidity, acknowledging the call of the age, girls are sent out into the industrial world, where they fight shoulder to shoulder with men. Here they find out for the first time the passions and potential worth of their individualities; here they meet with the same—no, greater—temptation than their brothers, but with no knowledge to guide them, no traditions to give them poise, no ameliorating factor of social tenderness or tolerance when inexperience fails to temper their emotions and their femininity.

There are some old-fashioned, stubborn people who refuse to admit that the wheels of time turn round. They would push woman back into the position she used to disgrace. She must either be a wife and mother, happy or unhappy, or dependent upon relatives, agreeable or insulting, who will support her. The ignominy of her position does not astound them; the absurdity of it awakens in them no sense of wonder; the pathos of it does not touch them.

Other people there are who accept the situation as it is with passive indifference. Oh, yes, women are out in the world. How did the world ever get along without

them? Only to a comparatively few sober-minded people has the situation been turned around so that the woman's side is noticed as well as its masochistic appearance of womanly independence.

DO not for a moment think that I believe woman should be dependent upon man at the cost of her dignity, her intelligence, and her individuality; but before she assumes the rôle of a wage-earner she should be a woman, not a child. A girl's protection must come from within, a boy's from without. Every boy who reaches the age of adolescence knows his nature. It asserts itself. His sex instincts are dominant, aggressive. He is man, the father of the race, and the laws of procreation are to him as open book. A girl stays innocent until she is awakened. It is the kiss, the touch, the senses stirred, that make her, in the glory of her womanhood or in her shame, acknowledge her sex.

Our cities are full of mere children who have felt the glow of freedom and the necessity of toil. Our factories and shops are run by them. It is but natural that they should obey the call of the times; but they leave their toys and their spelling books to go into wage-earning competition, where life crowds and entices, enchants, dominates, and sometimes kills. Whose fault is this?

The very frailty of such a girl, her dependence upon her intuitions and emotions, the triumph of feeling over intellect, place her in greater danger than her brothers, even were their responsibility to society the same. But, add to this the fact that in yielding to sexual temptation she has the burden of child-bearing—how much more necessary that she should have some knowledge of what she is to meet in the world, of what she must combat, lest her emotions forestall her intelligence as physical development precedes mental appreciation.

WITHOUT this education the force of natural selection asserts itself. A young girl is no reader of character. She does not understand herself, and she mistakes physical fascination for love. It is pathetic that she should stumble into the net of her own immaturity, but this is too often true, and if she does so worse she probably marries the wrong man. This because she was left alone, a child, untutored, responsible for the fruit of the tree of knowledge which she picks because it is growing in her garden, and she is curious.

So we struggle with the great problem of illegitimacy. How strange are our morals, that we call the effect of ignorance immorality, the result of nature's untutored awakening sin.

Suddenly we are realizing the situation, and a campaign of education is the result. It is absolutely necessary, if we are to face the facts. If we permit conditions without a suggestion as to remedy, they become our grave responsibility because of our acknowledgment of their existence. Whether we like it or not, women are in the industrial world to stay. Whether we face the issue or dodge it, they must know the laws of sex as they are, and, like their brothers, be instructed as to the use and abuse of their instincts. Then we will approach a standard of morals that will bear the light of day—not a double standard, as in the past, but a basis for right living evolved from a knowledge of the law of sex, which should be regarded as simply as is any other law which nature has ordained for man's development.

Political Snapshots

A Discussion of American Beliefs

By CHARLES ZUEBLIN

Illustration by William H. Walker

II

The Party

HAS it ever struck you, Mr. Voter, that the capstone of American government is the party, as the cornerstone is the "system of checks"? The party was not nominated in the bond; the Constitution-makers thought they could avoid so popular a device. The organization that represents all that most of your fellow-voters know about government is not only unmentioned in the Constitution; it succeeds only by violating the spirit of the Constitution. That ancient document was intended to confer absolute power upon the minority; the party was a futile afterthought to give expression to majority opinion.

Mr. Voter, do you know that parties originated in the division of sentiment in 1793 over the recognition of the French Republic?

SINCE we adopted the British aristocratic system, parties have come to be a powerful means of expressing the public will in the mother-country. They are an integral part of the British Constitution, hampered intentionally by the

nobility, but with a freedom of expression unknown here. Party loyalty is not only demanded of the British voter but is expected of his representative. The "government" is the cabinet chosen by the leader of the victorious party, and remaining in power only so long as satisfactory to the electorate.

The party girth and the party tailbit away. Blessed be the name of the party (in Great Britain).

DID you know, Mr. Voter, that your party is not likely to rule even if you win? The constitutional checks in the United States have prevented complete party-control of all branches of the government at the same time for nearly a hundred years of our history. Twelve times has a party been victorious in the popular branch of government—the House of Representatives—without having any support in the other branches. For nearly forty years no party has had a sufficient majority to control the treaty-making power of the Senate. The Democratic party, now in power in all departments, is not strong enough to make a treaty.

Mr. Voter, did anybody ever tell you that the masses are responsible for misgovernment?

PARTY-GOVERNMENT has been so ineffectual that the parties have generally had no reason for existence, except to hold office. Ever since slavery became a conscious issue, both historic parties have straddled or wobbled on all vital questions. Their platform planks on the money question have been illuminating.

	Insulation	"Sound" money
1864	Republican	Democratic
1868	Republican	Democratic
1872	Republican	Democratic
1880	Democratic	Republican
1888	Democratic	Republican

"The decision places events in the administration line."

WHILE you, Mr. Voter, have been taught that party loyalty is a better guarantee of salvation than the grace of God, your representatives have effected a bipartisan government. A bipartisan alliance elected Cannon speaker, framed the rules, passed the Payne-Adrich tariff bill, elected Lorimer, white-washed Lorimer and Stephenson, and will probably be needed to pass the next tariff bill through the Senate in spite of the Democratic majority. The only division in Washington is between reactionaries and progressives. Their political labels tell you nothing.

Mr. Voter, don't you want a pure food law to show the ingredients in your political party?

The Autopilgrim's Progress

IV

Lemuel Motoreth without Trimmings and
Getteth Trimmings

LEMUEL BOGG lit a five-cent cigar,
Put on his duster and motoring cap,
Cranked up his little red godabout car,
Tied on the brake with an old hitching strap,
And thus to his wife and his daughter Katury:
"I'm bound t' show you, if ye're from Missouri,
That, though it costs steep,
The Bogg folks can keep
A place
In the race
At the top o' the heap.
Danged if we don't,
Hanged if we won't!
Anythin' modern that travels on wheels,
Wheelbarrows, airypianes, automobiles,
Gasoline, kerosene, steam, or the real,
The Bogg folks 'll travel as good as
the best."

So hop in, my dearie,
And don't y' git skeery—
We're off in a cloud with our nose to
the west."

LEM looked heroic,
Mother looked prayerful;
But daughter, though stoic,
Said, "Pa, do be careful!"
As, spitting wild odors and mindily
vibrating,
Jolting, back-firing, slam-hanging, and grating,
The rear-door antique began slowly to strike
A tortuous progress down Pennyroot Pike,
Ma said, "Good land!
Do stop, for I'm dying!"
But daughter cried, "Grand!
We're most nearly flying!"
While Pa, with his hand
On the wheel, death-defying,
Straight on the road kept his aquiline optic,
Little he listened; they might have talked Coptic,
But he thought, "This old cart ain't constructed fer style,
But I het
That I'll yet
Meet old Si's stylish pet,
Give 'im fair roadway and skin 'im a mile."

HE was some less elated near Chatterhorn's pump,
When the car sagged abeam with a desolate bump,
Too bad at this juncture,
A puncture!
So out of his seat he disconsolate gat
And sought the garage of one Jacob Q. Spratt,
Who, spite of poor Lemuel's bargaining hollers,
Sold him a "shoe"—and charged forty-two dollars!
"Ginger!" sighed Lemuel, counting the dross,
"It's a sight more expensive than shooin' a boss."

The morn was divine. Such a day, without censure
I say, might cause train-wrecks or love or adventure.
When the tire was adjusted
Lemuel dusted

The grime from his nose, then up-cranking his steed,
Remarked, "All aboard! Here's the place for some speed."
A roar like a ton of coal shooting a chute,
And off and away with an ear-splitting toot,
Defying both time-table, speed-law, thermometer—
Twelve miles an hour, said the worried speedometer.

TWAS all very well till, down Henderson's lane,
Something behind whistled loud as a train,
Eye glancing aft,
Lem bitterly laughed,
For, eating the dust in its might and its main,
Came the natty green speeder
Of Silas J. Scagg.
"I'll show that torpedoer
A bit o' red rag!"
Lem hissed. Honks behind. Then, his pride growing larger,
He tendered more gas to his quivering charger.

The road was too narrow
To let a small harrow
Pass, unless some one hunched 'way to the side,
"Which same I won't do," Lem declared in his pride.

"Them upstartish Scaggs,
With their gasoline dregs,
And boostin's and brags,
Ain't got no more right to this roadway than me,"
A voice from behind:
"Say, Lem, 't y' don't mind?"—
"I can heat yer old 'hus!" shouted Lem. "Just you see!"
He stamped down his toe on the ac-celerator;
The enginery shook with a rage even greater,
While Si's haughty vehicle,
Smoother than treacle,
Purred in the rear, till at Ogreviv's Hill

The roadway, upshooting at twenty degrees,
Somehow grew broader. Lem's car with a will
Tucked the grade. But it cost it a wheeze,
Then suddenly, swift as a greasy green thunderbolt,
Straight up the hillside Si's car 'gan to blunder. Bolt
Upright at Lem
Like a charioteer,
While Si coughed, "Ahem!"
As he passed very near,

A sound so reveling, sarcastic, sardonic
That Lem's swelling anger grew fairly bubonic.

OUT over the valley and far, far away
His rival was lost in a garment of gray,
Lem was about

To snort, "The old snob!"
When his engine gave out
With a back-broken sob.
A chain rattled loose, its roaring was still;
And there she stood, stalled on the side of a hill,
Lem leaped to earth. Daughter tried to dissuade him;
But he shook his strong fist at the car that betrayed him.
"You spring-halder, wind-galled old gas-kangaroo,
I'd a-beat that dum fool, if it wasn't fer you!
I'll leave you right here till y' take root and grow,
And I'll buy a new auto, by hick, that'll go,
And I'll beat that Si Scagg in a fair, open race,
If it costs so dum much that I mortgage the place!"

(TO BE CONTINUED)

Orators Who Have Influenced Me

By T. P. O'CONNOR, M. P.

JOHN BRIGHT

THERE are some things you should see when you are eighteen; and one of these is "Romeo and Juliet," and the other is a great orator. I was just eighteen-and-a-half when first I saw John Bright; and I was indeed well attuned to enjoy to the very fullest that extraordinary opportunity. I had been reading about him for years; to the generation of Irishman to which I then belonged, he stood out as the one politician who had the courage to speak for my country. In spite of this, my impressions of him were not altogether pleasant; for curiously enough, the papers which I usually read belonged to an opposite party; and John Bright used to be still assailed at that period of his life with a bitterness that would be scarcely credible to those who only knew him surrounded by the universal veneration of the nation in his later years. Punch, at that period, always presented him in the guise of a prize-fighter, with the gloves on; possessing a corpulent body, a pugmascous expression, and a single eye-glass in his eye. As a matter of fact, Bright never used a single eye-glass in his life; but I assume that the paper, having once portrayed him thus, felt itself bound in consistency to present him thus ever after. I had got this idea of a prize-fighter so much into my head that I expected to see a man with a fierce face, with coarse development of limb and chest, and with an aggressive air. Further my newspaper guide had accustomed me to think of him as a man of extreme and unreasonable views; which were set forth with all the brazen and raucous throat of the demagogue. And I have always hated unreason and I have always hated demagogues.

I SET these ridiculous misapprehensions thus frankly forth so that my readers of this generation may be able to project themselves backwards,—if I may be allowed to use that paradox,—and understand the atmosphere amid which John Bright lived for nearly three-quarters of his illustrious life. Judge, then, of my surprise when I caught sight of the real John Bright. He spoke in a small hall at a luncheon, in the historic but rather decayed city of Limerick. I watched him every second that I could; I even observed that he took a glass of claret from a claret jug—he took wine for a few years of his middle life, and then relapsed into the teetotalism of his early years. I studied every line of the face; and my first impression was one of delighted surprise; for the face was not brutal nor aggressive, but classic in its beauty and in its refinement. The complexion was healthy but not overcoloured; the nose was small and perhaps even suggested a slight tip-tilting; the mouth was small; the brow was lofty, the hair silken silver-white; and the whole expression was one of profound self-mastery and profound introspection—the face of one of the men who live much in the inner kingdom of the soul; and the figure, though robust, was not coarse but well proportioned.

And yet, it was not altogether a soft face. The thin-lipped and delicately shaped mouth had in it a grim suggestion of bitterness, scorn, and the sacred anger of the prophets; the eye, too, though it could look gentle, could also be imagined as scornfully bitter and indignant; and the brow was severe. In short, though I little knew the meaning of the phrase at the time—for I had scarcely ever seen an Englishman—I was looking at the greatest and most perfect embodiment of the English Puritan, high in purpose, noble in life, but also sternly severe.

WHEN he rose to speak, an even greater surprise came to me. This man used no violent language; the voice was soft, sweet and low; the gesture was rare; the chief impression was one of majestic self-control, and of a moderation of manner that would have fitted my idea of the calm citizen of respectable views rather than the demagogue that had been painted to me. Further, I should add that I was struck with a certain nasal tone in the voice, the tone which I associated with what I had read of the Roundheads, and that some of the words were pronounced after a fashion that seemed to me strange; for instance, he spoke of the emigration from Ireland being "unexampled" in any country or any time. There was a distinct difference in the way an Irishman would have pronounced that word and the pronunciation which Bright gave to it.

How can I convey to my readers the depth of the impression which that speech made upon me! I have listened to many great singers; I have heard many great orators; and, except in the case of my dear old schoolmaster, the late Professor D'Arcy Thompson, never did I hear any voice that seemed to me such exquisite music. And the music was the more beautiful and entrancing because it was so soft and low. Never once did he raise his voice, though now and then it became softer and lower, especially when he reached the beautiful and poetic peroration, a part of his speech which he wrote out and which alone he carefully prepared. And it was all an appeal, not to passion, but to reason. There were doubtless hot Irishmen in the gathering which he addressed; they could not help being grateful for his advocacy of their cause; but there was not a word which seemed to be anything but the calm appeal of a perfectly poised man to the intelligence of the world. I saw him soon after when he passed through the streets in the carriage of George Peabody, the celebrated American philanthropist, to whose house he was on his way to try a little salmon-fishing, his favorite amusement; and again I was struck, almost painfully, with the severity of the expression and especially the severity of the thin-lipped, small, tightly compressed mouth.

I WAS a better psychologist than I knew, for I formed the true conception of John Bright's personality. His biography has now been published—an

admirable book—and it is evident that underneath the sweetness of John Bright's character—its intense devotion to wife and child, its sympathy for all humanity and especially for those who suffer—there was at the bottom a tremendous strength and almost a fierce severity. He could be frank, almost to rudeness. Take for instance, that terrible retort he made to Disraeli, when Disraeli told him he would have surrendered everything he had ever said or written to have uttered that noble passage with regard to the "Angel of Death." "I just said to him, 'Well, you might have made it if you had been honest.'" The statement was not quite accurate; for with all his brilliancy, Disraeli was incapable of such a flight of tender eloquence; but, whether or not, what an awful response to a friendly greeting.

Nor was John Bright a tolerant man. I don't think it ever entered his head that he could be wrong, or that any of his political enemies could ever be right. I am not sure that he was even prepared to admit that they were honest. All this marked a certain intellectual narrowness, but assuredly it was also one of the secrets of his immense influence and of the splendor of his speeches. A prophet and an apostle, especially of unpopular gospels,—and Bright's gospels were unpopular during the greater part of his lifetime—must go to his task with no self-doubtings, with no mercy from the power of understanding the different point of view from his own. The very flexibility of Gladstone, his power of taking a wide all-round view of any situation, sometimes interfered with the effectiveness of his speech; he became diffuse and prolix, and many of his sentences missed their mark. To-day it is difficult to read even some of his greatest speeches in the pages of Hansard. With Bright every word was a bullet that went straight to the bull's-eye; it was clear, vigorous, concentrated; and rarely did he speak for a longer time than even the most impatient audience could bear.

WITHOUT knowing it, Bright was a great man of letters. He never wrote a book—I don't know that he ever wrote an article in a newspaper—and he had never been to a university; but, all the same, he was a great man of letters. "My life," he said once, "is in my speeches." So is his great contribution to the literature of his country. For he was a great master of a perfect English style. The chief qualities of all style are simplicity and lucidity, and what I must call inevitableness, the use of the one and only word that seems to express the idea. His speeches are as easy reading, for the most part, as Robinson Crusoe, the Vicar of Wakefield, Addison's essays, or any of the other mighty books that still influence us, and that influence us mainly because their language is at once so perfect and so simple.

But that is not an exhaustive description of the oratory of Bright. He himself repudiated the idea that only short words of one or two syllables were to be

found in his speeches. It would be as untrue to say that of him as to say it of "Paradise Lost." In Milton, whom he never ceased to love and to read, he found the glowing imagery, the magnificent and resonant phrases that occur throughout his speeches. Sometimes, indeed, one is reminded of Milton's use of the classic name instead of the English as in a speech, which preceded that with the passage as to the "Angel of Death." "Here, sitting near me, very often sat the member for Frome [Colonel Boyle]. I met him a short time before he went out, at Mr. Westerton's, the bookseller near Hyde Park Corner. I asked him whether he was going out. He answered he was afraid he was; not afraid in the sense of personal fear—he knew not that; but he said with a look and a tone I shall never forget, 'It is no light matter for a man who has a wife and five children.' The stormy Euxine is his grave, his wife is a widow, his children fatherless." It will be seen here that Bright chose the word "Euxine" instead of the Black Sea; that was quite a Miltonic touch.

THE speeches of John Bright, then, were great and produced their tremendous effect mainly because they were great literature. It is for that reason, that amid the shifting changes of

political life—and nothing changes so quickly as political life—his speeches can be read to-day with the same delight as when they were uttered, red-hot, amid the fierce controversies of stormy times. He remains and will remain the most frequently read of English orators, as long as the English language endures.

But, of course, mere diction, however wonderful, will not account for his success, or that of any other orator. The orator, like the actor, must always owe much to merely physical qualities, and first of these qualities is the voice. It was usually, as I have said, sweet and low; but every now and then you heard, underneath it all, that tremendous ground swell that unveiled for a moment the depths of passionate emotion, which lay beneath its smooth and tranquil surface. Indeed the voice was so beautiful and so thrilling that, as I have often said, I felt shivers down my back the moment he uttered, at the beginning of his speeches in the House of Commons, the simple words, "Mr. Speaker, Sir." He could put a whole argument and a passionate, irresistible appeal into a single word; as when he asked an awed House of Commons whether the children of the marriage of a man with his deceased wife's sister could be called "bastards."

Then again, he managed that voice

with perfect elocution. In spite of the fact that he had rough-used it for half a century, and had spoken not only in the largest halls but often in the open air,—and an open-air speech takes ten times as much out of most speakers and most voices than a dozen speeches under cover,—in spite of the fact that he had to meet the bellows of popular fury during many of his meetings, in spite of all that, the voice retained its perfect melody till within a few years of his death.

And the momentous part that his voice played in his oratory was painfully revealed when years and ill-health and the loss of so many he loved and some of the disillusion of politics brought about its partial loss. I heard one of his last speeches; the matter was still good; the language simple, direct, and cogent; the air had all its old dignity; but the voice was gone, and the speech sounded just neither better nor worse than a half a dozen other men in the House could have made. There is much that is pathetic in the closing years of Bright. With all his splendid serenity and courage, it gives one an impression of disappointment, of hopes that were never entirely realized, of visions that lost their splendor when they were transformed into the solid shape of accepted policies and prosaic statutes.

THE OPENING OF SCHOOL

Teacher: I'm glad to see so many bright, happy faces eager for the year's work

BY R. M. BRUNKERHOFF

PEN AND INKLINGS

By OLIVER HERFORD

Girolomania

IN these glorious days of Serums and Antitoxins and Pure Food Laws and Investigation Committees, when we have almost discovered a cure for everything under the sun, from tuberculosis to Tammany, will no one catch a *Bacillus* potent enough to down the epidemic of simpering femininity that is devastating the land through the medium of magazine covers?

Some weeks ago an effort in this direction by our sane contemporary *The Masses* took the form of a deliciously clever cover design, which, although scientifically prepared from a culture of the most deadly girl-bacillus, has so far done nothing to check the plague of pink and white imbecility which continues to smirk and ogle and pout and bridle and kiss and euddle with a persistence that threatens to become chronic. It is in the hope that a second application

Drawn by Stuart Davis

"Gee, Mag, Think of Us Bein' on a Magazine Cover!"

may prove more efficacious that we are reprinting *The Masses'* cartoon.

Very as they may (according to the season) in superficial details of costume and complexion, so pronounced is the family lack of expression in the faces of these cover sirens, it is almost impossible to tell one from another.

Miled by this, many people in the course of a month buy copy after copy of the current issue of a magazine, under the impression that the girl on the cover is either another girl by the same artist, or the same girl by another artist.

One would think that by opening the magazine the purchaser might discover his error. This, however, is not a safe test. I am told by people who actually read these magazines that the stories printed therein, though signed by various

names, are in reality written by the girl on the cover.

Musings of Hafiz

The original of the "Robaizat of a Persian Kitten"

IF it isn't one thing it's another, and now it is the magazine covers that must be reformed.

For the lives of me, I can't see what is the matter with the present style of magazine covers. Unquestionably their first duty is to be decorative, and surely, next to an Angora kitten, a pretty lady is the most decorative thing in the world. I see no reason to apologize for putting the kitten first. Am I out, in so doing, voicing the opinion of the lady herself? Does not every pulchritudinous female of the human species, on meeting another of her sex who surpasses her in beauty, regard her reverently as a creature worthy to belong to the feline race?

Quite apart, however, from the artistic psychology (whatever that means) of the discussion, I can not help feeling that the misogynistic attitude of the writer toward female book-covers is under the circumstances in questionable taste.

By "circumstances" I mean, of course, the charming female cover designs made by Mr. Gibson for a magazine which is by way of being a sort of relative of ours. Whatever may be said in disparagement of others, these human heads of Mr.

Gibson's come up to the very highest kitten standard. Can I say more?

Since writing last week I have learned that, so far from being an imitation, the "Child's Garden of Verses" is an original work, of which the "Kitten's Garden" (printed in a book and dedicated very properly to me, since I furnished there—I should say posed for the pictures) is only a translation.

It was stupid of me to make such a mistake. As Mr. Frank Crowninshield says, "It's all very sad, but we are none of us perfect except Hall Caine."

Speaking of Hall Caine reminds me that yesterday I accidentally overturned the trash-basket that stands by the big desk in the study.

Picture my surprise on discovering among the fragments of waste paper and torn letters what seemed like a perfectly new book. As no one was about, I pushed the covers apart and examined the contents.

I should explain here that, though I do not actually understand human print, I possess the faculty of sensing—noosing perhaps is a better word—the inside of a book is less time than it would take some people to read it.

It was a thin red book, and the faint artificial smell of it recalled a stuffed canary I once made the mistake of trying to swallow.

How I ever came to be deceived by that badly stuffed, unlife-like imitation of a bird I can not explain, except that I was at the time a mere kitten and very fluffy. Strange that a thin red book should have exactly the same smell as stuffed canary.

Beyond its high-sounding title, "Tiger," and the pretty name of the author, Witter Byssner, the thin red book had nothing to recommend it. I pushed it quickly back into the trash-basket.

Whose? 'Twas it there was right.

HAFIZ.

Finance

All About Money

By ALBERT W. ATWOOD

What Shall I Invest In?
How Do I Go About It?
Are The Securities I Have Safe?
Where Can I Sell Them?
What Sort of Insurance Do I Want?
These and any other financial questions will be answered free by the Financial Service Bureau of HARPER'S WEEKLY (McClure's Magazine). This is a part of the service HARPER'S WEEKLY (McClure's Magazine) offers its readers. Such information and advice as we give are unbiased, and influenced only by the facts.

"No Charity at Six Per Cent"

ARE the tenants of a building which returns six per cent net to its owners to be regarded as the objects of charity? This question, so absurd on its face, had to be answered a short time ago by the Surrogate of New York County in passing upon certain bequests. A woman had left \$1,000,000 to be used for constructing model suburban homes, and she wished the money to yield the amount specified. Naturally enough the Surrogate refused to remit the inheritance tax, as the law provides for philanthropic bequests, for he quickly decided that persons who would pay rent sufficient to yield such a net return would have cause to resent an imposition that they were objects of charity.

If the philanthropically inclined woman had provided for model homes to yield five per cent it is highly probable the Surrogate would have acquiesced. The difference between five and six per cent is only one digit. On an investment of \$20,000, a fair average for estates of the more fortunate classes, the difference is only two hundred dollars a year. On the investment of the average beginner, which is say five hundred dollars, the difference amounts to the large sum of five dollars a year. And yet it requires no argument to demonstrate the yawning gulf which exists between five and six per cent. One is a moderate rate of income. The other is generally regarded, whether rightly or wrongly, as a big income.

The farmer who pays six per cent on his mortgage, the corporation which pays a like amount to bankers, never regard six per cent as charity. They consider it good hard-headed business upon the part of the recipient. Of course in considering the testamentary scheme which so aroused the Surrogate's ire certain factors must be considered which the general run of bond and stock investors rarely have to face. Owners of improved real estate who actually manage the property expect more than six per cent to pay for their personal attention as well as provide a return on the actual capital invested. So common is it for real estate owners to give more or less direct attention to the management of their properties that the two classes of return, one on management and the other on capital, are often carelessly lumped together. Thus before we condemn the woman who left a fund for model homes of being grasping even in death we must be sure that she entertained no vague idea that the six per cent should include an element of management.

Tire Taxes Which We Pay

These are the ruins which tax tire users more than any others.

We pay these taxes for you on No-Rim-Cut tires, as no other maker does.

Listen to these facts. Then you will know why Goodyear tires hold topmost place in Tiredom.

Rim-Cut Tax

Rim-Cutting ruins almost one clincher tire in three. This is shown by careful statistics gathered by public accountants.

We end this completely—that we guarantee—in Goodyear No-Rim-Cut tires.

We do this by a feature which we control. A costly feature which none can imitate, because we alone know the secret.

Blow-Out Tax

We add to our cost \$1,500 daily to give these tires the "On-Air Cure."

The tires are final-vulcanized on air bags shaped like inner tubes—under actual road conditions. All other tires are vulcanized on iron cores alone.

On an iron core the tremendous compression often wrinkles the fabric, so part of it gets no strain. Countless blow-outs result from this.

Our "On-Air Cure" corrects this. But this process is costly. It is so costly that no other maker employs it.

Loose Tread Tax

Loose treads have cost motorists, probably millions of dollars.

We paid \$50,000 for a patent method which effectually combats this. No other tire maker does what we do to prevent tread separation.

We Pay the Price

We pay these extra costs. In these three ways—and others—we give to you what no other maker gives.

Yet these tires—No-Rim-Cut tires—now cost no extra price. They used to cost one-fifth more than others.

Year by year our multiplied output has brought the cost down, and the saving went to users. Now no standard tire of any type costs less than No-Rim-Cut tires.

There are hundreds of thousands who have proved these economies by testing Goodyear tires. As a result, these tires far outsell any other tire in the world.

There are other thousands who never made the test. They still buy tires that rim-cut, tires with wrinkled fabric, tires without our trends.

They are paying taxes which we pay for users of No-Rim-Cut tires.

Don't you think these tires, at present prices, deserve a test from you?

Our dealers are everywhere.

What They Think of Us

DeWitt C. Wing, Associate Editor the Breeder's Gazette (Chicago)

I have written impatiently but with a large confidence for the first HARPER'S WEEKLY under your editorship. Last evening I eagerly and delightfully read your corking editorials, and enjoyed other unique features of the great first Hapgood issue. It is a beautiful journal, full of cultured instinct and inspiration. I like its fine spirit. I like its breadth. I am glad that you intend to recognize agriculture, editorially and otherwise.

The Lexington Herald

We give glad welcome to HARPER'S WEEKLY under its new ownership, edited by Norman Hapgood, as will every one give welcome whose brains are not so crystallized that to think causes him pain. It matters little whether we agree with Norman Hapgood's views; he has been a distinct stimulus to American thought, and no one who is capable of thinking or whose brain is sufficiently mobile to welcome a new turn to an old idea, or a new exposition of an old thought, or an original view succinctly expressed, will fail to welcome his reentry into active newspaper work.

We have disagreed with much that he has written; we have opposed much that he has favored; we know that we, as many others, will combat much that he will advocate. But he has clear vision, is honest-minded and able, and what errors he has made have never been either from corrupt motive or fossilized brain. He is in sympathy with every movement for the betterment of moral, social, and political conditions; and under his editorship HARPER'S WEEKLY will be a real power in provoking, if not always in leading, thought.

In the current issue, the first under the editorship of Mr. Hapgood, the future policy of HARPER'S WEEKLY is outlined. We wish all who are still able to think and young enough to grow would read his article on "What Women Are After." We do not know a sadder spectacle than a man of any age whose mind is old and whose eyes are turned to the past, whose thoughts are bound by the fetters of prejudice and whose sympathies are circumscribed by habit, unless it is the woman of arrested development, who does not realize that breadth of sympathy and mental and spiritual development must take the place of the charm of adolescence. Mr. Hapgood tells something of what the women movement means, indicates something of what has been the result of that movement. When the present generation of ancient men and useless women is gathered to Abraham's bosom, and those who think and feel and strive as does Norman Hapgood, and the men and women of whom he writes come into their own, the world will be a better place in which to live and to work.

John Howells (New York City)

Taking up the WEEKLY, I surprised myself by reading it from cover to cover. I admired particularly the Branch's article, the clear headed suffrage article, and the brilliant figure drawings for the New York summer show. I congratulate you on the first number.

HAYNES

First today, as 20 years ago, with the wonderful

Model 27, 7-cylinder, 20-horsepower touring car, as described below.

Electric Gear Shift

Twenty years ago Elwood Haynes and his new fangled "horseless carriage" was the sensation of the hour.

Today the new Haynes Models with the Vulcan Electric Gear Shift are the sensation of the automobile season. The hand gear lever is replaced by electric push buttons. No longer the bother and worry of throwing in gears. Electricity does that for you.

Three New Models

The new Haynes cars are more beautiful than ever. More convenient and comfortable, too. Among the features are: Electric lighting, starting, gear shifting, mechanical tire pump, Collins curtains.

Model 26, has 4 cylinders, 24 H. P., 120 in. wheelbase, and sells at \$2,900 for a 2-passenger car, 4 or 5-passenger touring car, 4 or 5-passenger roadster.

Model 27, has 4 cylinders, 24 H. P., 120 in. wheelbase, and sells at \$2,900 for a 2-passenger roadster, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 28, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 29, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 30, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 31, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 32, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 33, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 34, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 35, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 36, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 37, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 38, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 39, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 40, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 41, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 42, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 43, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 44, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 45, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 46, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 47, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 48, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 49, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 50, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 51, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 52, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 53, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 54, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 55, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 56, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 57, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 58, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 59, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 60, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 61, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 62, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 63, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 64, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 65, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 66, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 67, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 68, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 69, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 70, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 71, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 72, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 73, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 74, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 75, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 76, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 77, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 78, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 79, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 80, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 81, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 82, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 83, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 84, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 85, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 86, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 87, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 88, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 89, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 90, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 91, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 92, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 93, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 94, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 95, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 96, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 97, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 98, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 99, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 100, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 101, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 102, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 103, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 104, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 105, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 106, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 107, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 108, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 109, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 110, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 111, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 112, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 113, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 114, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 115, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 116, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 117, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 118, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 119, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 120, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 121, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 122, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 123, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 124, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 125, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 126, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 127, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 128, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 129, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 130, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 131, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 132, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 133, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 134, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 135, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 136, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

Model 137, has 6 cylinders, 30 H. P., 120 in. wheelbase, and sells at \$3,400 for a 2-passenger car, 4 or 5-passenger touring, 4 or 5-passenger coupe.

The Merger of East and West

*"But there is neither East nor West, Border, nor Breed, nor Birth,
When two strong men stand face to face, tho' they come from the ends of the earth!"*
—KIPLING

In the "Ballad of East and West," Kipling tells the story of an Indian border bandit pursued to his hiding place in the hills by an English colonel's son.

These men were of different races and represented widely different ideas of life. But, as they came face to face, each found in the other elements of character which made them friends.

In this country, before the days of the telephone, infrequent and indirect communication tended to keep the people of the various sections separated and apart.

The telephone, by making communication quick and direct, has been a great cementing force. It has broken down the barriers of distance. It has made us a homogeneous people.

The Bell System, with its 7,500,000 telephones connecting the east and the west, the north and the south, makes one great neighborhood of the whole country.

It brings us together 27,000,000 times a day, and thus develops our common interests, facilitates our commercial dealings and promotes the patriotism of the people.

Mrs. Cora Herrick Miller (Amsterdam, N. Y.)

I was amazed at the ignoble, bigoted article on anti-vivisection in your HARPER'S WEEKLY for Aug. 16, 1913.

You do not have to state that you will be extremely bigoted. The whole editorial shows that you are, and while I have not taken sides in this question of vivisection, or anti, yet your ridiculous comparisons, referring to sewers in city reservoirs, are so detestably odious and unfair that I for one shall discontinue your paper if this is to be your policy; and I have always enjoyed the HARPER'S WEEKLY in the past. You may have enjoyed success in your whole life, but it seems to me that the good will of a dog is preferable to its ill will.

(Chicago Tribune)

From Harvey to Hapgood is a terrific flipflop for HARPER'S WEEKLY. HARVEY made it the official organ of solidity, stolidity, and smugness. Hapgood says he means to make it, among other things, "the official organ of feminism in this country."

Feminism, in its present sense, is a young word for an official organ. This is all the Century Dictionary, edition of 1900, has to say about it: *feminism* (fem-in-ism) *N.* (obsolete. (Root, Lat. femina, woman.) The qualities of females.

Feminism, obsolete in 1900. Shades of Sylvia Pankhurst's unseasoned breakfasts. In the 1900 edition of the Century, feminism is no longer described as obsolete, but as a noun meaning, "the presence of specifically female characteristics in the male."

That certainly gives one considerable pause. Feminism is usually described by its opponents as the presence of specifically male characteristics in the female, and by its proponents as the effort and desire of women for a larger place in the sun. "Votes for women" is its most immediate symptom, but it goes very much deeper than that. It proposes, for instance, a fundamental revolution in the marriage relation as well as that between parents and children. The subject is a live one just now, and Mr. Hapgood seems to have displayed his customary perspicacity in making a feature of it.

We hope the attacks on Mr. Hapgood will begin immediately. The gentlest soul in the world to all appearance, yet he is never quite at the top of his game when out of battle.

(Chicago Evening Post)

A vehicle of expression for the feminist movement had to come in the United States. England and France have them. It is high time that this country had careful and intelligent exposition of what is in many ways the most profoundly important change of our times.

That Mr. Norman Hapgood through HARPER'S WEEKLY can perform this service we have little doubt. As the "Official Organ for the Feminist Movement," he will be breaking almost new ground. In this country "feminism"—the label first used in France—is largely an intellectual thing. It is not even tentatively formulated in the minds of more than a few women—or men. The fight for the vote is as far as we have gone, without giving great thought to the larger issues that lie behind that important symbol.

Mr. Hapgood's detachment, his spiritual fiber and mental quality should make him an ideal expositor of the difficult problems of the new "standards of civil-

Wilson's Character

THE story about Secretary Lane's surprise at being visited in his office by President Wilson, told by Mrs. Willie in her article this week, is one of those anecdotes that enter into history, and equally significant is what he says about the sadness of his life. The country knows Woodrow Wilson, so far, much better as a combination of qualities—intelligence, efficiency, courage—than it does as a human entity. Before he has finished his term, however, his personality, and the distinct outlines of his character, will have sunk into the public imagination as thoroughly as his fitness for the job.

Morals and Dancing

MADAME PAVLOVA, in her article in this issue, says that she is interested in the new dances, not from the moral but from the esthetic point of view. From the moral point of view, however, there is one point that we think ought to be made about them. Active exercise is stendy and makes for normality of feeling, whereas keeping quiet and taking in sensuous impressions makes in the opposite direction. For that reason, thoroughly recognized by science, the most exaggerated turkey trot, if danced in places where no liquor is served, is much less of a sex stimulant than the ordinary musical comedy.

The Highest Virtue

WE asked a friend once what he looked upon as the highest of the virtues, and he replied: "Cheerfulness." Doubtless he would have agreed with the point of view hinted by George Sand when she said:

"Who knows whether, in a new moral code, a new religious catechism, satiety and sorrow will not be branded as vices, and love, hope, and admiration rewarded as virtues?"

We believe George Sand is right. The police idea of vice and virtue will tend to go into the background; the conception of all those things which enhance life as being virtues and all those things which depress and limit it as being vices will increase. More and more we will exalt growth, freedom, joy, less and less will we extol sacrifice.

Some old subscribers have scolded us for saying that the Puritan point of view is no longer adequate to meet the demands of our civilization. That statement, however, represents our point of view, and will have to stand. Moreover we shall make a few more remarks upon the subject next week.

Is There a Limit?

MORE than 100,000 pounds of meat and eggs were condemned in Philadelphia recently by the State Dairy and Food Commission, and warrants were issued for the arrest of the dealers. The reason for this punishment was that the goods had been in cold storage since 1906 and had become unfit. Forty thousand pounds of game were also called unfit, although they have been in storage only two years. Pennsylvania has a statute, which went into effect only last month, providing for a penalty of \$500, or imprisonment, or both, for storing beef more than four months; pork, sheep, and lamb, six months; ven, three months; butter and fish, nine months; fowls (drawn), five months; undrawn, ten months. This is all very well, but ought there not to be a statute of limitations? The principle of the statute of limitations, well recognized, especially in saving criminals from probable penal punishment, is that if you did a thing long enough ago you are not punished for it. In real estate, a similar principle is that if you occupy a certain piece of land long enough without any right to it, you thereby acquire a right. Would it not be reasonable, therefore, to provide that if food has been in storage, say, twenty years, the statute of limitations should run and it would be perfectly legal to sell it?

Goethe on Our Canal

THE Canal opens next month. Perhaps the first interesting remarks about it were made by Goethe. Eckermann's first reference to canal-building is to the union of the Rhine with the Danube—a project of Eugene Napoleon, Duke of Leuchtenberg, that was to be realized in the nineteenth century. "Charlemagne had the same plan," said Goethe, "and even began the work, but it soon came to a standstill. The sand would not hold; the banks were always falling in on both sides."

This was Goethe's table-talk in 1824. Three years later he was discussing Humboldt's project for a canal piercing Panama. It would be even better if use could be made "of some streams which flow into the Gulf of Mexico." Listen to the enthusiastic poet:

I should wonder if the United States were to let an opportunity escape of getting such a work into their own hands. It may be foreseen that this young State, with its decided predilection to the west, will, in thirty or forty years, have occupied and peopled the large tract of land beyond the Rocky Mountains. It may, furthermore, be foreseen that along the whole coast of the Pacific Ocean, where nature has already formed the most capacious and secure harbors, important commercial towns will gradually arise, for the

furtherance of a great intercourse between China and the East Indies and the United States. In such a case, it would not only be desirable, but almost necessary, that a more rapid communication should be maintained between the eastern and western shores of North America, both by merchant-ships and men-of-war, than has hitherto been possible with the tedious, disagreeable, and expensive voyage round Cape Horn.

We read Goethe a great deal and always find something new. Perhaps he prophesied, in some conversation that we have overlooked, the establishment of a Chinese republic in the twentieth century.

Eikonography

APPLETON'S JOURNAL for January 7, 1871, states that:

A favorite figure of one of the Chinese gods of gambling is a tiger standing on his hind feet, and grasping a large cash in his mouth or his paw. . . . The title of the beast, *HIS EXCELLENCY, THE GRASPING CASH TIGER*, is frequently written on a piece of paper and placed in the gambling-rooms.

What do you know about that?

To-day the Tiger, to be sure, has no such resounding name as the Chinese give him, but he at least *deserves* to be called *HIS EXCELLENCY, MR. MURPHY'S GRASPING TIGER*. And the beast is still a favorite with the gamblers.

Penrose

PRESIDENT WILSON, in his conduct of the Mexican crisis, has acted only for his country's welfare and for the welfare of Mexico. So have most members of Congress. There are a few exceptions. It is easy to understand Senator Penrose's solemn declarations of our duty to protect American lives in Chihuahua. If only our interference could be brought about, the Administration's tariff and banking programs would be indefinitely postponed. Republicans of the Penrose kidney have worked for this end, just as certain politicians interested in perpetuating slavery secured our jingo Mexican War in 1846. One would expect a Senator serving what is likely to prove his last term, to be bent on bettering his unpopular record, rather than on playing peanut politics as of old, but Boies Penrose is a Bourbon to the bottom of his heart.

Americanized

THAT the Filipinos are ready for political freedom might be reasoned in reading this newspaper item about Franklin Dalat, the eleven-year-old son of an Igorrote head-hunter:

"So you know baseball?" one questioner asked. "What do you call the umpire?"

"Tell him," Mr. Sibley prompted, when the youngster hesitated.

"Thief, sometimes, but mostly robber," the boy answered.

Nature's Extravagances

THERE is something stirring in the wholesome extravagances of nature as seen in the autumn time. The hillsides strewn with nuts,

ten times more than all the little woods animals can eat; the ground in the orchard specked with apples so plentifully that all the great arteries of commerce can not carry them uncongested to market; the fields thick with shocks of corn, and yellow pumpkins between; all the face of the earth covered with food, and material for clothes in such rich abundance that much of it goes to waste. And yet Nature knows that because of choking competition of the woods, and the battle with floods and pests, she must scatter a hundred acorns to every one that she gets to grow in the little bare glade that needs covering. And because of the hard choking competition among men, she must lavish food and covering with reckless extravagance, that the little ones and the weak ones may get a few crumbs.

The Call of Indian Summer

THE call to the country is never so strong as in autumn. Custom and commerce and society have conspired to call men back to the city just when the heat has passed, and the mellowing air and the coloring world is most alluring in the country. When the haze hangs over the hills, and leaves are green and gold and scarlet, and soft sunlight of Indian summer fills the world, then the west wind stirs in man the half extinct memory of his hunting ancestors and he longs to strike the trail for the unknown woods. Then it is his primal instincts prompt him to build wood fires and sleep under the starlit skies. But, alas! stern necessity or feverish nights of winter gaiety call most men back to the nervous grind of the world as it is. But only if we could strike the long trail and answer the call of Indian summer, what wonderful high adventure, what keen delight, and restful health we might find over the rim yonder—from whence the west wind comes.

Mexico

ONE of the current ideas of the time, taken for granted by most people, is that a man has a right to go into a half civilized country in order to make money by speculative investments, and then, if political conditions in that country interfere with his money-making, he has the right to involve his own nation in war to protect his so-called interests, thus forcing his countrymen to interrupt their useful activities, and spend their money and their blood, and brutalize their civilization, for the sake of looking after his dividends. This is not President Wilson's view. His conduct of the Mexican situation has been remarkable for patience, and for a firm but tactful adherence to those general principles by which his whole life and thought are guided. As he has stated publicly, he wishes to act "not in the interest of any person or body of persons who may have personal or property claims in Mexico." Those foreign newspapers which have been calling his policy in Mexico amateurish may imagine that their own conduct of Balkan affairs and other complications in Europe and Asia is professional; but they will have hard work to convince enlightened Americans that professionalism of that sort is superior to amateurishness of the kind that President Wilson is exhibiting.

A Second Thought

THEY were attending the closing exercises of a school where they met for the first time.

She: Does it not seem queer to be visiting a place where you are known merely as the mother of John or the father of Betty?

He: Not queer at all. I like it.

She: Well, come to think of it, so do I.

Probably no one thing, outside of health, adds more to happiness than development in the direction of getting rid of the excesses of our own personality. People look back over their youth and talk about it as if it were the happiest period. As a fact, it usually is not. Usually, the young person is thinking about himself a large part of the time and taking an inflated view of the limitations of life. If, later on, we retain our activities, and at the same time find our interests less centered in our own ego, we have entered a much happier period.

The ideal lies in the ability, as George Santayana puts it, to live

"Our lives without remorse, as if
not ours.
And others' lives with love, as if
our own."

A Poet of Labor

SINCE the day of Robert Burns there have been few genuine poets of the plow and pick. More than one yokel has essayed to write verse that smacks of the soil—but who reads them? Who reads Robert Bloomfield? To-day, however, we have John Masefield, and now we have made the acquaintance of one Patrick MacGill, who is his own publisher for "Songs of a Navvy." There is a rather surprising talent in these verses, though the best of them suggest nothing more strongly than the influence of Rudyard Kipling:

Down on creation's muck-pile where the sinful swelter and sweat,
Where the scum of the earth forgather, rough and untutored yet,
Where they swear in the six-foot spaces, or toil in the barrow squad,
The men of unshaven faces, the ranks of the very bad,
Where the brute is more than the human, the muscle more than the mind,
Where their gods are the loud-voiced gaffers, rugged, uncouth, unkind,
Where the rough of the road are roosting, where the failed and the fallen be,
There have we met in the ditchway, there have I plighted with thee
The wage-slave troth of our union, and found thee true to my trust.

But you're foul to the haughty woman, bedlamon'd slave of lust,
Who bows to a seignior's sabre, tinged with a coward's rust,
Foul to the aping dandy with the glittering finger rings,
You who have helped to fashion the charnel vault of the kings!

—Ah! the lady fair is disdainful and loathingly looks askew,
And the collared ass of the circle gazes in scorn at you,
But some day you'll scatter the clay on grinning lady and lord.

For yours is the cynical triumph over the sceptre and sword!

*Emperors pass in an hour, emperors pass in a day,
But you of the line and muck-pile open the grave alone.*

Such is the "Song of the Shovel," that one of MacGill's admirers praises as superior to Hood's

"Song of the Shirt." The comparison is unnecessary, but the ditch-digger is better at writing verse than Hood ever was at opening ditches.

Dogs, Old and Young

PUPPIES frolic. They enjoy; they wag their tails; they confide. The world loves a lover, and everybody loves puppies because they trust and welcome everybody. The old dog looks askance. He lies on his mat and growls. So forbidding is he that younger dogs decline to fight with him, notwithstanding his lack of teeth—not out of respect do they decline, but awed by his expression. And how about the animal that stands on his hind legs and rules the world? Ah, friends, it is an art to grow old genially, a difficult art, and most important. You may seem reasonable and even sunny to yourself, but do the young think you so? That is the test, and the best way to meet it is to have interests not too closely connected with your own welfare. How much wisdom is there in the Bible! how true it is that he who would save his life shall lose it. Old Buster, well intentioned but sleepy and morose, is lying there on his rug by the fire, as we write these words, and he has set us looking into the future, and thinking how hard life is, how lovely it may be, how fascinating it nearly always can be to the generous and open mind.

Death

WHAT is the most interesting statement that has ever been made about the great fact of death? Shakespeare has made many of the most splendid ones, as in the description of the horrors of lying in the earth in "Cymbeline" and the speech when Macbeth hears that his wife is dead. He was the typical skeptic. Death was the end and life was nothing, and that was all there was to it.

Often in smaller poets there are interesting side-lights of feeling, as in Landor:

Death stands above me, whispering low
I know not what into my ear:
Of his strange language all I know
Is, there is not a word of fear.

It is seldom that death is praised with cheerfulness. Vaughan, a truly religious poet, says:

Dear, benighted Death, a jewel of the dust!
Shining nowhere but in the dark.

It may be doubted whether anything nobler on the subject has been written than these words of Sir Walter Raleigh:

O eloquent, just, and mightie Death! whom none could advise, thou hast persuaded; what none hath dared, thou hast done; and whom all the world hath flattered, thou only hast cast out of the world and despised. Thou hast drawn together all the farr stretched greatnesses, all the pride, cruelty, and ambition of man, and covered it all over with these two narrow words, *Hee jaeth!*

Perhaps of such a universal fact as death we should not expect anything to be said that has the interest of unusualness. It is so simple, so familiar, that human genius can do little except express the prevailing mood toward it. Possibly other readers know something to equal Shakespeare's words in adequacy, but we do not.

Mr. Lane and the Public Domain

IV. A Renaissance in Washington

By HONORÉ WILLISIE

THERE is a renaissance in Washington. It has to do with a number of things, but mostly it touches the rebirth of simplicity.

One spring morning, Mr. Lane's office attendant opened the door softly and bowed profoundly.

"The President, Mr. Secretary!" he said.

"President of what?" inquired Mr. Lane casually.

"The President of the United States of America, sir!" replied the attendant, and he swung the door wide for Mr. Wilson.

It was the first time that a President had been known to visit the Department of the Interior!

Washington does not approve of informality like this. Washington prefers form and functions. It likes bowing and scraping and pulling of the forelock.

ONE evening, a very hot one in July, Mr. Houston, the Secretary of Agriculture, might have been seen on the Raleigh Roof Garden in Washington. He was dining with some friends, in a quiet, contented sort of a way, quite a human way, in fact.

A man belonging to the species known in Washington as Government Employee—that is, his salary is less than \$3,000 a year—eyed Secretary Houston with a mixture of awe and disgust.

"Isn't that awful!" he groaned. "You could tell that he belongs to Bryan's party! How can an official of the Cabinet expect to keep his influence and dignity, when he lets the public see him eat and walk?"

"And yet, the President," said Mr. Lane wearily, as if the comment were old, when told of this incident, "is pleased when he hears just that sort of thing about the members of the Cabinet. How can the New Freedom come, unless it brings with it entire simplicity?"

It is Washington's function to doubt and smile sardonically at informality. Washington mistakes simplicity for lack of dignity. It does not see that this informality springs from the bigness that dares to be itself under all conditions. Life is very short, and there is much work to be done. The boast of heraldry, the pomp of power, are great time-wasters. And they deprive a man of all his human sympathy and of his individualism, two essentials of bigness.

"I know Lane's kind," said a lank individual, sitting on the steps of the Congressional Library. "He's a trimmer—that's what he is. Look at the appointments he's making. He's playing politics."

"Is it something had to be a trimmer?" asked the stout woman. "What's it like?"

"It's making appointments that'll make votes for you," replied the man. "It's playing to the common people. I saw him smoking a cigar on the front end of a street car the other night. A man in his position has got no business to do that. It's never done here in Washington. Playing to the common people!"

The woman, who had a Western accent, looked puzzled. "But Washington's in America! What difference does it make what he rides in, as long as he gets where he is going?" she asked.

"When you've lived here as long as I have, Eliza," answered the man, "you'll know that a Cabinet officer is next to the President. He's got to keep his dignity."

THE abashed layman recalled an incident that had occurred in Mr. Lane's office that same morning. Mr. Meyers had piled the Secretary's desk high with a mass of documents. He explained each document to Mr. Lane. Sometimes the Secretary signed silently; sometimes he hesitated.

"I wish I had time to go over these more thoroughly," he said. "But how am I to manage? We are a year

behind, and I am working fourteen hours a day. I have to rely on the men below me. You can see what a frightful thing it is if I can not trust them. If the system could only be arranged so that decisions not only of high financial magnitude but relating also to the actual economic life of so many thousands of people did not have to be made so hurriedly! What is this one, Mr. Meyers?"

"It's that Indian Office appointment," replied Mr. Meyers, who has a remarkable memory. "It doesn't carry much salary, but a lot of responsibility."

"I remember," said Mr. Lane. "Lay it one side. I want to go over that again. I shall be criticized, no matter what appointment I make there. What is this one?"

"Jim Smith has slipped up again, and I guess he'll have to go this time. Last year, when he went on a spree, they made him put in his resignation, and told him that when he went on another the resignation would take effect. You sign here."

The Secretary sighed. "He's an efficient man, too. It's too bad."

"He's extremely efficient," said Mr. Meyers tentatively, "and getting to the age where it will be hard to find work; and he has a wife and three children."

Mr. Lane picked up his pen, laid it down, lit a fresh cigar, and said: "Give him six months more."

Mr. Meyers smiled a little and slid another document under the Secretary's hand.

Great puffs of heat and dust came in through the open window, and the abashed layman remarked on the fact.

"Hush!" said the Secretary. "A Cabinet officer is not supposed to feel the heat. Last night I thought I'd like to get cooled off, and I rode up home on a street car. A government man caught me at it, and remonstrated all the way up. It seems that one must subscribe to the caste system here in Washington, or be accused of playing politics. I'm a Westerner, you know. I came into politics a poor man, and I'm just as poor now. I am an anomaly, for I like my job and am satisfied with its interest and breadth. But I don't expect the average person to believe it. Do you recall the attitude that most of the Water Users in the Reclamation hearing took toward Mr. Newell and Mr. Hill? They took it for granted that they were inefficient and dishonest. Only the profoundest sense of public duty can keep an honorable man on the job, under that sort of heckling."

IT takes a deal of courage to be one's self in Washington—to go into an office that has a caste system of which an army need not be ashamed, and do the simple, ordinary thing, just because it happens to be the short cut to quick results. A man with a position of the vast responsibility of Mr. Lane's must have men who understand him and men whom he can trust close to him. The first noon of the abashed layman's visit to Mr. Lane, the Secretary rang the bell, and an attendant appeared.

"My compliments to Dr. Miller, and ask him to take lunch with me." The Secretary lighted a fresh cigar and signed half a dozen documents before the attendant returned and said, with a bow:

"Dr. Miller's compliments, sir, and he will be delighted."

"All right!" replied Mr. Lane, pulling a bill out of his pocket. "Ask Dr. Miller what he wants, and get some fresh cigars."

"Who," asked the abashed layman in the corner, "is Dr. Miller?"

"His official title," answered the Secretary, "is Assistant to the Secretary. He is this kind of man. He held an important chair in the University of California. He has a wide knowledge of business and business men. He

is an old friend of mine. I wrote him and told him that I needed him, that all he could have was a quarter of the salary that he was getting, but that this department needed him. And he came."

The colored man came into the room and cleared off a side of one of the desks. He put down three pieces of blotting paper, covered them with three towels, and on each set a bowl and a spoon. In the middle of the desk he placed a pitcher of milk and a pile of shredded wheat biscuit. A tall blond man with a clear-cut face appeared in the doorway.

"Lanebon is served, Mr. Secretary," said the attendant; and Mr. Lane, Dr. Miller, and the abashed layman fell to.

"I'm going to try out the automobile idea to take the place of some of the stages in the National Park, this summer," said Dr. Miller. "I must get an efficient man or two."

"Well," said the Secretary, "that's a good idea, but it will have its difficulties."

Dr. Miller nodded. "I believe that my stock is going up in Washington," he said to the abashed layman. "I've been seen going in and out of this building several times with the Secretary of the Interior. You know the story they tell of Baron Rothschild. He refused a man a loan, but added: 'I will help you out. I will be seen walking one block on the street with you!'"

The Secretary laughed heartily. "This is indeed 'New Freedom' to a Westerner!" he said.

"Dr. Miller, do you, too, believe this to be the last stand of individualism in American politics?" the abashed layman asked.

The big professor nodded. "If we fail," he said, "I shall be bankrupt so far as my economic ideals are concerned."

The layman thought this over for some time. They are tragic phrases. Whether or not they become true phrases depends on how nearly, in the next four years, America comes to understand the ideals of the Administration and the interpretation the Administration puts on certain very old and underworked ideas.

THERE is nothing new or revolutionary about the ideas. It is their renaissance in Washington that is remarkable. The principle of individualism is as old as government. It proposes the non-interference of the state in the affairs of the individual. It is the doctrine of "Let 'em go it." It is the doctrine of utterly free competition. Washington calls Mr. Lane an individualist. It is extremely interesting to sit in Mr. Lane's office and try to correlate the things Mr. Lane says with the things that Washington says. If the Secretary is an individualist, he is of a modified variety, with a new vocabulary and a large social conscience.

"So great has been our physical endowment in America," he said, "that until the most recent years we have been indifferent to the share that each received of the wealth produced. We could then accept cheerfully the coldest and most logical of economic series. But now men are wondering as to the future. There may be much of envy and more of malice in current thought; but underneath it all is the feeling that if a nation is to have a full life it must devise methods by which its citizens will be insured against monopoly of opportunity. This is the meaning of many policies, the full philosophy of which is not fully grasped—the regulation of railroads and other public-service corporations, the conservation of natural resources, the leasing of public lands and water-powers, the control of great combinations of wealth. How these movements will express themselves eventually, none can foretell; but in the process there will be some who will dogmatically contend that "Whatever is, is right," and others who will march under the red flag of revenge and exploitation. And in that day we must look for men to meet the false cry of both sides—'gentlemen unafraid,' who will neither be the money-hired butlers of the rich nor power-loving panderers to the poor."

A new sort of individualism, this: the fine growth of an industrial idealism.

"The prime achievement of our time," Mr. Lane went on, "has been the assertion by the whole people of

their supreme authority. Underneath all else, whether it be the consideration of conservation policies, pure-food laws, ballot reform, or railway regulation, there is evident the determination by the people that this government shall be their government, that its policies shall be their policies, and that there shall be no one group, class, or interest whose will shall be permitted to override the sober judgment of the people, and their own estimate as to what is most beneficial to the community.

"Mr. Sydney Brooks, perhaps the greatest of present writers on economics, thinks that Europe would not have taken to government ownership if the plan of regulating by commission as we have it in America had been earlier discovered. It must be remembered by those who advocate government operation that they do not by this means escape governmental regulations. The control of rates must rest somewhere, and those rates can not be fixed by some merely mechanical rule. Under government ownership, as under private ownership, there must be rate regulation; personal judgment must have its play, as well as economic law.

"American civilization," concluded Mr. Lane, "is new in the sense that it is the blend of many, and yet it is as old as the Egyptians. Surely the real tradition of such a people is not any one way of doing a certain thing; not even any one fixed phrase, expressive of a general philosophy, unless it comes from the universal heart of this strange, new people. . . . Is there any other tradition so sacred as this—so much a part of ourselves as the hatred of injustice?"

Many people have thought Mr. Wilson unwise in bringing men untried in Administrative work into his Cabinet. This does not seem so to one who watches the cumbersome workings of our great bureaus. The great hope of the New Freedom lies in the unsophisticated eyes these men can turn on the machinery of government. They are not blinded by habit, made narrow by routine. If they are able to trust their subordinates, who know the details of the business at hand, the combination of "new head and old hands" is a good one.

Washington has its own reasons for being cynical. For many years it has watched the "captains and the kings depart." And yet, the new régime is there, and, because its tenets are so simple and so human, one may hope that it is there to stay for some time. A man who takes office under the New Freedom does not find his compensation in the thing seen by the eye. Greatness is not always its own reward. One gets a little tightening of the throat from the hint of sacrifice in President Wilson's remark to a friend the other day.

"It's a lonely life," said the President wistfully—"a lonely, lonely life!"

MR. LANE will be difficult for the old-type politician to handle. It will be hard to "put the screws" on him. He has no common avenue of approach, such as the old boss was wont to travel. Mr. Lane belongs to the renaissance which the President represents.

Mr. Lane thinks that there are jobs more interesting in life than the job of getting rich. To be clever enough to get lots of money, one must be stupid enough to want to devote one's life to getting it. Mr. Lane has not that kind of cleverness. He is keenly interested in his job of directing America's inland destiny. The men who approach him with offers of money think they haven't come up to his price. They don't understand. He has a strange idea that a man born with a good type of brain owes a thing called Public Service, that he owes it for no reward beyond a living, for no other reason than that he is a human with a brain.

And we, being Sons of Mary, ought to understand; but we don't.

And the Sons of Mary smile and are blessed; they know the angels are on their side.

They know in them is the Grace confessed, and for them are the Mercies multiplied.

They sit at the feet and they hear the Word; they know how truly the Promise runs.

They have cast their burden on the Lord, and the Lord, He lays it on Martha's sons.

HAY FEVER

By STUART DAVIS

Lamar, Mulhall, and Christmas

By ARTHUR WALLACE DUNN

THE English are gathering at Bermuda and threatening our control of the Panama Canal. Already those whose duty it is to perch upon watch towers, sniff battle in every breeze, and see "grim-visaged war" driving our fleets from the seas and foreigners seizing our choice possessions, have decided that in order to counter-check Great Britain we should acquire the Danish West Indies as an additional base in the Caribbean Sea. That would give us three additional islands in that part of the world as well as Porto Rico, Guantamano, and the Canal.

The proposed acquisition of the Danish West Indies, together with some of the statements by Martin M. Mulhall and David Lamar before the lobby investigating committee, recalls one of the most remarkable fakirs that ever figured in Congressional literature.

Captain W. Christmas Dircknick Homfeld flashed upon the horizon at the close of the last century, but his alleged exploits did not bring him into the brilliant limelight until the beginning of the present century. His story, in comparison, makes the "Wolf of Wall Street" and Colonel Mulhall mere "pikers" in the realms of Congressional romance and supposed activities.

"CAPTAIN CHRISTMAS," as he called himself, came from Denmark in 1899. Landing in New York, he made acquaintances and connections that gave him an audience with President McKinley and conferences with Secretary Hay when he turned his attention to Washington. He came to this country to sell the Danish West Indies to the United States. He had no credentials from the Danish government and was not introduced, but, on the other hand, was discredited by the Danish minister at Washington. Consequently little attention was paid to him by the United States officials.

Several years afterward the atmosphere of Washington became surcharged with rumors of a "report" made by Captain W. Christmas Dircknick Homfeld to the Danish government which disclosed a startling system of corruption in Congress and among high officials. It was known among the newspaper men that there was such a "report," for it was offered for sale; then attempts were made to give it away; in fact, every effort was made to secure its publication. Finally this "report" was taken by a few members of Congress, printed in the *Congressional Record*, and an investigation of the charges and allegations was ordered.

AFTER an exhaustive inquiry a committee of the House of Representatives utterly discredited Christmas and entirely exonerated every man mentioned in the so-called "report." When the committee presented its report, the brilliant Robert G. Cousins of Iowa made a speech about it, which is one of the few real gems that are embalmed in the *Congressional Record*. It was remarkable on account of its reference to all the fakirs of the ages, together with their operations. Speaking of the "report" that Christmas had made, and the long time it had kicked about the national capital, Mr. Cousins said:

"It had been dead a long while, the press refusing to handle it. By special request of its general agent, an autopsy was held upon it by that eminent and skillful surgeon, Dr. Grosvenor, (General Charles H. Grosvenor of Ohio, then a member of Congress), who expressed the opinion that no one could ever hit it."

It was in a satirical vein that Cousins proceeded in his "roast" of those Democratic leaders who had caused the "report" to be printed in the *Record*, and also in commenting upon W. Christmas Dircknick Homfeld,

who had written the marvelous tale of his exploits in the United States, and particularly in Washington. A bit of Mr. Cousins' humor is displayed in the following comparison of various fakes and fakirs:

"The tales of Baron Munchausen are reasonable compared to this. The stories of the crusaders and the necromancers and the alchemists and fortune-tellers and the magnetizers become dull reading. Jack the Giant Killer and the Fairies are outdone. All the magicians from Giber and Alfarabi down to Valentine Greatraks and Cagliostro are now in the shade.

"WHEN we contemplate what this strange person claims to have done with a dollar and seventy-five or eighty cents in cash, truly we may say that no one need abandon hope because of poverty.

"Think of it! According to the story, this outcast from the Danish navy, landing in a strange country, not even deputized or authorized by his own government, at once commanded bankers, skilled interpreters, lawyers, capitalists, press associations, investors, intimate friends of men in power, representatives, senators, diplomats, premiers, presidents, claims to have received unlimited credit with which, in his own imagination and actual penury, he bribed a great nation, wine and dined associates that were his dupes, traveled to and fro in elegant apartments, stopping at the best hotels, and peddling, meantime, the islands of the sea—dickering in little worlds.

"It reminds one of that famous description of Talleyrand: 'Like a spider in its web he allured and caught in succession heroes, thinkers, great men, conquerors, kings, princes, emperors—Bonaparte, Sieyès, Madame de Staël, Chateaubriand, Benjamin Constant, Alexander of Russia, William of Prussia, Francis of Austria, Louis XVI, Louis Philippe—all the gilded and glittering flies who buzzed through the history of forty years.'"

Mr. Cousins then went on with a history of the world's famous fakirs from the dawn of the dark and distant ages to the present time, but he awarded the palm to Christmas because he operated upon such a small capital and pretended to have done so much. "Considering," said Mr. Cousins, "where he stood, and the difficulties under which he labored, Mr. W. Christmas Dircknick Homfeld appears to be about the most illustrious dealer in real estate of whom we have any record."

IT has been more than ten years since Mr. Cousins made that famous speech, and during that time Mulhall has been operating: selling Congressmen he had never seen; bribing men he did not know; defeating legislation; and performing other feats for which he was liberally paid. Later, Lamar transferred his activities from Wall Street to Washington, and by impersonating leading men of the country arranged ententes between political parties and world-controlling financiers.

It is a real pity that Christmas can not meet Lamar and Mulhall in some sort of a reunion. They certainly could enjoy themselves if they have a sense of humor. Lamar and Mulhall would have it "on" Christmas to some extent, for they have caused consternation far and wide; they have stampered both houses of Congress and entertained the country with a midsummer vaudeville sketch that has rarely been equaled. Mulhall also had some facts upon which to base his claims, and only by his alleged "influence" does he approach the remarkable Dame. Christmas, however, could lay claim to still being the greatest fakir, pointing to the speech by Mr. Cousins as proof and indorsement.

Glenn O. Coleman.

MUNICIPAL BATHS

By GLENN O. COLEMAN

About Bathing Suits

A WOMAN doctor affiliated with the Rush Medical College of Chicago was recently arrested for wearing what the police considered an immodest bathing suit. We wrote to her, asking her for the facts in the case. The following is her letter:

HARPER'S WEEKLY,
New York.

To the Editor:

When the Jackson Park beach opened I asked the matron if she thought there would be any objection to my going in, in bloomers. She replied that she did not think so. After I went in a few times, the manager of the beach saw me and sent word through the matron that I should wear a skirt. As I did so, I found it difficult to swim and I felt the under-tow dragging me into the lake. So I spoke to the matron again and asked her again, if she thought it would be all right for me to wear the skirt from the dressing rooms to the water, then leave it at the water's edge and go in and swim in the bloomers and put on the skirt again on coming out of the water. She thought again that it would be all right. There were no rules of any kind in the dressing rooms or on the beach, and none were given to her. I tried it once or twice and nothing was said.

On July 2, as I left my skirt at the water's edge and started to swim, the life guard gruffly commanded me to come out of the water and put on my skirt. I replied that I did not have to do that, but that I would put it on coming out of the water. He then said "If you have not decency enough to wear a skirt, get out of the water." I replied that he had no authority. He then rowed his boat to the shore and returned with a policeman, who commanded me in the same gruff manner to get out of the water and put on my skirt. I replied again that I would do so coming out of the water. He returned to the shore and when I was nearing the dressing rooms he placed me under arrest. I asked him if he would give me a chance to put on my street clothes and he did. He then took me in a patrol automobile to the Hyde Park Police Station and booked me on the charge of disorderly conduct. Friends hailed me out and the case was tried the following day before

Judge Gemmel. The Court held: first, that a person could not be held for violating rules which did not exist in writing; second, he agreed with me perfectly that my suit, made of heavy wool material, consisting of bloomers, canvas shoes, and stockings, was far more decent than those worn by men, who are half naked. He said that he saw them put on their trousers in automobiles in full view of numerous passers-by. Jackson Park beach being a very popular promenade in the bathing season.

The Court suggested that I take up with the good women of Chicago the question of men bathers wearing more clothes than they had on at the present. Will add that the suits given out on the beach to the men leave the arms, neck, sides and leg below the groin bare. They are allowed to parade on the beach and visit with young girls. The park police do not interfere with them. My plea was that I was a graduate of two colleges, have practised medicine in Chicago fifteen years, that I have served on the faculty of Rush Medical College, affiliated with the University of Chicago, that I have contributed original articles to the *Medical Literature*, that I was the recipient of scholarly honors, and that I was in good standing both professionally and socially, that my suit was perfectly proper and modest, that my arrest was an injustice and a discrimination. Soon after the trial a placard was placed in the women's dressing rooms reading as follows:

1. Women bathers should be supplied with skirts.
2. The manager of the beach has the right to request people to stay away from the beach.

I intend to circulate a public petition to the City Council requesting them to pass an ordinance requiring both men and women to wear a bathing suit covering them sufficiently to make them presentable, and that would at the same time not interfere with freedom and safety in swimming. I think with you that conventional dress of women is in the way of their advancement and efficiency. Dress reform for women should be a part and parcel of their enfranchisement.

Yours very respectfully,
ROSALEE M. LADLOW.

SLIT SKIRT WEARER ARRESTED BUT WITH DUE

Extreme Fashions Get Pretty Young Women from Facilities in Police Station.

NO LAW AGAINST IT

Garment Not Indecent Either Mayor Says in Denying

Police arrested a woman at Jackson Park beach today for wearing a bathing suit which the police considered immodest. The woman, who was identified as Mrs. J. M. Smith, was taken to the police station and held for a short time. The police stated that the woman's suit was made of heavy wool material and consisted of bloomers, canvas shoes, and stockings. The woman's suit was considered immodest by the police, but the Mayor has stated that there is no law against it. The woman was released after a short time.

August 18, 1913.

TO THE EDITOR OF HARPER'S WEEKLY.

My dear Sir:

As requested in your letter of the 12th inst., it gives me pleasure to enclose you the following local newspaper account of the incident of the appearance of the slit skirt in this city, as called to official attention.

The newspaper expresses my views none too emphatically. To me, there is nothing suggestive about the slit skirt, and I fail to find a discriminatory distinction between the street or the stage; or the bathing resort against the street. If the slit skirt is shocking to the alleged moralist and the prude, the bathing suit, or the costume of the chorus girl, should be more so.

Most respectfully,

W. H. COLE.

Mayor.

THE FEMINIST FLY

A Fable

By AMY MALIHICKS

AN empty bottle lay up bottom in the grass. Attracted by some sugar on its mouth, a Bee and a Fly crawled along inside and became imprisoned.

"As a reasoning and rational insect," said the Bee,

"I know that the way to Freedom is always toward the Light."

And it buzzed consistently about in the end of solid glass.

The Fly fussed around with seeming aimlessness.

"Foolish Creature!" said the Bee. "Why don't you, too, follow the only course of true logic, and go to the Light?"

The Fly did not answer, for just then it found the mouth of the bottle, and flew out into the open.

"Life, it seems, is larger than Logic," it mused, as it went along rejoicing.

Physical Freedom for Women

By BLISS CARMAN

THE two most conspicuous characteristics of the last century were its unexampled material welfare and its startling revelations in the field of science. In invention and discovery and the useful arts it stands unrivaled as an era of progress. It was an age of practical achievement rather than of speculation, faith, or dreams.

Along with these two main threads of development, however, we may observe a third, less obvious but not less significant—a decided spiritual awakening, a striving of the racial heart and conscience, not only in regard to social conduct, but in respect to the more profound problems of existence and well being.

If there is indeed a "stream of tendency, not ourselves, that makes for righteousness," a stream of soul-seeking beyond self-seeking, without doubt that stream is making itself unmistakably felt in our generation.

IN this vast struggle that our race seems to be making toward a fuller and more symmetrical realization of its ideal life, the part played by woman must be ineluctable. It is preeminently her concern. She has been from time out of mind the treasurer of all the spiritual wealth of the race, and now that this wealth is in demand, it is to her we must come for our supply, and for our help in adjusting that supply to our needs. In capacity as the great preserver and guardian of the mysterious gift of life, she has gathered untold stores of spiritual experience.

If her life, until recently, has been restricted to the cradle and the hearth, with little opportunity for cultivating that detachment and impersonality of nature which has led men to their victorious ventures in civilization, she has thus been enabled, even forced, to brood upon the secrets of her own heart and to discern the pressing need of the day and hour.

So it happens that woman's genius is not only deeper, more mystical, more impassioned and religious than man's, but it is at the same time more actual, more sentient, and less irrelevant. She has learned to keep close to the life of the senses and to the life of the soul, while she was obliged to let the life of reason go by unfulfilled. If she has little interest in abstract problems and principles, if she acts from impulse and judges from intuition, if she loves aspiration and ignores logic, it is because the long and inexorable economy of evolution has imposed these tendencies upon her being. If her genius is comparatively sterile in the realm of thought and invention, in the realm of feeling, sensibility, and adjustment it is usually fertile and supreme.

Since all these interests in the deeper life of humanity are thus the peculiar care of women, and are only dimly appreciated by men, and since it is certain that the whole life of man must remain unhappy and distraught if these interests are overlooked, there can be nothing of more vital importance in our advance toward racial perfection than the liberation and perfection of woman and woman's helpfulness; and nothing more natural.

THEOLOGY of a certain extreme type used to regard woman as the source, or

at least the channel, of all evil. It would have been less absurd and nearer the truth to regard her as the source of all good. For, while she is seemingly less scrupulous than man, she is apt to be more conscientious, more persevering after the best, more intolerant of fundamental wrong, more fully conscious of the life and requirements of the soul, which really earns little for achievement and only asks to be made happy. She may frequently exhibit a startling disregard of codes and apparent reasons and conventions, but against the profounder laws of essential morality and goodness she seldom rebels.

The liberation of woman, therefore, would seem to be an essential factor in the ultimate liberation of humanity from the coil of evil and disaster that so terribly environs life. Without her idealism, her knowledge of immortal things, her instinct for the best, we should be forever involved in the maze of our own dreams, disasters, and reforms. Without her intense practicality and her genius of adaptation, we should find our conquest of the resources of nature of little avail, after all, in perfecting our earthly paradise. Woman is not by nature a rebel or reformer. She knows a better way. She is a born pragmatist, and lives to make the profound desires of the human heart come true.

WHILE the religious and intellectual liberty of woman has long been assured, her social, political, and economic independence is still in debate. In other words, her spirit and mind are free, while in the circumstantial sphere she is still not fully emancipated. Whatever we may think on this subject, whether we hold the economic and political restriction to be part of a wise racial economy or only a survival of arbitrary oppression, there is yet another direction in which the actual liberation of women is gradually taking place, which can be only beneficial, and to which there can be no opposition save the inertia of custom. That is the physical and personal freeing of women's bodies from the slavery of hampering dress and restricted activity.

The superstition of woman's physical helplessness, growing out of her actual incapacity in some respects and at certain times, has been long enough cultivated by women as a means of advantage and encouraged by men as an evidence of superiority. Under this old regime, the more impossible her prescribed dress made physical exertion, the better. Her very dependence won her favors, and her ill-fitness marked the wealth and magnanimity of her lord.

THIS is only the unpleasant side of the question, which reformers like to dwell upon, and we must not forget the great spiritual good woman has been able to bestow on the world even through her enforced exemption and leisure. It is a point that she herself is apt to lose sight of in her race for freedom. But the fact remains that the fashions of women's clothing of the past few centuries are unsuited to modern conditions, unworthy of modern woman, and are being finely superseded.

Women of culture and independence, who care for beauty and efficiency rather

than conformity to unquestioned usage, are discarding the extremes of old-time restrictive costume in favor of more rational, more humane, and lovely fashions. Shoes, gowns, coats, and hats for women were never more comfortable than they are or may be now. The day of the small waist and the pinched foot is passing.

The women one sees everywhere are more free and graceful, more natural and gracious, and therefore more magical and enchanting, than ever. Their walk and carriage are mobile, more ideal, natural, and serene with the swiftness of fine motion; their eyes are steadier, their voices more happy and level, as they go about the world untortured and undisturbed.

Women's participation in outdoor life and in active recreations and occupations tends in the same direction of personal freedom and fulfillment. When once the pleasure and power of free physical effort are experienced, and the supreme beauty of free motion is realized, restrictions of clothing become intolerable.

In the wonderful art of life, whatever is merely arbitrary and artificial must give place to what is more sane, inspired, helpful, and lovely. Corsets are for cripples, and clogs for slaves; but emancipated men and women must have the freedom of unspoiled nature in order fully to evince and radiate the spirit and intelligence that inhabit them; else are we nothing but puppets and mummies, unfair, uncomfortable, and debased. For nothing is so brutal as pain. Nothing—neither hardship, nor sorrow, nor failure, nor ill fortune—can so quickly thwart and deform the soul and poison the mind as bodily torture.

IT only remains for all women to demand and take this freedom, as the wisest are doing. It is a fundamental and influential liberty in which woman has everything to gain and nothing to lose. She must assume her right to a free body in order adequately to express her freedom of thought and feeling. One often wonders that economic and political equality should be so violently contended for by women who would not abandon the fetters of unnatural dress for a queen's sovereignty.

The strangest thing about the impressive parades in the agitation for equal suffrage is not the fact that so many women should have the enthusiasm to walk in them, but that so few of them should walk convincingly. The spectacle of ten thousand advanced women voluntarily walking in the antiquated fetters of a by-gone age is a strange argument for their readiness to serve the cause of human freedom.

The whole question of personal or physical emancipation for women on equal terms with men would seem to be logically prior to their social and political equality; and failure to make use of the one would seem fundamentally to delay the realization of the other. Certainly, so far as the good of the race goes and the immediate happiness of all concerned, freedom to move and breathe and live a normally comfortable, kindly, and beautiful bodily life is of first vital importance.

Poems About Christ

By JOHN PALMER GAVIT

I Saw Him, Crucified

I SAW Him pouring molten brass into the mold for the engineer's brake-valve.
In the superheated air of the foundry I saw tiny flakes of poison floating.
Upon His white face I saw written grim waiting death.

The things of which He thought were far distant; He saw not the grim death;
Nameless and alien, He obeyed all day without understanding;
Faithfully, without philosophy, He poured the molten brass.

. . . The train jolting stopped, obeying the hand of the engineer.
Under the car I heard the air-brakes hissing!
I walked to the great chasm at the end of the track.

I was glad I was saved, with the rest!
And then I remembered Him with the grim waiting death upon His face—
For me pouring the molten brass in the poisoned air of the foundry.

They Told Me About One Judas

THEY told me about one Judas—

How he betrayed his Friend for a handful of dirty money.
They warned me against the harlot—
That daily she peddles her kisses, without love, for food and shelter.
They accused before me the common thief—
That he takes that to which he has no lawful title.

I looked upon him who warned me of the thief;
His wealth was the house of the widow and the fatherless; yea, and of the harlot also;
His children fattened upon the toil of their brothers and upon the shame of their sisters.
I considered her whose scornful finger pointed out the harlot;
She herself sold her body without love for, lo, a lifetime of food and shelter.
And as for him who condemned my brother Judas,
With his lips he worshiped somewhat he called Christ, but with his daily life he worshiped
Money.

I looked upon them all—who condemned the thief, the soiled and trampled sister, the
wretched hanged Iscariot—
Every one bartering daily for hire a mockery of loving service;
One day kissing the face of the Master and six days spitting where they kissed!
I looked upon myself;
I peered loathing into the dark places of my own soul.

I, shamed, stood silent before my fellow thief, my sister harlot—
Yea, and before my brother hypocrite also!
For I heard One saying, a great way off:
"Neither do I condemn thee . . .
Let him without sin cast the first stone . . .
Verily, the publican and the harlot shall enter before you!"

Theory of the Dance

By
Anna
Pavlova

Copyright International News Service

I AM not one of those who cry out against the immorality of the new dances. Morality is a matter for the spirit, and therefore, if the thoughts of the dancers be moral, what matters it how they dance together? My indictment of modern ball-room dancing is rather on the grounds of its utter absurdity and inconsistency.

Almost all the dances known to history may be said to fall into one of six general classes which represent in a general way the moods of the dancers themselves. The first class contains the dances expressing joy and unconfined gaiety; to the second belong the languorous dances connoting a luxurious contentment; the third includes all the formal dances demanding a courtly grace, dignity, and

minute attention to detail; the dances of the fourth class are those that express amorous passion; the fifth is composed of pantomimic and directly imitative or narrative dances; while the last class contains all the varieties of acrobatic and gymnastic dances. The old waltz, for example, is a type of the languorous dance, and has always been popular in Southern and semi-tropical countries. The minuet, the Virginia reel, and the cotillion, in their best forms, belong to the courtly, formal class of dances. The bacchanal and the Apache dances are of the passionate variety.

But how are we to classify the modern rag-time dances? A moment's thought

will convince even the most superficial observer that they are all of the same class—the class which expresses unconfined joy. When a descriptive dancer wishes to indicate the abstract quality of joyousness, she does it by employing some form of the skip or hop. The modern dances are all skipping dances. Rag-time is essentially a skipping, light-hearted, trivial rhythm. It is almost impossible to dance to its music in a languorous or a passionate or even a courtly and dignified fashion. It absolutely demands the skipping dance of pure joy.

I object to the complete concentration of one trivial style to the exclusion of all others, just as I would object if a nation devoted itself exclusively to musical

"When a descriptive dancer wishes to indicate the abstract quality of joyousness, she does it by employing some form of the skip or hop."

Copyright International News Service

"Let the dance of joy be purely and simply what it pretends to be, and let the other moods of human nature have their place"

comedy in its theaters, or to humorous dialect stories in its fiction, or to cartoons and caricatures in the field of pictorial art. Such meaningless snobbery and dogmatic specialization can not be other than harmful.

In the second place, I object to the misinterpretation and the misunderstanding of the real significance of the skipping dance. The element of sex should have no part in it. The dance of joy can be performed by a single dancer as well as by a pair, and there is no reason whatever for bodily contact or the suggestion of an embrace. If the dancers wish to skip about in pairs or in larger groups, they can do so hand in hand. Any contact more intimate than this is not only unnecessary but completely at variance with the spirit of the dance. It introduces an appeal to sex which is both irrelevant and inconsistent. If dancers wish to indulge their amorous sensibilities, they should do so through dances of the bacchanal or Apache type, whose significance is at least frank and undisguised. But if we are to limit ourselves to the skipping dances of joy, let them also be consistent and sincere.

In truth, I have no fear for the permanent welfare of the old dances. The

furious blaze of rag-time will burn itself out in a few years, and a revival of the graceful, dignified dances of the past will follow. Even now those who dance the rag-time dances sincerely and spontaneously are interested chiefly in learning new steps and new figures and thus satisfying the competitive instinct and the desire to excel in any line of accomplishment. In a modern ballroom it is easy to pick out at a glance those who dance for love of the game and those who are chiefly concerned with the appeal to sex. The former are constantly searching for more complicated and intricate evolutions, while the latter seem to desire no variety if only the embrace be close and constant.

The highest form of any art is that which succeeds in giving concrete expression to the abstract. It is an ideal seldom realized. The Greeks are said to have accomplished the task through the medium of music, and in modern times Beethoven seems to have been equally successful. In sculpture, also, the Greeks approached more nearly to the definite expression of the abstract than any geniuses of later times. Futurists and Post-impressionists are making the attempt in the field of painting, but with little suc-

cess thus far. In literature Walt Whitman alone has adequately expressed the abstract, and he has done so at a sacrifice of all the traditions of form.

The art of dancing also has for its ideal the definite expression of abstract ideas. And since it is aided by sound, color, form, and motion, all working in unison, its opportunities for realization are almost unlimited. The perfect dancer will be the one who can, without assistance of pantomime, costume, or program, unerringly and infallibly create in the minds of an audience the distinct impression of an abstraction. How can this ideal be realized if we insist upon making an impossible mixture of all the essentials of the art, if we confuse gaiety with sex instinct or formal grace with acrobatic dexterity? Let the dance of joy be purely and simply what it pretends to be, and let the other moods of human nature have their place also, in order that, through variety and comparison, there may be constant development and increasing clearness of understanding, resulting eventually in a general comprehension and expression of the abstract, which is the highest possible form of the dance, as it is of all art.

R. Norris Williams

WHEN we encounter genius in sport, criticism is disarmed, and while it would be possible to find faults in the play of Maurice E. McLoughlin, he has done so much for American tennis that we hesitate to speak of him save in praise. Whether his type of game should be copied by the average player is another question. McLoughlin has proved that he is a supreme tournament player. Equipped with an unusual physique and a natural grace that make him an idol on the courts, he has worked his way to the top by driving his opponents off the court. For the average man the better model is perhaps R. Norris Williams, who, in spite of his defeat by McLoughlin, plays sound tennis and tennis that will improve as he grows older.

There are times, of course, when older and more experienced men, like John C. Parke and Anthony F. Wilding, will take the measure of the American champion; but I doubt if the McLoughlin of the All-Comers—his form better than when he played for the Davis Cup—can be beaten by any man not playing the same type of game. It is true that Wilding refused to be driven off the court by McLoughlin's "canon-ball" service, and that the New Zealander displayed the better generalship, but I think that had he faced the American whirlwind at Newport he would have found himself in difficulties. It has been said, and with justice, that the champion is sometimes shaky on ground strokes, and that, temperamentally, almost every stroke is designed to be a "winner"; but the burden of proof is the score, and McLoughlin holds the record of having been the first champion to play through.

He proved that the thing could be done, and in the course of the demonstration he met some good men, notably Clothier, one of the coolest court generals the game has produced in this country. When a man like Clothier admits bewilderment in the face of the fastest play seen on an American court in recent years, the rare pace of the champion becomes apparent. McLoughlin, like some of his predecessors, has dropped away from his supreme pace at times, but at Newport he proved that it could be sustained throughout an entire tournament, and that—for his purposes at least—his type of game has "made good."

The California game—a type that has all but revolutionized tennis—may be dangerous for the average man to take up under conditions different from those on the Pacific Coast, and it begins to look as if in this country there would be two schools in future, and both good. Men like Clothier and Wallace Johnson are examples of one school, the Californians of another. The proof of the pudding, after all, is in the taste thereof, and if the type of play indulged in by the far Westerners smacks well to them they should be encouraged in sustaining its development. If, on the other hand, men like Williams and Clothier find their type of play suited to their own physique and temperament, it is well for them to keep up its development.

All of which means that the younger men will copy one style or another to a large extent, and the more frequent clashes are between the two styles, the better for the game. This applies to tournament tennis rather than to tennis just for fun, which most of us who love the outdoors play. Probably, if we are to learn of the big men in the game, it would be better to make our idol a composite, learning from McLoughlin as much about pace as our physiques will let us utilize, from Wilding court generalship, from H. S. Mahony one of the prettiest and most effective back-hand styles ever seen on any court, and from young Williams or his tutors that courageous "sticktoitiveness" that has made his play so absorbingly interesting.

IN a way, Williams is more valuable as an example to the average man than the champion, for he has perhaps played more tennis for sheer fun than any of the other men of high rank on the courts. A strange combination, Williams—a young man who delays the splendid attack of which he is capable until in difficulties. Doubtless continued participation in tournaments will cure that fault, but I like to feel that, after all, it is a fault of good sportsmanship. The point is that every move Williams makes is sound, and that he is a joy for the amateur of average ability to watch. In England he accomplished the task for which he was sent, and his defeat in this country is merely a personal disappointment.

The fact that McLoughlin and Williams came through to the final at Newport is the best possible proof that the Davis Cup team was properly chosen. While Hackett proved of value in the doubles, I think most followers of tennis would like to see McLoughlin and Williams get together as a team. I think the two types of play would fit well, just as would the two temperaments.

FORTUNATE indeed is this country in the possession of such a flight of young experts and so many experienced men to keep them busy. Fortunate, too, in the inventiveness of every member of the top string. It is better for the future of American tennis that every now and then a player turns up who can tease the top liners, as Touchard teased Williams in

Copyright Amer. Press Assn.

Maurice E. McLoughlin

their match, than that our players should unexpectedly strike something new when they meet foreigners. Therein lies the health of the game—the constant building up, the constant search for something new indulged in by Americans, by Australasians, and by Irish players, who seem to have made far more progress than the Englishmen.

English tennis seems to have dropped into a rut. There is age, experience, and court generalship back of it, but no development of pace, no all-round progress. And there are not so many younger players of promise in sight as there are in this country. The Australasians, the French, and the Germans are far more promising than the English. They have had the good sense to learn from English tennis all that made it worth while in the past, and have gone ahead on their own account. They will be more formidable another year, and will continue to menace American supremacy as long as they remain in the ranks of progressive sportsmen.

This is the day in sport of men rather than of systems. It is easy to lay down laws for the playing of any game, and, as in other sports, it is probable that in tennis the average player will have to adopt a system and stick to it, but the men who reach the top will play their own game to suit their own temperament and physique.

It has been a wonderful year on the courts, the appearance of William M. Johnston, of Strachan and Griffin, the keen play at Longwood, at Bay Ridge, and at Southampton, serving to sustain the interest of the great mass of players, and serving also to prove that skill in the game is not a matter of sectionalism.

NOW, just at this time, when the successful American players have proved to be imitators, comes word that possibly the other nations will get together and so alter the rules as to destroy the terrific service that has had so much to do with the success of American play. I doubt if the French players, who also use the severe service, would enjoy having that feature of the game crippled; but, should the plan go through, the inventive American player would find a way to get over a troublesome first ball, even with both feet on the ground.

What is needed principally is an agree-

ment on the foot-fault rule, which is often violated in spirit, if not technically. The men who judge the service in the big tournaments do not seem to be in accord on the subject, which leads to much hard feeling from time to time. If the American players are committing foot faults regularly, they probably will find a way to avoid it, if only they can get a final judgment on this important point. As the game is handled now it lacks consistency in the work of the officials, and more than one player has ignored a decision, and out of sheer sportsmanship played a ball out of court or into the net, as did Williams at Newport, in order that his opponent might not suffer.

THE salient feature of the game played by the tournament top-liners in this country is, of course, the rush for the net—command of the court—and McLoughlin has carried it to such a point that he seems well into the court by the time the ball leaves his racket. There is in his stroke what in baseball parlance is called "whip," and when one faces him at his best neither the chop-stroke game nor the driving game will stop him. The real test of the game of pace—when the game of pace is at its best—and the game of chop strokes, came in the match between McLoughlin and Wallace Johnson. In the first set McLoughlin scored 86 points to 10 for his opponent, and he made only 8 errors against 18 for the chop-stroke expert. The champion's speed was in evidence, as it was in the match with Clothier, and the forcing tactics of the Californian simply ruined Johnson's game. It was in the second set that Johnson made his best stand, but even here McLoughlin clung steadily to the lead through sheer tremendous pace. Johnson was simply forced into making errors, and these, far outnumbering his earned points, told the story.

Williams proved a harder man to handle than Clothier or Johnson, and his steadiness cost McLoughlin the only set he lost in the entire tournament. Williams had taken a leaf out of Wilding's book, and played as often as possible the low strokes that the champion met infrequently finds difficulty in handling; but, while he, too, had plenty of pace and a great deal of finesse, it was the champion's fighting spirit and speed that forced Williams into making returns into the net that carried him through. Yet Williams, through remarkable generalship, at times made the champion over-play his strongest strokes, so that they went into the net or out of court. In the end, the sheer brilliance of the Californian carried the day, giving him a well earned triumph, and leaving Williams a loser, with all the honors that go to a loser of his type.

AS the record stands, the Californians have, for the second time, made a clean sweep of the championships. The far Westerners now hold the men's singles and doubles, the women's singles and doubles, and the mixed doubles. The East has left only the interscholastic title, held by G. C. Coner of Philadelphia.

There can be no doubt that the play of the members of the Davis Cup team has been improved by their experience abroad, and that the steadiness, too often absent in the work of American internationalists, will be a feature of play in the future in this country.

IT is interesting, in the light of the standard set by the present-day stars, to consider the work of some of the old-timers like Wrenn, Whitman, Larned, and the Englishman Dr. Eaves. It would be worth while to learn how Whitman's game at its best would work out against McLoughlin and Williams, how long Wrenn's sound game of years ago at its best would meet the modern pace, how the remarkable "gets" of Dr. Eaves would serve as a defense against rare speed. Larned, when he was at the height of his career, had flashes of blinding speed, and, while perhaps not achieving the gait of the present-day apostles of speed, could bewilder an opponent much as McLoughlin does to-day. Indeed, Larned has probably had more effect on the work of the present champion than any other player; the Californian's generalship frequently resembling that of the older master of the courts.

Wrenn's game, on the other hand, had that steadiness and reliability at important moments that marks the true champion. His defeat of Dr. Eaves in the All-Comers years ago was a fair sample, and was accomplished more as the result of courage than of brilliant tennis.

In England the bulk of the tennis world still swears by the Dohertys, the men who were always at ease on the court, and to whom the fact that their opponents were leading apparently occasioned little concern. They were not players given to making remarkable "gets," and there were many occasions when they refused to go after balls that the average player would consider reasonably playable. There was the path of least resistance, letting their opponents make errors and putting faith in supreme steadiness and stamina. It is a pity that their type of game could not be tested again against McLoughlin or against Williams.

ONE of the great encouragers of pace has been the hard court, whether the sand or covered court of France, the asphalt of the Pacific Coast, or the clay

with which the every-day player is familiar. The upkeep of the turf court is at once so difficult and so expensive as practically to bar it save for tournament use, and as a result most players learn the game on the hard courts, finding turf only when in tournaments, and indeed there are many who prefer the clay court all the time.

Now, in picking up the game, as most players do, on a hard court, they are practically coerced into a fast pace, for they find that chop-strokes and, indeed, the whole "soft" game, save as it is used for placement, hardly pays. The result has been that when men who have been brought up on hard courts finally get upon turf they have the tendency to maintain the pace that they have found so useful under what, to them, are normal conditions. This is the reason, I think, why even the best of the American players are sometimes at fault in their ground strokes, and why the Englishmen in the past have been strong in this particular.

In the Davis Cup tie against the Australians at the West Side Club, it was plain that all the Americans preferred the overhead game, and did their best work with it, while the visitors made the most of the ground strokes and did a deal of driving from the base line, getting the ball at the feet of the Americans as often as possible. In handling this type of play both McLoughlin and Williams were frequently at fault, and had not the courts been so well drained and otherwise cared for they might have found themselves in serious difficulties.

The tendency of any player who has begun with the hard court game is to keep his pace when he strikes turf, and this tendency has cropped out among both the Americans and the French. The latter, playing on covered courts, overdid it for a time, but have settled down considerably since, but not too much to spoil the initiative and individuality that marks their game.

The Frenchmen, like the Californians, are fair examples of what sheer enthusiasm can accomplish in a short period. The former wisely took up professional coaching at an early stage, and made the most of it. In France, as in this country, it was the young men who put speed into the game and went out for the winning points. On covered courts their play sometimes went to the point of recklessness, and they were slow to "get the hang" of turf, as is the case with most men who have begun their game on hard courts. In the long run, however, I believe that play on hard courts is the best schooling for the tournament player, and certainly the best for the man who plays merely for the sport of it.

The Rose and the Record

TO the Rose the Record said,
"I shall live when you are dead."
"Think you, then," the Rose replied,
"Fame can laugh at Love denied?"

Scarcely had the words been said,
Rose and Record both were dead.
Scattered dust, forgotten token
Of a Heart, a Record broken.

MEREDITH BLAKE.

Since Groh was turned over to the Reds by McGraw, he has boosted his batting average with a vengeance.

ACCORDING to John J. McGraw, leader of the Giants, the securing of one prize performer a year is all that he ever hopes for, because there is a positive dearth of high-class timber in the minor leagues, while the colleges are producing fast fielders but weak batmen. Scouts representing the major league teams confess that the outlook is not a pleasant one.

Personally, McGraw relies on the slow development of classy players under his system of training, figuring that this is the method which tells in the long run. That it is best seems indicated by the fact that Connie Mack, the shrewd general of the Athletics, places his main reliance on the school idea, and his aim is to look years ahead. When emergency arises, McGraw and Mack are well equipped.

Necessity has forced other managers to forgo such an excellent scheme, and on their teams diamonds in the rough have had a quicker opening to rise in popularity, without the unpleasantness—not always the ignominy—of warming the bench day after day.

This year more players are coming and going than ever before. Constant changes in the line-up are being made, and the "fans" have plenty to gossip about. Perhaps before the curtain is rung down half a hundred other recruits will have been allowed to bask in the limelight. In the tail-end of every season there is a lot of experimenting with a view to "next year."

FRANK CHANCE, better known as the Fearless Leader, has been working with might and main with a view to giving New York a winner in the American League in 1914. Early this year his batting order was rarely the same two days in succession, but the supporters of the Yankees, in spite of their disappointment at the showing of the team, kept their hammers in the tool-chest, and awaited with interest Chance's latest acquisitions. Even the most rabid Polo Grounds "rooter" felt that the former boss of the Cubs was doing the best he could do, and they accepted the situation more in the light of a novelty than a disgrace. Chance holds that the average "fan" likes to see changes now and then, and he appears perfectly right in his conjecture.

Two excellent teams could be selected from among the new regulars of 1913. The clubs would be mostly composed of

New Big League Regulars

By ERIC HAROLD PALMER

players who have had trials before or been carried a year or so to absorb the full store of knowledge necessary for due expertness in thought and action.

These aggregations might be made up something like this, with the odds decidedly on the representatives of the older organization:

National League	Position	American League
Myers, Boston	First Base	Johnson, Cleveland
Vine, Pittsburgh	Second Base	Bauman, Detroit
MacDonald, Boston	Third Base	Musel, New York
Marnaville, Boston	Shortstop	Leibold, Cleveland
Burns, New York	Left Field	Shang, Philadelphia
Storark, Brooklyn	Center Field	Leibold, Cleveland
Crosby, Philadelphia	Right Field	Shang, Philadelphia
Fischer, Brooklyn	Catcher	Schall, Chicago
Whaling, Boston	Catcher	Schall, Chicago
Downs, New York	Pitcher	Boehling, Wash.
McQuillen, Pittsburgh	Pitcher	Falkenberg, Urm.
Perce, Chicago	Pitcher	Shawkey, Phila.
Harer, Philadelphia	Pitcher	Dunn, Detroit
James, Boston	Pitcher	Wellman, St. Louis
Johnson, Cincinnati	Pitcher	Kentling, New York
Dickson, Boston	Pitcher	Barnett, Chicago
Radcliff, Boston	Pitcher	Leonard, Boston

LOOK out for the Braves! Manager Stallings, who figures on the much-abused Bostonians being pennant contenders in a year or two, certainly has something to back up his prophecy. More likely-looking youngsters have been gathered in than ever before in the history of the club.

Knight is a particularly valuable adjunct, for he can play first to perfection and can also play second. He has been in and out of the big leagues often. Peckinpaugh, who failed to break in as a regular with the Naps, has filled the gap in the Yankees' short field. Fisher of the Superbas is an excellent all-round player, his specialty being timely hits. This shortstop and his team mate, Cutshaw, are among the best of all blondground-wielders with men on bases, and as such are rated as most deserving of favor. Whitted, the St. Louis infielder, shows promise and has been rewarded with constant work. Shafer, of the Giants, the star of the younger contingent, was really a regular in 1912, but has done his best work this season.

Connolly, another Boston discovery, had a try-out with the Senators. He is a fair hitting outfielder with a propensity for triples. Against southpaws, however, he is a weakling, and Lord (once of Baltimore) is sent in to cover left. Catthers of the Cardinals pulls in many a budding homer.

Groh, the fast little second baseman now with the Reds, was trained by McGraw. The Giants regarded him as a sensational fielder but a negative quantity with the stick. When he was turned over to the Cincinnati team, however, Manager Tinker installed him as a regular, and Groh proceeded to make good with a vengeance. His excellent batting has completely upset calculations.

Mann, the new Boston middle gardener, who used to play with Groh in Buffalo, is a good hatter, but he has not been shining as a base-runner. Fred Smith, the Boston infielder (still the

Copyright American Press Assn.

The "second Wagner" is what the Pirates call Vizz, who bangs away at the ball as if he bore it a grudge.

Braves!), is pronounced a coming star by Stallings. Dodge of the Reds is a much improved youngster. He used to draw pay from the Quaker Club. Dodge covers third or short nicely.

Phelan of the Cubs is giving Zimmerman a contest for the third bag. He can't bat as well as "Heinie," of course, but he sticks to the game, not having Zimmerman's proclivity for nagging the umpires. Early in the season Midkiff played gingery ball at the far corner for the Yankees, but he fell off in his hitting and went to the minors. He is now with the Orioles.

IN the National League roster, the inexperienced stars are Myers, Whaling, Fischer, James, Johnson, and Mayer, while the debutants on the other side are Chappell, Leibold, Shang, Schall, Boehling, Wellman, Shawkey, and Dunn.

In the final analysis, it is fair to say that Buckling and Marnaville have created the biggest stir in their respective circuits.

Although he may be comparatively ineffective next year, Boehling, the southpaw "find" of the Senators, has the natural ability to keep on with his excellent pitching. If he does keep up in 1914, the Senators look like real contenders for the pennant. Clarke Griffith, the "Old Fox" who is in charge of the Washington brigade, is coaching the youngster in all the tricks of the trade. Nick Altrock, the famous left-hander of other days, has spent much time drilling Boehling. Both teachers believe he will be a consistent performer in 1914.

Marnaville came from the New England League (now known as the Eastern Association), and proved a lightning fielder right from the start. He broke in for a few games last fall, but it was this spring that he aroused enthusiasm. He made impossible plays with apparent ease—and is still making them. The future Braves will to a large extent be built around this dazzling guardian of short, who covers acres of territory and throws like a rifle shot. When the Cardinals were beaten four straight games by the Bostonians early this season, they said that Marnaville's amazing stunts were responsible for every defeat. Marnaville heads the batting order because his slight build makes him a hard man to pitch to. His hitting, slightly below the .250 mark, comes in streaks, but he draws frequent bases on balls.

Myers, the latest discovery in the line of first sackers, is of fair ability as fielder

and batsman, but he is a wonderful base-runner. In the Northwestern League he stole everything in sight during 1912, and even the National League catchers have found it hard to prevent his pilfering. Proving a leader in the art of thieving, his first season out in the big show is a boost for any one.

PROBABLY the most valuable catcher brought into the National League this season is Fischer, the hard batting backstop of the Superbas, who handles himself well at all times. Fischer jumped from the metropolitan semi-professional ranks directly to fast company. Like Boeding, he owes his rise to a newspaper man, who gave the tip that led to a try-out. Fischer is only twenty years old. He is frequently used as a pinch hitter. Whaling, the other new catcher, is a steady man, and was brought on chiefly to handle the speedy shoofs of James.

Mayer, Johnson, and James are the only new twirlers of promise as far as the National is concerned. The White Sox let Johnson, better known as "Chief" because he is an Indian, go without giving him a chance other than on the training trip this spring.

Among the premier batsmen developed during the season are MacDonald of the Braves and Stengel of the Superbas. MacDonald may finish the race in first place among the clubbing artists. When he was with the Reds, no one counted on him as a terrific clouter. MacDonald is a poor fielder, so Fred Smith and a scintillating star of other days, Arthur Devlin, cavort around the third sack for the Bostonians now and then.

Stengel arrived in swell society toward the close of last season. He got four clean hits and a base on balls out of five trips to the plate in his first encounter, and did fairly well later on, but it was not until early this year that Stengel jumped to the fore in the way of making long swashes. After the middle of June he fell off considerably, but his great work did more than anything else to make the Superbas the surprise of the league for quite a long time. Their crash came just about the period when Stengel was forced out of activity by a sprained ankle. Stengel is a brilliant ground coverer, and runs the bases like a streak, sometimes to the degree of recklessness.

BUT the way Cravath has "come back" is furnishing the most excitement. Cravath has hit like a fiend in the minors in the past, only to fall down in his big league trials. This season he has come into his own with a vengeance. His batting average for 1912 was .284, when he had no fixed outfield post. This year he is keeping up his American Association record for fence-busting. His string of homers, not to speak of doubles and triples, marks him as one of the worst punishers of the sphere in the National, and his team-mate, Sherwood Magee, is not far behind when it comes to long drives.

Cravath is bound to finish the season with .330 or over. Of his hits, few will be infield taps beaten out by springing ability.

Burns got his diploma from the McGraw school in April. It meant the passing of speedy "Josh" Devore as a member of the Giants. Burns was a power with the willow in the New York State League, but McGraw kept him on the bench two seasons before trusting him as a regular. The New York's guiding genius speaks of

Burns as the ideal player in build and movement. The young outfielder runs the bases with excellent judgment, and can be counted on for runs when they are needed. It is worth while to watch him take the "hook slide" originated by McGraw. Burns was the first National Leaguer to make one hundred safeties this year.

THE "second Wagner" is what the Pirates call Viox, a stocky, aggressive individual who stands up to the plate just like the famous Hans and bangs away at the ball as if he bore it a grudge. He did a little infelding last year when Wagner was not around, but this season his pummeling earned him the second sack job over McCarthy and Butler, two others rated as dangerous hitters.

Two really great catchers joined American League teams in the persons of Schang of the Athletics and Schalk of the White Sox. Schang was the best backstop in the International—then the Eastern—last year. The two proved worthy of all the praise critics poured on them right from the start of their big league careers.

Johnston, who has been doing yeoman service at first base for the Naps, is an excellent base-runner. His batting is a desirable asset. Olson, the third baseman, also displayed ability as initial corner picket, too. Williams, the Texas star whom Chance brought on, may be a winner in 1914.

Baumman has been with the Tigers before. Manager Jennings sent a hurry call for him this year, when the team was going bad. Baumman started this season as a member of the Providence tribe.

PIERCE, the only new southpaw of skill in the Lynch organization, had a trial with the Giants, and then was sent to the Cubs. Johnny Evers, in turn, let him go to Scranton. Pierce was recalled after he had set up fine strike-out records in the "bushes."

McQuillen, the ex-Quaker, was relegated to Columbus because of his habits, but he has now returned, and the Pittsburghs have all sorts of confidence in him. McQuillen possesses some of the finest curves extant.

Rudolph and Dickson were once on the Giants' pay-roll. Rudolph is a "spitball" artist whom many big league teams were after. He was a steady winner in the International.

"Cy" Falkenberg is the greatest surprise in the whirling line in Ban Johnson's circuit. It was generally figured that his days were over, but he has accomplished what the esteemed James Jeffries could not do.

CHICAGO "fans" are putting a lot of reliance in Russell, a portlander with a fine change of pace. He was used very frequently in the early part of the year, and the strain is showing on him, but the prevalent impression is that he will develop into a second Rucker. Engel, a native Washingtonian, is improving, despite a tendency to wildness. His 1912 showing was poor, as he scored only one victory, but then he was not used much except as a finisher.

Shawkey and Dasso are two newcomers with everything that a slab artist should have. Wellman, the giant Brown, is another who has the "stuff."

Krating and Leonard are in-and-out pitchers from whom extraordinary performances might be expected occasionally; on the next time out they are quite as likely to be batted out of the box.

IF no one else has proved it, Chance has inaugurated the policy of giving the young ambitious element a real trial—quite a new proceeding, according to those in a position to know. What has occurred this year is bound to be followed out in the future, and encouragement is being given to aspiring hall-towers who may have figured that the gates were set against them.

Not long ago Jacob Daubert was discussing the hopes of young players for recognition in the big leagues. The captain of the Superbas, whose title to the world's honors as a first baseman can be disputed by only one man, Hal Chase, now of the White Sox, is as close a student of the baseball as Roosevelt is of politics. Bryan of the dove of peace, and Wilson of the tariff.

"Let me tell you," said Daubert, "that many a brilliant lad is sent back to the minors because he does not get even the slightest chance to make good. Scores of them have been deprived of an opportunity that ought in fairness to be given them. Perhaps there are no Jacksons or Speakers in the lot, but there are a score of born .300 hitters who were not able to display their wares."

"How do you account for this?" he was asked.

"Well, the managers seem to forget they pay large sums of money to get some of the stars from the tank-towns," he responded. "They just keep them standing around until they get sick looking at them, and then shunt them off to other diggings. Big league managers for the most part have got it into their heads that a team of veterans can beat the youngsters every time."

"Playing baseball," Daubert continued, "is different in speedy company. Big crowds make it hard. It requires more than the ability to swing a bat, run bases, and stop 'grounders.' It is steadiness and nerve that count in the final test. You've read stories of young players in other years who showed up fine for two weeks or more and then they fell off. When the 'breaks' went against them, they lost their confidence, and without confidence you can't get anything in this world—certainly, if you haven't got it, you might as well give up the idea of playing ball in the National or American League."

"Steadiness comes only after experience, according to most people's way of thinking, but that does not always hold true."

"Give the young fellow a chance, that's my advice, although old-timers might not like it. It endangers their jobs, but it has got to be done in fairness to the recruits—and not only that, but the folks who buy grand-stand tickets are always glad to see the newcomer get a show."

"They can't understand why a man is brought on after screaming articles about his wonderful work, see him run after a few flies in practice, and then learn shortly afterward that he has been released to Last Hope in the Down and Out League."

Daubert speaks from bitter experience. A few years ago he was signed by the Clevelanders. He stood around first base in practice for three weeks, with hardly a soul paying attention to him, and then was shunted to the American Association and later to the Southern League. When he came to Brooklyn, however, he supplanted the redoubtable "Tim" Larkin right away, and inside of six months he was regarded as one of the greatest first basemen of all time.

As chief lieutenant to Manager Dahlen of the Superbas, he sees to it that the youngsters have a chance, and if he ever becomes a boss himself, Chance will have nothing on him.

Political Snapshots

A Discussion of American Beliefs

By CHARLES ZUEBLIN

Illustration by William H. Walker

The House of Representatives

THE House of Representatives, as the name implies, was intended to represent the people. Whichever Mr. Voter, even Hamilton thought the people ought to have some representation. With a property qualification for the suffrage, with Congress meeting thirteen months after election, and votes in the hands of the Senate, the President, and the Supreme Court, Aleck thought you voters could be allowed to have representatives to represent you. He was more generous than his successors. They abolished the property qualification for suffrage, but they have arranged the conduct of business in the House so as to neutralize Aleck's indiscretion.

"You can fool all of the people some of the time, and some of the people all of the time, but you can not fool all of the people all of the time"—unless they like it.

WASHINGTON is called "the city of magnificent distances" because the Representatives are so far from home. The country looked so big in the days of primitive transportation that the Congressmen were given thirteen months to get to the Capitol. They do not begin to represent you, Mr. Voter, until their disinherited predecessors have had another session in which to represent Aleck (whose "dead hand" is more powerful than the mailed fist of Kaiser Wilhelm).

Thus stability (not to say petrification) is insured to our government.

Would you trade your yellow dog for a dead lion, Mr. Voter?

ALTHOUGH the House is supposed to represent the people and the Senate the States, the unwillingness of any State to give up one of those representative Representatives was warrant for increasing the number of members of the House on the basis of the last census. There were already too many members for effective legislation, but State jealousy was supplemented by the increasing social prestige of the Capitol, and the 308 members of the House could join the 400 by this increase. The representation is supposed to be equal, but in fact the altruism of the Republican party gives the Democrats in the South an extra vote for each negro, thus continuing their noble assumption of the white man's burden.

Your "white hope" has been found at last, Mr. Voter.

IN the "good old days" measures used to be debated in the House; but the architecture has been so cunningly devised that only Bryan, Holman, and other Chautauqua lecturers can be heard. The Representatives are thus driven to address their constituents through the *Congressional Record*. You can get, in this way, an excellent idea of the literary fancies of the members' secretaries, as the canned eloquence of the House of

Representatives is enshamed in the fluid of general literature. With the franking privilege, the American public enjoys the free distribution of the contents of expensive subscription library sets and encyclopedias.

Mr. Voter, ask your Congressman for one of his sixty copies of the *Congressional Record*. It is cheaper than a five-foot book-shelf.

WITH so many statesmen eager to save the country, there is an almost unlimited grist of bills to be digested somehow. As they can not all be read, much less digested, the system of committees has been invented for their predigestion. Mr. Bryce says: "A system better adapted to the purpose of the lobbyist could not be devised." As long as you do not have a referendum, Mr. Voter, this is a good sifting process; but it sifts men as well as measures, and only the elect come through the sieve. You will remember the methods of Mr. Cannon becoming so obnoxious that this autocratic power was intrusted to a committee. The Speaker is shown of the power of a czar, and that power is transferred to the floor leader. Mr. Underwood now controls the secret Democratic caucus with a power that makes Cannon look like a toy pistol. There is no way by which a majority in Congress can compel a committee to report.

Mr. Voter, watch the Democratic caucus. It is as reactionary and unenformed as the Massachusetts Senators.

Orators Who Have Influenced Me

By T. P. O'CONNOR, M. P.

MR. JOSEPH CHAMBERLAIN

THERE could not be two men of more widely different views than Charles Stewart Parnell and Joseph Chamberlain. And yet there were many points of resemblance between them. Even in physique there was a likeness. Both were tall men, both slim, in each case the scabbard seemed too delicate for the flaming sword inside, masterful temper, burning passion, and vehement utterance. And both, above all, had the same almost unnatural pallor of complexion. In Parnell there was a certain muddy dullness in the pallor which led to the application to him frequently in Parliamentary descriptions of Carlyle's famous "Sea-Green Incorruptible" with regard to Robespierre; whereas in the face of Chamberlain the pallor was as white as that of wax. Even in their manner of speech there were also great resemblances. The voice in both cases was icy cold, the delivery frigid and impassive. Each speaker seemed absolutely self-controlled, could look on the storm their words created quite unmoved and untouched by the tempest and tumult around them; they both seemed men of iron self-control.

But here the resemblance came to an end. Parnell, except when he was deeply moved, always spoke with extreme hesitation; it seemed almost a painful effort for him to extract the words that were to express his ideas, and, as I have said, when it came to figures or documents he was hopelessly flustered. Mr. Chamberlain, on the other hand, though he spoke slowly, never paused for a word. Cold, limpid, the stream moved onward with the regularity of running water. And though, in the end, Parnell did find the exact word that expressed his idea, it always showed effort. In the case of Mr. Chamberlain the right word seemed to come by instinct, without the smallest effort. I have heard that Mr. Chamberlain in his early days used to write out every word of his important speeches—especially those that he delivered in the country and when he was preaching an important new campaign; and the intimate of his who told me this added the characteristic little fact that Mr. Chamberlain wrote with a hard steel pen. Steel using steel was what the friend wished to suggest by this detail.

THERE was also the striking difference between the methods and temperaments of the two men, that the one was such a pattern of orderliness as the other was a flagrant example of the want of order. Never was there a man who gave to politics so much of the stern regularity of business life as Mr. Chamberlain. It was one of the many tragic things in his checkered career that he had first to acquire a large fortune before he felt himself at liberty to devote himself to politics. His name has so long been familiar to the public as a great Parliamentary figure that few people of this generation remember that he was forty years of age when first he took his seat in the House of Commons. He had, of course, a long and distinguished career in the municipal politics of Birmingham—and the Birmingham of to-day has enduring memorials of the large vision and the reckless courage with which he developed its resources, its potentialities, and its beauties. I have heard many Birmingham people say, as they pointed to the splendid educational equipments, the perfect drainage, and the splendid and even grandiose appearance of its chief streets, that it was only a man of Mr. Chamberlain's extraordinary daring that would have been able to propose to a city the vast but fruitful expenditure that all these things involved. But still the fact remains that Mr. Chamberlain was forty years of age before he got his chance of playing his big part on the greatest arena of Parliamentary work and glory that the world has ever known.

But once he had become a member of Parliament Mr. Chamberlain gave to political work a concentration of thought and activity such as few men have ever bestowed upon it. Unlike Mr. Gladstone, he did not disperse and vary his toil by essays in Homeric mythology or theological controversy; unlike Mr. Balfour, he found no attraction in trying to render down to the first-root principles of philosophy, history and religion; unlike Mr. Bright, he had no passion for doing nothing—which Bright once declared to be the chief ambition of his life. Business, in which he has played so big a part, Mr. Chamberlain dismissed forever from his thoughts and activities; he became a politician to the exclusion of every other interest and occupation of life—unless, indeed, one except his devotion to his garden and his flowers.

THERE was no detail too small for Mr. Chamberlain's attention. He was as keen about seeing that the proper man was chosen for a councillorship in a ward of Birmingham, or that the right man should be found for secretaryship of a political committee, as about the larger organization of great imperial offices. He read and noted and pigeonholed every item in the day's papers that could be of use in debate. I am told that even at his dinner-table almost the only questions ever mentioned and discussed were political topics. Add that he had a natural aptitude for orderliness stimulated by many years of the regularity of a great business, and you will see that Mr. Chamberlain brought to political life immense advantages over the small Irish country squire who found himself a politician suddenly, after a youth devoted to farming, to sport, and to cricket.

I lay stress on these orderly qualities of Mr. Chamberlain because they are an explanation of much of his marvelous powers as a debater. The House of Commons demands, more than any other place, the qualities of presence of mind, of promptitude of reply, and of the ready and harmonious arrangement of material. Great orators, of course, can lift it up to the empyrean by the expression of lofty thought in splendid language. That was how Bright produced his greatest effects—as in the celebrated passage, "The Angel of Death is abroad throughout the land; if you but listen, you can hear the beating of his wings." But that is oratory, not debating; and debating is more frequent and more important, in the daily life of the House of Commons, than oratory.

MR. BRIGHT was poor as a debater; Mr. Chamberlain was supreme. Standing bolt upright, except for a slight stoop forward, icy, self-controlled, Mr. Chamberlain always came to a debate with a small bundle of notes. The notes were written out on small pieces of note-paper, and it could be seen that there wasn't a sentence, there wasn't a quotation, there wasn't a figure, that did not take its allotted and proper place with as much symmetry as the different parts that make up a great mosaic. You began to perceive all the great and all the orderly work that had preceded the speech. Did Mr. Chamberlain want to expose the contradictions of his opponents, he read out a sentence from the speech of one, and then followed it by an extract from another which was in flagrant contrast. Did he want to exhibit to the ridicule of the House the absurdities or the extravagances of his opponents, he immediately read out in its proper place, from the notes in his hand, some passage of unconscious humor or roaring farce. And if he were interrupted or contradicted, quick as lightning came out the retort or another quotation confirming those he had already read.

Thus it was that Mr. Chamberlain was one of the most deadly debaters the House has ever known. Nobody could trip him up. He seemed as one clothed in steel.

whose armor no lance could penetrate. And the fine arrangement of the material was backed up by a perfect delivery. The voice was wonderful—without the richness of Bright's, without the infinite variation of tone that made Gladstone's voice like a scale in music, but clear, penetrating, reaching the very marrow of men's bones. And though the voice was icy, even, and subdued, it had its moments also when a deeper note revealed the tempestuous and masterful soul beneath; it had its groundswell, as had the voices of Bright and of Parnell, with the difference that in Bright it suggested the anger of the prophet and in Parnell the fierceness of the revolutionary, while in Chamberlain it gave the idea rather of the born fighter, that was determined neither to give nor to ask for quarter.

ONE of the other great advantages that Mr. Chamberlain brought into oratory was his perfect elocution. There is no quality of the speaker in which even trained members of the House of Commons show greater laxity than in elocution; they often bellow when they would be more effective by quietude. They rush the first half of a sentence with such speed that they are out of breath and inaudible when they get to the end. There never was once, in all my experience of Mr. Chamberlain's speaking, when I could detect any such flaw in his orderly and beautifully delivered utterance. Mr. Chamberlain reached this perfection of elocution, as he did so many other of his excellencies, by steady, hard, and regular work. I have heard that he took lessons in elocution; that he was very fond of amateur theatricals in the days of his youth. There is, I believe, a playlet to his credit. But, however he reached this perfection of elocution, he did reach it. No actor on the stage ever managed his voice with such impeccable perfection.

His extemporaneous speeches were often even better than those he had prepared with such elaborate care.

Then he sometimes let himself loose. Here, again, another of his characteristics added to his effectiveness. He was in politics what the French call *archi-personal*. Political debate was warfare and a duel, and he lit out with the mercilessness, but also with the deadly skill, of a great fencer. Sometimes he reminded one of one of those historic musketeers that figure in the romances of Dumas, and that had a thrust first for this assailant, then turned to the second and placed him out of action, and then was ready with his blade for the third and the fourth, and all that might come on.

It was extraordinary to see the effect upon the House of one of those fierce bits of extemporaneous attack. Listless, tired, somnolent the House might be before Mr. Chamberlain got up; in a trice the whole atmosphere was transformed. You heard laughter, cheers, violent interruptions—in short, the storm of passion pervaded a scene which a few moments before had all the signs of a castle of indolence where nobody could care or could feel about anything except lazy acquiescence. It was like a beleaguered city surprised in the middle of night and sleep by an ambuscade, and rushing, shouting, shrieking, amid the clush of arms and the curses of the fighter with the sigh of the dying. Whether it was in winter or summer, or at the beginning of a great sitting when all were fresh, or at its close when all were exhausted, it was always the same. Mr. Chamberlain's rise transformed the whole temper into cyclonic disturbance.

Such, then, was the man as a speaker. His political career has been and will be forever the subject of fiercely contrasted estimates. His statesmanship will be given to posterity either as glorious inspiration or as shocking example, according to the political prepossessions of those who discuss him. But no opponent, however bitter, can ever deprive him of the glory of having been the most powerful debater of his time.

"I WONDER WHY THEY ALL COME TO ME WITH THEIR TROUBLES"

By J. R. SHAVER

Brain Plays in Germany

By ARTHUR HOPKINS

IT was with no small anticipation that I entered the Deutsches Theater, the dramatic core of Germany, and to the outer world the workshop of Max Reinhardt, if not the foremost at least the most talked of producer on the Continent.

I went to see Reinhardt. I came away thinking chiefly of the audience, for the greatest feature of the great Deutsches Theater is in front of the footlights.

Here the Tired Business Man, the *crêpe-hanger* of the American theater, does not exist. There may be Tired Business Men in Berlin, but they are not to be found at the Deutsches, and without them the Deutsches is pushed to the designs on the wall-paper and the frescoes on the ceiling with an audience that is vibrant and concentrated.

Fifteen hundred people nightly seat themselves to a man, put their teeth into a dramatic idea, and hold it for three hours and a half without letting go once to cough.

TOLSTOY'S "Living Corpse" is a severe test of any audience's assimilative capacity. It lasts three hours and a half, with practically no comedy relief and with but few tense situations. It is just plain brain-building, characterizing, weaving, dissecting, always logical, always analytical, but over sparkling.

Prognostication is rarely scientific, but it is my opinion that at present there is no audience in New York that would not entomb "The Living Corpse" at its first performance. But "The Living Corpse" was devoured by the wide-eyed Germans as if it were a footlight dainty.

And now comes the question as to responsibility. Does the Deutsches Theater succeed with brain plays because it possesses an audience of brains, or does it attract an audience of brains because it gives brain plays? I believe the latter is the cause. I believe there is a Deutsche audience in New York and in every large American city, but it is not to be found in the theater. This audience sits at home in a comfortable chair, regaling itself with books in which there are brains, with music that came from brains, and with conversation that possesses at least a particle of brains.

This is the audience that must be got into the American theater. This is the audience for which the producer of the future must bait his trap. This is the audience for which at present there is no competition, despite the fact that it is financially, artistically, and permanently the most remunerative of all.

THE Tired Business Man has had his day in America. Now comes the Piffle Tired Man, the man who has licked his business into willing submission, who looks it up every evening at five—and is hungering for something that he can drop into his unoccupied brain-layers for the night.

So I came to pay tribute to Reinhardt, and I left burning incense to the audience.

The acted performance revolved itself into one Alexander Moissi, a young Italian Jew, who gave one of the rarest performances I have ever witnessed. His skill is so great that there is no flavor of the

histrionic. He seemed even to spurn make-up. His face is a sensitized plate where every emotion is recorded. His hands are barometers that express every passing change. His body molds and remolds into every attitude of lassitude and tension. His eyes telegraph every message that his mind records. He grips you and holds you, though never seeming to try. Twenty Moissis scattered throughout the world would revolutionize the theater. This one Moissi will do much in that direction. If it were in my power, I would set every young actor in America before Moissi. If, after seeing him a few times, the young actor was not fired with a desire to explore his own brains, then I would petition the Powers that Bar to keep him forever from the theater. Here again the performance was a unit. Every number strove to insert his little block so evenly and so surely that the finished structure would be smooth. As at the Comédie Française, the individual has disappeared. The slogan of the Continental theater seems to be, "in union there is perfection." That slogan must come to America.

AS to Reinhardt—the Tolstoy play did not give him his greatest opportunity.

He used his much heralded revolving stage. In killing waits it contributes much. He sets five scenes on a wheel, so that all the scenes are practically two-sided, with the corner of the room center. This similarity in architecture gave the scenes a sameness that was rather monotonous. He strove valiantly to break the monotony by carrying off his off-stage rooms with a detail that was most impressive. Frequently two, and at one time three, rooms were visible to the audience.

The necessity of making the settings small brought out a value that impressed me more than the quick changes.

The smallness of the scenes brought them down into natural proportions that made them very lifelike.

It is always somewhat disconcerting to see a room twice the usual size of the room it seeks to represent, while the furnishings, and necessarily the living occupants, are of the usual size. Further than that, the compression of the scene resulted in an intimacy in the action that contributed greatly to its dramatic force.

If nothing more, the revolving stage has developed possibilities in the setting of scenes that makes it worth while.

Its advantages and temptations were better revealed in his production of "Faust." Here was an opportunity to show many massive settings without stage waits. To that extent it was a complete success. But Reinhardt went beyond. Like a boy with a new toy, he wanted to see how often he could change settings, with the result that the play was frequently interrupted for the wheeling on of a new set that was not necessary to the action of the play. Though the pause was only momentary, it necessarily broke off the story, and at various points the accumulating dramatic interest was suspended. This is certainly opposed to the best effect of the play, and the revolving stage, originally designed to contribute unbroken action, degenerates into an interruption on its own account.

AT several points in the play scenes were presented wherein practically no progress of the story occurred. The scenes in themselves were very striking, but a producer is scarcely wise in stopping a play just to show an audience pictures. This defects all that the new foreign school has striven for. Instead of making the scenery a contributing atmospheric background always subservient to the uninterrupted telling of the story, it projects the scenery in front of the story, and to that extent is just as damaging as the old realistic, over-cluttered settings.

Some of the settings were quite remarkable, showing a complete liberation from an old conventional stage picture. Reinhardt's disregard of the ingrained notions as to the inviolability of the sight-line was indicated in one setting, the horizontal opening of which was not over six feet. The scene went to the height of the gridirons, forming a narrow cañon of enormous height. Marguerite traced her way down the cañon to its base, which was at the front of the scene, and here knelt in prayer before a figure of Christ carved in the rock. Since the setting was so narrow, it was impossible for any action to take place, and it was used only for the prayer scene. While the view from the sides of the theater doubtless afforded very little, the only action that occurred was presented in full view of all.

Psychologically the setting conveyed volumes. There seemed nothing between Marguerite and her God. The sense of her nearness to her Creator, with all the world excluded, was tremendous. With very little structure and almost no painting, it proved a picture over to be forgotten. It was a perfect example of scenic suggestion.

Other very effective scenes were most striking, but so unnecessary that they were lost. In one instance a most unusual scene of the church exterior was shown, and in its midst the curtain was lowered to show another exterior view of the same scene, and the action was then resumed.

THE acted performance of "Faust" was a distinct disappointment after the glorious performance of Tolstoy's "The Living Corpse" on the preceding night.

Dr. Faust was a remnant of the old German school. He ranted and raved and "acted" to a degree that bordered on travesty.

But the night was saved by Elsa Eckberg, a very young actress, who presented a Marguerite that was an angel come to earth. Her smile, her sigh, her terror at the birth of passion, its fascination darting out through her fears, were tremendous.

Marguerite's hysteria in the prison scene I have never seen equaled. The prison scenes are usually an injustice to the audience; but little Eckberg has proved that they can be played, and for that I consider her something of a discovery. On the previous evening I had been convinced that there could be no such acting as Alexander Moissi's; but this delicate little lady soared to Moissi's heights.

Fortunate Deutsches—God-blessed Berlin! To have a Reinhardt, a Moissi, and an Eckberg in the same theater,

"Against my will, I am sent to bid you come in to dinner"

"Much Ado About Nothing"

By N. H.

John Drew as Benedick—Laura Hope Crews as Beatrice—

A discouraging article, bewailing various things

DURING the summer just passed, a group of young girls were rehearsing a comedy of Shakespeare's. One of them reciting the famous lines ending "the course of true love never did run smooth," was speaking these lines distinctly, but without passion, when she was stopped by the teacher managing the rehearsal, who stepped energetically toward the stage and exclaimed: "Gosh, gosh! I'm in love, and nothing goes right!" The girl then read the lines admirably, because she understood, and because the manager had understood.

Last year "Much Ado About Nothing" was given by Annie Russell's company in a way that made some of the lovers of that comedy love it even more, because the actors had not only skill and training, but also the opinion that the piece in which they were acting was a good piece. Franz Reicher played Benedick as Wilding plays tennis, or as the infield of the Athletics plays baseball, as if it were an exercise in which he was naturally proficient and in which he had a striking all-round training. That, to be sure, is more than we need ask for Shakespeare. One of the most satisfactory performances of the difficult role of Juliet given in this country in many years was by an actress who lacked Shakespearean training, and who could not even speak the meter of her lines correctly, but who felt herself in the character, lived in the scenes, and threw her heart into what she said.

Shakespeare probably does not mean much to a person who is pleased by having the newspapers shriek at him with peculiar emphasis and tell him more about the latest rumor than about the essential performances of his government; a person who fits snugly into the scheme of spending his business life in making as much money as possible, and his hours of relaxation in hooting a sensation which he vainly imagines different from the sensation he had the day before.

"Much Ado About Nothing" contains the most sparkling couple of lovers in literature, the greatest of all Malaprop comedy characters; many passages of dialogue unsurpassable after their kind; and scenes that need only to be understood and let alone by the manager, and seen by unspoiled audiences, to be as popular to-day as they were three centuries ago, when Benedick and Beatrice and Dogberry ranked with Falstaff and Malvolio in the favor of those who saw Shakespeare's plays just after they were written. If "Much Ado About Nothing" was not very popular on the evening of September 1, it can safely be left to our readers whether the fault was in the comedy, or in the managers, the actors, or the audience.

MR. DREW is a man of humor and ease. His histrionic skill is in the direction that might be thought especially to fit Benedick. The trouble seemed to be that he did not approach the part as if he believed enormously in the whole play and was one of a group of living persons having an extremely exciting and buoyant time with one another. It apparently seemed to him a little archaic,

written at times in language rather queer, and presenting various characters lacking in novelty.

Nobody ought to play Shakespeare who sympathizes with the rounder's opinion of Hamlet, that it is "full of chestnuts." Nobody can play these unapproachable dramas properly who does not relish the task of speaking the mighty or scintillating lines as if their very fame were an advantage, a temptation to the actor to put into them all the glory that has been seen in them by three centuries of cultivated men and women in many lands. Nobody, in short, can play Shakespeare who does not find in him one of the most enriching and consoling gifts of our existence.

Doubtless the fact that so many stars are to produce Shakespeare this year is a subject for rejoicing, because it betokens a healthy doubt in the public about whether it is getting all that the theater might give; but no one of these stars will win much glory unless he likes his play so much that he feels like boasting among his friends about what a wonderful drama it is, how full of good parts and stirring scenes and wonderful speeches.

Once I went to the theater with a man who had neither read nor seen "Hamlet." When the Prince came to those lines about "this majestical roof fretted with golden fire," my friend turned to me with perfectly serious enthusiasm and exclaimed: "Isn't this play terribly well written?" He chanced to be ill informed on the subject of the foremost dramatist, but he was the right material of which to make an audience.

If Mr. Drew had happened to exist professionally in a different environment, his natural intelligence would have caused him to identify himself more confidently with Benedick. He would have let the part act itself more simply. He would have forbidden the stage-manager, whoever that unfortunate may be, to give him speeches belonging to other actors, in the most absurdly incongruous manner, in order to get him extra curtains. He would not have permitted that superb scene in which Benedick is induced by Beatrice to challenge Claudio to be spoiled by lack of faith in the power of an ending absolutely dramatic, and the substitution for that powerful ending of such exclamations as: "Kill him! Kill him! Kill him dead!" "You may kiss my hand! Oh, my dear friend, you may kiss my hand again!"

SHAKESPEARE occasionally requires greatness in the actor, as in Lear, but usually all he asks is ability to work harmoniously with other actors, to speak the verse without choking, and to throw yourself into a part with intelligent enthusiasm. Laura Hope Crews deserves a good deal for her performance of Beatrice, because she played it as if she liked it, and played it as if she found herself sympathetically a young woman full of joy, with a tendency to say smart things, but very honest, and capable of being very kind, and furnished with admirable lines in which to express these qualities, lines which, far from embarrassing her, seemed

quite simply to meet the needs of what she wished to say. Beatrice is not an easy part. A girl who is born under a dancing star can be represented with absolute adequacy only by a very exceptional temperament. The poet Campbell called her an odious woman, which she certainly is not. She does herself scant justice when she apologizes for one of her speeches by saying she was born "to speak ill mirth and no matter." Shakespeare was often careless. He took plots where he found them, as he did the plot of this play; but when his heart got into a character, as it did into Beatrice, and Benedick, and Dogberry, all of whom he invented, he always makes it profoundly human and justified from its own point of view.

It was Coleridge who said that in an ordinary play characters are interesting because they are in the plot, whereas in Shakespeare the plot is interesting because of the characters who carry it out. Beatrice lives as a woman known intimately to all readers of the best in literature, disliked by some who do not fully understand her, loved by more. If Miss Crews played the part a little bit "down," perhaps that was the wise course, as she may have been afraid of not quite reaching the almost unapproachable gaiety of the girl, and it was certainly the prudent course when playing with a lot of individual actors who had not been welded together.

IF all these actors had known their business as well as Mr. Frank Kemble Cooper, who played Don Pedro, and if there had been a manager who belonged to the same school as Mr. Cooper, this little article would have been written in a different key. Dogberry was unusual but satisfactory, and there were a number of actors who might be praised for various qualities, and who might have worked admirably into the whole effect had they been guided by the right hand, and had they faced an audience that cared for Shakespeare, instead of the typical Frohman first-night audience, which was going through one of the most exquisitely painful experiences ever inflicted upon a group of humans.

Here are a few questions which may have in them a certain testing power:

1. Do you think "Much Ado About Nothing" is funnier than "Seven Days" or "Baby Mine"?

2. Do you think Dogberry is funnier than Joe Weber?

3. Is the speech in which Benedick expresses his contempt for "these paper bullets of the brain" worth more from a literary point of view than the whole of "The Second Mrs. Tangueray"?

4. Does the mere stagecraft of many of the scenes affect you to the choking point?

5. Do Benedick, Beatrice, and Dogberry strike you as being as good acting parts as can be found in the range of drama?

If not, whatever your other merits, you might profitably refrain from being an actor, critic, or manager in "Much Ado About Nothing," and have fully as good reason for refraining from being a member of the audience.

PEN AND INKLINGS

By OLIVER HERFORD

My Shadow

I HAVE a little shadow, that I can not quite make out—
Sometimes I think he is my own, sometimes I am in doubt.
We do not look the least alike, as any one can see;
But underneath the surface we're as like as like can be.

The funniest thing about him is the way he likes to ~~sput~~
On how to down the Trusts and how to drive the grafters out.
When he talks about the people's rights he looms up grand and tall,
But when the people talk to him he isn't there at all.

The way he tries to pose as a reformer is a shame;
You wouldn't need an X ray to see through his little game.
If he'll only can the statesman stuff, and likewise "come across,"
I'll make him Senator some day, as true as I'm the Boss.

Looking Forward

WHEN I grow up as big as pop
I'll be a gunman or a cop.
Gee! Won't it be a lot of fun
Shooting at people with my gun!

The Palmist

BIRDIE tucked a yellow bill
Just outside her window-sill:
Down at headquarters next day
Birdie's place was marked O. K.

The District Leader

THE District Leader, big and gruff,
I love with all me soul.
He helps me out, when times is tough,
With good advice and coal.

He shakes my mit, and calls me "Sport,"
Just like I was a toff;
And when I'm pinched he tips the court
The wink, and gets me off.

He treats the missis most polite,
And joins the kids at play.
You bet he'll get my votes all right
Upon Election Day.

Singing

OF storage eggs the grocer sings,
And frozen Chanticleer.
The butcher sings of joints and things,
And steaks of yester-year.

The children sing of fevers hot,
Of colic and ptomaine.
The Food Inspector in his yacht
Is singing on the main.

BOOKS

Preventive Medicine

A book which makes accessible to the general reader the latest conclusions about the scientific control of disease

By JOHN B. HUBER, M.D.

PASTEUR a generation ago demonstrated microscopic parasites to be the specific causes of the infections; Koch and his co-workers based upon Pasteur's findings the science of preventive medicine, which has since developed into perhaps the most essential and the most pervasively beneficent agency in civilization. Personal, domestic, school, communal hygiene, as we understand the terms to-day, are derived from it. Infants no longer die through dispensations of Providence, but by milk demonstrably laden with pathogenic bacteria. Only by reason of crass obscurity are many infections suffered. Preventive medicine is adequately equipped to cope with housing, sewage, filtration—well-nigh all problems of civic and rural sanitation.

CICERO declared, many centuries ago, *salus populi suprema lex*; to-day preventive medicine can, if permitted, vouchsafe the public health. In ways most necessary to humankind is preventive medicine "making good." Life-insurance companies are preaching it to their clients on the sound business principle that the longer a policy-holder lives the more premiums he will pay. Vast tracts of hitherto pestilent land, impossible of human habitation, may now be made salubrious and capable of most profitable agriculture.

Only Oriental fatalism stands in the way of banishing those age-long infections, cholera, the plague, and the malarias, from India, the world's granary of those diseases; for the sure methods of preventing them are now established. Preventive medicine has made the tropics safely habitable for the Caucasian.

It is true, absolutely beyond peradventure, that the Panama Canal could never have been built had not such men as Gorgas and his associates first rid the Zone of the malarias, typhoid fever, yellow fever, and the infectious dysenteries. To-day Panama vies with Palm Beach as a health resort.

Commercialism has wisely taken advantage of preventive medicine for the elimination from great entrepôts of such diseases; business, because the thing has been found to pay, has succeeded oftentimes where humanity has failed; wherever infections have impeded commerce they have been made to disappear.

PREVENTIVE medicine has clearly demonstrated that such infections as tuberculosis (which now destroys every third or fourth adult life) can be removed from human experience. But, besides being so dreadful a disease, it is perhaps the most potent influence for economic and social degeneration in civilization. It therefore needs only that the political

economist and the statesman shall ally themselves with the expert in preventive medicine for the Great White Plague to become but a ghastly and nevermore realized memory. And, indeed, publicists and statesmen—Disraeli, Goldwin Smith, Roosevelt, Taft, Hughes, Wilson—have been and are now coming to discern in preventive medicine the pillar of fire lighting the way.

ALL are realizing preventive medicine to have for its objects to curtail and if possible to obviate disease, to prolong life, and through improved conditions to make existence happier. Lecky observed:

"The great work of sanitary reform has been perhaps the noblest legislative achievement of our age, and, if measured by the suffering it has diminished, has probably done more for the real happiness of mankind than all the many questions that make and unmake ministries."

And Dr. Elliot of Harvard has written:

"Preventive medicine is capable in the future of doing away with poverty and misery, of remedying industrial disputes, and of contributing to the cause of international peace. It is capable of removing those causes of human misery, poverty and sorrow, which lead to internal rebellion and disorder and, among nations, to war and strife. We are going to get, through preventive medicine, relief from frictions which arise out of immigration, among the leading nations of the world."

One welcomes, then, with peculiar satisfaction the authoritative book of Professor Rosenau, of Harvard, who has served in many an epidemic campaign, in many an investigation, at home, on the Continent, and in the tropics. The work is well-nigh encyclopedic, since, besides Rosenau's most valuable findings, matter widely scattered in literature and very difficult of access for many, is epitomized in it. One shall indeed find here scientific fundamentals. And, since preventive medicine has become a vital factor in sociology, Rosenau has duly considered the economic and social aspects of the communicable diseases.

Since one can not suppress an infection without knowing its peculiar mode of transmission, these diseases are admirably grouped on that basis. Rosenau writes of preventive medicine relating to the person as *Hygiene*, that relating to one's environment as *Sanitation*. All the important methods used in public health laboratories are described.

THE question of the propriety of small-pox vaccination is clearly answered for those still in doubt. Precisely how the "social diseases" are to be attacked remains debatable; but this much should be preached eternally—that the single

standard for both sexes should prevail, and that male continence is altogether compatible with health. One of the most dreadful things in existence, as tragic as the theme of a Sophoclean drama, is the blinding at birth, ever afterward irretrievable, through venereal infection. Such disaster need never occur, for it is easily preventable in the first day of life. Rational celebrations are now obviating our erstwhile dreadful deaths from Independence Day lockjaw. Rosenau counsels well for vaccination against typhoid fever, the peculiarly American infection.

A VERY vital section is that on infantile paralysis, containing Rosenau's notable discovery that the germ of this infection is transmitted by the common stable fly.

Leprosy is transmitted with difficulty, states the author. It is questionable if, in the ordinary circumstances of life, it is transmissible at all; it certainly is not without close, prolonged, and intimate contact. In Norway, leproseries are not insisted on; the lepers remain reasonably by themselves in their own homes, cheerfully observing the mild restrictions placed on them by the government. Under such régime no new cases are developing in Norway, while those in existence are fast disappearing; and there is among those sensible people no leprophobia, nor any occasion for the ignoble fear that has been evoked against poor John Early, the alleged leper, who is now reported insane by reason of his persecutions, and whose case parallels those of Calas and of Dreyfus.

ROSENAU well defines eugenics as the science of being well born. Surely there is none more altruistic, since no one among us could, if we would, follow Oliver Wendell Holmes' advice to "be careful in the selection of our ancestors." (There may possibly be reversals of form in some such Gilbertian way as was indicated by Paracelsus, who held "It was not the fault of David, it was not the fault of Bathsheba, it was the fault of Solomon.") Fortunate indeed is it that of the three modern fates, heredity, environment, and will, the latter two are at least as potent as the first, and oftentimes altogether adequately corrective of heredity's misadventures.

THE book contains important chapters on Sewage and Garbage, by Professor Whipple of Harvard; on Vital Statistics, by Dr. Wilbur of the Bureau of the Census at Washington; and on the Prevention of Mental Diseases, by Dr. Salmon of the National Committee of Mental Hygiene. There are one hundred and fifty-seven illustrations. Abundant references are given. And there is an index which really indicates what one seeks to know.

The Autopilgrim's Progress

By WALLACE IRWIN

Illustrations by James Preston

V Lemuel Obtaineth Some Class

A DEALER in second-hand automojunk
Bought Lem's ancient buzzer and took it away.
"There's nothin' about it that ain't to the punk.
'Cept the hoos—that still goes. All the price I can pay
Is twenty-five dollars"—the man laughed his scorn—
"Ten for the auto, fifteen for the horn."
When they towed the old dretchet over the hill,
Mrs. Bogg sighed: "Disappointin'! But still
We've been and we've went and we've tasted some life;
Now we'll git a new hoos."

Lem regarded his wife
With a manish glare that disturbed her tranquility,
A gaze fairly flashing with automobility.

"Looker here, Dnisy,
Have you gone crazy?
D'ye really suppose—has yer brain turned to moss?—
That a man that's smelt gas would return to a hoos?"
Ma's face was sad,
But Katury's was glad.
"Will you get a new car, Pa? I love 'em like mad!"
Pa answered not.
His manner was set.

As he strode to the track of the Boston and Maine
And took a quick trip to the city by train.

CHOOSING a shop with a window display
Of cars built like battleships, frowning
and gray,
Monster road-devils with brass bright
and clean

And engines as big as a thrashin'-machine,
Lemuel gazed at the treasures
With Pleasure's

Light in his eye.
"Though it puts me a heap into debt, I'll
Just bet I'll
Beat Si!"

HE entered the store and explained, "I'll take that one"—
Pointing his thumb at a long, rakish, flat one.
The salesman looked startled and said, "It's some big
Now, here's a twelve-horse-power, two-cylinder gig—"
"Show that to your grandma," sniffed Lem. "As for me,
I'm a reg'lar speedometer, that's what I be.
I'm lookin', by George (and I'm totally riled),
For sixty-six horse-powers, and all of 'em wiled."
The dealer, who needed no more explanation,
Took out the big car for a short demonstration.

Such big, brutal levers!
Such pompous self-starters!
As bright as new beavers
And snappy as garters
The six mighty cylinders noiselessly tore
The speed laws to forty-nine fractions or more.
And Lem, before lunch
Having mastered in full
The buttons to punch
And the handles to pull,

Paid cash for the marvel, and shot like a streak
Along the new turnpike toward Butternut Creek.

NEAR Hipplewhite's store Mr. Constable Dimmit
Arrested him twice for exceeding the limit,
While uarn, hens, and babies, boys, horses, and dogs
Barked, cackled, whistled, "Look comin'! It's Bogg's!
Gosh, how he's bratin' it!

Road? Say, he's ratin' it!
If Death is around, say, he surely is cheatin' it!"
Landscapes and villages seemed to scoot by
Faster than comets devouring the sky.
Lem spurred the road in a manner sublime,
Taking sharp corners one wheel at a time—

When sudden, behold!
What a thrill!
Still and cold
On Ogelvie's Hill
Stood the well-hated auto of Mr. Si Scagg.
The latter as snooty and limp as a rag,
Covered with smudges, disconsolate stood,
Pounding a bolt in the bowels of the hood.
Approaching him, Lem
Soot o' snootered, "Ahem!"
Awful sarcastic,
Semi-bombastic.

SI snapped his teeth like a broken elastic.
"Say, Mister Bogg," and his tone was polite,
"Will y' give me a tow to the shop of Bill Wight?
I've a lout in my feed."
"If it's hrip that y' need."
Quoth Lem, "I'm prepared for a Christian-like deed;
But why—d I could
Put the question so far—
Don't y' got somethin' good
When ye're buyin' a car?"

Si flashed as bright as a pumpkin in hall
As he banged down the hood. He had tasted the gall.

"See here, Mister Hot,
I don't know the make
O' that car that y' got,
But I bet it's a lark,
When I git this here auto tuned up in condition,
I'll trim ye, front, backwards, or any position,
For fun, money, marbles, or nothin'," said Si.

LEM stroked his chin. There was blood in his eye.
"Next Tuesday week at the County Fair Meet
Ther's racin'—a chance to take down yer conceit.
I'll race ye two miles round the Centerville track,
No favors nor handicaps, right from the crack.
For twenty-five cents to the side. Are y' there?"
"I'm with ye," snapped Si, looking devil-may-care.
"Now I'll give ye a tow."

Said Lem, with a low
Sort of comical grin. Grunted Silas: "Not so!
I'm sorry to say, though I'm tellin' ye true,
I'd rather be towed by the divvil than you!"

(TO BE CONTINUED)

Finance

Eliminating the Middleman

By ALBERT W. ATWOOD

THE craze for eliminating middlemen has struck finance as well as other departments of human affairs. Just as, in dealing with food distribution, there is the haziest of ideas as to precisely who the middleman is, so in finance there is no sharply crystallized proposal of reform, only a feeling, more or less backed up by facts, that the distribution of securities to ultimate investors has somehow been an unnecessarily expensive and indirect process.

Possibly there is no room for such spectacular feats in eliminating the finance middleman as similar treatment of his fellow in food distribution has given rise to. Mayor Gaynor selling city bonds from a cart-tail seems highly improbable, even though Mayor Shank of the no mean city of Indianapolis did dispose of bonds from the same vantage-point. Yet, the topic is one that finds its way almost daily into newspaper headlines. "Popular sale of city bonds" is becoming a familiar phrase, almost a slogan. A newspaper sold \$998,400 of city bonds in Baltimore, department stores have sold large amounts in other great cities, and in St. Paul that master builder, James J. Hill, has undertaken in his usual large manner a popular sale of city securities wholly at his own risk.

All these and many similar incidents are perhaps the more superficial and even passing phase of what is really an important movement. Ordinarily the solid and intelligent investor does not care especially how bonds and stocks reach him, provided only they are safe, return a reasonably large interest, and have not been the source of open and scandalously large profits to the broker, or dealer, or middleman who negotiated the purchase.

NOW the question of whether a large, established corporation or municipality can do better with or without close regular and more or less exclusive banking and underwriting connections is a delicate and technical one. The reader will have to be referred to text-books on corporation finance, business organization, and trust development, which are now coming forth in such a flood for consumption in our scores of new schools of commerce and business administration. Abstractly, this is a question for the economists to debate. Business and financial experience does not afford an easy answer to the bald question.

A careful analysis of all the attempts to sell corporation or public securities on a large scale by popular subscription in this country would probably show a heavy percentage of failure. There are numerous good reasons why the bankers' services are of value. Underwriters take great risks in guaranteeing a sale of securities at agreed rates before their market value is known. They provide cash in larger amounts, more quickly, and at more certainly stated intervals than would be the case if popular sales were resorted to. In fact underwriting bankers often lose, and the question of whether in any given instance they are paid too much depends for an answer upon so many delicate factors that an answer is never simple.

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will make you independent.

20 Years to Pay

Rich Canadian land for from \$15 to \$30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy and improve the land.

We Lend You \$2000

for erecting your buildings, fencing, digging well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of \$1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of stock farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

Fort Worth (Texas) Star-Telegram

It is generally known that few, if any, men in the country can show more scars acquired in the war with sin and a thicker breaking out of righteous heat and chronic altruism than the new editor-in-chief of HARPER'S WEEKLY; and naturally plain, plodding people as far away from "Central" as Texas are curious to find out whether Providence has brought Norman into action because a great field of opportunity opens before him, or great and wonderful things are now assured because he has arrived, spit on his hands, and reached for a blundering and hally world's tail. But soon we shall know, soon we shall know; and the killing fever of suspense will pass away.

THE DOCTOR'S GIFT

Food Worth Its Weight in Gold

We usually expect the doctor to put us on some kind of penance and give us bitter medicines.

A Penn. doctor brought a patient something entirely different and the results are truly interesting.

"Two years ago," writes this patient, "I was a frequent victim of acute indigestion and biliousness, being allowed to eat very few things. One day our family doctor brought me a small package, saying he had found something for me to eat."

"He said it was a food called Grape-Nuts and even as its golden color might suggest it was worth its weight in gold. I was sick and tired, trying one thing after another to no avail, but consented to try this new food."

"Well! It surpassed my doctor's foodiest anticipation and every day since then I have blessed the good doctor and the inventor of Grape-Nuts."

"I noticed improvement at once and in a month's time my former spells of indigestion had disappeared. In two months I felt like a new man. My mind was much clearer and keener, my body took on the vitality of youth, and this condition has continued."

"There's a Reason." Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in paper.

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

The University of Chicago

HOME STUDY

In addition to student work, offers also instruction by correspondence.

For detailed information address:

1201 Year B. of C. (St. C) Chicago, Ill.

SO much may be said in defense of our bankers. But the fact remains that corporations pay enormous sums to bankers to dispose of securities that are perfectly safe in themselves to investors who are only too anxious to buy just that class of securities. Why can not the thing be done more directly?

Let us admit also that corporation and city officials have neither the time nor the training to act as brokers. There is still an unexplained remainder—an obstinate feeling that somehow the work is not being done efficiently.

Finance and banking firms are too much of a mystery to small investors. Unscrupulous promoters get \$100,000, 000 of their money each year partly because they know how to make things simple. The legitimate banker's office has too rarefied an atmosphere for the average woman with \$100 to invest. Therefore my first suggestion is that the ability to simplify and popularize, which is so essential to the newspaper or department store of the close-to-the-people type, be incorporated into the investment banking machinery of this country.

"Ah, that is all very well," says the banker, "but we can not make money by selling securities in \$100 or \$200 lots."

It is quite true that most reputable bankers see no way of profiting by "small business." But it is an admission of inability and lack of brains that they can not find a way. Possibly the average merchant would have scoffed at selling goods in five and ten cent amounts a generation ago. But a man named Woolworth had the brains to find a way, make a fortune, and stimulate endless competition.

BUT the education of the small investor will come slowly. No big problem of finance is to be solved overnight by splitting bonds up into \$100 denominations. William A. Prendergast, Controller of New York City, says there is a great educational work yet to be done before our habits become anything like those of the French people toward investment. Small investors of the wiser class will for a long time continue, from habits early acquired, to put their money into savings bank, while those of the more ignorant class will likewise buy worthless stocks. Larger investors will for a long time buy bonds in large amounts after these bonds have come through many banking intermediaries. Underwriting will continue in some form for a good while to come, because corporations must have money and the public will not supply it directly.

But suppose the New Haven directors, instead of waiting for criticism at the special meeting of stockholders, had anticipated it by explaining in detail just why they were paying \$1,675,000 to J. P. Morgan & Co. and associates. Or suppose even now they sent out a circular to every stockholder explaining that step, and showing just what risk the banking firm took, just what special ability is necessary to place the bonds, and just how great integrity and prestige is necessary to form a big underwriting syndicate.

The British Companies Act provides for publicity in these matters, and it works well. The marketing of huge quantities of securities is worth paying well for, and the business would not be injured if the stockholders knew just what services they were paying for and why. If directors explained because they thought it the right thing to do, and not merely because stockholders forced them into it, their work would be smoother and securities would be more valuable.

What They Think of Us

Garet Garrett, the New York Times Analyst.

You are producing a mighty fine weekly. If you can keep it up you will be irresistible.

Meredith Nugent, (Sawtelle, Cal.)

Duringly brilliant, your new HARPER'S WEEKLY has taken its place with the world's very best.

Sagacious (New Orleans, La.)

Mr. Honoré Willis has, in the opening paragraph of his "puff" entitled "Mr. Lane and the Public Domain," demonstrated that Secretary Lane is a violator not only of the divine law, but out of harmony with the leaders in human progress. Mr. Willis wrote of Mr. Lane's office hours and stated: "He works these hours seven days out of the week."

Mr. Lane certainly is a Sabbath violator, and in addition working at a rate that leads to degeneracy—not conservation.

It is just possible that Mr. Willis is mistaken, and judging from his gross stupidity in failing to see, as the Democratic visitor pointed out, that the Secretary of the Interior is making the word "efficiency" serve as a mask for his purpose to retain his fellow Republicans in offices that the American people pronounced them unfit to administer, I am disposed to acquit Mr. Lane for such a flagrant violation.

If you are to retain the standard of Harvey, you must blue-pencil Honoré Willis—or is it possible you prefer to follow the Barnum cue?

James H. Caine in the Asheville (N. C.), Citizen

The marked evidence of new blood and new life is such as to warrant the prediction that HARPER'S WEEKLY will be THE leading weekly publication of its character in the United States.

Care Bernhardt, The Bobbs-Merrill Company, Indianapolis, Ind.

The NEW HARPER'S WEEKLY reminds me forcibly of what Maurice Hewlett says of one of the characters in one of the *house* novels—that he was born fully dressed and ready to go out in society.

Please let me tell you how refreshing and fully charged your summer beverage is!

B. O. Flower, (Boston, Mass.)

I wish to heartily congratulate you on the splendid publication you are making of HARPER'S WEEKLY. You have made it worthy of the old HARPER'S WEEKLY, which performed such an inestimable service to good government in the powerful campaign against Tweed and his Ring.

Your editorials are very fine and precisely what the present demands. I was particularly impressed by your discriminating suggestion on White Slaves in the current issue, as it touches upon something that is very vital to free institutions and popular rights—something that I think, constitutes one of the gravest perils confronting democracy.

E. W. Kemble (New Rochelle, N. Y.)

Congratulations on the new HARPER'S WEEKLY. It certainly is the best thing on the market. Keep up this pace, as you will, and you have a winner.

Mexico and Money

THIRTY-SIX years ago Porfirio Diaz overthrew President Lerdo, and President Hayes refused recognition to the new régime until a constitutional election had been held confirming Diaz in the Presidency. He was popular with American investors for other reasons than the fact that he maintained order. It may well be questioned whether order was not secured at too great a price in the exploitation of natural resources and the alienation of the lands to rich favorites. Madero was always unpopular with American investors. When Huerta conspired with Felix Diaz, whose life Madero had spared, and Madero was overthrown and assassinated, President Wilson refused to recognize a government established by the treachery of a soldier and the assassination of his commander-in-chief. The appeal of the commercial interests through their newspaper organs, and perhaps through Ambassador Wilson, for the recognition of Huerta has been tremendous, but the "steady pressure of moral force" by the Administration against the condonation of treachery and murder has been greater, and will prove overwhelming.

The effect of this upon the Mexican mind will increase with the years. The sacred right of revolution will not degenerate into the license to rebel against constitutional government for the gratification of personal ambition or the desire for loot, when the failure of such a course is foredoomed by the attitude of Mexico's powerful neighbor. Meanwhile, the real grievance of the Mexican people is the ownership by the great landed proprietors of the soil, which the peons till with no prospect of material advantage to themselves. When the French Revolution had ended, there were millions of small farms through division of the confiscated estates of the self-exiled nobility.

Blease

GOVERNOR COLE BLEASE is an anachronism, yet he has been elected Governor twice, and is now a candidate for the United States Senate, with more than fair prospects of success. His strength lies with the remnants of the former Populist party in the rural districts, which Tillman held to the Democracy; with the cotton-factory operatives, who form, with their dependents, perhaps a fourth of the white population, the voting population, of the State; and with the baser elements of the two cities of Columbia and Charleston. The factory population is four times as illiterate as the white citizenry

of the State at large, thanks to the demand for the labor of children of school age, continued for more than a generation, and persisting with almost unabated force. The citizens of the State of Calhoun and Hampton, whom Blease has twice proved to be a minority, have the sympathy of the people of the United States in their task of education.

The Alabama Senatorship

SOME of us remember the Indian Chief of former days who went by the name of "Young-Man-Afraid-of-His-Horse." The Chief Executive of Alabama is a Governor-Afraid-of-His-Legislature. The Legislature of that State meets in regular session but once in four years. A former Legislature enacted a State-wide prohibition law, and later the Prohibitionists attempted to make the statute a part of the Constitution. In this they were defeated, and, in the reaction that followed, Governor O'Neal and a local option legislature came into office, which repealed, by a small majority, the prohibition act.

Now the complexion of the Legislature has been changed to a considerable degree by death and resignation, and special elections must be held to fill the vacancies, if the Legislature is called in extra session. There is no telling what the new Legislature will do in the matter of prohibition and several other things. So, when Senator Johnston died, Governor O'Neal appointed his successor, Representative Clayton, Chairman of the House Judiciary Committee, who recently added to his reputation in the handling of the Archbald impeachment proceedings. It is a nice legal question whether the Seventeenth Amendment to the Constitution allows the Governor to appoint a senator to fill a vacancy, unless empowered anew by the Legislature. It declares, however, that "this amendment shall not be construed to affect the election or term of any Senator chosen before it becomes a valid part of the Constitution."

Senator Johnston was chosen before that amendment was passed, and it is his term that is now to be filled out by another man. If the Alabama Legislature had been called in extra session, it could have authorized the Governor to make the appointment, and in time for the final vote on the tariff bill. Thus did exigencies of State politics help to make the margin of safety in the Senate so uncomfortably close. Oscar Underwood is expected to become a candidate for the full term next year, and if he does run he will be elected.

Necessary?

ATLANTA is one Southern city of considerable size which has declared that prostitution is not a necessary evil. The campaign for the closing of the houses of prostitution was the outcome of the Men and Religion Movement. It began in June, 1912, with a series of powerful and convincing bulletins, published as advertisements in the daily papers, prepared by Marion Jackson, a talented young lawyer of the city, John J. Egan, Chairman of the Executive Committee, financing the work.

The facts were first disclosed by an investigation in which every woman of the under-world was interviewed. The usual objections to the suppression of the houses of prostitution—that women would be scattered elsewhere, the streets would be infested, and the hotels degenerate into houses of assignation—were discounted by the established fact that these supposed results of suppression were already abundantly evident beforehand.

Four months after the publication of these bulletins began, Chief of Police Beavers closed the houses; the women were cared for, many of them gladly leaving their old life, and one of them giving twenty-five hundred dollars toward the establishment of a Martha's Home, where fallen women are taught how to support themselves honestly. State laws and municipal ordinances were found to be sufficient, once public sentiment was aroused, to the support of a courageous official, and it is asserted that the evils supposed to be increased by suppression have actually decreased, with due diligence on the part of the police.

The women voters of the three Pacific States have definitely made up their minds to suppress commercialized prostitution. Such large cities as Seattle, Portland, and Los Angeles have abolished all houses of prostitution, while street-walking has become a perilous profession, and the unsavory hotel a doorway to the police court. San Francisco still has its Barbary Coast, hut, under the new California statutes, it remains only because San Francisco is a law unto itself. There have been numerous prosecutions of rich and powerful men for the crime of "contributing to the delinquency of a minor child." The recall of the Seattle Mayor who helieved in a "wide-open town" was a lasting lesson.

The Minimum Wage

THE minimum wage, which is still being discussed as a theory in the East, some States having appointed commissions for the study of the question, has reached the stage of actual experiment in several of the far Western States. In Portland, Oregon, a strike was called in a fruit-packing factory in July, and fifty of the women workers demanded an increased wage. The I. W. W. immediately accepted the opportunity to organize these workers, picketing the plant and appealing to street audiences to support the strikers in their contention. The Oregon Industrial Welfare Commission, consisting of three members, one of them a woman, was granted extraordinary powers in the regulation of industries in which women or minors are

employed, and had just been organized, beginning its work of investigation in Portland.

Naturally, it turned its attention first to this packing company, and proceeded to examine into the conditions of wages, hours, and sanitation. It found, according to the report of the chairman, Father O'Hara, that many of the women were paid forty and fifty cents a day, and the Commission decided at once that this was less than a living wage in Portland. The orders of the Commission could not be made effective, under the law, in less than sixty days, by which time the work in the factory would be over. But the owners of the plant agreed to put into effect immediately a minimum wage of six dollars a week.

The strike was broken, though the I. W. W. endeavored to prolong it for a while. The Commission will grant personal permits for the employment of individual workers who are partially incapacitated, and will allow them to receive less than the minimum wage. It issued a general order, applying to all the factories and mercantile establishments in Portland that employ women, that hereafter, unless further investigations shall lead to an increase in the minimum, no such establishment shall pay its employees less than six dollars a week. It may as well be accepted that any business employing women and children must be subject to regulation in the interests of the future citizens of the State and the mothers of the race. As Mrs. Florence Kelly recently remarked, "The pay-roll has become public property."

The Effect

IN the meantime, no one need fear that a great army of women will be turned out of employment because their jobs, under the higher wage scale, will be taken by men. The census statistics for 1900 show 4,750,000 women engaged in "gainful occupations," and less than 2,500,000 men not so employed. But, of these last, 861,289 were youths from sixteen to twenty-one years of age, most of them doubtless in educational institutions, and 491,562 were over sixty-five years of age, leaving about a million men between twenty-one and sixty-five to take the places of four and three quarter million women at work. Perhaps we shall get more light on the subject some time before the next census is taken with the publication of the occupation statistics from the census of 1910. But the pathetic plea of the employers of women not to force them out of work by paying them a living wage may be disregarded. Undoubtedly, there will be a tendency for a general increase of wages, under which more women, let us hope, will be forced out of the ranks of the workers because they will be asked to marry men who can support a family.

Single Tax

TO the disciples of Henry George it seems as if that pioneer's views were not being accepted as readily as they ought to be, but to most others it looks as if they were traveling fast. Like many other creative thoughts, the central idea of Mr. George is influencing the world profoundly,

even where it is accepted only as one principle in taxation instead of as the only principle. Progress here and there is constantly observable. Sometimes it is in big changes, and sometimes it is in details, such as, for instance, in the fact that Mr. Pastoriza, known in Houston, Texas, as a single-taxer, was elected Tax Commissioner as a joke. He went a long way, however, toward putting his ideas into effect, and met with such a reception that the practice is starting in many parts of Texas. Mr. Pastoriza is a person of graphic ideas. He put up a sign on two dismal looking vacant lots, stating that the lots cost him, in 1903, \$370, and that he means to hold them until the increase of population has made them worth \$5,000. "This profit I will get instead of the community who created it, and who would have received it in betterments had we the single tax. Read 'Progress and Poverty,' by Henry George." Houston has halved the tax on buildings, and seems as well pleased with the result as Vancouver is with the establishment of similar taxation ideas there. The heavy taxation of unearned increment is a principle that is undeniably sound, and the slowness of its progress represents that conservatism of the human mind which makes it take a long time to move, even when motion is to its unmistakable advantage.

The Tariff on Art

USUALLY, when the tariff on art has been defended, it has been mainly on the ground that the poor American artists ought to be protected from the pauper labor of Europe. Now, however, those who are defending the reactionary clause on art in the tariff bill are emphasizing particularly the point that the necessary burden of taxation should be laid, as far as practical, on the luxuries of the well-to-do. This argument is not so preposterous as the other. The abstract principle under which it endeavors to come is sound; but if we deal with realities, and not with words, this argument is worthless also, although made a little more dangerous by its plausibility. Champagne is one kind of luxury. It does no good to the public and it does no good to the individual. It is a luxury in the ordinary and convenient meaning of that word. Possession of a good painting is not a luxury in any other sense than going to college is a luxury. It certainly is not something that ought to be made difficult and expensive, even if we consider only the effect on the individual possessing it; but in the case of a painting there is a second argument. If it has high value it does not remain long in the home of an individual, but is almost certain to pass into some public museum, where it is seen by everybody. Probably not one person in one hundred, who has done any adequate thinking about art, is in favor of raising revenue by taxing it as seriously as this bill does, any more than he would be in favor of raising revenue by any form of taxation that would cause the importation of fewer foreign books or the production of fewer foreign plays.

On a Desert Island

"IF I were to be cast upon a desert island with a single book," writes some one to a newspaper, "my choice would be the one that Dick-

ens, Kingsley, and Ruskin loved, that Mark Twain dying sought under his pillow—the marvelous Iliad of the Terror, Carlyle's 'French Revolution.' From its pages the attentive reader can reconstruct much of the very wording of the Bible; Homer, Virgil, and Horace sing their verses again; Aristotle and Dante bring Italy before us. The genius of Germany speaks from the lips of Goethe, Musäus, Richter, and Schiller. The humor of the world is echoed by Cervantes, Voltaire, Sterne, Swift, and Irving. The *ipsissima verba* of Milton and Shakespeare appear again and again with magic effect."

It is a game that generally interests people,—this book-on-a-desert-island business,—and naturally, since it tests an important ideal. Our earliest choices would be Shakespeare, the Bible, the Golden Treasury, some first-rate encyclopedia, and the Oxford Dictionary.

Editing for Girls

A VERY delicate question inevitably faces any American publication that wishes to exercise leadership in thought. Either it has to confine itself to topics and treatment which are suitable to all members of the family at any age, and thereby cut itself off from much that is important, or else it has to take for granted that it is written for intelligent adults, and in this case there will be a certain amount of scolding whenever anything is published that is not especially adapted to the immature mind. For our part, we have chosen the second course. We should like to be popular among the fourteen-year-olds, even those of conventional parentage, but we are not willing to give up the entire expression of our thought on all serious matters of the day. Nothing, it need scarcely be said, will be published in this paper that is not entirely moral, but a great deal will be published that is extremely frank.

Is Drama Interesting?

A WELL known author, when the first issue of HARPER'S WEEKLY appeared under its present management, spoke favorably of it, but said that he did not see why a paper intended for the thinking classes should pay much attention to the theater. Our own opinion, however, was not shaken by this view; nor has it been shaken by the view of an intelligent newspaper man in California, who writes that evidently we are going to use too much of the drama, nor yet by the view of an old gentleman who states that he is a grandfather, and declares that the immorality of our art, and of some of our articles, is no doubt due to the fact that we have been acquainted with too many actresses. No; our prejudice, if it be a prejudice, is one that will scarcely be overcome. The drama contains more great works than any other form of literature, and not without a reason. It is also the most popular of the arts, and not without a reason. If, in the United States, it lacks a strong appeal to the reading and thinking classes, it is merely because the drama has not been in the right hands. Our aim, therefore, will not be to neglect it, but to endeavor to encourage what is promising in it.

The Invisible Government at Washington

By A. J. McKELWAY

Soon after Woodrow Wilson came back from Bermuda to consider the questions that would have to come before him after inauguration he met some social workers at the home of a friend in Hoboken, and listened to their suggestions. The suggestion that seemed to strike him most strongly dealt with the way in which the city of Washington is governed. The President-elect immediately stated that that was the kind of trail he liked to follow, and that he would look into it as soon as he got to Washington. The following article is written by the man who made the suggestion.

PRESIDENT WILSON'S recent appointment, as Commissioners of the District of Columbia, of Mr. F. L. Siddons and Mr. Oliver P. Newman is another proof that the old order has changed, and that the period of the exploitation of the National Treasury and of the District resources for selfish ends has terminated—the invisible government has been overthrown.

The citizens of Washington have less to say about the welfare of their city than those of the remotest congressional district, or even the citizens of Alaska or the Philippines. For even Alaska and the Philippines have delegates in Congress, who have a voice, though not a vote, on any subject, including the government of the District. It is the most helpless community of English-speaking people on the face of the earth, and it is now a city of a third of a million souls. Only those who have "influence" have had any voice in the government, and this has meant what Carlyle designates the base of all aristocracies, the Aristocracy of the Money-bags.

THE District of Columbia was established by acts of Congress, approved July 16, 1790, and March 3, 1791, to give effect to a clause in the eighth section of the first article of the Constitution of the United States, giving Congress the power "to exercise exclusive legislation in all cases whatsoever over such District (not exceeding ten miles square) as may, by cession of particular States and the acceptance of Congress, become the seat of the Government of the United States."

Congress is therefore the legislature of the District, with a Committee on the District of Columbia in each House. It has delegated in a general way to the Board of Commissioners jurisdiction covering the ordinary features of municipal government, and has by specific laws empowered them to make building and plumbing regulation, and to make and enforce the reasonable and usual police regulations for the protection of lives, limbs, health, comfort, and quiet of all persons, and the protection of property. Yet, it required an Act of Congress, the other day, to provide for the Woman Suffrage Parade, and the failure of the police to preserve order had to be investigated by a committee of the Senate.

The three Commissioners are appointed by the President, two of them to be confirmed by the Senate, the third being an army engineer detailed for this service. The President also appoints the Judiciary of the District, consisting of the Court of Appeals, the Supreme Court, the Police Court, the Municipal Court, and the Juvenile Court.

The Supreme Court of the District appoints the Board of Education, for the ostensible purpose of having the schools divorced from politics. The Board of Education is thus independent of the Board of Commissioners, and the conflict between the two boards in the matter of estimates for the schools has been a demoralizing influence. The President also appoints the Board of Charities, for whose intelligent supervision of the public institutions of the District too much can not be said, though they have protested in vain, in the face of much adverse criticism, against the continued subsidizing of private and sectarian institutions. The Board of Commissioners appoint the various Departments of Health, Fire, Police, etc., and when a vacancy occurs, though few die and none ever resign, they appoint the members of the Assessment Department, consisting of the Assessor and the Board of Assistant Assessors, who virtually have a life tenure of

office, being removable only for neglect of duty, malfeasance in office, or inefficiency.

And this brings us to the first count in the indictment that there is the control of taxation for favored interests.

THE House Committee of the District of Columbia for the past two years, of which honest Ben Johnson of Kentucky was chairman, appointed a sub-committee, of which Representative Henry George of New York was chairman, and of which William C. Redfield, now Secretary of Commerce, was a member. That sub-committee was authorized to inquire into the question of assessment and taxation in the District. The Hearings and the Report are public documents (Report No. 1215, 62d Congress, 2d session). The Report gives the conclusions of fallible men. But the Hearings are the sworn testimony of Commissioner Rudolph, who was reappointed to office by President Taft, to serve for three years of President Wilson's term, the appointment being held up by the Senate; of Assessor Richards and one of his assistants; of Charles C. Glover, president of the Riggs National Bank, and Edward J. Stellwagen, president of the Union Trust Company, two of the largest holders of suburban real estate; of Herbert J. Browne, who, under the direction of the George Committee, made an exhaustive investigation of the question of assessment and taxation; and of various citizens representing the "40,000 small homes" of the District. The admissions and statements under oath of some of these witnesses are startling.

With regard to the life tenure of the assessors, the curious fact was brought out, in the testimony of Commissioner Rudolph, that the term of office of the assessors was four years previous to 1902, when an Act of Congress gave them a life tenure "to remove the incumbents from all outside influence," as Commissioner Rudolph suggested, who thought that life tenure was an excellent thing in this case. In the same year the law was passed requiring that real estate should be assessed at not less than two thirds its real value, previous to that time it having been assessed at its "real value"; but the "real value" having been interpreted to mean what it would bring "under the hammer on a rainy day," to use Assessor Richards' naive expression. Assessor Richards also brought out the fact that in 1894 the twelve assessors—who were none too many, even considering that assessments are made triennially instead of annually, the effect of which is "to favor more particularly those who have the larger areas and the more valuable land in the center of the District," as Commissioner Rudolph frankly testified—were reduced to three. These three assessors, known as the Dawson Board, increased the assessments for the year 1904. This "occasional new legislation. It caused the people to be dissatisfied, and the new board that came in on account of the dissatisfaction made a decrease in the following assessments, instead of an increase," said Mr. Richards.

Mr. George. Would you say Mr. Dawson and his associates were legislated out of office?

Mr. Richards. They were. None of them was reappointed.

Then, by 1902, there evidently being no more "dissatisfaction," the assessors, being evidently the "right" men, were given a life tenure. And it would require court proceedings to oust any of them from office, if the Commissioners should so desire. The assessors had also been taught their lesson not to assess too high the property of men who might have influence.

THE testimony shows that the Assessor in 1910 forecast an increase of \$30,000,000 in the assessment of ground values, while the actual increase amounted to only \$18,000,000. But there was an increase of \$12,000,000 in the assessment of improvements, "falling almost entirely upon the 40,000 small homes of the District." It was also proved that when condemnation of land for public purposes was forecast, assessments were raised, in one instance seventy-four per cent, falling only five per cent below the condemnation awards. One man who had painted his porch had his assessment raised \$500 on his "improvements," while Mr. Stellwagen insisted that the New Willard Hotel ought not to be assessed at what it cost to build it ten years ago, on account of the depreciation in its value. Yet the Shoreham Hotel, which since has been remodeled throughout, had the assessment raised on the building, which was twenty-five years old, fifty per cent, on account of an offer by Mr. John R. McLean, of the *Washington Post*, of \$800,000 or more for the property, since an increase in the assessment on the land would have logically compelled an increase for all the rest of that square, which is owned by Mr. John R. McLean. Newspaper proprietors also have "influence" in the right quarters. According to the testimony of the expert, Mr. Herbert J. Browne, Mr. McLean's suburban home, "Friendship," on Wisconsin Avenue, consisting of 76.92 acres, is assessed at \$3,500 an acre, while the property on the other side of the avenue is assessed \$8,700 to \$15,000 an acre, and is held and sold at prices ranging from \$15,000 to \$40,000 an acre. The "improvements" on Mr. McLean's property, including his residence, are assessed at \$25,000, when "twenty-five thousand dollars will not pay for the stone wall which runs in front of the property."

Now for the contrast. Square 466, between E and F and Sixth and Seventh streets, Southwest, was assessed at an increase of 25.46 per cent, 29 houses assessed \$37,700 in 1908-9, and \$47,500 in 1911-12.

Mr. George. No new buildings?

Mr. Richards. No new buildings.

Mr. George. No improvements?

Mr. McKenzie. No improvements.

Mr. George. Nothing assessed this time that was not assessed before?

Mr. McKenzie. No.

According to the testimony of Mr. Harold E. Doyle, some of the land values in the fine residence area are as follows:

The Senator Clark property, true value, \$15 a square foot, assessed \$4.85; the Kean House, true value, \$26 a square foot, assessed \$4; the Portland Apartments, true value, \$30 a square foot, assessed \$4.

EVERYBODY in the country knows Gifford Pinchot, what he stands for in public life. Consider this letter from him:

Grey Towers,

Milford, Pike County, Pa., July 14, 1914.

HON. HENRY GEORGE,

United States House of Representatives,

Washington, D. C.

My dear Mr. George:

Your committee, I learn, has developed the fact that many small owners of property in the District of Columbia are taxed on an assessed valuation far greater than the two thirds of the real value provided for by law, while many of the large owners of property are taxed on very much less than the two thirds provided by law. In this way the poorer men are taxed most heavily, and those who are richest pay least in proportion. I am told this is generally true in the District.

When these facts came to my knowledge they led me to investigate the assessment of my own property, to which I had hitherto given no attention. Accordingly, I asked two well known real estate men to estimate the value of the land and improvements on which I am taxed. Their estimate leads me to believe that I have been taxed on a valuation about \$40,000 too low. In other words, at the current rate of taxation, the assessor has not assessed against me about \$600 of yearly taxes that I ought to have paid, and has assessed that amount on others less able to pay it. This is unjust. Therefore, I put

the facts in your hands for such use as you see fit to make of them.

Yours sincerely,

GIFFORD PINCHOT.

To make up the under-assessment of \$43,000 on Mr. Pinchot's house alone, the assessment on 203 small houses, mostly old, was raised from \$183,500 in 1911 to \$226,500 in 1912.

As to the control of credit, the encouragement of investments within the speculative suburban area, and their discouragement in other districts, take the following illustration:

Mr. Donohoe. The best evidence of that is in the estate of the late John E. Herrell, who was president of the National Capitol Bank, and the biggest financial man in this section of the city. He understood values on Capitol Hill better than anybody. I could go to Mr. Herrell and get a loan on real estate quicker than I could from any one else in Washington. He has since died, and the American Security and Trust Company, one of the largest financial institutions in Washington, have charge of his estate. In every instance where a trust is coming due on property in this section of the city, they are either demanding a curtailment of the trust or making the borrower take it up. In other words, they have not as good an opinion of East Washington as Mr. Herrell had, and when protecting his interests they either take that loan up or curtail it.

Mr. George. That is, they either shrink their credit or withdraw it entirely?

Mr. Donohoe. That is the idea, and Mr. Herrell was considered a very conservative man with his loans.

THE usual interlocking of directorates is found among the banks and trust companies of the city. The president of the Riggs National Bank, Mr. Charles C. Glover, was formerly vice-president of the National Savings and Trust Company and is a large stockholder of the American Securities and Trust Company, of which Mr. Charles J. Bell is president. Two of the directors of the Riggs National are also directors of the American Security and Trust Company. The president of the Union Trust Company, Mr. Edward J. Stellwagen, is also the president of the Thomas J. Fisher Real Estate Company, and is president of the company that owns the Raleigh Hotel and leases the New Willard Hotel. Two directors of the American Securities Company are directors of the National Metropolitan Bank of Washington, a director of the National Metropolitan Bank is also a director of the National Savings and Trust Company, and so on. There is the same general evidence of the control of credit in Washington as in New York City.

And as to the control of the direction of improvements by the government, a glance at the maps of real estate holdings in the Northwestern suburban region, toward Chevy Chase, or along the line of the Massachusetts Avenue Extension, is sufficient to demonstrate the point made. Large fortunes have been easily made, through a more or less intelligent surmise as to the direction these governmental improvements would take, while the taxes on the speculative area were kept down to a pleasingly low figure, the helpless poor were overtaxed, and for every dollar raised by taxation on real or personal property in the District another dollar was paid out of the National Treasury, to be appropriated at the will of Congress, under the persuasion of the complacent District committees of past years. The situation is not unlike that by which John D. Rockefeller, in former days, not only received a rebate on his oil shipments from the railroads, but was paid a rebate on the shipments of his business rivals, who, of course, could not remain rivals very long under that system.

In brief, the counts in the indictment are sustained amply by documentary evidence, largely consisting of the sworn admissions of the defendants.

And here is the ultimate result in terms of human life, according to a report on housing conditions of the public-spirited Monday Evening Club:

There are in Washington 258 blocks which have inhabited alleys. These alleys contain 3,148 dwelling houses, and approximately 16,000 inhabitants. . . . The two startling facts which

should years ago have swept these alleys out of existence are, first, that one out of every three children born in these byways dies within the first year of life; and, second, that these houses with their disease and crime fill the center of many blocks rimmed with splendid houses and hotels.

And here comes to mind a prophecy of the lamented Tom Johnson of Cleveland, when he was a member of Congress in 1892, and deeply interested in the welfare of the District. He said:

Already the effect of the growth and improvement of the Federal District has been, by the increase of land values, to give hundreds of millions to the fortunate few, but to increase the cost of living to such a degree as to make it a serious question with many of the officers and employees of the national government who are called on to live here; and if this tendency continues, not only will the salaries paid to employees of the United States soon become entirely inadequate to the scale of living for which they are intended, but the capital of the American Republic must ere long present such a contrast between luxurious idleness and poverty-stricken workers as can be exceeded in no capital of confessedly aristocratic countries.

And a short speech by Chairman Ben Johnson of the District Committee of the last House is much to the point. On the question of the improvement of certain real estate by the government he said:

The argument was made that this farm should be cut up so that the poorer classes could have homes. I say it ought to be, but it ought to be cut up and sold to these people before it is improved at government expense. When it is cut up, and the government has completed the macadamized roads and pavements through it, then the land shark comes in and sells it to these poor people, not for the reasonable price he should have asked them for it before the government money was put into it, but he adds the government money to the extortionate price he asks for the land, and then sells it to the poor people of this community who seek homes.

Through one means or another, the efficiency of the public service will be maintained when this great army of public servants, numbering 40,000, may have comfortable homes at reasonable prices, be cheaply served by public utilities, have model schools for their children running up from the kindergarten to a real municipal university, for which there is a greater need than for a national university, for whom the cost of living shall be reduced as far as government regulation can secure that end, and for whose declining years some means of workmen's pensions should be devised. With the gradual abolition of the spoils system and the projected reforms of the civil service, these employees of the government should become more and more filled with zeal for the public service, and should be correspondingly held in honor by the nation whom they serve.

Washington is also the home of those who serve these public servants, professional men, business men, and men who labor with their hands. They will share, of course, in all that is done for the city by the nation, but the provision for their comfort and happiness is more a municipal than a national function.

And, lastly, Washington is the home of those who have chosen to live in this city because of its educational and social advantages, who have erected many of the beautiful homes of the District and are welcome as residents. The point is simply made that Washington does not exist chiefly for them, as might be supposed when any voice is lifted for equitable taxation, deemed a discouragement to investment on the part of this class of our citizens.

DURING that period of the District's history when there was a considerable measure of self-government granted to it by Congress, Washington passed through the experience of most American cities, an era of graft, incompetency, and the piling up of public debt. In 1878, what is known as the Organic Act was passed by Congress, that Holy of Holies which must not be touched by profane hands, the mere mention of which sends the cold shivers down the backs of the large property-owners of the District and drives certain newspapers into hysterical spasms. It is also known as the half-and-half sys-

tem. The Act, in brief, provides that the taxes collected in the District are to be paid into the United States Treasury, all appropriations to be made by Congress, and Congress to appropriate out of the National Treasury, for the ordinary expense of the District, an amount equal to half the approved estimates of expenditure, which has been interpreted to mean as much as is raised in the District. It has already been indicated that this system tends to make graft easy and fashionable. Perhaps a still worse effect is the tendency to make of the citizens of the District a community of mendicants.

The system works badly from either direction. There is a tendency to keep down the taxable resources of the District. The rate is "\$1.50 on the \$100, on not less than two thirds the value of real estate," and on the full value of personal property. There is no inheritance tax, and of course no income tax. There is not, as for most city residents, a State and county tax. With an estimated budget of about \$12,000,000, the District taxes must be kept down to \$6,000,000. So, according to the report of the George Sub-Committee, \$400,000,000 worth of real estate does not pay any tax.

On the other hand, Congress often denies to the District what it sorely needs and officially asks for, such as a hospital for the indigent sick, now confined in the Washington Asylum and Jail under one superintendent; makes no adequate provision for the feeble-minded; refuses to authorize the building of a reformatory for white girls, or a Detention Home for the Juvenile Court; cripples all the group of institutions for children by inadequate appropriations; and, in general, scrutinizes severely the estimates for the District, on the ground that half the money is to come out of the National Treasury, while inflicting upon the District appropriations that are not needed, half of which must be raised by local taxation. It has granted subsidies amounting to a million dollars in ten years to private and sectarian institutions. Here is an intolerable situation for free Americans who have no axes of their own to grind.

WHAT is the remedy? First, there should be equitable taxation. Considering the appropriations from the National Treasury, there might be an exemption of taxes on homes costing not more than \$2,000, many of them belonging to the nation's servants. Beyond that, real estate should be taxed at its full value, just as personal property is taxed. The addition of tax resources on \$400,000,000 of real estate, now dodging taxation, will give ample revenues for all legitimate purposes, and will prevent the indefinite holding of suburban tracts for speculation purposes. Then let the half-and-half system be abolished, and let a generous nation, mindful of the fact that this is the national capital and the home of its public servants, fix a just sum, on a just basis of taxation on the estimated value of the government property of the District, to be paid to the District. Let the rate of taxation on private property be fixed according to the needs of the District, fairly estimated. Then, let there be drawn some line of demarcation between national and municipal functions, and let a free people, more than ordinarily intelligent, elect their own public servants, and hold them responsible for the government of the District so far as municipal functions are concerned, while the nation keeps up its own buildings and parks and the streets, the national highways. Congress might at least establish a territorial government for the District, holding the veto power over legislation by the municipal authorities.

A long step was taken in the right direction in the closing hours of the last Congress, when the Commissioners were empowered to act as a Board of Public Utilities, to control for the first time the public service corporations; and when a new excise board was provided, instead of the Board of Assessors acting as the Excise Board. The new administration and the new Congress and the new Commissioners, with President Wilson as the Lord High Mayor of Washington and Congress still its Board of Aldermen, have an unexampled opportunity to give freedom to this American community, and to do generously by it at the same time.

THE PARCEL POSTMAN: "GO AHEAD—SAY SOMETHING. EVERYBODY DOES"

BY STUART DAVIS

Orators Who Have Influenced Me

By T. P. O'CONNOR, M. P.

HENRY WARD BEECHER

I SAW him but a few times; and yet I feel as if I had known him all my life. Never was there a more transparent nature; you could look into his eyes, and find them at once the windows of his soul. They were great big open eyes, looking out at you with bracing sweetness, and ready to reflect every emotion, as in a mirror. They had at once defiance and infinite tenderness, as this little story will demonstrate. As everybody knows, Henry Ward Beecher was one of the first, one of the boldest, one of the most merciless assailants of slavery.

At Liverpool he confronted his first meeting; howls and missiles met him; but he fought on; in the end he gained a hearing and carried the meeting, as he put it himself, American style. "I whipped them," meaning the pro-slavery mob.

This was the daring side of the man. Here is an example of the tenderness. Thomas Nelson Page is a well known Southern writer, who has gained fame as a painter of the life of his people in Virginia before the War—idealized, of course, and yet true in essentials; and the first story that won him universal fame, described the courting of two fine young Southern people; then the tiff; then the separation through the War; and the death of the lover; and the ineffable grief of the desolate girl. It was a favorite story with Beecher—in spite of its idealization. In the story the narrator is a faithful old negro who loves his masters and met with nothing but affection from them. In spite of his fierce past as one who, with his sister, Harriet Beecher Stowe, did more than any two individuals to drag down slavery, Beecher loved the story, and would insist on its being read to him; and went copiously as the tragedy unfolded itself in that old dead-and-gone South which still practised slavery.

GOOD WILL to all the world, tenderness, forgiveness, the desire to lead them to simpler faith, and to preach religion, not as dread and terrorizing and people with dreadful specters, but as hopeful, cheerful, and bracing—these were the keynote of his character and of his gospel. Of his tenderness, here is a beautiful example. It will be remembered that he was involved, through a hysterical woman, in an odious scandal; that for six long months the terrible ordeal dragged itself through the courts, with miles of newspaper reports, and Beecher all the time standing on the brink of the abyss of ruin. Yet, when it was all over and Beecher once more ventured, in some fear and trembling, to stand on the lecture platform, he said after the lecture was over to Major

Henry Ward Beecher and his wife

Pond, his agent, as he handed him the £100 fee, "You know to whom I wish that to be given." It was to the pitiful woman who had caused him such untold suffering and so nearly blasted his career.

I heard Beecher altogether but two or three times; but even that experience was sufficient to give me some idea of the marvelous power of the man. One fact alone will bring out a unique distinction. For quite fifty years he preached at least once and often twice a week; every sermon of his was reported verbatim, and published to all the world; and yet he was able always to go on, never repeating himself, always fresh, always vivid; always with some new thought that remained imperishable in the souls of those who heard or read it. This is an achievement that has never, I believe, been equaled in the history of any preacher who ever lived.

His oratory, as all oratory, was largely helped by his physique. He was an extraordinarily impressive figure; but it was the impressiveness of the new world rather than of the old. I saw him and Gladstone on the same platform at Liverpool once; and nothing could be more remarkable than the contrast between the two men; you might feel as if they embodied in their splendid persons the finest manhood of England and of America. Everybody knows how noble was the presence of Gladstone—with the massive head, the regular and massive features, the piercing black eyes brought into greater relief by the ivory pallor of the skin, and the splendid proportions of

chest and limbs. This face and figure bore in their every line the stamp of old England; with its generations of education, tranquil civilization, and training in ancient universities. Beecher was even more robust in appearance than Gladstone. The shoulders were broader, the chest deeper, the height greater; but there was the ruggedness in it all of the primeval forest; and the clean-shaven bronzed face, with the massive jaw, the broad brow, and the long straight hair, suggested the young, new, vigorous world that had not yet completed the bitter struggle between man and nature.

The first time I heard Beecher speak was at the City Temple. Joseph Parker was then the head of that communion; himself a striking figure, with his strong rough-brown face, his mass of strong upstanding hair, and his brawny shoulders. There could not have been amore appropriate setting for Beecher, and the gospel that Beecher preached. There were wide differences of religious points of view between Parker and Beecher; for, with all his daring imagery, Parker remained steadily conservative in his theology—unlike the brilliant and daring young revolutionaries who had succeeded to his pulpit. But in this the two men were alike: their religion was essentially a religion of cheerfulness. They absolutely declined to make even their house of God gloomy and formal. And thus this service began after a fashion to me strange and at first even a little surprising; for Dr. Parker uttered a few words of welcome and greeting, and interspersed them with a joke or two at which the congregation laughed heartily, universally, with no shamefacedness as of desecrating the temple and the day and the occasion.

BEECHER, like a great many other men of strong and original and imaginative minds, had no memory for words. He never could get off a verse of poetry by heart; and even though, of course, he knew his Bible well, he knew none of it by heart; and even his texts he had to have before him in the Bible on the desk of his pulpit. And so it was on this day. He read out from the Bible the words, "And the greatest of these is love." It is an old text on which, I dare say, millions of sermons have been preached; and yet this wonderful man was able to give to it an entirely new setting. You might have felt that you were hearing it for the first time, so strange and so new and so impressive was the meaning that Beecher was able to read into it.

One passage in particular I can vividly recall, though I do not profess to give it verbatim; but it was something like this: Beecher wished to bring out the text as

the cornerstone of Christian morality, and as supreme above all other things in that gospel. And this is how he worked it out this day. He gave a picture of a young theological student standing his examination for admission into the Christian ministry. The student, shivering and submissive, is brought before the harsh examiner of each different sect in turn. I should say that Beecher not only spoke the scenes but acted them. When he was putting the question, he assumed the gruff tone and the domineering air of the examiner; when he gave the response of the student, he did it in a quaking and submissive tone that excited shouts of laughter.

"Do you believe in the Thirty-nine Articles?" asks the first examiner. "I do," bleats out the student. "Do you believe in the Westminster Confession?" asks the next examiner. "I do," bleats out the poor student again. And when he had gone through several of the formularies of the different creeds, he used a daring Americanism: "By this time the student begins to sweat," which, somehow or other, did not sound coarse from his lips; as a matter of fact, Americans use the old English word more freely than we do. And then he started again. "Do you believe this? Do you believe that?" Finally, with a rush, and in deep, thrilling tones: "But never

is he asked, 'Do you believe the greatest of these is love?'" I never can forget the feeling of awe and wonder with which I saw this man thus in a sentence summarize and realize and make intelligible his own consistent gospel, that in Christianity the true Christian looks more for the harmonies than the discords of religious feeling, and puts as the highest lesson the gospel of love.

There were one or two other things in the sermon that I can recall, though not so vividly. One of these strong impressions is of the way he spoke of a public man as "bought." In that single word "bought" he managed to convey such a wealth of meaning that you could see his soul rising and getting his whole nation to rise against that corruption which was then so terrible a feature of the life of so many cities in America.

JUST as to Gladstone, Bright, and Chamberlain, I ascribe a large part of the marvelous success of Beecher's oratory to his voice and to his elocution. I have heard Gladstone devastate a whole powerful argument and successful speech by his pronunciation of a word or two. For instance, once, after Mr. Goschen had made a speech of effective criticism, in which, however, he several times referred to his "conscience" as disabling him from supporting Gladstone, that doughty de-

hater replied, referring to his "Right honorable friend's ungovernable conscience." And he spoke these words with a deep note of concentrated mockery which made the whole House, including Mr. Goschen, ring with laughter. Similarly, Bright carried a bill for marriage with a deceased wife's sister by asking the House if anybody regarded the children of such marriages as "bastards"; and the word was used with such perfection of tone that it thrilled and convinced the whole House. And so it was with Beecher. His voice was so powerful, his elocution so perfect, that he also could pack a whole argument into a single word.

I heard Beecher in a different atmosphere. He made a large income yearly on the lecture platform in his own country, and when he went to England he was taken up by a lecture agency. I heard one of the lectures at Exeter Hall, if I remember rightly. It had his flashes of eloquence; his wit; as when he described two parents discussing what they should do with their sons, and deciding that, as one of them was rather dull-witted, he should go into the ministry. But it lacked the inspiration of the sermon. In truth, Beecher was an apostle, not a lecturer; it was only when he stood in the pulpit and dealt with the eternal things of the spirit that he was his real and his best self.

Henry Ward Beecher

*The orator whose centennial is about to be celebrated—
Anecdotes by the organist of Plymouth Church*

By H. S. MILLIGAN

"IF it hadn't been for Henry Ward Beecher," said Abraham Lincoln at the close of the Civil War, when he invited the great preacher to deliver the address at the raising of the flag over Fort Sumter, "if it hadn't been for Henry Ward Beecher, there would be no flag to raise."

The centennial of the birth of the greatest pulpit orator of his day, whose influence upon his generation, both spiritually and politically, was almost incalculable, will be celebrated in October of this year. The thousands of visitors annually to the church that made famous, Plymouth Church, in the Borough of Brooklyn, New York, bear testimony to the still potent influence of his life and work. Oliver Wendell Holmes said of him: "He was as genuine an American as ever walked through a field of Indian corn. He had not the fine fiber of the scholastic thoroughbred, but he had the hearty manhood of Lincoln."

LIKE Lincoln, too, his sense of humor was keen and typically American. Once, on a visit to Buffalo, where he was to lecture, he entered a barber shop to be shaved. The barber, during the course of the operation, not recognizing his distinguished customer, asked him if he intended to hear Mr. Beecher lecture that night. He replied, languidly, that he thought perhaps he would. "Perhaps you will!" said the barber. "Why, that's no way to talk about Henry Ward Beecher. Don't you know that at nine o'clock this morning nearly all the tickets were sold, and if you expect to hear him at all you'll have to stand up?" "Now,

isn't that just my luck," said Mr. Beecher. "I always have to stand up!"

The story of Plymouth Church during its early years is the history of the times themselves. The war with Mexico was at its height when the church was organized. The following years were those during which the slavery question occupied the center of attention and slowly approached its inevitable conclusion. "The irrepressible conflict," the Civil War. Henry Ward Beecher threw himself into the discussions of the times with all the ardor and force of his nature. Every Sunday morning found Plymouth Church crowded to the doors, and Mr. Beecher's discourses were listened to by audiences that were profoundly moved by his extraordinary power. One Sunday morning, after concluding his sermon, he announced that he wished to present a certain matter for the consideration of the congregation.

There was a moment of surprised silence. No one had the least idea what he was about to do.

Then he said: "Sarah, come up here." Whereupon a little mulatto girl ascended the pulpit steps and stood beside him. Taking her hand, he turned to the people and continued:

"This little girl is a slave, and I have promised her owner twelve hundred dollars, his price for her, or she will be returned to slavery. Pass the basket."

The congregation of nearly three thousand people quickly made up the necessary amount, many contributing their jewelry and watches, and Sarah's freedom was announced amid thunders of ap-

plause. Many people at the time condemned this action as an acknowledgment of the right of a slave-owner to receive remuneration for a slave; but Mr. Beecher pursued his own course, regardless of criticism. It was no secret that some of the men of Plymouth Church knew a good deal about the Underground Railway.

After the war Mr. Beecher continually advocated that the North should do nothing to impair the self-respect of the South, that suffrage for the negro should be left to wait upon the processes of education, and that the South should not be treated as a heathen country to which missionaries should be sent, but as a part of our country to which aid should be given by the more prosperous section.

MR. BEECHER was in Connecticut on a lecturing tour when the tidings came North of the bombardment of Fort Sumter. The attendance at his lectures was very small because of the fear of riots, and, abandoning the tour, he returned home to Brooklyn. In the meantime, his eldest son had given up his position in business and enlisted in the army that was being recruited. Mrs. Beecher, fearing that her son might enlist, secured his promise not to leave the house until his father's return, a promise which he gave readily, as he had, unknown to her, already enlisted. On Mr. Beecher's reaching his own house, the first words of greeting from his son were: "Father, may I enlist?" "If you don't," was the prompt answer. "I'll drown you!"

The following day was Sunday. Mr.

Beecher preached from the text, "Speak to the children of Israel, that they go forward." The sermon was a careful review of the condition of affairs and a sober counting of the cost of both advance and retreat. He said: "Peace can be had by two thirds of the nation yielding to one third; by legalizing the right of any discontented community to rebel; by changing our charter of universal freedom into a charter of deliberate oppression; by becoming partners in slavery and ratifying this gigantic evil; by surrendering all right of discussion, of debate or criticism. On these terms we may have peace. So far as I myself am concerned, I abhor peace on any such grounds. Give me war, redder than blood and fiercer than fire, if this terrible affliction is necessary, that I may maintain my faith in God, in human liberty, my faith of the fathers in the instruments of liberty, my faith in this land as the appointed abode and chosen refuge of liberty for all the earth. War is terrible, but that abays of ignominy is more terrible!"

In the first months of the war the Beecher house on Columbia Heights became almost a military storehouse; Plymouth Church became a rendezvous for regiments passing to the front, and the church parlors a workshop where the women of the church, under the direction of Mrs. Beecher, met daily to sew and knit and pack for the soldiers. Mr. Beecher, after helping to fit out two regiments, took upon himself the burden of entirely equipping one, called the Long Island Volunteers, afterward the Sixty-seventh of New York. His oldest son joined it and became a lieutenant.

Mr. Beecher never worried about the welfare of his many kindred and friends at the front during those terrible days.

He said: "My oldest son is in the army. Shall I read with trembling anxiety the account of every battle to see if he is slain? I gave him to the Lord, and shall not take him back, and I will not worry and fret myself about him."

MR. BEECHER'S manner in the pulpit or on the lecture platform was absolutely simple, yet it was the simplicity that is profundity. The supreme ease with which he spoke, even to audiences obviously unfriendly, was a source of amazement to other orators. At the beginning of his address his speaking was

so quiet, so colloquial, so free from the usual artifice of the orator, that it almost invariably produced a feeling of disappointment. He seemed almost to be speaking to himself, apparently indifferent as to whether his audience thought well or ill of him. Once, during an address in England, a voice called out: "Can't hear!" "I never intended you to hear that," retorted Mr. Beecher, and calmly pursued the course of his argument.

In the midst of the calm flow of his speech, he would sometimes utter a statement so startling or an epigram so piquant that his audience would be shocked into close attention. In a short time he would win them so completely that often the conclusion of his address was the occasion for a scene of frantic excitement. This was a new kind of oratory. The eloquence of the great speakers of that day was artificial in form, built up of highly wrought rhetoric by a process of laborious elaboration. Mr. Beecher was a man who thought clearly, who felt deeply, and who spoke out of his heart in honest vernacular.

He did many unconventional things in the pulpit which brought down upon him much harsh criticism from those who held strict ideas on ministerial dignity. One Sunday morning, on his way to church, he was recognized by a group of small boys playing in the street, who shouted after him: "Henry Ward Beecher—he's a great screamer!" "Henry Ward Beecher—he's a great screamer!" This amused Mr. Beecher so much that he told the story to his congregation a few minutes later.

THE Sunday-school room of Plymouth Church contained a fountain in the center, with gold and silver fish swimming about among the moss-covered rocks. Around three sides of the room were galleries for primary scholars, Bible classes, and visitors. Under the galleries were hung flower-baskets and bird-cages.

In those days it was not the custom to have flowers in church, as it is now. One morning, before church, Mr. Beecher was presented with a bouquet, which he put in a glass of water and took into the pulpit with him, to the scandalizing of many of his strait-laced parishioners. There was a perfect storm of criticism and discussion. Mr. Beecher's action found many sympathizers and defenders, and he stuck to his guns and instituted the custom of having

flowers in the pulpit. This love of flowers and of all growing things was one of his most prominent characteristics. During his college days he took long rambles over the countryside. Many years after leaving college he said: "I owe more to what God has done for Amherst than for anything he ever did for me."

TOWARD the close of Mr. Beecher's life, the theological world, as well as other forms of intellectual life, was thoroughly disturbed by the publication of Darwin's "Origin of Species," and the promulgation of what is now known as the Darwinian theory.

He was one of the first preachers to defend the new doctrines. For a man thus to change his whole method of thought and belief at the age of seventy is almost unique. Shortly after this a son of Mr. Darwin was visiting in this country and attended a service at Plymouth Church. His friends were anxious for him to meet Mr. Beecher. At first he demurred, saying that all preachers hated his father; but finally, at the close of the service, he was prevailed upon to go forward to where Mr. Beecher was receiving his friends. When he learned who the young man was, Mr. Beecher seized him by both hands, and asked him to tell his father, on his return home, that Darwin had done more for him than any other one man who had ever lived.

Mr. Beecher once read a book of a philosophical nature by a French writer of considerable prominence. It seemed to him that the natural conclusion of the line of thought of the writer would be complete atheism, although such a conclusion was nowhere stated in the book. Being abroad shortly afterward, Mr. Beecher took occasion to hunt up the author and converse with him. Asked if the inevitable result of his logic was not absolute atheism, the author refused to admit that he was willing to come before the world in such a light. Mr. Beecher was much disappointed, saying that he had always wanted to meet a real, conscientious atheist and hold an argument with him on the subject, but he had never been able to find one.

Once, speaking of death, Mr. Beecher said that he would like to go out of life suddenly, like a cannon-ball shot out of a cannon. He died very peacefully in March, 1887, after an illness lasting only a few days.

Plymouth Church

The Newest Theater

By J. M. HOWELLS

WHILE such words as *Cubists*, *Ensembles*, and *Post-Impressionists* are just now popular enough with every one, they seem to have been adopted by the American newspapers with a passion of affection, especially since the very remarkable exhibition of latter-day art in New York last winter.

These words are applied to those interpreters of art who think it right to give a picture of the impression made upon them by a given object, rather than a picture of that object itself.

This tendency has been a steady development in painting ever since Monet was considered extreme, and before that. In architecture, and in the arts of decoration, of furniture design, of textiles, glass, and such matters, this same influence became very widespread a few years ago, and was generally called *art nouveau*, from the French, or *secessionist*, from the German.

UNTIL lately this movement, in painting and the other arts, has reached the public only through the Salon of the Independents, in Paris, and through small exhibitions. It has not been taken seriously by the great exhibitions or by established schools of art.

That it has, however, taken a new step toward public tolerance is shown by the fact that the astonishing new theater, or opera,—for such it really is,—in Paris has been intrusted from the ground up to a group of architects, sculptors, and painters wholly made up of men of these modern tendencies, without one man of the old school among them.

This theater, whose official name is *Théâtre des Champs Elysées*, has already been dubbed so many other things, in its

few weeks of life, that you will be understood, whether you call it the *Théâtre Gréco-Ninivite*, the *Théâtre des Atrides*, the *Synagogue de l'Art Lyrique*, or simply, as the cabmen do, the *Ta-têtre Asdruc*.

It is not enough to say that the *Théâtre des Champs Elysées* is new: we must say, rather, that there is nothing about it that is not new. The whole conception of such a lyric house is new: the situation, far to the west of any other principal theater, is new; the program that Mr. Asdruc (the first hut apparently not the only begetter of the theater) proposes to the public is very new; while the architecture and decoration of the theater itself is new almost to revolution.

IT is now several years ago that the prime movers, with M. Bouvard as their architect, proposed placing the new theater in the Champs Elysées itself at the end of the park-space harboring the *Ambassadeurs*; but the city of Paris decided to permit no further building in the Champs Elysées, and with the new site in the Avenue Montaigne the construction became impossible on account of its great cost. It was then that the proposals of the three Perret Brothers, architects and contractors at the same time, to construct the theater, in every part, of the newly perfected *béton armé* or reinforced concrete, made it possible to proceed financially. It is the revolutionary character of this kind of construction that made appropriate the revolutionary character of the decoration and of the finished work.

Owing to the possibilities of this new construction in clever hands, the finished theater is a vast honeycomb of incredibly

thin and apparently delicate divisions, floors, and supports, a very eggshell of reasoned and calculated mathematics, where walls of formerly impossible tenuity rise to levels of formerly impossible heights, where balconies and galleries project necromantically forward without a column to obstruct the view. This is what is best and newest and truest about the whole thing, because it is a better practical answer to the problem than the old forms of construction. It is a step in advance, which will never again be taken in retrogression. And what is here most true, and most Greek in spirit, and most Gothic in spirit, is the reasoned employment of a new construction which the use of metal and chemistry in building has just now given us. From this may grow a new architectural style or expression—if, indeed, it has not already come—which may extend even to the American skyscraper, if our various municipal building codes, with their sometimes regrettable collateral interests, will permit.

IT is the rectilinear and somewhat ungracious if not ungraceful façade on the Avenue Montaigne that has most stirred up the Parisian public since its unveiling. In a word, it is claimed to be German—the unforgivable sin. "*C'est du Berlin*," said to me one of the best known and most cultivated of the French architects. But when I repeated this to a modernist admirer of the work, he only said, "He has the classic stomach, and can not digest it." The present architects of it deny any foreign inspiration, and their statement must be accepted.

But no unequivocal approval is needed of the great *salle* or theater proper. It is magnificent, and, architecturally at least,

a clearly reasoned, new, and instantly successful solution of a big theater.

It would be difficult to get a first sight of it without catching one's breath with satisfaction. The effect is of a very large space, and of a very circular stair; and the fact is, the great shell actually is round. The quality that first strikes the attention is plainness. The balcony-fronts are without ornamentation and gray; the great proscenium surfaces and arch are also gray and nearly without ornament. Excepting the ceiling, all surfaces are plain gray marble or flat gold—both reduced in extent as much as possible; while everything else—boxes, walls, balcony, ceilings, and floors, partitions, chairs, and carpets—are of purple-rose velvets and silks, so that one really stands in a great hall of amaranth.

FROM the warm color come rose reflections, and this fact, together with the plainness, was studied from the beginning, for the intention of the architects has been that the decoration of the great house shall be the women of the audience. The men, with their black and white clothes, may be allowed to count with the background, but the theater shall be finally decorated by the women. This the women are well able to do, if one can judge by the audience that welcomed La Barrientos one night in April. The brilliant evening dresses of this year's fashions, with their aigrettes and great flaming plumes, need no assistance.

It has been said of Garnier's mighty Opera House of the Second Empire that the interior is over brilliant, and that "where all shines nothing shines." But here the women shine, and this same Parisian delight in the *femme parfe* has led to the public approval of the entrance-

foyer with its three levels, where, from the floors, balconies, and stairs, you can look down and upon these lovely achievements of the art of dress, and sometimes of *maquillage*.

THE great vault-ring is the most prominent thing in the theater, and so attracts the most notice. It is wholly the work of M. Maurice Denis. These paintings are much discussed; the reader can judge something of them from the illustrations here given. When one looks at the circular medallions, as, for instance, that of the "Orchestra" and some others, he wonders timidly if the same beauties could not have been preserved, and yet more tolerance (I will not say deference) given to those shapes of people's heads and arms so long fixed upon, somewhat arbitrarily perhaps, by nature. Maurice Denis is too well known as a master of the modernist school with a great following to doubt the beauties of this considerable work.

The next work in magnitude is the group of frescos by M. Boudelle on the walls of the entrance-foyer. The marble bas-reliefs on the exterior are also by the same brilliant, if untrammelled, sculptor-painter. It is undeniable that they have the great qualities of richly filling the panels, and of being strongly modeled largely in two planes,—that is, flatly modeled with strong outlines,—making them bold and "exterior" enough to be married to the bold interior architecture. If you say they are queer or unanatomical you will not isolate yourself; but, anyway, no such reproach can be brought against them as the remark of the painter Degas, while gazing at some sculptured nymph stuck sprawling against an equally sprawling façade. "Ah," he said, "I

sympathize with her perfectly. She is trying to get away from the architecture."

IN the "Salon des Dames" the frieze of long panels is all by M. Labasque, and is all delightful. They are the loveliest things in the theater, and one is relieved to turn from the solemnity of the other decorations to Labasque's high sense of grace, and to the freshness of his color and his fairy figures among the grass and trees.

This hall has been decorated in panels by a woman, Mme. Marval, with scenes from a day in the life of Daphnis and Chloe. While the taste of these scenes is doubtless of simple purity it is as fancy-free as the drawing and the painting. Their connection with such a room is at first not clear; but a dance foyer is doubtless as good a place as another in which to learn what Daphnis and Chloe did during the day.

The curtain, representing a country fête in honor of Dionysus, is by K. X. Roussel. It is a gay and graceful pastoral, bright and clear in color. The foyer of this theater is decorated by Edouard Vuillard in a series of panels which are perhaps the most interesting paintings in the whole group. Mr. Vuillard has done here on a small scale what is being done at the Gobelin's factories to-day on a large scale—that is, using modern subjects, modernly expressed, for modern work. In Mr. Vuillard's panel of "Contemporary Comedy" we see the two standardized men, in evening dress, quarreling in the front center of the stage; behind are parties dining in a smart restaurant; equivocal ladies at one table waiting the end of the squabble; at another a couple of a stiff forbiddingsness. M. Vuillard is an impressionist, and a refreshing one. His brilliancy comes out in the Punch and Judy panel, and in the woman "making up" her face. This last has already been reproduced with avidity in the French art reviews.

AND so we have seen decorating this whole architectural fabric only the works of such artists as Boudelle, Maurice Denis, Mme. Marval, Vuillard, Labasque, and Roussel. These are all modernists, to use the broadest of the many terms, and it is not surprising to see them together; but it is surprising to see them called together for the purpose of confiding to them officially a great work, to the exclusion of painters of the old schools; for until to-day modernism has been anything but well looked upon officially. One enthusiastic reviewer cries out that all this shows what may be done "when the Republic wears of stereotyped Renaissance city halls and Greek post-offices"; but perhaps this is over-impatient.

One wise editor of a Parisian review told me that he believed it was all rooted in the English pre-Raphaelites. Indeed, when we look again with this in mind, and see the Byzantine stiffness of some figures and the scallid fluidity of others, we hear some faint echo of the parodies of Oscar Wilde (an echo which I do not for a moment mean ever come to these painters), and as our minds float dreamily backward we perhaps repeat to ourselves the unjust but wonderful Gilbert and Sullivan lines:

*What time the poet hath hymned
The writhing maid, lithe-limbed,
Quivering on amaranthine asphodel,
How can he paint her woes,
Knowing, as well he knows,
That all can be set right with calomel?
—I cannot tell.*

Two Kinds of Mothers

By N. H.

THE first emotion, in looking at Mr. Becker's drawing on the next page, will be sympathy with one woman and disapproval of the other. Perhaps, on reflection, it is possible to sympathize with both.

The maternal instinct, guided by reason and fitted into an intelligent plan of life, is a profound element in character at its best. On the other hand, I have known a hen who had a more insistent maternal impulse than any woman, a hen who, if ducked in water, would immediately return to her eggs; if the eggs were removed, she would sit on the straw where the eggs had been; if the box containing the straw was removed, she would sit on the ground underneath; if bricks were put there to disturb her, she would sit on the bricks; and if the place was flooded with water, she was wholly wretched, and would finally decide to sit on the ground somewhere in the neighborhood. Here was a diseased maternity, fitted to carry out the intentions of nature in conditions where most of the progeny die young, but scarcely suited to the highest development of conscious life.

THE woman in the picture who has the child at her breast is very likely superior material to the other one, who is amusing herself in so frivolous a way, but possibly also she is not. The circumstances of her life have brought to the front devotion to those who need it. They have brought out the age-long sacrifice of woman, the fate which made Coleridge say:

A mother is a mother still,

The holiest thing alive.

She has at least the foundation of the significance thus expressed by Tennyson:

Happy he

*With such a mother! Faith in womankind
Beats in his blood, and trust of all things high
Comes easy to him.*

In ancient art the mother ideal was represented, but to a much less extent than in the first great art which followed Christianity, that of the Italian Renaissance, when the Madonna type was forever created. That type is not interesting through its individuals. It is lovable and typical and moving in the rôle it plays. The Sistine Madonna stirs me year after year, appealing to some conservative instinct in me that will never end; but I realize what is meant by those persons who call it the "divine cow" type. I am in favor of abolishing all skirts, or at least of a great change in them; and yet I dislike to think of the time when a small child no longer rushes to sink its face for comfort and protection in those skirts. Henry Ward Beecher, whose anniversary is about to be celebrated, spoke of the mother's heart as the child's school-room. It was the heart he spoke of, not the mind, and thus says Richter:

"On the blue mountains of our dim childhood, toward which we ever turn and look, stand the mothers who marked out to us from thence our lives."

It is not the mind but the heart that constitutes this ideal, in its sacrifice and constancy:

Youth fades, love droops, the leaves of friendship fall,

A mother's secret hope outlines them all.

It was not a sentimentalist who wrote these lines. It was a satirist and a doctor. It was Oliver Wendell Holmes.

But I want to get back to Henry Ward Beecher, who has spoken much that is beautiful on the subject.

"A mother has perhaps the hardest earthly lot; and yet no mother worthy of the name ever gave herself thoroughly for her child who did not feel that, after all, she reaped what she had sown."

And, with that informality of his that seems at times almost disrespect, he said: "A mother is as different from anything else that God ever thought of as can possibly be."

THERE are many ideals, and many beautiful ideals, that must be modified to-day. The ideal of motherhood is not to be lessened, but it must be supplemented. It must accommodate itself to the enlarged development of woman's mind and opportunities. That woman of Mr. Becker's in the private dining-room is a ridiculous-looking object, rather discouraging because she is trying only for personal power, and personal power over a man through the use of charm only. She seeks excitement instead of service; and yet is there not a useful striving in the background? Perhaps not in the case of this particular individual, because, judging from the wolfish face of the man she is with, it is a very low aspect of pleasure that we have to deal with. Slight modification would bring out our principle more clearly.

Instead of a brutalized form of pleasure-seeking, imagine a form that is found in leisure society in all great cities, and is very much criticized by the solid citizens everywhere, at the same time that these citizens read the society columns of the newspapers and follow such doings with the keenest interest; or imagine, if you please, that instead of being a scene of either low or high society, the scene presented of a young woman and a young man of limited income, of a certain restlessness against the monotony of life, of no particular bad feelings, but with a desire for keener existence than was furnished to them by the factory, the office, and the little flat.

The problem of furnishing a reasonable amount of joy for people in every walk of life is a problem that can not be set aside. Our Puritan ancestors had no sympathy with it. They thought the mere desire for the lighter pleasures was in itself wicked. But the point of view that expansiveness and joy as such are good things or women has come to stay. There is no poetry for it yet. There will be none until the ideal has been longer established, and until much genius has taken that ideal for a starting-point. Irrevocable, however, is the desire for freedom and expansion, and that is what our much criticized society women are after. No doubt they are injured by luxury, and greatly injured by having no economic function in the world, but they are filling a useful purpose all the same.

I have spoken of the fact that the woman who seeks fullness of life for herself will not be a widely recognized ideal until the great artists have represented her,

but something must come before that. The principle must be established in the deeds of millions before it is represented profusely in art. A man usually constructs the ideal woman out of the actual woman with whom, for a variety of reasons, some of them accidental, he happens to be in love. The more women establish for themselves the new point of view, the more that point of view will become an ideal for the men who happen to be their husbands. I have been reading an extremely good book on the feminist movement, and I want to quote a little from it in spite of the fact that I have written a review of it on another page. It is called "Women as World Builders," by Floyd Dell. He is speaking of the young woman of the leisure class:

"I confess to having the greatest sympathy for her, and in her endeavor to create a livelier, a more hilarious and human music. She is doing, I feel, a real service to the cause of women. Our American pseudo-aristocracy is capable to teach us, despite its fantastic excesses, how to play. And emancipation from middle-class standards of taste, morality, and intellect is, so far as it goes, a good thing. 'Too many cocktails,' a lady averred to me the other day, 'is better than smugness; risqué conversation far better than none at all.' And that celebrated 'public-be-damned' attitude of the pseudo-aristocracy is a great moral improvement over the cowardly, hysterical fear of the neighbors which prevails in the middle class."

SOME people are very much worried about race suicide, and hypothetical refusal of women to follow their deepest instincts, and various other dangers which seem to these observers to darken the horizon. The way that this situation is viewed, however, depends on our underlying beliefs. Those of us whose faith is in democracy have as our fundamental principle that if all classes and both sexes have free opportunity to express their needs and ideals the results will be far better than if any of these needs and ideals are suppressed, or represented by a limited part of the whole population.

The class of persons who are discouraged and alarmed over all the changes in social ideals are going to have a bad time in the world for many years to come. To our mind, the uncomprehending conservative, in the circumstances of to-day, is a hilariously comic character. That is one reason why, later in the season, Mr. Wallace Irwin will run in this paper a series of his characteristic poems telling the adventures of such a creature among the hazards and horrors that our rapidly developing democracy is planting in his path. To get back to our topic, however, the ideals of democracy tell us that the woman in the picture with the baby at her breast shall have opportunities that will make motherhood less of a sacrifice to her, and that the other woman in the picture, striving even absurdly for freedom and self-expression, shall realize those ideals, but in higher forms than those in which she sees them in the days of her crude beginnings.

Maurice Becker.

TWO KINDS

By MAURICE BECKER

MOTHERS

BECKER

J. Betz, Pitcher

By GERALD MORGAN

Illustration by James Preston

THE trouble with J. Betz began the first week he arrived at the Admiral's spring training camp at Tallahassee.

J. Betz had had no experience in organized baseball, not even in the most minor of minor leagues. He was strictly a back-lots ball-player, born and bred in that wild hinterland of Weebawken and Union Hill, where they play ball without the aid of the English language, and combine a curious sort of picnic with their games, and pursue erring umpires with champagne and vodka bottles into the Hackensack Meadows. It was there that J. Betz laid the foundation of his reputation. It was from there that he branched out into "semi-pro" circles, and hired himself out, at ten dollars a game, to teams in the Bronx and Williamsburg, and even as far as the Long Branch coast; and it was from there that an enterprising scout produced him.

So, to the hotel room in Tallahassee, which Tim Mullane, the manager, used as his office, came J. Betz to report. Other recruits were there also, and two or three regulars, chiefly coaches.

"J. Betz," said Mullane.

The back-lots man stepped forward.

"B-e-t-z," said Mullane. "Is that right?"

J. Betz gulped. "Bey-ab-tsey," he replied.

Tim Mullane dropped his pencil and glanced up. Gradually, the blank look on his face changed to one of comprehension, and then to one of simple rage.

"May God have mercy on that scout's soul!" he said shortly. "This poor, benighted creature is trying to spell his name to me in Bulgarian or Chinese. Somebody get him out of here quick."

"Say, Mr. Mullane," exclaimed one of the regulars, laughing, "spell the guy's name 'B-e-t-z.' Tommy Betts will be sore if you spell it like his'n. B-e-t-z. How about it, be?" he asked, turning to the recruit.

J. Betz had not moved, and it suddenly became evident that he had allowed himself the liberty—surprising for a recruit—of losing his temper.

"Spell it any damn way you like," he replied shortly, and left the room.

"Now, what do you know about that!" said Tim Mullane. "The big heathen! He was rattled, I suppose. Well, make it 'B-e-t-z.' But, say! he's big enough,

ain't he? I bet he could pitch all afternoon, hey?"

"I expect he's Hackenschmidt in disguise," replied the regular shortly.

THEY put him in against a team from Waycross, Georgia; and the town of Waycross closed up business for the day to see the Admirals play. The local firemen attended in a body, armed with a liberal supply of last year's cannon crackers, a band, and a full set of Colt automatics. The result was that the first two Admiral recruits were led from the box, after having given nine bases on balls in three innings, and being scored against six times. There were two men on bases, and none out, when J. Betz was called on, and the firemen and their cannon crackers were going strong.

J. Betz walked in and fanned the side. In the last six innings, just two Waycross men reached first base, and none scored. The more noise the firemen made, the better J. Betz pitched. He simply stood the Waycross batters on their heads.

After the game,—which the Admirals won,—Tom Betts, the catcher,—the real Betts,—interviewed Tim Mullane in the managerial Pullman state-room.

"There was a crash, but no report, and Kelly sank beneath the table"

"J. Betts is all right," he said. "I'm thinking of having him spell his name in a regular American way after this."

Much as he had to learn, he was learning it quickly; and, whatever Tim Mullane thought of him personally, he had made up his mind not to let him go. Therefore, to preserve the morale, the unity of the team, some sort of status must be established for him.

"Say, Tom," he said to Betts, the catcher, "I know you're an easy-going man, and I hate to take advantage of you, but we've been together some years, and I want you to do me a favor. I want you to team up with this here Weehawken Hun. I know he's a heathen, but you've got to catch him, anyway. You've got to be his keeper."

"Betts and Betts," replied the catcher gloomily. "I'll herd him as long as I can stand it, Tim."

Herdling J. Betts as long as the team remained upon the road proved to be a comparatively easy problem. In the friendly society of the catcher, he showed a willingness to talk, but only on the one subject of baseball, for which his knowledge of the English language was quite sufficient.

But when they reached New York the herding ceased automatically; for as soon as the day's work was over, J. Betts took a car to the Forty-second Street ferry and disappeared into the fastnesses of his native Weehawken hills.

"There's nothing to it, Tim," he said to the manager. "I'm not going to camp out in Union Hill for any Polack."

The manager laughed. "How's he doing?" he asked.

"He's a perfectly well-meaning cuss," replied the catcher. "There's no reason why the boys should be so set ag'in him."

"I mean, how's his wing?" explained the manager.

"Fines!" exclaimed Tom Betts enthusiastically. "He's got the stuff, sure. There's only one thing about his pitching I don't like. He has a way of grooving his fast one, in the pinches. Puts it right over. He thinks he can get away with it just because his fast one is so fast; and he can—with hushers."

"He's got to stop it," replied the manager. "Big league batters lunch off that kind."

Three times in the following fortnight the manager called upon J. Betts to finish games already settled, one way or the other, beyond dispute. Each time, J. Betts pitched well, the only score against him being due to two long hits.

"I told you not to put a fast one over the middle of the plate for Bill Maher," Tom Betts remonstrated. "You went and grooved it for him, after all I said."

"I won't do it again," replied J. Betts.

IT was on the home grounds that Tim Mullane, the manager, decided to give J. Betts his first real chance to make good. Mullane sent for Tom Betts.

"Tom," he said, "the Owls are going strong just now. They're making their bid for the lead against us early. They're a bunch of youngsters. The series we have with them next week is important. If we beat them now, we've beaten them for good and all. They'll lose confidence."

"Yes," replied Tom Betts.

"Dugan's got a lame arm."

"Yes," said Tom Betts.

"And I want to know can I start J. Betts," concluded the manager.

Tom Betts paused. "He'll do it!" he replied.

"Now listen here, Tom," the manager

went on. "There's something more, and it's under your hat. I asked Tom O'Brien, the grounds detective, to keep an eye on J. Betts some night. O'Brien says J. Betts had supper in Weehawken, all right, but he came back to Manhattan in the evening, and went to a dive in West Forty-sixth Street near Tenth Avenue. He sat round there talking to a guy called Louie Kelly, who runs the hobo gang—whatever they are. O'Brien says Kelly's a kind of Polack, too. They're all Polacks."

"Was he drinking?" asked Betts.

"Hold on," went on the manager. "He wasn't drinking, but O'Brien says this here Kelly bets on the games, right back of third base, in the grand-stand. He says there's a bunch who do. They stick together, and don't keep books, but they bet good and strong. As long as they keep quiet O'Brien lets them be."

"Well?" asked Betts.

"O'Brien says," continued the manager, "the dope round there is that Kelly's got him fixed the first full game pitches. Now, what do you know about that?"

"Put him in, Tim," replied the catcher shortly. "He'll throw no games."

"How do you know?" retorted Mullane. "You say yourself you can't talk to the guy!"

"It ain't talking," said Betts obstinately. "I can tell, and I bet I could tell a Filipino or a Chinese. J. Betts is straight!"

"Well, I'll take your word for it," said the manager.

J. Betts was not told that he was to go in against the Owls until a short time before the game. He accepted the information with the sullen calm that seemed to be his normal condition.

His preliminary work-out was good, and he stepped into the box with confidence. But the first batter hit the first ball high between left and center fields. It was an easy fly; either fielder could have had it,—both were under it,—but between them they let it drop, and before it was returned to the diamond the runner was on third. A scratch infield single scored him, and, although J. Betts tightened up, the damage was done.

But the Owls were nervous, too, and a base on balls to the first Admiral set the whole infield on edge. They kicked the dirt about, and all gave advice to their pitcher at the same time. The second batter, with three balls and two strikes on him, hit a grounder to short. If the double play that was then attempted had come off, it certainly would have broken all records for speed. But it did not come off, and by the time the Owl infielders had finished throwing the ball about, the run on first had scored, and the batter was on third. At the end of that inning the score was two to one in the Admirals' favor.

"We've got 'em now, old boy," said Tom Betts to J. Betts. "Keep it up! Say," he added, "did you groove that first ball they scored on?"

J. Betts shook his head; then he turned toward third base, toward the seats behind it, from his place in the box, and deliberately nodded.

A shiver went down Tom Betts' spine, and the umpire said:

"Batter up!"

NOT an Owl reached first that inning, and when it was over Tom Betts asked:

"Who did you nod to before the inning started, J.?"

"Friend of mine over there," replied J. Betts quietly.

Tom Betts was first up in the second inning, and first out. The manager stopped him as he passed the first-base coaching line.

"Say, Tom," he said, "O'Brien says this here Louie Kelly is just betting his little head off against the Admirals. How about it?"

"J. Betts nodded over there," Betts said. "I saw him. I was leaving it to you."

"Give him one more chance," Betts said. "He's done nothing crooked yet. He wasn't responsible for that first run, unless he grooved the very first ball, and it didn't seem to me he did."

"I'll just go on leaving it to you, Tom," said the manager.

There was no scoring in the second inning, none in the third. The spectators—not including Louie Kelly—yawned. The game had developed into one of those early-season affairs where the batters go out on pop flies or little grounders—games unwriting in spite of the closeness of the score.

Up to the ninth inning the Owls died painlessly, getting just four scattered hits, and they came up for their last chance still a run behind. It was then that J. Betts gave the spectators the only thrill they had had since the first inning.

He nodded toward third base, then he fanned the side on nine pitched balls. The crowd poured out on the field. J. Betts had won his game.

IN the dressing-room, his fellow players surrounded him, and slapped him on the back, and called him "J." Tom Betts shouted: "You got to spell your name like me after this, J!"

J. Betts seemed to take it pretty calmly. Only, as he was going out, he said to Tom Betts:

"You are my friend. Come with me."

Together they went down on the elevated to Forty-second Street, and there J. Betts engaged a taxi. They turned west at Forty-sixth Street, and presently stopped in front of a rickety saloon.

J. Betts told the taxi to wait, and they walked in, past a greasy bar, toward the door of the usual back room. J. Betts opened the door. Inside, a slight, dark youth was sitting alone at a table.

"Hallo, Louie," said J. Betts.

Louie Kelly's only answer was to push his chair a little out from the table.

"Louie," said J. Betts, "you took me for a crook. I'm not a crook." He stopped, and tapped his chest with the tip of his forefinger—a gesture oddly foreign.

"Louie, you pig!" he cried in a voice Tom Betts had never heard before. "I am American, American, American!" Quite still sat the gang-leader. Very quiet was his reply:

"Double-cross me, would you?"

Then, like a flash, he slipped his hand into his side pocket. Tom Betts saw the glacial glimmer on the half-drawn gun.

THERE was a crash, but no report, and Kelly sank under the table. The unshot pistol rattled on the floor beside him. For a second there was silence, except for the sound of something round rolling on the planks and rattling the tin spittoon. Then it rolled clear out into the middle of the room. Tom Betts picked it up.

It was a brand-new National League baseball. He turned to J. Betts.

"Do you mean to say you hit him with that?" he exclaimed.

"He's only stunned," said J. Betts. Then he looked up, and added quietly:

"Yes, Tom. I grooved that last one."

Current Athletics

By HERBERT REED ("Right Wing")

Football Coaches for the Coming Season

Walter Camp, who has been the football man of mystery, the man with the inscrutable smile

OPPORTUNITY knocks with unusual vehemence this season at the doors of those football coaches who already have achieved eminence as strategists and tacticians. After the lapse of some years employed in experimentation both on the field and in the rules committee room, they have a game upon which it seems safe to build logically and at the same time brilliantly, without the constantly recurring feeling that the unknown chance will be almost certain to upset their calculations. They have had one season that seemed in many ways satisfactory, one season in which the superior team had better than an even chance of winning. Here at last is firm footing.

It has always seemed to me that the ideal game was that in which the rules permitted an eleven twice as good as its foe to make twice as many openings for victory, not as the result of "brain-storm" or "shoe-string" plays, but as the fruit of a well conceived and systematic form of attack—a game in which the successful use of these openings depended, in the end, on the personnel. Toward that ideal, football, I feel sure, is steadily approaching, and although this year there will be "upsets" in all probability, and isolated cases in which supreme individual effort will play havoc with form, I believe the play will be sounder all over the country than it has been in many years.

THERE will be teams, I hope and firmly believe, that will display a better balance of all arms of attack than has been the case in recent years,

and whose defense will cope with the foe's attack more along the lines of team concentration. There has been too much burden on individual stars recently, and last season provided stars in plenty, both on attack and defense. Sometimes these stars fitted nicely into the scheme of the team-play, while in other cases there was nothing to the team but the star.

I have said that those coaches who are already at the top will have the great chance this year. The reason is that, while they have been through all sorts of "freak" play, their mastery of the game was too thorough ever to let them lose sight of the great basic principles of the greatest of college games. They are close to the heart of things, and have been so at all times.

So few were the changes in the rules at the close of last season, and so slight was the demand for any change, that it became apparent that the bulk of the players and coaches were satisfied. The players at last had a game they could enjoy playing, while the coaches had a game they could enjoy teaching. The fun of the teaching will be even greater this year, for there is plenty of room for advanced work without the penalty of destructiveness that has gone hand in hand with so many of the recent radical innovations.

THE unknown coach of the smaller institution still will be forced to some degree of unhealthy radicalism from time to time, largely because of the lack of balance in his squad, and also because when facing a big team his eleven has everything to gain and nothing to lose. But if this same coach keeps in mind the rest of the schedule—the teams o himet that are in the same class as his own eleven—he will be doing in the long run more for football and more for his team and the teams that are to follow it. There is always the temptation to take the scalps of the big team, but it is too often practically suicide for the little team. The rest of the schedule generally goes to smash.

Seasons there have been, of course, in which a smaller team has been equipped with unusual material, material that would be the envy of any of the larger institutions. But in these cases the record against the larger rival has been made rather by sheer all-round good football than by special device. It is said that Rutgers, which recently has had excellent material, has received some preparation at the hands of one of the greatest experts the game has seen—preparation against the day of the opening match with Princeton, now only a few days away. It will be highly interesting to see what form this preparation has taken—whether so wise a coach has built up all-round play in the way that he is capable of doing, or whether he has had recourse to the "shoe-string" or the "brain-storm" with which he is also familiar.

NOW, there are men in the field who can be depended upon, I think, to make long strides this year, building soundly, yet brilliantly, on basic principles, or perhaps even showing some new variation of an old principle. They are

"Hurry Up" Vost, of Michigan, temperamentally a "chance-taker," whose "brain-storms" have met with frequent reward

men like Walter Camp at Yale, who, while not in any sense a field coach, will be once more in touch with Yale football—the clever and capable Howard Jones acting as the head of the active system; like Percy D. Haughton, who has brought Harvard back to the top of the heap; like George Brooke, at last in charge at Pennsylvania, where he has belonged for some time; like Dr. A. H. Sharpe, the old Yale star who is doing so much for the achievement of football prestige at Cornell; and a host of others.

Others from whom I think progressive but sound football instruction may be expected are Ed Robinson at Brown—to my mind, one of the very best coaches in the country; Cavanaugh at Dartmouth; and, in the West, Staggs at Chicago, Williams at Minnesota, and certainly Juneau at Wisconsin, who last year turned out a team of real champions.

The attitude of Fielding H. Vost at Michigan should be one of the interesting features of the season, for Vost is temperamentally a "chance-taker." Unlike most extremists, his "brain-storms" have met with more frequent reward. It must not be inferred from this, however, that Vost does not know the game from the ground up—merely that any move he makes is absorbingly interesting for the reason that something fancy is apt to develop from it without notice to or benefit of clergy for his opponent. The more startling type of play usually comes out of the West, anyway; for the Westerners like short cuts to victory.

The general public is perhaps more familiar with the name of Walter Camp

than with that of any other of the big coaches. He has been the man of mystery, the man with the inscrutable smile. Men have often said of him: "You can talk with Camp for an hour, and you will have spent a most enjoyable hour. But you will come away knowing no more than when you went." This I don't think is entirely true. If a man does not come away richer for a five-minute chat with him, it is that man's own fault. He will not have plumbed the depths, but he will have learned something if he is awake at the time.

Further, Mr. Camp is one of the best spectators the game has known. Too many football men are ready to talk about what the game gets from Mr. Camp, without stopping to think what Mr. Camp gets out of the game. And these latter things count tremendously.

WHILE on this subject of getting things out of the game, there is another spectator who is not so well known, for the reason that he hides away in the mass of his fellow spectators. That man is the quiet Mr. Reginald Brown, of Harvard, another of the "inscrutable," who has omitted to mention more football than most coaches have talked in a period covering several weeks. Mr. Brown is one of the really deep students of the game, and they think the word of him at Harvard.

From the same institution comes Percy D. Haughton, from whom also, in his double capacity of active field coach and tactician, farther progress in the game's development may be expected. He is already a highly successful theorist, and an independent one. Harvard, indeed, is fortunate in retaining his services for another term of years.

It has taken George Brooke several years to swing over to Pennsylvania as head coach. In the meantime he has turned out workmanlike teams at Swarthmore, where he has had better than fair material, despite the small squad. Most of Brooke's teams that I have seen in action were built up along perfectly sound lines, and he should be able to put into effect at Pennsylvania a system that will readily replace the disorganized and haphazard if daring methods used by the Quakers in the last few years. Here is another man from whom much may be expected, for he has the teacher's art as well as a deep knowledge of the game.

Dr. Sharpe, if his material turns out reasonably well, ought to put a team on the field that will play the thinking game; and while his system is as yet far from thoroughly rooted at Ithaca, his eleven should show progress. Both Mr. Brooke's and Dr. Sharpe's teams meet Pennsylvania and it will be absorbingly interesting to see the battle of wits with the daring Yost.

Dartmouth, where the material last year was exceptional, will be seen in action in New York this season. These husky collegians have many friends here; but as they are to meet the Carlisle Indians, always popular with the general public, there will be plenty of support for both sides. If Dartmouth this time plays with better generalship than was the case last season,—and I think there has been a change at Hanover,—the game ought to produce some football lessons worth filing away for future use.

THE Redskins, coached by Glenn S. Warner, are always an attacking team,—brilliant to the last degree,—and Warner is quite as much of a chance-taker as Yost, albeit in an all-round way. I have never believed the Carlisle coach to be

a master of defense, but he has probably provided more puzzles for his opponent in the way of attack than any other Eastern coach; and, with the rules in their settled condition, probably will continue to do so. New Yorkers are fortunate in their opportunity to witness this game, for the community has been pretty well starved for football.

By the time these lines appear Princeton will have settled down to a coaching policy the nature of which at this time I am not aware. One thing is certain—the Tigers will base any system they work out on speed. Speed has always served them well. There was a brief period when the Princetonians overloaded the backfield with sluggish men, so that the play did not get under way with the terrific jump that was in evidence last season and has been in the past. It was something of a feather in the Orange and Black cap to steal the Minnesota shift from Yale openly and then all but beat the Blue simply by gearing it up to high speed.

I have always felt that in the matter of innovation the Tigers stood still for a time; but I believe that period has passed, and that, while they will not "shoot the ball all over the lot" this year, they will provide something of a treat with their all-round open play.

Before passing on the immediate subject of coaching to the probable lines along which progress will be made, a word about G. Foster Sanford, the man of ideas and epigrams in football. Indeed, Sanford maintains that be "invented coaching by epigram." Here is as interesting a theorist, diagnostician, and practical man as one could find with whom to discuss football. His illustrations are always happy, and he drives his point home as does no other man with whom I have ever threshed out the game. He is an all-round coach, who, however, is sheer genius when it comes to line play, as many a famous guard and tackle can tell you. Talk to him before a game, talk to

him after it, and there will be nothing in it but profit.

I HAVE said that, in my opinion, the chief progress in the game this year will be along the lines of a better balanced attack. There was sharp improvement last season, in spite of the better-asketer now and then, but this season there should be that smoothness that delights the heart of the coach. Learning a lesson from Harvard, I think cleverly placed punting until the team gets within striking distance will also be much in evidence, and I expect to see what I call "kicking attack" carried to a higher level of efficiency—I mean fast, low kicking even when past the center of the field. Although the old outside kick has been abolished by rule, all forms of kicking remain the great demoralizer of the game, and, in view of the proof of this last year, I do not anticipate so much waste in the running attack.

Generally speaking, there would seem to be at present two sound types of attack—kicking until the team is well across the center of the field, and then opening up the running attack, or running past the center of the field to bring up an unusual long-distance drop or place kicker. In the running game I include, of course, the forward pass, and this move ought to be carried to a high point of excellence; for the eleven equipped with a few good ones that are made safe by careful covering, has twice as good a chance for an opening as the team that has allowed the play to fall into comparative disuse save as a last chance. Individual interference should also show improvement, and the defense by signal may also be carried further.

It is certain that more will be done with the shifts. There are any number of defense coaches who laugh at them only to find them working well against their own eleven later in the season. There is so sound a principle in these plays that the coach who abandons all consideration of them will find himself in difficulties. This applies to the shift made on line-up as well as to the maneuver known as the "jump" shift. So strong is the defense these days, even with the weapons that the rule-makers have added to the attack, that guile must supplement strength.

THESE are only a few of the probabilities which furnish fascination to coaches and followers of the game. There are coaches who prefer actual field work to the checker-board side of the game, while others find pencil and paper and the blackboard more appealing. The story is told of how Yost, traveling one day on the train with his team, found his men indulging in a little light conversation. "Come, come," he said; "stop that, and get to work and see if you can not invent a new play or two."

This is not the practice of most coaches, but it is true that just before the season opens and thereafter they will see possibilities in almost anything. The great weeding out process goes on in their minds against what they consider a first-class defense, yet a few of them remain to be tried out on the field. I have known a chance phrase to suggest a play to one of these strategists, and even the numbers on a passing electric car. Most of these so-called inspirations come to nothing in the end, and the coach drifts back once more toward working up his game along sound fundamental lines. And it is along these lines that the game should move this season.

G. Foster Sanford, of Yale, the man of ideas and epigrams in football

"Faint heart——"

Lovers Idle

By ROBERT CARLTON BROWN

Picture by John Sloan

HAD Whistler painted a nocturne of Washington Square, he must have put into it the slumped, listless figure of Nick, huddled backbones on a bench near the arch, his feet swathed in grimy cloths thrust into shapeless hangers, a thick pad of newspaper buttoned over his chest under his frowzy coat against the evening chill. Nick was always there when he wasn't working, and an hour's daily toil suffered to keep him in beer, which must be bought by money begged.

His occupation, supported by tradition, paid in spite of clumsy execution. His custom was surreptitiously to stuff his pockets with bread each morning at the barrel-house where he breakfasted on two foaming bumpers of lager, and an assortment of bits of pickled fish, pickled onions, unwashed radishes, liverwurst, and other delicacies displayed on the free-lunch counter.

Then he would saunter out to the boulevards, select a busy thoroughfare,

and secretly drop a chunk or two of bread in the gutter. When a sufficient number of shoppers, pleasure-pursuers, and hurrying pedestrians were passing the bread point, Nick would leap from his near-by stand on the curb with a cry of discovery, snatch the bread from the gutter, and tear at it ravenously, like a starving wolf. It was seldom that the act did not bring expressions of pity from the eyes of chance passers-by, and nickels, sometimes dimes, even quarters, from their purses.

Nick would mumble his thanks through mouthfuls of bread, and dash off, apparently in search of a restaurant, while his misty-eyed patrons would stare after his emaciated form and wish they had doubled their donations. Nick's dash always ceased abruptly as soon as he had disappeared around the corner. He would then shuffle to a new hunting-ground, where the police and passers-by were not familiar with his trick, and again plant his bread in the gutter.

The park was always pleasant. He sat and pitied business people who hustled through on their way to and from work; he sighed at the burdens of well-dressed mothers wheeling fretful babies, and moved to another bench whenever a go-cart stopped near him, for fear the infant would cry and set his sensitive nerves a-jangling.

Nick disliked mothers and babies. He had been driven from his home in a small Western village by an inconsistent wife who refused to support him when the baby came, and by the cries of the ill-nourished child itself, its food impoverished by Mrs. Nick's straining at the tub.

BUT one day in middle October came a woman who was Nick's sort. She dropped on the bench beside him, adjusted her spotted watered-silk sacque, modestly shoved her lonely-looking straw hat down over her eyes, blew her nose, yawned, and spat.

She glanced at him twice, looking sharply away each time, as she caught his eye, and then grinned, not foolishly, simply, like the women that passed. It was a proper grin, showing a gleaming gold tooth and the good-fellow spirit of a true lady, which Nick had never seen in the women with the baby carriages, who passed him with averted eyes, as if conscious of their charms and determined to coquette with him, he thought.

Nick grinned back eagerly, for it was sometimes a bit lonely on the bench, now that two cronies had turned sandwich-men and another had gone to his winter home on Blackwell's Island.

"If it ain't askin' too much, sir, could you give a lady the time?" She leaned her haggish head toward his and her eyes lolled.

It was a civil tongue she had, thought Nick; and she had treated him proper, like a gent.

"No, I ain't got the time; my ticker's went up the flue since me fall in fortune," he said casually, in his most elegant social manner.

"How unfortunate, too! But I can sympathize wit' you. I've had to economize myself sometimes since 'Arry died, but, my Gawd, before then there weren't nothin' too good for me."

"Life ain't all eatin' an' drinkin'," said Nick philosophically.

"My Gawd—no—it ain't. I wonder if you could oblige a lady with the price of a scuttle of suds?"

Nick was charmed by her abrupt manner. It bespoke confidence. She had found him her sort and favored him with frankness. He liked women to come to the point like that, and romance rose within him, strangling miserliness. He offered grandly, "I'd be pleased ter oblige, ma'am. Where shall we go? Kelly's?"

"No. They deals with a liberaler hand at Caffery's."

"Caffery's for yours truly, then," answered Nick, with an air.

HE shuffled along by her side, but a little behind, the lady being the more eager for the things that are sold at Caffery's.

With the air of a woman of the world who could take care of herself, she gave the grimy swing door beneath Caffery's enticing gilt sign a practiced push, and shouldered her way in, sat down at a battered table, and banged her chapped red fist upon it.

Nick sidled in and slumped into a seat beside her, a bit sheepish in the unaccustomed company of femininity.

A heavy-jawed waiter gazed upon the pair aloofly, and, learning their pleasure, presently brought two orders of beer in glasses the shape and size of flower-pots.

"Here's a go, then," said the woman, tossing hers off after the hearty fashion inaugurated by Henry the Eighth.

Nick solemnly swallowed his, with none of the gaiety of his companion's manner.

Business having been good that day, he bought another, in silence. With the flesh refreshed, the woman blossomed, confiding that her name was Jennie and calling upon Gawd to witness that before 'Arry died her every whim had been humored.

They shuffled out shortly, and returned to Nick's favorite bench. There they sat together with hands clasped over contented stomachs and drowsy eyes closed. Though neither spoke, their souls communed in close companionship.

Finally, the woman awoke and nudged Nick. "I'm goin' to blow along," she said.

"All right," answered Nick. "See you ter-morrow?"

"Sure."

She shambled off, and Nick returned to his dreams, well content with the day's developments.

The following morning he exerted himself to greater endeavor, and realized sixty cents. In the afternoon Jennie appeared, and they sat among the flies at Caffery's for a delightfully desultory half hour.

Nick bared his soul to her, telling how he hated babies, and what satisfaction he found in association with a woman who was beyond the petty weaknesses of the sex.

Jennie was plainly pleased and flattered. At the end of an hour on the bench afterward, she left him again.

During the days that followed the courtship grew. Over beer and bench they learned to depend on each other.

Life took on a new beauty to Nick. Though it was fall, the radishes seemed to have a deeper blush and the very pretzels of Nick's existence lost their acrid taste. He had found his mate—Jennie, who drank of his beer and shared his bench.

THE chill of winter suddenly descended on Washington Square, and Nick thriftily thought of the future, including Jennie in his every plan.

"How would you like a nice warm room this winter, right over Caffery's, so we wouldn't have to go far to chase the growler when there's snow on the walks?" he whispered to her, one sharp, biting day in late October. "How'd you like that?"

"My Gawd, it'd be swell." All the pent-up emotion of Jennie's shrunken breast surged toward the suggestion of a heated room. "Since 'Arry died the only 'arbor an' retreat I've 'ad 'as been a room with another young gal who's always gettin' into trouble. I think we'll be quittin' fer good this time."

"My graft's good winters," said Nick. "People fall harder for it when there's snow on the ground. I can make enough in three days to keep us a week. Are you an?"

"I'm on," said Jennie, not even attempting a blush, but winking a blackened eye to express the pent-up emotional longing of her soul. "I'm quittin' Mag, away," she added. "She's always gettin' into trouble."

"Women's a nuisance," agreed Nick. "All the time thinkin' of nothin' but style an' bringin' up of children."

"That's Mag," agreed Jennie heartily. Then, with suddenly modesty: "But, my Gawd, she can't even think of bringin' 'em up in her fernamental situation."

"I'll work hard ter-morrow, and rent the room. You meet me here and we'll move in then," said Nick, with finality. "Don't bring no women's gree-gaws, now."

"No," said Jennie, her hand fluttering on his for a tender moment and leaving a black smudge. "I'll come to you just as I am, my good man; no dot, no dowry, but a awful thirst. Don't work too hard ter-morrow, Nick." She winked her unblackened eye with concern.

"HERE! Move on, there!" cried a policeman, coming upon the pair, who started guiltily. "Move on there, you bums. And after this you two sit on different benches. I'n'erstan' what I mean?"

"'Bout time we was gettin' a tidy place of our own, Jennie," sighed Nick, as they hurried off like frightened rats.

"Them lulls ain't got no sentiment,

no sympathy with young love or nothin' like that. Well, till ter-morrow, then."

Nick went to look at a dollar-a-week room above Caffery's. In his eagerness, he paid a deposit on one that would be vacated the following day. Having no bed money, and being too tired to pan-handle, Nick sat down on a dark bench in Washington Square and fell asleep. Then, after midnight, when he had sunk into his second sleep, he felt some one shake his arm. Thinking it was a cop, he mumbled something and tried to force open his gummy eyes.

"It's me! Jennie!" came an excited voice in his ear. "Here! Take this. The cops are after me!"

NICK vaguely sensed that a huddle was being thrust into his slack arms. He caught at the huddle as it slipped to his knees.

Then his dazed eyes made out the form of the huddle. With a shudder, he recognized the cry. The huddle was a baby.

Glancing sharply about to locate the policeman at the far end of the park, Nick jumped to his feet and paced back and forth with the babe, moving it up and down with the jerky motion of a churn, in a senseless effort to quiet its cry.

Though it was a cold night, perspiration burst out on his forehead. He walked up and down with the baby from necessity, as he had never walked with his own child.

Desperate, at his wit's end, he shoved a coat button into the baby's mouth for a pacifier, and fed up the walk to the policeman.

"Here!" he cried, thrusting the squalling infant into the officer's arms. "Some woman went off an' forgot her kid."

HE turned and ran before the astonished officer could catch his breath and start in pursuit.

Safe around the corner, Nick stretched his weary arms to get the cramp out of them, and smiled grimly with relief.

A woman rushed toward him out of the street shadows. It was Jennie. Nick, with his head held high, walked past her, cutting her dead.

She clutched at his tattered coat sleeve, crying: "My Gawd, ain't you goin' to speak to me, Nick? It was another of Muggie's brats. I was takin' it to the Foundlin' Home when the cop chased me. I had to pass it to you to make my get-away."

Nick shook himself free and glared at her.

"You're like all the rest, Jennie," he cried, in a towering rage. "I never yet seen a woman that didn't have something to do with a baby. I don't want nothin' more to do with you. It's all off."

"My Gawd!" screamed Jennie. "Allof! And I was only doin' a kindness for a friend. I was comin' back for the kid now."

"It's too late," said Nick in hollow tones.

He left her, and turned his steps sadly toward the Bowery.

Broken, disillusioned, the light of love snuffed out of his life, Nick sought seclusion in the only monastery he knew. It was situated on the Bowery, a ten-cent lodging-house.

Since that night so fatal to his one great romance, Nick has never stirred from the walls of his monastery, except to plant pieces of bread in the gutter and collect sympathetic nickels and dimes when in actual want.

He has forewarn Washington Square, and taken irrevocable vows of single blessedness.

PEN AND INKLINGS

By OLIVER HERFORD

CHORUS OF ANIMALS: "WE SHOULD WORRY"

Musings of Hafiz

The original of the "Rubaiyat of a Persian Kitten"

PERHAPS you have noticed there are none of those obnoxious Tammany verses in this issue. To me these parodies have been such a painful source of embarrassment that for the last two weeks I have been ashamed to look the Tiger rug in the face, much less repose on his back as I used to do. The suppression of the Tammany verses seems like an act of Providence. It befell in this way. This morning, when I was preparing for my usual nap on the big desk in the study, I came across a sheet of paper marked with the peculiar half-positions of writing that I recognized. Now, the big desk is close to a window, overlooking a deep court, and just as I had satisfied myself as to the objectionable nature of the poetry a sudden

gust of wind caught the paper, which I had inadvertently pushed to the edge of the desk, and tossed it out of the window.

THANK heaven, vacation is over, and that arch-enemy of peace and meditation, the Boy, is once more under restraint. Were I not constitutionally opposed to agitation, I should start a movement for the abolition of the Boy's vacation. Why the Boy is not kept under permanent restraint, I have never been able to understand. Why, indeed, he is kept, in the first place, is a puzzle

to me. If, as with kittens, only the most fitting specimens were allowed to survive, how much better it would be for the human race!

APROPÓS of my remarks on the food question, a correspondent writes to ask me why I worry about the high price of liver, when mice are so cheap. There is no denying the cheapness of mice, but, for my part, since the invention of liver (by Edison, I am told) I have completely lost my taste for mice. Even as a sport, I much prefer the catnip-balls. To tell the truth, mice bore me. You may call me a micanthrope—a mouseogynist if you will. To be misunderstood is the highest compliment Advanced Thoughts can receive from Mediocrity.

"Women as World Builders"

By N. H.

THE sub-title of Mr. Dell's book is "Studies in Modern Feminism," and he is one of the few men who seem really to understand what the feminist movement is. He is the sort of man who would be able to sympathize with both types of mother discussed in pen and pencil in another part of this issue, and realize what each type needs. He points out that some women find their destiny in the bearing and rearing of children, that others demand independent work like men, and that still others make a career of charming, stimulating, and comforting men. The first of these types he calls the "mother" type; the second, the "worker" type, and the third he calls, without prejudice, the "courtesan" type. "Without prejudice," not because it exists within legal marriage as well as without, but because it is not certain transgressions, but the human qualities of companionship, that are the essential thing. When a girl of this type marries, her life may turn out to be happy, provided the man is a person capable of giving her the right amount of rope, and at the same time furnishing a satisfactory career for the family.

MR. DELL is a thoroughly moral man, but he is not conventional, and therefore he is not alarmed by any such word as courtesan, but thinks out everything for himself. He is extremely fair. For instance, he says that the reverence for woman as virgin or wife or mother, irrespective of her abilities as friend or leader or servant, is Romance, an attitude that was discovered in the Middle Ages and has added a new glamour to existence. Through it woman as an abstract idea becomes the sustenance of hungry souls. Believe in her and you shall be saved, is the gospel of Petrarch, Dante, Browning, and George Meredith; but it is not the gospel of Mr. Dell, and it is remarkable that he is able to express the gospel of those who disagree with him as sufficiently as he expresses his own.

With this fair-mindedness goes, naturally and harmoniously, a certain lightness. Most books on the feminist movement are dull. Mr. Dell's is very readable. The author finds in the woman's movement of to-day another example of the readiness of women to adapt themselves to a masculine demand. Men are tired of subservient women, or of the seemingly subservient women who effect their will by stealth,—pretty slaves with the slaves' subtlety and cleverness,—and Mr. Dell sums up the reasons why men are ready for a feminist movement by saying: "In reality, they desired it because it promised to be more fun." This lightness goes not only with candor but with simple profundity. Here is the author's forecast of the purely political results of woman's suffrage:

"In women as voters we shall have an element impatient of restraint, straining at the rules of procedure, cynical of excuses for inaction; not always by any means on the side of progress; making every mistake possible to ignorance and self-conceit; but transforming our policies from a vicious end to an efficient means—from a cancer into an organ.

"This, with but little doubt, is the his-

toric mission of women. They will not escape a certain taming by politics, but that they should be permanently tamed I find it impossible to believe. Rather, they will subdue it to their purposes, remold it nearer to their hearts' desire, change it as men would never dream of changing it, wreck it savagely in the face of our masculine protest, and merrily rebuild it anew in the face of our despair. With their aid we may at last achieve what we seem to be unable to achieve unaided—a democracy."

THIS writer finds the most potent cause of the woman movement in the birth of modern science. He thinks Herbert Spencer and Walt Whitman more effective leaders of the movement than Victoria Woodhull and Tennessee Clafin. Walt Whitman comes into it largely through the renovation of the modern soul—the removal of Puritan spectacles and the feeling of the goodness of the whole body. Whitman has helped prepare us for such an opinion as Emma Goldman expresses here:

"Her development, her freedom, her independence, must come from and through herself. First, by asserting herself as a personality, and not as a sex commodity. Second, by refusing the right to any one over her body; by refusing to bear children unless she wants them; by refusing to be a servant to God, the State, society, the husband, the family, etc.; by making her life simpler, but deeper and richer. That is, by trying to learn the meaning and substance of life in all its complexities, by freeing herself from the fear of public opinion and public condemnation."

Here is Walt Whitman's own expression:

"They are not one jot less than I am. They are tann'd in the face by shining suns and blowing winds, Their flesh has the old divine suppleness and strength, They know how to swim, row, ride, wrestle, shoot, run, strike, retreat, advance, resist, defend themselves. They are ultimate in their own right—they are calm, clear, well-possessed of themselves."

When Whitman made this prophecy, the Civil War had not been fought and its economic consequences were unguessed. The English factory system, with its exploitation of women and children, had hardly gained a foothold in this country.

"In 1840, of the seven employments open to women (teaching, needlework, keeping boarders, working in cotton mills, in bookbinderies, typesetting, and household service), only one was representative of the new industrial condition which to-day affects so profoundly the feminine physique." That was the time when Whitman dreamed of a race of "fierce, athletic girls." But the factory has come and raised problems that Whitman did not know. It has not only given to woman occupation which is bad for her physique, but also occupation of which the monotony is entirely out of harmony with her nervous organization. Factory problems fully as much as simpler moral problems must be solved not by men alone, but largely by women. As John Galworthy, in an address to working-women, said:

"There is beginning to be a little light

in the sky; whether the sun is ever to break through depends on your constancy, and courage, and wisdom. The future is in your hands more than in the hands of men; it rests on your virtues and will being, rather than on the virtues and the welfare of men, for it is you who produce and mold the future."

Mr. Dell's book treats the feminist movement through various personalities—Charlotte Perkins Gilman, Emmeline Pankhurst, Jane Addams, Olive Schreiner, Isadora Duncan, Beatrice Webb, Emma Goldman, Margaret Dreier Robins, Ellen Key, and Dora Marsden; but his discussion of these various women is mainly not of what they have accomplished as exceptional individuals, but of what they show of the essential nature of women, and of what may be expected from a future in which women have a larger freedom and a larger influence. He thinks that the idealism of women is one that works itself out through the materials of workaday life and which seeks to break or remake those materials to fulfil the idealism. He pictures woman as reconstructor of domestic economics; as a destructive political agent of great power; as worker; dancer; statistician; organizer.

In Ellen Key's work he finds the Talmud of sexual morality. The many elements that it contains all bear upon the creation of that new sexual morality for which, in a thousand ways, we are a mixture of readiness and unreadiness. He finds in Madam Key a real conservative who is careful about what she conserves. She would save the right to love rather than the right to hold another person; the beauty of singleness of devotion rather than the cruel habit of trying to force people to carry out rash promises made in moments of exaltation; motherhood as against the exclusive right of married women to bear children; personal passion that is at once physical and spiritual, as against too rigidly standardized marriages. She thinks that in trial marriage, which practically exists among peasants all over the world, is a bulwark against prostitution and a part of the new morality.

That Mr. Dell agrees with Madam Key is evident, for he says that the Puritans among us have lost all moral sense in the true meaning of the word and are unable to tell really good from really bad, merely registering the things that were socially respectable or not in the year 1860; and he shares Madam Key's belief that only the profoundly moral are capable of discovering the dividing line between new morality and old immorality. The position that the celibacy of unmarried women is well purchased at the price of having in existence a whole class of prostitutes seems to him a masculine view, a cruel idealism of the male mind, divorced from realities; and he concludes this part of his argument with the rather characteristic jauntiness of expression: "I think that with the advent of women into a larger life our jerry-built virtues will have to go, to make room for mansions and gardens fit to be inhabited by the human soul."

With this characteristic remark we may leave him, repeating that he has written much in a small space, and written with pleasantness and depth.

Two Intelligent Comedies

A comparison of what is popular with what makes the stage worth while

By N. H.

AFTER the editorial in this issue called "Is Drama Interesting?" went to press, a distinguished and able friend observed, "You are printing too much about the theater. Persons who care for the important political and economic leadership that *HAMPER'S WEEKLY* is evidently going to give do not wish to see the publication full of articles about actors, managers, and plays."

In spite of a high respect for the speaker, I can not believe that the most popular of the arts, which is at the same time the highest form of literature, should occupy a small place in a magazine which undertakes to reflect the life of the time in its most significant and interesting aspects. What President Wilson, Secretary Lane, Mr. Brandeis, Senator La Follette, Jane Addams, and Ellen Key are doing and saying is not the only interest to the mind.

The other day, after spending three hard-working hours with political leaders, I went with them around to the Hippodrome. We went behind the scenes and watched the dexterous devices by which the illusion is produced of a flying-machine sailing among the clouds. We stood among the horses and their riders, and heard about the training and salaries of the young men and young women, and where they came from. We learned the method by which the bathing girls are able to stay so long under water, and discussed the emotions of Chief White Feather (if that is his name) as he acted as assistant property-man to a German gymnast. Then we went in front and shared some of the emotions of the audience that filled the gigantic house. It is an average audience, and it represents enormous numbers, even as they are represented by the films which every day present thoughts and emotions and manners and moral standards to many millions of our countrymen. It represents the greatest common denominator.

Personally, I have much sympathy with "Dark Eyes," "The Girl in the Gingham," "Everybody Loves a Soldier," and the immense stage fixtures of the Landing of Columbus, New England Farms, the Levee at New Orleans, San Antonio, Panama, the Ponce de Leon Hotel in Florida, a Pueblo Village, the Grand Cañon of the Colorado River. Such a spectacle probably stirs the imagination and the ambition of thousands of persons every day. Therefore the theater, on the side of mere numbers influenced, is extremely important.

But there is another side. Why is it that a considerable body of thinking Americans take the attitude of belittling the theater as an institution, whereas in Europe discussion of the drama occupies a large place in most of those publications which appeal to the leading members of the community? The reason is that a number of the big capitals of Europe, and a number of the smaller towns, possess theaters which are capable of being as important a part of the life of thought and taste as a college or a library or a museum. They have troupes of actors who are fitted to represent masterpieces, and they have every week competent expression of the greatest dramatists set out before the

mind of the old and the young. We have nothing corresponding to that; but I, for one, should be very sorry to give up the hope that we may yet have theaters that shall be as satisfactory to the highly educated as the Hippodrome and the moving pictures are to those who have not had the most complete special advantages. There are signs that this time is approaching, although it must be confessed that often plays which represent the most progressive and talented young writers of this country frequently fail when they entirely deserve success.

DURING the same week that I saw the Hippodrome I saw two comedies, one an importation, the other the work of an American, and both of them deserve a much more enthusiastic reception than they received in New York City.

Mr. and Mrs. Fiske, for a great many years, have kept up a standard well above others maintained during the same period in this country. The latest play produced by Mr. Fiske is the work of one of those Hungarians who are now putting their country well to the front in drama. It is translated by Philip Littell, who has so much humor and so much subtlety that he fits this kind of work exactly, and the brilliant dialogue sounds not like a translation, but as if it were the flexible expression in his own language of the man who conceived the comedy.

"Where Ignorance Is Bliss" (the title is the least happy part of the translation) depicts two characters; it offers two uncommonly effective acting parts; it handles with much skill a simple but holding plot, and it sparkles throughout. The histrionic nature offers an inviting starting-point for a study of vanity combined with goodness of heart. The actor in this play is a lovable man devoted to his art, devoted to his work, pure in heart, honest in spirit, and his ingenious exploitation of his own greatness is as unobjectionable as the peacock's spreading tail. Mr. William Courtleigh showed how charmingly he could burlesque the actor nature as far back as "Trelawney of the Wells," and he did it with equal felicity in the Molnar play. He took a part that is longer than Hamlet, at two weeks' notice; and perhaps after I saw it he got a better grip on some of the delicate opportunities for emotional power, where the touches of genuine feeling come gently but vividly in the midst of satire and might, if given exactly right, thoroughly shake the spectators' emotions.

THE attractiveness of this comedy is double, and both elements are characteristic of comedy when it is good. The plot is not very complex, but it is very neat, and it holds up to the very latest moment, the final curtain being about to fall before we actually know how the powers of self-deception and of deceiving others in two good-natured but surface characters will actually work out. It must bore a great many persons to hear speeches as long as this actor delivers, but they all throw such subtle light on the general absurdities of humanity that they are extremely diverting to a class of per-

sons who do not find much of what they want on the American stage.

Mark E. Swan is a man of radical sympathies. He is forty-two years old. Born in Rockport, Indiana, he went to the public schools until he was twelve years of age, when he ran away and took care of himself. He was always fond of literature, especially the drama, and he read much. He wrote his first play at thirteen, and at seventeen he made an adaptation that was produced in Louisville, Kentucky. Like many playwrights, he has been on the stage a number of years.

In spite of this minor work, "Her Own Money" may be treated as his first significant effort. Being produced by Mr. Winthrop Ames, it naturally falls into the class of which the merit lies in thoughts and execution rather than in their standardized adaptability to the average mind. In the few years he has been at work, Mr. Ames has done much to give a start to this kind of drama. "Her Own Money" takes up a question that is agitating thousands of women, however quiet they may keep about it, and it is significant that that unreason of women under an oppressive condition should find such sympathetic expression in a man. I am not going into the details of the plot of this play, but they are sufficiently well chosen to hold the attention and to bring out with effect the point that women to-day can not be happy when their work at home is not recognized in definite money payments, so that they may have themselves the freedom that goes with the ability to spend money without accounting for every nickel to some one else.

A play of this kind is much more dependent upon refined acting than the average cruder drama, and Mr. Ames always knows how to furnish casts which work together and which show at least understanding and taste. Miss Julia Dean has an extraordinary finish and variety, for an American actress, in realistic and simple details. The other parts were also well done, not only individually, but in the way that the players acted for the general effect. The development of the drama of thought in this country can not be separated from the development of this kind of acting. Fortunately, we have in the Fiskes and Mr. Ames managers who appreciate the relationship, and Mr. Arthur Hopkins and other young managers in considerable number will follow in their footsteps.

Possibly, in the course of this little article, it has been made clear why it is part of the function of *HAMPER'S WEEKLY* to point out what is being done by the managers and playwrights who are beginning to build up in this country a standard that may make the drama what it is in Berlin, in Paris, and in Vienna. It is the function of such a paper not only to give much attention to any opportunity to see the great Greeks, such as was marked by the opening of "Electra" in San Francisco on September 6, or to see the highest genius in our own language as it will be seen a number of times this season in Shakespeare, but also to remain awake for the young playwrights of the country, and to welcome them heartily whenever they bring contributions of their best.

WHERE IGNORANCE IS BLISS

"Imagine how I should have felt if my wife's lover had been any one else but me"

The Autopilgrim's Progress

By WALLACE IRWIN

Lemuel Speedeth Not Wisely But Too Close

CENTERVILLE FAIR with its horses and cows!
Centerville Fair with its humans and pigs!
Bumpkins and pumpkins and horse-trades and rows
And Midway Plaisances who dance wriggly-jigs!
Muse, linger not 'midst each rival attraction,
But follow me, please, to the center of action—
Gaudy with bunting, with popdaze black.
The motor-car races on Centerville Track.

FOR to-day was the day
They gave prizes away.
Professional racers with wind-battered faces
Turned up their chiggers to enter the races;
The Royal Brass Band, led by Harry Van Wykles,
Brayed. Many speed-frenos on fast motor-cycles
Put-putted round—a sensation profound
When an airplane (almost) arose from the ground.

WHAT boots it that one or two records were broken
And a man or two killed, by the same noble token?

The moment of glory
Concerning our story
Was when, 'midst a hush such as fell over Rome
When Nero appeared in his favorite 'drome,
Regulus Perkins, the clerk of the course,
Bawled through his megaphone, terribly hoarse:
"Laid-ees and gents,
To close the co-vents,
We'll next have an ama-choor motor-car race
'Twixt Lem-u-el Bogg, who has chal-langed for place,
And Silas J. Scagg.
At the drop of the flag
Once round the course these here gentry will ride
For a wager of twenty-five cents to the side!"

SENSATION intense. Silence first, then applause.
And, after a proper dramatic pause,
Silas J. Scagg was the first to appear,
Pushing his motor. He looked rather queer
In a fierce leather racer's cap, carefully graced
Under his snowy and billowing beard.
More silence. More cheers
As, cued to the ears,
Lem entered next. For economy's sake
He stuck to a cap of old hickory make;
Butternut overalls, tucked in his boots,
Aided the picture. A storm of salutes.

UP in the grand-stand Katury's young man,
Percival Brown,
A worldling from town,
Toosed up his panama, whooped like a fan:
"Rah-rah for Bogg! He's the pink of condition—
But honest, by Jove,
Who'd suspect the old cove
Of taking the track with a racer's ambition?"

LOVELY Katury, as pink as the roses,
Toosed to her father an armful of roses
As the cars toed the mark. At the pistol's sharp
crack
They were off—that's to say, Si was off; for, alack!
Lemuel's car
Stood still as an anchor.
Goodness to par,
He'd forgotten to crank 'er!

Kindly assistants turned over the engine.
Off shot the greyhound with growlings avengin'.
By then Silas' car was a half mile ahead.
Lem, tense like steel,
Best over the wheel
As nearer and nearer and nearer he sped.
At the mile turn he felt Silas' dust in his eyes;
A mile and a half, and he could not disguise
The joy that he felt
As distinctly he smelt
The gas-smudge escaping from Silas's prize.
A mile and three quarters, he crowded so near
He could mock at his foe with a venomous jeer.
"Ahem!"
Chortled Lem,
"Git a horse, git a cow!
Who's driving a crazy old rattletrap now?"

BUT the race isn't all for the swiftest—I think

Some one's said that before.
As they raced down the stretch neck
and neck, by the brink
Of the pit Silas swore,
For Lem, in his strenuous effort to pass,
Had crowded Si's auto clean on to the
grass.
"Quit yer shovin', ye road hog!" Si
turned his machine
Slam-bang into Lemuel's car. With
a green

Flash of flame and a roar, half of pain,
half delight,
Like a pair of steel bulldogs engaged
in a fight,

Those autos, tight locked in a mighty
embrace,

Head-over-heeled over
Flippety-keeled over

Into a field, and thus ended the race.
But Silas and Lemuel, keeping right on,
Shot through the air

In a comet-like way,
And landed full fair
In a winnow of hay.

The stand roared, "They're killed!" with a true Roman fury;
But when Mrs. Boggs and her daughter Katury,
With her beau, Percy Brown, arrived on the scene,

Their grief
Found relief.

For there on the hay,
Wrangling and jangling their usual way,
Sat Silas and Lemuel, face turned to face.

"I won!" shouted Si. "What y' say's a disgrace!"
"Ye didn't," snarled Lem. "I was two spokes ahead,
I can prove by the dent in the fence—strike me dead!"

"Ye're a cheat!"
"Ye're a beat!"
"Ye're a flum!"
"Ye're a sham!"
"It's a lie!"

"It's a which?"
With a cry,

In the ditch
The enemies grappled to settle the grudge,
When Timothy Riddle, the qualified judge,
Thus settled it:

"Gents, in decidin' the race,
I was up in the Judge's stand, watchin' yer pace.
Since y' both crossed the line, well, I guess 'twas a finish.

Though you sure did come in on a space rather
thinnyish,
But I vow in this case
That Lem won the race,
Since he was the first to come down when ye fell."

"SI, hand me that quarter!" was Lem's hungry yell.
"I won the race fair, though I didn't suspect it."
Spluttered Si: "This here match
Sure won't be a scratch
On the run I'll give you, Lem, before you collect it!"

Finance

Breaking Up the Harriman Empire

By ALBERT W. ATWOOD

ONE of the largest and most confusing problems with which the financial markets have had to deal in the last six months has been the "dissolution" of the so-called Harriman railroad system. The quotation-marks are used advisedly. The rending asunder of monopoly by process of legal decree may, and probably does, possess wholesome elements, but its complete effectiveness yet remains to be proved. Corporate entities may be broken up, but it takes something more than a mere court order to dismember such an intangible but real thing as a financial community of interest.

In June the security markets reached a discouragingly low point. From that time on there has been, up to the period of this writing, a fairly consistent recovery. To enumerate all the influences that make for the movement of stocks either up or down, without lengthy and painstaking analysis, can satisfy only the most ingenious. But no intelligent person will challenge the statement that a final settlement of the Harriman tangle, a sort of eleventh-hour solution of a vexing and intricate question, was at least one of the clearly discernible forces in stopping the slow but grave decline in security prices.

In many respects the undoing as well as the upbuilding of the Harriman railroad structure has been an instructive and startling chapter in American financial history. But it is a long story, and a complete recital would be alike impossible, uninteresting, and valueless in this place. The bearing and application of this highly instructive specimen of financial biology is, however, of immediate and in many of its aspects of as yet unrealized importance.

The Man and the Law

SOME ten years ago E. H. Harriman, at that time and for several years later the dominant force in the Union Pacific Railroad, bought for that company forty-six per cent of the stock of the Southern Pacific Company, which controls a railway system from New Orleans to San Francisco and Oregon, and through the Central Pacific, from San Francisco to Ogden, Utah, where connection is made with the main line of the Union Pacific to Omaha. Subsequently Harriman bought for his company great quantities of stock in such railroads as the New York Central, Chicago & Northwestern, Illinois Central, Baltimore & Ohio, and others, although no attempt was made to place these systems under one central control, as had been done with the Southern and Union Pacific. Absurd as it now seems, Harriman clearly intended to continue to buy up and dominate the great railroad systems of the country. Death stopped his plans; and public opinion might shortly have done the same. Yet those, of whom the writer is one, who saw the mighty little wizard only a few days before his death, still believe that his genius had no limits.

But the passing of Harriman, coupled with growing public antagonism to monopolies, was likewise the death-knell of

the vast combination he built up; and on December 2, 1912, the United States Supreme Court decided that the Union Pacific must give up its \$126,650,000 of Southern Pacific stock. Four distinct and separate efforts were made to put this decree into effect. All four plans failed to meet with approval of all parties concerned. One "plan" went so far that the Union Pacific Company actually paid over \$1,250,000 to a syndicate to carry out operations which it never had to undertake because the plan on which they were predicated fell through. Not until June 30 did the United States District Court finally agree to a method of dissolution. At no time from December 2 to June 30 was there a shadow of doubt but that \$126,650,000 of Southern Pacific stock had to be sold. In other words, this huge mass of stock hung over the market in a very real if not immediately literal sense. Financial people even feared a receivership for one of the most powerful and solvent corporations in America. The depressing effect of this unprecedented necessity can not be exaggerated.

Magical Finance

NOW, the result of the fifth and finally adopted plan appears at this writing to have succeeded far beyond the most sanguine hopes. To say that a weight has been lifted from the markets is the mildest of expressions. But first it is necessary to state briefly wherein the dissolution consisted. It appears that the Union Pacific already owned a large quantity of stock in the Baltimore & Ohio Railroad, which operates from New York to Chicago, and that the Pennsylvania Railroad, a directly parallel and competing line with the Baltimore & Ohio, likewise owned a great quantity of Baltimore & Ohio stock. The brilliant idea occurs that if the Pennsylvania shifts its Baltimore & Ohio stock for shares in the Southern Pacific, which of course does not come east of New Orleans, the Pennsylvania will be in no illegal relation to the Baltimore & Ohio, and the Union Pacific will do nothing illegal by merely taking on more Baltimore & Ohio stock; because the Baltimore & Ohio and Union Pacific are not in the same territory at all. And of course the Union Pacific would be relieved of illegal ownership of Southern Pacific by just the amount it gives up.

The Attorney-General and the United States District Court agreed to this fine scheme, and thus the Union Pacific got rid of \$38,392,400 of its illegal Southern Pacific stock. But it still had \$88,357,600 left, and an equally clever method was devised of ridding itself of that. The stock was deprived of voting power to prevent the Union Pacific from continued influence, and was placed with the Central Trust Company of New York City, whose certificates were issued against it. Union Pacific stockholders were permitted to subscribe for these certificates at \$88 a share, but could not vote at meetings or receive any dividends unless they made an affidavit that they had rid themselves of their Union Pacific stock. They have until January 1, 1916,

to make that affidavit. A trustee, Louis C. Krauthoff, a New York corporation lawyer, was appointed to see that all the details were properly attended to. A huge international underwriting syndicate, said to have at least five hundred members, agreed, for a consideration, to take any of the certificates that the Union Pacific shareholders did not take. But the stockholders appear to have taken four fifths of what they were allowed, and the members of the syndicate have shown a genuine eagerness to absorb any that were left.

Southern Pacific as an Investment

THERE are two highly important results directly traceable to this remarkable piece of finance. One is the strict investment aspect. The other concerns itself with public policy. I have already said that the general effect of making this arrangement has been to remove a dead weight, or, to change metaphors, what in Wall Street parlance is called a "sore spot." But of more individual moment and significance is the opportunity offered to buy a good railroad stock at a low price.

At this writing Southern Pacific is selling at 80, and, as it pays six per cent dividends (since 1906), the net income return is 6.74 per cent. This compares with 4.65 per cent for St. Paul, 3.11 for New York Central, 5.50 for Pennsylvania, 5.48 for Great Northern, 5.71 for Norfolk & Western, 6.19 for Northern Pacific and Baltimore & Ohio, and 6.22 for Atchison.

There are many reasons why good railroad stocks as well as others should sell high or low. But if there is one fact clearly indicated in the present market position, it is that a leading reason for the present price of Southern Pacific is the necessity of selling \$88,000,000 of stock. No one has suggested that the Southern Pacific is not earning a handsome return upon its stock. For the year ended June 30 the company earned \$7,700,000 more than it had ever done before, and had nearly \$10,000,000 surplus after paying six per cent on \$73,000,000 of stock. Its earnings may decline, it may have other troubles like other railroads; but it is a well managed, prosperous company, conservatively capitalized, serving a vast and growing territory, and built into its present form by the unremitting services of the greatest railroad genius the world has ever known.

The nearest tyro in finance knows that the forced sale of \$126,000,000 of stock is a most depressing influence upon that stock. Hardly less depressing is the forced sale of \$88,000,000 of stock. Once it became known that the life insurance companies in New York State would be forced by law to sell their big share holdings in various companies, numerous offers were made for these stocks at prices so far below their real value that the insurance officials, in desperation, asked the legislature for more time; and a more too friendly legislature had to admit the argument. It is not in high finance alone that forced sales

depress prices. Any house and lot, any piece of furniture, any case of books, usually sells far below its true value when the owner must part with them. The necessity of the seller is perhaps the most fundamental factor in the whole range of price-fixing.

The gradual liquidation between now and January 1, 1916, of \$88,000,000 of Southern Pacific stock has been cleverly arranged. The process of finding ultimate owners for all these shares has been provided for with unusual foresight. Yet the very magnitude of the problem, its unusualness, and the long period that elapsed before it was settled, was enough to depress the stock well below its true worth. But, with a plan carefully worked out to meet the situation, there must ultimately, in the ordinary course of affairs, be a recovery in value.

Is the Law a Farce?

BUT how about the public bearing of this dissolution? George J. Kindel, an irrepressible Congressman from Denver, Colorado, who has fought valiantly if somewhat sensationally for the public's interests as against those of the express companies, asks Congress to investigate this alleged "dissolution." Such an inquiry seems improbable, but Kindel raises several interesting questions. He points out that the great banking firm of Kuhn, Loeb & Co., are closely identified with the Pennsylvania and Baltimore & Ohio railroads, which were brought into the dissolution, as well as with both the Union and Southern Pacific. He gently intimates that the Union Pacific and Southern Pacific, on the one hand, and the Pennsylvania and the Baltimore & Ohio on the other need not compete

very dangerously, with the bankers so friendly to all of them. It at least is true that \$88,000,000 of the Southern Pacific stock, which the Union Pacific was supposed to rid itself of, has not gone outside the group of four with which the bankers are closely related. To quote Mr. Kindel is not necessarily to agree with him, but merely to raise the question.

"The Union Pacific has since 1906 owned \$42,000,000 of Baltimore & Ohio stock, and through the intervention of Kuhn, Loeb & Co. this stock has been consistently voted to perpetuate control of Baltimore & Ohio in the interest of Pennsylvania. Consistent with the past practices of the parties, it is in the power of Kuhn, Loeb & Co. to cause the Union Pacific, now owning \$80,000,000 of Baltimore & Ohio stock, to deliver to persons acting in the interest of the Pennsylvania a voting proxy thereon, thus enabling the Pennsylvania to control the annual stockholders' meeting of the Baltimore & Ohio.

"It would be in the power of this same banking firm to cause the Pennsylvania to deliver to persons acting in the interest of the Union Pacific a voting proxy on the \$38,000,000 of Southern Pacific stock owned by the Pennsylvania, which, added to the \$42,000,000 owned by individual Union Pacific directors and their associates, would in turn enable the Union Pacific to control the annual stockholders' meeting of the Southern Pacific with the same efficiency as in the past."

Kindel likewise points out that Krauthoff, the lawyer who oversees the details and reports to the court, has acted on previous occasions as a lawyer for the Harriman and Kuhn, Loeb interests. He might have added that Jacob H.

Schiff, senior partner of the banking firm, is a member of the executive committee of the Central Trust Company, which the court has appointed to hold the disfranchised stock.

It is strongly insisted, by those who speak with no little authority, that our great bankers have no desire whatever to perpetuate monopoly of any sort. It is said that the Union Pacific would be glad to sell its great blocks of Baltimore & Ohio stock if it could find a purchaser. It is firmly denied that the Pennsylvania has any desire to become a transcontinental line through acquiring more Southern Pacific. The difficulties in which the New Haven finds itself, from trying to be too big and monopolistic, and the separation of the Rock Island and San Francisco companies, indeed the whole trend of railroad policies, is said to make our great financial groups cautious about even a further suspicion of monopoly. If members of the banking firm were asked why such a curiously interrelated plan for separating the Union and Southern Pacific properties had been adopted, they would probably say:

"We are merely protecting our clients. We are not trying to monopolize anything. We and our lawyers and allied financial institutions know the most about all this problem, and therefore its solution should lie with us."

One thing is certain: whatever ultimate changes may take place in the stock ownership of the Harriman railroads, there appears to be no immediate lessening of the intangible but actual "money power." Court decrees, even those of the Supreme Court, appear, in some cases, to strengthen rather than weaken the noiseless influence of a small "inside" banking group.

What They Think of Us

Columbia (S. C.) State

Norman Haggood is worth the comment due a national figure by reason of having earned what is almost a unique distinction among those who, in the wider field, have made a bid for country-wide influence.

That is to say, that as editor of COLLEGE WEEKLY he combined with the editorial audacity that is a part of the trade of the professional reformer a sense of values and an honesty of opinion that are rare qualities among the disciples of that vogue.

In our opinion, the highest compliment attaching to Haggood as COLLEGE's editor is the fact that he was denounced from both sides; he was pilloried both as pie-eyed and reactionary.

D. R. Barbee, in the Mobile (Ala.) Register

Let an old admirer of yours express his appreciation of the first number of HARPER'S WEEKLY that is issued under your name. I spent a large part of Sunday going through it, carefully studying the editorial features and comparing them and the physical make-up of the paper with the matter and make-up of other great weeklies. You have given us something new and a little bit better than any weekly published in this country. The typography of HARPER'S WEEKLY in its new dress is most pleasing, and the illustrations have this rather unique quality—they draw me back to them time and again, each time with an increased pleasure.

I have always liked your editorials. They are most stimulating, and they force one to think. I look to see you make your editorial pages the clearing-house for all that is good and true and noble in modern thought, with always a clinging fast to the best that there is in the old. Even if you do sometimes journey "into the clouds," as Colonel Harvey said of you, it is worth while to follow you up there, though differing with you as to what is to be found so high up.

You have a big job to make succeeding numbers of your paper as fine as the first one is, but I know you will make them even finer.

Cast your eye to the South, and give some thought to this section of the Republic. It will see a new birth in the next ten years, and our old civilization, the pride of two hundred years, will pass. Already we moderns see the line-up, and we hope for a great upbuilding down here. The Steel Trust has just bought a large tract of land three miles above Mobile, and will undoubtedly build immense works there. The General Electric Company is preparing to build a port at Alabama Port, twenty miles south of Mobile, at which it will create big works and an industrial city. The whole Gulf coast country is alive with new enterprises. All the South is forging ahead.

Can't we depend on HARPER'S WEEKLY to be our steadfast friend in this re-awakening?

Homer A. Gook, Vice-President the Mining Gazette Company, Houghton, Mich.

Permit me to express my appreciation of the new HARPER'S WEEKLY, which arrived Saturday. I read every line of it without delay and found interest and instruction in each article. The editorials were, of course, to me the best of the magazine, but I want to say that I think you have started right and it is a pleasure to have HARPER'S WEEKLY to look forward to each week.

Leola Leonard in the New York Morning Telegraph

It must be set down right here that the size and general form of the periodical under discussion can not be improved upon. In these matters, it has neither superior nor equal among publications of its kind.

Moreover, the first issue has a variety of interest in its contents that bids for a wide circle of readers. Julian Street has a good take-off on dramatic critics, and the accompanying illustrations by James Montgomery Flagg bring great joy to readers who recognize the "prototypes." The comedy end is also held up by Wallace Irwin and Edmund Vance Cooke. Herbert Reed discusses current athletics. Secretary Garrison talks of the army and Louis D. Brandeis of banking, while Mr. Haggood himself looks after the drama and woman suffrage. George Bellows, John Sloan, and Wallace Morgan have contributed editorial cartoons.

To find the editorial section the weakest part of the magazine was a decided shock.

Columbus (Ohio) Journal

We had been led to believe that nothing untoward, like Mr. Thaw's escape, for instance, could possibly happen after Mr. Norman Hapgood had taken direct personal charge of HARPER'S WEEKLY.

Buffalo (N. Y.) News

HARPER'S WEEKLY reports several teams of baseball girls who throw ball with a skill unknown to thirty women in the United States fifty years ago. The girls of to-day are becoming athletic at so fast a rate as to insure great interest in the sport page hereafter.

Troy (N. Y.) Morning Record

A careful perusal of the publication shows that Mr. Hapgood has original and interesting ideas about the needs of a journal of honorable reputation. Editorial comment, special articles by men eminent in public life and in financial affairs, a little up-to-date fiction, an intelligent consideration of the drama, athletics in general, and verse which contributes to gaiety are noted. . . .

It must be acknowledged that the WEEKLY, under its new editor, is wide-awake to the influences which are swaying those members of the gentler sex who believe that the subjection of their sex is about to end.

E. Furman, New York

Good-bye! We have had you in our family ever since I was a little boy—and I'm fifty-five now—but you'll come no more. It's a shame to have the grand old name of Harper associated with the absurd Normie Hapgood and the socialist Jewman Brandeis. You can probably get along without my weekly arrangement with the newsdealer, and I must get along without you to retain my self-respect. Normie and Louis are a great team going nowhere and quite uncertain as to the route. But you ought to be decent enough to abandon the name Harper, which has never stood for the ridiculous things it is evident you are to stand sponsor for hereafter.

Good-bye, dear old HARPER'S WEEKLY.

Archie Bell in Cleveland (Ohio) Plain Dealer

With typical New York ignorance and egotism, after remarking that things theatrical in America begin in New York, and that what succeeds there in 1912 is seen elsewhere in the country in 1913 and 1914, Norman Hapgood, the new editor of HARPER'S WEEKLY, prints a large half-page picture of Margaret Anglin, bearing a caption to the effect that the opening of her tour will be one of the really big things of the season, because she will play Sophocles' "Elektra"—and the opening will be in San Francisco. The editor of HARPER'S WEEKLY should observe that Sophocles is what might be termed a well-seasoned and experienced playwright, and he didn't make any stipulation as to a New York opening. And it might be hinted even that Sophocles has succeeded fairly well without the bagaboo of New York approval.

H. B. Matthews, S. W. Straus & Co., Chicago, Ill.

Permit me to congratulate you on the first two numbers of the revived HARPER'S WEEKLY. For me to wish you

YOUR best play on the "19th." Tee off with a bite to eat, and follow through with that incomparable after-golf refreshment—

Budweiser

From an Immaculate Plant

The main plant of Anheuser-Busch requires 120 square buildings. It covers 143 acres, equal to 70 city blocks. 6,000 people are employed here and 1,500 others in branches. Home cleanliness is maintained

in every nook and corner of this institution. One can't go through on a tour of inspection, as hundreds do each day, and not get a quality-impression.

Anheuser-Busch, St. Louis

The Largest Plant of Its Kind in the World

Some of the Principal Buildings

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor Harper's Weekly, McClure Building, New York City.

Washington Crisps helps Children grow Sturdy and Strong

MOST people know that foods made from corn are very good for growing children. WASHINGTON CRISPS is made from one of the most nutritious elements of the choicest white corn.

Thousands of careful mothers give their children WASHINGTON CRISPS two or three times a day.

The youngsters thrive on it.

These crisp delicious flakes appeal to their delicate taste—are easily digested and soon make rich, red blood.

The purity of WASHINGTON CRISPS is beyond question. They are prepared in spotlessly clean mills by automatic machinery, untouched by human hands. It's economical too—1/2 more than any other cereal food for 10c.

Order a box to-day. Your grocer will be glad to send it.

Washington CRISPS

10c. The BIG Package of Toasted Corn Flakes 10c.

UNITED CEREAL MILLS, Ltd.

success would be unnecessary. The magazine shows you have already gained it. I must say, however, that I view with some alarm an "official organ for the feminist movement." A good many people in this disturbed State, in view of the new extension of the ballot wished upon us by our impeccable legislature, think that "the war between the sexes" does not need further incitement. Yet this is the only flaw in the continent I have found on reading HARPER'S WEEKLY. Your financial department is most interesting.

Providence (R. I.) Journal

Mr. Norman Hapgood announces that HARPER'S WEEKLY under his editorship will neither be "a highbrow publication in the limited sense," nor yet "collect a lot of lowbrows." This idea of a golden mean was expressed more elegantly, if not more forcibly, by a number of Latin poets, including Horace. An editor, however, can not always choose his readers at will.

G. A. Rises, First National Bank, El Campo, Texas

I am just in receipt of the first number of HARPER'S WEEKLY since you have become editor, and I beg to offer congratulations.

The plan to point out to your readers the best kind of books to be read will be of great value, and this alone should be worth the price of the publication.

Hartford (Conn.) Courant

The promised rejuvenation of the old Journal of Civilization will be worth watching. We wish Editor Hapgood good luck as he starts in on his job.

Detroit (Mich.) News

HARPER'S WEEKLY makes a bid for the waste-basket collection of the conventional magazine thus: "We want, largely, the by-product of our best illustrators. We want what they do because it expresses them as intelligent and gifted men." And, true to this test, the first number of Hapgood's HARPER'S WEEKLY contains some sketches by the popular James Montgomery Flagg that are entirely different from and superior to that artist's ordinarily accepted work.

So far the newspapers have a monopoly on unscrupulous, crude though much of it is. Maybe HARPER'S WEEKLY can help us out with leisurely developed standards of magazine art virility.

Frederic C. Howe, Director People's Institute, New York City

Heartiest congratulations for HARPER'S WEEKLY for August 16! I am happy to think that the traditions and best work of George William Curtis are being carried on under the old imprint and with his refined, courageous spirit. I am glad that the new problems of the new century, as well as old wrongs under new guises, are to have this old forum for their correction.

Aurora (Ill.) Beacon News

If HARPER'S WEEKLY were published in the sign language, a blind man would know that Norman Hapgood is now the editor.

If this splendid journal is allowed free rein, the American people are assured that they will learn something of the conduct of their own government which it is well for them to know.

It is good to hear Mr. Hapgood's voice again after an absence of several months.

[36 Cents a Year]

Murphy's Revenges

THE end so came to Mayor Gaynor that the universal tragedy of death received a most dramatic setting. He was the ablest man who had occupied his position in New York for long, perhaps at any time, and undoubtedly he was the most interesting. His administrative abilities, his strength of understanding, and his raciness of temperament and expression were such that hundreds of thousands in the City looked in the newspapers for every word he said, knowing he would take them off the beaten track. He had set his heart upon being mayor again, and if Tammany Hall were a less exacting master, it would have given him a renomination. He had done as much for Tammany as any reasonable partisan would think he ought to do; more, we believe, than he should have done, but he was too big a man to be subservient, as Murphy demands his subordinates shall be. His moral nature had peculiar twists, as his temperament and his intellect had, but he had size, and he had courage, and when he happened to feel like it he told Mr. Murphy to "chase himself." When Murphy and seven other men got together at Delmonico's and decided that the Mayor had not fed out of the organization's hand with sufficient docility, and therefore must be punished, it was a heavy blow to the strong constitution already snipped by a bullet wound and by age. Fate came into the complex political situation in a most terrific manner, but in this fate a large ingredient was that predatory organization which at present is headed by Mr. Charles Francis Murphy.

Tammany was already in the midst of demonstrating to William Sulzer, (as depicted by Cesare in our "double" this week), what happens when a member of the Tammany organization undertakes to do any thinking for himself, or any service to the public. It probably killed Gaynor, and it certainly brought about the political end of Sulzer. It will have no such trouble if it succeeds in electing Mr. McCall. Tammany learned so much in a short space of time from the rebelliousness of Gaynor and Sulzer that it made up its mind not to put anybody in office again whose docile obedience was not altogether beyond question.

Thaw

THE Canadian government assuredly has advantages. The presence in that country of a degenerate young man of wealth, who happened to have shot a famous architect and been associated with a famous beauty, created some excitement for a few days in a very small town which had theretofore led a peaceful life.

But the Canadian government rapidly tired of this species of lime-light, and calmly threw Thaw across the border back into the country that produced him. Canada will now go along doing its work as usual, and the business of filling its newspapers and possibly its courts with Thaw's affairs will be left to the United States.

Independence

THERE are at least two men in the Senate who breathe free air. Each belongs to a party, but neither is a slave. Each keeps the liberty, when important crises arrive, of acting for himself. In voting for the Tariff bill, the Republican, Robert La Follette, and the Progressive, Miles Poindexter, set an example of independence and courage that will not be forgotten. It was an emergency. The air was electric with excitement. Vast influences were at work, and yet these men voted with another party, because that other party happened to be right, and the crisis results to the country were too serious to be subordinated to party loyalty.

Pass the Currency Bill

NOTHING is so bad for business as uncertainty. The administration has shown superb competence and courage ever since the Fourth of March. Its next big task is to pass the Currency bill, and there are two profound reasons for haste. One is that if it is not passed now the subject will remain to trouble us, for there is no doubt whatever of the necessity of change, nor has there been doubt for years. The other is that the administration is in a better position to force a vote through, and thus quiet the situation, than it ever will be again.

Promotion

IN deciding to use the system of promotion in regard to consuls, the administration has taken a step which was not only wise but also particularly needed. The amazing success of the administration is admitted even by most of its opponents. The only criticism that has been at all prominent among liberal thinkers is that it was probably carrying too far the idea of party solidarity. It was excused by many on the ground that the Republicans have for so long packed the offices with their partisans. Nevertheless it was not inspiring, and the identification of the present democratic government with the principle of selecting and promoting subordinates for merit will give renewed satisfaction and confidence to the more independent voters of all parties.

The Democracy and the Civil Service

THE Democratic majority in the Senate struck a blow at Civil Service reform, the other day, by adopting the provision that the Commissioner of Internal Revenue shall appoint the agents, inspectors, deputy collectors, etc., for collecting the income tax. This was done after a wide discussion of the work of the Civil Service Commission and the presidential practice of covering into the classified service a vast army of employees who had been employed under the spoils system, President Taft having broken the record in this respect by protecting 41,559 government employes from removal by the Democratic Administration. Naturally, there is a human desire to even up things a little, and the Tariff bill furnished this opportunity. Senator Cummins neatly turned the tables, however, by proposing that the officials appointed by this provision of the bill, should not in turn be put by executive order under the protection of the Civil Service rules. There has been wide complaint against the inefficiency of a Commission which, in spite of its own rules, succeeded in having the service pretty thoroughly Republicanized. The provision, however, for a revival, even on a small scale, of the spoils system, will make the remedying of conditions only the harder to accomplish.

Bailey

SENATOR BAILEY took the stump in Texas, for Underwood, Harmon, or anybody to beat Wilson, with the result that the Texas delegation of forty votes came in quite handy for Wilson at Baltimore. Bailey then chose as his successor a notorious representative of the whiskey and corporation interests. Result, again, young Morris Sheppard walked away with the Senatorship. Then Bailey resigned, with the understanding that his Governor Colquitt would appoint Bailey's long-time supporter, Editor Johnson, to fill the unexpired term. But in the two Texas contests which Bailey had helped to precipitate, the line of division between Progressive and Reactionary was drawn so clearly that the most progressive Legislature Texas had ever seen was elected. It refused to confirm Bailey's choice for Senator, even for the unexpired term. Just before his resignation from the Senate, Bailey delivered his long advertised speech against the initiative and the "riff-raff-rendum," as they call it in Texas. And then, young Senator Ashurst, of Arizona, tried the trick by which Bailey earned his reputation as a debater, by delivering a prepared speech, on popular government, in immediate reply to that of Bailey. Now the ex-Senator is employed by a "taxpayer" in Washington, to embarrass the new District of Columbia Government, by contesting Commissioner Newman's right to appoint, on the ground that he has not been a resident of the District for the prescribed three years. This, as they would say in the South, is "small potatoes and few in the hill."

Glass—Owen

THESE two men, one in the House and the other in the Senate, bear the same relation to the Currency bill that Underwood and Sim-

mons do to the Tariff bill. Glass has long been known by his few intimates as a man of great ability. But he never made a speech in the House—when in the minority it would do no good and when in the majority there were a plenty to make speeches. He made a campaign in Virginia two years ago for the senatorship, but the machine was too strong for him to break. Then, through the dropping out of Pujo, Glass became Chairman of the Currency Committee. He bided his time, while the critics of the Currency bill did their worst, and a Democratic split was freely predicted. Then, at one bound, he leaped into fame, so far as his reputation with his Democratic colleagues is concerned, with his speech in the caucus in support of the measure, the opposition dwindling to a lean minority. His work is over with the adoption of the measure in the House and that of Senator Owen begins, as the manager on the floor of an important piece of legislation.

Owen won his spurs in the Senate in a debate with Senator Aldrich over the currency measure of that day in which he showed thorough knowledge of sound financial principles and of the unsoundness of our banking system. When in the re-organization of the Democratic Senate, the Finance Committee was divided into two parts, one to consider the Tariff and the other the Currency, there was no one on the Democratic side to whom could have been entrusted more safely the work of currency reform, as Chairman of the new Currency Committee, than Owen of Oklahoma.

Charles A. Canfield

THERE passed at Los Angeles the other day a pioneer; one of those men who see beyond their associates; who have vision; who build. He was shrewd, with humor that was unquenched. He saw through schemes and men. He was generous, and after his prosperity came, he helped friendless boys and girls. His natural wits and rugged strength caused him to finish his career with a fortune and the respect of his fellow citizens. He was the man who, with his partner, sank the first oil well on the Pacific coast, and thus began the unlocking of the great deposits of California and Mexico. He also set up the first cynnid plant, which made profitable lemon growing a possibility through reducing the loss from insects. He supported a school for three hundred orphan boys, and left in his will money to establish a similar school for girls. He was one of the builders; one of those who have made the American pioneer a type of which the country is proud.

The Working Class

WITH the British House of Lords rushing madly towards self-destruction, and the Liberal government planning that House's abolition, a passage in George Meredith's novel, "Beauchamp's Career," strikes the contemporary reader:

First, the King who conquers and can govern. In his egoism he dubs him holy; his family is of a selected blood; he makes the crown hereditary—Ego. Son by son the shame of egoism increases; valor abates; hereditary Crown, no

hereditary qualities. The Barons rise. They in turn hold sway, and for their order—Ego. The traders overturn them; each class rides the classes under it while it can. It is ego—ego, the fountain cry, origin, sole source of war! Then death to ego! I say! If those traders had ruled for other than ego, power might have rested with them on broad basis enough to carry us forward for centuries. The workmen have ever been too anxious to be ruled. Now comes the workman's era. Numbers win in the end: proof of small wisdom in the world. Anyhow, with numbers there is rough nature's wisdom and justice. With numbers ego is interdependent and dispersed; it is universalized.

This is typical Meredith, therefore not wanting in involutions and parentheses; eager as a child's speech, turgid and teeming all at once, but it is perfectly true, and it illustrates the fact that often the genuine artist reflects the time before the statesman does.

Meredith was a democrat, and he was not afraid of the consequences of his thoughts. In the dominance of the working class, he saw not a perfect society, but one much better than we have had.

Reasoning Power

A GOOD many newspapers in various parts of the country have barked at us for our opposition to the Mann White Slave Act. Their reasoning usually is that immorality is immoral, and, therefore, any punishment inflicted on the culprit by the Government is desirable. It would take a good deal more noise, however, than we have yet heard to change our opinion about having an act so sweeping in its terms that it orders the United States Government to take a hand in punishing private individuals for what may not be looked upon as entirely desirable manners and customs, and it is, of course, made especially ridiculous by being called a "White Slave Act." Under this act, if George Eliot and George Henry Lewes were alive and happened to cross from St. Louis to East St. Louis on the ferry, and Mr. Lewes paid the fare, for both, he would be liable to imprisonment as a "white slaver." A fair sample of the logic inflicted on the community in this connection is that of the *Journal of Lawrence, Mass.*, who says that the editor of this paper "disappoints many friends who have admired him for a long time by writing an editorial upholding people going from one state to another for immoral purposes when both are willing. It is unworthy any man who undertakes to lead the people. The white slave traffic is just as wrong when plied for sensuality alone as for money."

It would be pretty difficult to crowd more first class reasoning into so short a space. In the first place, because we object to the United States government undertaking to regulate all matters of individual morals and customs, we are accused of approving of "immoral purposes." In the second place, a voluntary trip of two individuals is treated by the *Journal* seriously as the white slave traffic. There are certain subjects which get people so excited that their minds seem to leave them altogether. No publication is going to work harder or more persistently for improvement in sexual morals and for the decrease of prostitution than will this publication, but we do not expect to carry on the work by making idiots of ourselves.

Clothes

PERSONS of obvious types have disagreed violently with this paper's recent article concerning the relations between women's clothes and morality. The belief that there is something essentially immodest about the human body is typically Anglo-Saxon. To such as hold this faith we recommend these words of Du Maurier:

If our climate were such that we could go about without any clothes on, we probably should; in which case, although we should still murder and lie and steal and bear false witness against our neighbor, and break the Sabbath day and take the Lord's name in vain, much deplorable wickedness of another kind would cease to exist for sheer lack of mystery; and Christianity would be relieved of its hardest task in this sinful world. . . . There would be no cunning, cruel deceptions, no artful taking in of artless inexperience, no unduly hurried waking up from Love's young dream, no handing down to posterity of hidden uglinesses and weaknesses, and worse!

What do you know about that? Wasn't Du Maurier wicked?

Aren't all the people wicked who believe that women could dress for convenience, activity and beauty without shaking the moral foundations of society?

What Is Immoral?

MR. BECKER'S cartoon which will confront you when you turn this page over deals with a topic that we have very much at heart. Many years ago "Mrs. Warren's Profession" was stopped by the same magistrate who has been pondering on the ethical effect of other plays which deal with the subject of prostitution. "Mrs. Warren's Profession" is an extremely moral play. Indeed, the police seldom stop a play which is really immoral. Every summer, the theaters are crowded with musical comedies, "revues" and "follies" and gardens, in which exhibitions are given built up mainly for the purpose of playing upon the sex instincts, and these exhibitions doubtless do a good deal to recruit the ranks. Nobody, however, undertakes to stop any of these frivolous stimulants, and the policeman who should undertake to do so would find himself extremely unpopular. The very men who howl bitterly against showing the dismal truth in "Damaged Goods" and in "Any Night" go right after night to the musical comedies.

It is a very excellent thing that the American people are coming to recognize this evil, talk about it, and think about it, and study it in all ways. It is one of the saddest, most destructive, most unjust diseases of civilization, and it will never be lessened by the Puritanic device of silence. Of course, there are a large number of men in the world who would like to have the whole subject let alone, so that their own pleasures can be catered to while the women and young people in their families are told not to concern themselves with such unpleasant and improper topics. This effort to shut off free observation and discussion of this particular horror will be a losing effort, no matter how many policemen and newspapers and virtuous Philistines join in it. All classes of the community and both sexes are going to be made familiar with the facts and what they mean.

BY MAURICE BECKER

The Younger Suffragists

By WINNIFRED HARPER COOLEY

MIDDLE-AGED reformers are tremendously excited over the radical utterances of some of the younger generation. Woman suffragists of a past decade, seeing the cherished goal of emancipation in sight, tremble lest the work of the pioneers be undone by revolutionary utterances of a few "hot-headed young women."

To these I would commend the following truth: *The radicalism of to-day becomes the conservatism of to-morrow.* Even in the memory of the youngest of us, the public once considered a woman suffragist a female outlaw, and the press pictured her invariably with short hair and trousers. Within a decade the entire attitude of the public has changed, until it is allowed that suffragists may be beautiful and fashionable, and only in rare instances is a little good-natured fun poked at them. I myself have witnessed the evolution of woman suffrage from a revolutionary measure to a conservative one!

The article signed by Mrs. Belmont in a contemporary magazine, which so passionately denies that the women leaders of the suffrage movement demand anything other than the vote, has a grain of truth, in that many of these women are of a past generation, and, while once radical, are now conservative. They have not kept ahead of the times. To them the vote is a fetish—a magician's wand to conjure with. Having once obtained it, all human problems are to be solved easily and expeditiously. Many of them, in fact, scarcely think ahead toward the solving of problems at all, but merely want the vote to prove their equality with man, and to demonstrate democracy.

The younger generation has no quarrel with this attitude, for it is absolutely necessary for any democracy to enfranchise all of its adult population; but there are within the fold of modern franchise-seekers a number of women who consider the vote the merest tool, a means to an end—that end being a complete social revolution.

ANY reformer is apt to be frightened for the success of his cause when others seek to couple with it still more unpopular measures. We have a deep sympathy with those older women who have borne the brunt and ignominy of the jeers and social ostracism of past public opinion. They are in terror lest the old unjust terms of opprobrium—"free love," "destruction of the family," and such—will drag the vigorous present cause back a few paces.

The younger feminists, however, do not look with any alarm upon temporary setbacks that might conceivably be given to woman's enfranchisement. So certain are they that evolution is necessitating changes in social and economic conditions, which may on the surface appear revolutionary, that they smile contentedly, knowing that no human agency can stem the tide.

What, then, are the demands of the younger radicals who are so agitating the elders within the fold?

1. *The abolition of all arbitrary handicaps calculated to prevent woman's economic independence.* This applies to spiritual as well as to material stumbling-blocks, for public opinion forms quite as impassable a barrier as rules and regulations. The woman of the future—married or single—must be absolutely free to earn her livelihood, and must receive equal pay for equal service. The younger feminists consider that the day is rapidly approaching when to be supported by a man in return for sexual privileges, or mere general housekeeping, or to be paid for motherhood, will be morally revolting to every self-respecting wife. They claim that as soon as men and women elevate their standards to the conception of a free womanhood, choosing its mate from deliberate affection, rather than in a wild scramble to be "taken care of" in idleness, they will look with horror on the old days when women "married to get a home."

2. *The opportunity for women to serve in all civic capacities—on municipal, educational, institutional, and reform boards, on juries, and in every function by which*

they can be of service to their own sex and to children. This is coming about gradually, through women probation officers, attendants at Juvenile Courts, police matrons, "policewomen," physicians in insane asylums, in children's institutions, etc. It is only surprising that there yet is a violent struggle every time a woman runs for membership on a local school board.

3. *A demand for a single standard of morality.* This is not to be interpreted arbitrarily as meaning either a strictly puritanical standard or an objectionably loose standard. It merely means that there shall be no unjust and persecuting discrimination against the woman offender, when both man and woman offend.

THERE is a violent altercation going on continually, within the ranks of feminists in all countries, regarding this question. Every woman in her right senses bitterly resents the injustices of the man-made world, which has for centuries branded the scarlet letter on the woman's breast, and let the man go scot-free. But the conservative women reformers think the solution is in hauling men up to the standard of virginal purity that has always been set for women. The other branch, claiming to have a broader knowledge of human nature, asserts that it is impossible and perhaps undesirable to expect asceticism from all men and women. Naturally, the former group of women are horrified that the latter are willing to face facts as they are, and constantly say to them: "In advocating a single standard of morality, instead of elevating men to the plane of women, you are dragging women down to the plane of man!"

Now, this is not a moral treatise. I am quite willing to let the future citizens work out their own salvation, with a fair certainty that they will attain considerably more fairness, and a generally higher standard, than ever before in any century. The all-important contention is that men and women as human beings, frail or strong as the case may be, must be judged from the broad human standpoint, and, legally and socially, receive fair play. The old-line suffragist who seeks the vote is order to gain laws by which the mother has an equal guardianship with the father of her children, an equal ownership of property, etc., and yet who condones the ostracism of a woman and the adulation of a man, when both have broken a law of conventionality, is absurdly inconsistent.

4. *The abolition of white slavery and prostitution.* This is only one form of the age-long insistence of man's ownership of woman. Its manifestations are quite as real in the harem, and in some phases of marriage, as in the poor creature who is sequestered, an absolute prisoner, in "houses" in our cities. The radical feminists consider it the highest moral duty of educated woman to instruct the young so that they may accomplish their own protection; and we resent the insinuation of the writer of the aforesaid article that women who wish to investigate and abolish the social evil are "morbid and discontented" and "discuss the subject from the house-tops, dragging young women and children into it." White slavery is due very largely to the ignorance of young girls—in many cases regarded as highly desirable on the part of their parents. The trend of many modern dramas has been to awaken woman's responsibility for her sisters, and to impress upon her the actual criminality of ignorance.

The play "Hindle Wakes" certainly never was witnessed by the author of the article, who mistakes the problem thus: "The play approves of a young man and a young woman slipping away for a week-end together to please the fancy of a moment." The entire point of the drama is missed. Any one who has seen the play knows that, sordid as it is, the effort is not to glorify a temporary liaison, but to claim that the girl was no more to be ostracized than the boy; nor could she be

"made an honest woman" by marrying a youth whom she held in contempt. Her clearness of vision was brought out in her assertion of independence. Although an ignorant factory girl, she rose above the suggestion of jumping into matrimony with the rich mill-owner's son merely to shield her reputation. "As long as there are eight mills in Hindle, I shall not lack for work," she said coolly. "So why marry a man I do not love or respect?" Any suffragist who fails to see the high moral ground of the girl who will not marry to protect herself simply stamps herself as one of the old-time conservatives.

5. *The right to activity of expression and of creating social ideals, quite unhampered by old superstitions.* For centuries women, like cows, have been over-sexed. No wonder that they are often self-conscious and hysterical. They are regarded as "the sex," and are seldom allowed self-expression as individuals. Thus it is that, in discussing all questions of divorce, of marriage, of the home, of children, people eternally drivel and become effusive regarding women. They are never referred to except in their relation to men. It is always "the wife and mother," "the sweetheart and sister," not simply "the woman." As a matter of fact, public opinion in the future will regard men as quite as essential to the home as are women; and women as quite as essential to the world as are men.

IF the above claims of certain advanced feminine thinkers in all countries seem revolutionary and shocking, let me hasten to assert that they are not the claims of suffragists, *in toto*. All feminists are suffragists, but all suffragists are not feminists. As I suggested in the beginning, the suffragists who only a decade ago were regarded as wild radicals are now considered quite conservative. They claim the vote as "wives and mothers," as "home-makers," as "helpmeets." They urge the rights of the child—the fact that pure food and milk and gas and water are municipal problems as well as housekeeping ones as reasons for women entering municipal housekeeping. The public and press, now educated up to this point, applaud this attitude which seems to them agreeably housewifely.

It is a well established fact that woman suffrage in itself does not bring about a revolution. Wyoming, which has had women citizens for forty-three years, has a remarkable record for few divorces. Colorado and the other States where women are enfranchised show a praiseworthy list of laws relating to women and children, factory inspection, protection and reform, introduced as bills by women legislators. The feminists applaud all these things, but go much further in their demands. They are glad that suffrage has not disrupted homes; but they are quite willing to inquire frankly into monogamy, studying it with open mind, not churchly terror, and to see homes disrupted which rest on an immoral foundation, believing that divorce is far preferable to "legal prostitution."

They regard as somewhat absurd the statement of the writer previously alluded to, that the record of women's political rights "shows beyond all controversy that the effect of equal suffrage has been to raise the standards of domestic life, to make wives happier, to increase the number of marriages; and it is a literal fact that there is far less of the abnormal discussion of the sex question where women have the suffrage!" Just why wives should be happier, as wives, because they vote, is difficult to see. I am a born suffragist, dyed in the wool; but I certainly base my happiness as a wife on the excellent traits of my husband, not on the fact that I have gone to the polls several times in my lifetime.

Again, one can scarcely see how the most ardent suffragist can claim that the ballot increases the number of marriages! Does the dropping of the coveted little paper in the ballot-box really increase a girl's romance and desire for matrimony? If so, men should be very eager to enfranchise all the eligible young women. Again, how did the writer obtain statistics as to the amount of "abnormal discussion of the sex question" in States where women vote and in States where they do not? Just what is "abnormal discussion," anyway?

WOMAN suffrage to-day rests on a "safe," conservative basis. It does not abolish monogamy. Now, the younger generation are quite curious to see the experiment of monogamy tried in some country! The majority of women have always been constrained to a monogamous existence; but no sane person would assert that monogamy actually exists anywhere, except in rare cases. If it does, how can we account for the curious fact—claimed by investigating sociologists—that the great majority of the patrons of houses of prostitution are married men?

These may be "indiscreet utterances of young women who deny the necessity of a proper regard for the conventionalities, and claim for themselves a liberty of speech and an independence of action that are wholly indifferent to the effect on a critical public." And it may be true that "it is most unfortunate for any reform to be championed by this class of enthusiasts." However, it is not my belief that any reform ever really prospered through moral cowardice. However persecuted the pioneers who express what they believe to be the truth, the world has a way of justifying them in the end. A terror of public opinion is not a part of the mental equipment of the world's great leaders.

If the kind public will but exercise a little thinking power, and try to realize the mental concepts of those who present a new viewpoint, they frequently will find it to be *intensely moral*. Invariably, the feminists of the world, in seeking woman's social freedom, her economic independence, and her responsibility toward all activities, are actuated by the highest moral purpose; and their newly constructed world will be one of greater civic and personal morality, far greater kindness, charity, and justice, and considerably greater happiness per person.

The personnel of these feminist leaders is invariably beyond reproach. It is very amusing to note that the public always insists that women reformers are unhappily married, and therefore are discontented and bitter, arguing that women think only in terms of personalities. I have in mind, at the moment, three beautiful young radicals in the thirties. Each has a handsome, intelligent husband whom she adores.

There is something rather noble and lofty in women who might be lazy and live by their sex, as their ancestors for centuries have done, deliberately putting themselves to work. There is a growing feeling among sensible women that alimony is absurd and unfair to men. Most people are fairly greedy, and it would seem natural that a disgruntled woman who obtained a divorce because her husband was at fault might be glad to secure all the "financial reparation" the court would allow her. Many women believe, however, that it is sufficiently absurd for an able-bodied woman to be supported by a man while living with him, but doubly so during long years after they have ceased to be on speaking terms!

The support of children is another matter. Of course, there is a grain of justice in the alimony idea, founded on the fact that if a woman has lived with a man for twenty years she probably has fallen behind in the race for a livelihood, and can not make a place for herself in the economic struggle, and so, in marriage has deprived her of her earning capacity, some restitution should be made. In the future, when women continue to make money after marriage, they will not be in drag (should they become divorced) on an ex-husband!

SUCH are a few of the claims and beliefs and hopes of a surprising number of women all over the world. They are not always brave enough to speak them openly. Many a man would be amazed if he could turn an X-ray on the brain of his demure little helpmeet! I hasten to say that suffrage is not responsible for these radical opinions. It might, and probably would, repudiate many of them. But I will tell you a little secret: Although woman suffrage does not know it, it is a part of the social revolution that is surely sweeping every civilized country, and is the prophecy of the dawn of a to-morrow far brighter and better than yesterday or to-day.

PEN AND INKLINGS

By OLIVER HERFORD

THE NEW YORK, NO HEAVEN, AND
HEARTFAILURE RAILROAD

Boston is famous for its historic associations and treasures which well repay a visit. Even the quaint and curious Pullmans that convey the traveler thither are relics of a bygone day and a joy to the heart of the antiquarian.

From *The Simple Geography*, published 1908.

THE GARDENER

THE gardener does not care to talk,
But in the garden loves to walk,
And gather all the plums he can
From fruit trees metropolitan.

The gardener has no time to play;
While the sun shines he makes hay.
Silent and big, sedate and grim,
I see him graft and rake and trim.

Oh Gardener, you had best beware!
A storm is brewing—have a care.
Soon there will be no hay to rake,
And no more plums for you to shake.

If you are wise, before too late
The rising gale anticipate,
And (like Dick Croker) take your pile
In safety to the Emerald Isle.

SWEET THOUGHT

IT'S very comforting to know
The town's so full of graft and dough,
And simple people made to rob,
Voting to keep us on the job.

THE WHOLE DUTY OF CANDIDATES

A CANDIDATE should say what's true,
When 'tis convenient so to do,
And play his cards above the table—
At least as far as he is able.

THE REPEATER

I USED to stay in bed till noon,
Then loaf around to a saloon;
But, now since last election night,
They rout me out before it's light.

I have to wear a suit of stripes,
With nary a drink to wet my pipes,
And in the workshop toil all day
At making brooms, without no pay.

And wouldn't any guy feel sore,
Now it's election time once more,
And all the boys are out for loot,
To have to wear a striped suit!

THE BOSS'S KEY

WHEN Uncle Charley moves around,
His pockets make a jingling sound.
It is his bunch of "private" keys
That fit the Public Treasuries.

LUCREZIA BORI
Metropolitan Opera Company

The Coming Musical Season

By SIGMUND SPAETH

well oiled with American dollars, is preparing to grind out its annual supply of singers, pianists, violinists, operatic stars, orchestral conductors, composers, and "artists" in general.

In looking forward to the coming season, the plans of the Metropolitan Opera Company are naturally first in importance. Mr. Gatti-Casazza seems as well supplied as in the past with singers of the first rank, having retained most of the old favorites and added several new names of distinction to his list. The feature of the season promises to be the presentation of Charpentier's new opera, "Julien." Preliminary reports of it from Paris are none too encouraging. Yet the devoted followers of "Louise" will probably hail with joy this succession, which is in a sense a sequel. Julien, in the earlier opera, is the lover of Louise, and, while the two stories are not otherwise connected, this one circumstance binds them closely together. "Julien," however, has much more of symbolism than "Louise," and is correspondingly less coherent. It is said that the composer contemplates the writing of a third opera which shall tell the story of the child of Julien and Louise. But the long interval between the birth of "Louise" and that of "Julien" would seem to indicate that the coming of the child is still far in the dim future. Charpentier is anything but a prolific composer.

ANOTHER feature of the Metropolitan season will be the presentation of a new American opera. This time it is a modest work in one act by Victor Herbert and bears the title "Madelaine." In spite of its insignificant size, however, it promises to score a success that has been denied to all its predecessors. This question of an American opera has become rather a sore subject of late. We do not like to admit that we are nationally incapable of producing a first-class operatic work, yet such has been the case thus far. "Mona" and "The Pipe of Desire" have been distinct failures, while "Cyrano" and "Natoma" have had only a moderate success.

I believe two causes to have been primarily responsible for this: first, the direct imitation of the foreign schools, which has robbed the operas of all individuality, and, second, the tragic solemnity of the subjects selected by the librettists. The Americans, as a rule, do not care for tragedy, and will accept it only with a liberal coating of foreign atmosphere. But when this atmosphere is supplied artificially the dish is too nauseating to swallow.

Mr. Herbert has very wisely chosen a sentimental comedy as the subject for his

ELIZABETH AMSDEN
Century Opera Company

new work. The story is slight and the setting is French. Briefly, the plot deals with the whims and caprices of a great French opera-singer, Madeline, who, having the world at her feet, is exceedingly provoked at being unable to find any one who will take New Year's dinner with her. The situation is productive of much sparkling comedy, and at the close develops into real sentiment when Madeline, chastened in spirit and resigned to her fate, dines alone with only the picture of her mother to keep her company. The subject-matter as well as the treatment are strongly reminiscent of Wolf-Ferrari at his best, as, for instance, in "The Secret of Suzanne." Yet, in its directness, its tunefulness, and its same straightforwardness Mr. Herbert's music is distinctly and unmistakably American. It is not too early to predict a very real success for "Madelaine."

After all, Victor Herbert is to-day our most representative American composer. His efforts have been chiefly expended on light operas, yet most of these light operas are far above the general run of Broadway musical comedy. Gilbert and Sullivan are unquestionably the representative English operatic composers. If America is guilty of a similar preference for light opera, why be ashamed of the fact or attempt to disguise it? Our chief concern should be whether we shall ever produce any one who can write light opera as Gilbert and Sullivan did.

NEXT in importance to the Metropolitan Company stands the Chicago Opera Company, which has made an enviable record in the past, especially in the production of novelties, and is equipped with an unusually fine array of singers. Mr. Campanini announces as his chief novelties for the coming season Févriér's "Monsieur Vieux" and Francini's "Cristoforo Colombo." He will also produce "Madama Butterfly" in English. Giuseppe Sturani, formerly one of the conductors of the Metropolitan Company, has been added to the Chicago forces, and the engagement of such singers as Titta Ruffo, Bonci, and Mary Garden insures a continuation of the high standards of the past.

FOR some years, an American public, partly intelligent, partly thick-headed, and largely imitative, has been paying enormous sums of money in order to hear the best music that the world can produce. Impresarios, managers, and in some cases even the musicians themselves, have reaped a golden harvest as a result of this dogged enthusiasm of the Americans; but as the demand for good music has increased the supply has also increased out of all proportion, so that now there is grave danger of choking the financial stream forever by the mere accumulation of rubbish. America has come to be considered the Mecca of all musicians, and so sure are they of the vast wealth to be gained through a *tournee* of the States that they frequently come over with very little preparation and with an artistic equipment that is obviously inadequate. Yet even such mediocre work often gets a hearing through the enterprising efforts of the press-agent, and as a result the Americans are forced to depend upon their common sense to distinguish between good and bad.

It seems a pity that the really great artists are forced to make use of the same methods of publicity as are employed by the common herd; yet it is doubtful whether they would receive recognition by their sheer worth, so congested has the musical field become. Last season we were invaded by an army of singers and instrumentalists, many of them worth only a passing notice, and this year all signs point to the coming of a greater multitude of militant musicians than ever before.

TO begin with, think of four first-class opera companies competing in New York alone. This will be the case if Mr. Hammerstein carries out his project, and the Chicago company pays its regular series of visits, with the Metropolitan and the Century already on the ground. Think also of half a dozen full-sized symphony orchestras in the same city, half a dozen organizations for chamber music, half a dozen choral societies, and then all the army of soloists and virtuosos. Yet the stage is set. Everything is in readiness. The great European music-box,

It is to be decided once for all whether opera can be sung in English, and whether it can be produced at popular prices. With all the discussion that we have had concerning the English language as a medium for song, it is strange that the real point at issue should have received so little attention. For the question is not whether English is *per se* a singable language.

The real question is whether an English translation can be sung with the same effect as the original. And here the burden of proof lies strongly with the Century Opera Company. The Messrs. Aborn have had experience in the production of opera in English, and know what they are about. Yet it would seem folly to argue that an English translation can be sung with exactly the same effect as a French, German, or Italian original. The point was clearly proved in the Metropolitan production of "Boris Godounoff," which, according to those who had heard it in the original Russian, was immeasurably weakened by its transformation into Italian. A translation can not possibly give an exact imitation of the correspondence between the vowels and the musical tones in the original.

Take such a famous and hackneyed aria as "Celeste Aïda," for example. It is probably the most "grateful" piece of music ever written for the tenor voice. Every vowel sound in it is exactly adapted to the tone that carries it. Every consonant seems to aid instead of hindering the singer. It is a masterpiece of singable diction. But, translate it never so well, and the effect must be lost in part. The point is simply that Verdi wrote his music to Italian words. Had they been French, German, or English, the melody would probably have been quite different.

There are plenty of English songs whose words are just as closely knitted to the music. Think of the old "Drink to me only with thine eyes," or of "Mavourneen," or of "Annie Laurie." These songs are just as untranslatable as "Celeste Aïda."

It must be remembered, however, that in all languages much has been written that is not well adapted to being set to music. We can hardly imagine any one singing in clear, limpid tones:

"The thush which stretched its thick protecting strips

Belwist the kitchen steps and starry skies."

Similar monstrosities are quite possible in French and Italian, more than probable in German and Dutch, and an every-day occurrence in Russian, Finnish, Swedish, Danish, or Bohemian. And this brings up another interesting fact. The librettists of the earlier Italian operas kept the possible musical effect always in mind. They wrote not for literary excellence but for musical effectiveness. As a result, their lines are often pure drivel, and when translated into English sound utterly ridiculous. Wagner, on the other hand, wrote his music-dramas with keen literary appreciation, and his librettos are in themselves great poems. But have you ever noticed how few singers are willing to sing Wagner, and, more than that, how few of the willing ones are able to do it? It is not merely the strain of singing against a great orchestral chaos, as is so often represented. Rather is it because Wagner never manufactures a combination of words and music for the sake of *bel canto*, as the old Italians did.

BUT, to come back to the experimental Centurians, what crying need is there for opera in English? There are two ways of listening to grand opera, and practically every member of an American audience adopts one or the other. The first and easier way is to concern oneself as little as possible with the meaning of the whole thing, and to pay attention only to the music, which is pleasing to the ear, and to the stage-effects, which are gratifying to the eye. It is this attitude that leads to the demand for irrelevant encores, the senseless interruption of the dramatic continuity of action by applause, and the unreasoning craze for individual voices of the heroic type, quite apart from the medium used for their display.

The other way of listening to grand opera is to study the libretto and possibly the score beforehand, and thus to familiarize oneself with every significant detail of the action. Without such preliminary study, I defy any one to get a clear and consistent impression of a grand opera at a first hearing.

That being the case, what matters it in what language the opera is sung? If the hearer is of the first class, he will get little additional satisfaction by understanding the words, even supposing this to be possible. If he is of the second class, he is already familiar with all the necessary details, and can follow the opera closely in any language, particularly if he has the libretto or score with him. All of which argument would seem to prove that an opera had best be sung in the language in which it was originally written.

The one real reason that the Century Opera Company may have for using the English language is that it will draw the patronage of a portion of the public which has hitherto scorned grand opera as being too intellectual for any but the veriest hypocrites. As it happens, this same portion of the public will be attracted also by the reasonable prices asked for

seats, which brings up the second great problem that the Centurians will have to face. Can good opera be given cheaply? It all depends on what you mean by "good opera."

We can find an interesting parallel in the drama in America. When a play has made a big success, it is put in the hands of second- and third-rate companies to play "on the road," usually without the star who helped to make it successful, and finally it is turned over to the stock companies and allowed to run on to the limit of its natural life.

It becomes merely a question of whether we want good opera or marvelous singers. The latter can not be had at a reasonable price. Adequate singers there will always be a plenty, competent orchestras and conductors, artistic and dignified staging. In fact, the Century Opera Company promises to do more than this—to compete on even terms with the heroic type of opera itself.

At the very least, we may be sure that the Century performances will be distinctly above the European average. If this standard is too low for us, we can only put the blame on our artificial intellectual snobbery and our abject worship of money as an end in itself. The Centurians can expect little support from our wealthy opera-goers, who will probably turn up their noses at anything inferior to the magnificence of the Metropolitan productions. They must depend upon the middle and lower classes who profess a real interest in art for art's sake, and who now have the chance of their lives to prove their sincerity. If the twenty-five and fifty-cent people do not turn out consistently, the Century project will fail. And its failure will be a lasting indictment of American culture, a permanent proof that our interest can be held only by a display of magnificence, and that the vast majority of our population has no ideals of art whatever, except as they are dictated by the wealthy classes.

LOIS EWELL

Aborn English Grand Opera Company

AT the time of writing, Mr. Oscar Hammerstein is rather an unknown quantity in the operatic field. When these lines appear in print, he may be in jail, or trying to make up a heavy bill of damages, or possibly completing his new opera-house on Lexington Avenue and laughing in his sleeve at his competitors. His preliminary announcement is both impressive and amusing. He presents a long list of names new to the American public, reminds us of his artistic triumphs in the past, and asserts that his new singers and conductors will surpass all that he had before. It is impossible to forecast anything definite at this date.

There is one encouraging feature of America's musical development in the rise of countless local organizations in our small towns, particularly throughout the Middle West. In these places music is practiced for its own sake, with little dependence on foreign schools or performers. When so many musical festivals take place each year in widely separated spots, when so many amateur societies are thriving on all sides, when not only New York, Boston, Chicago, and Philadelphia, but Pittsburgh, Minneapolis, Cincinnati, and Los Angeles as well can support symphony orchestras of the first rank, then perhaps it may be hoped that other considerations besides wealth and notoriety are responsible for the musical development of America, and that our enormous interest and enthusiasm are, after all, founded upon a sincere love and appreciation of the art of music.

"Being men, neither of them felt the antagonism of sex, because they had more than sex as the basis of consciousness"

The Ideal

By CORRA HARRIS

Illustrated by Wallace Morgan

IT was the after-dinner hour, one evening early in December—that season at Atlantic City when the world recedes, when fashion gives up her ghost in that place, and the Boardwalk looks like a long, naked hargain-counter in a country store, with here and there an ugly, stiff-kneed remnant of a man or a woman left limping over it. Half of the shops were closed. Only the sea went on breaking up on the shore in widths of nettled foam, like gorgeous patterns of Florentine lace, as if the world and the fashions of it had nothing to do with this eternal business.

The hotel was nearly empty. Occasionally a guest came through the door of the adjoining dining-room and sat down in the lobby. Three very old women were grouped around the open fire. One of them had palsy. Her head wagged incessantly, and she turned it from side to side like an ancient, wrinkled-faced witch looking for mischief. Two others, young, wearing smart gowns, were seated in high-backed chairs beneath the winding staircase. And two men sat cross-legged in the farthest corner, with clouds of cigar smoke rising from behind the newspapers they were reading.

The women under the staircase exchanged offensive glances. Being women, they did not like each other. They carried on a dialogue of silent antipathy.

Presently one of them arose and went out, as much as to say:

"Well, if you will not go, I must. Some one will think we are friends if we sit here side by side!"

The other looked after her indignantly for having got the last word so effectively and so impudently.

THE two men discarded their papers.

The elder was tall, very thin. His hair was white, his expression forbidding. It consisted of a certain frigidity, the congealed look of rectitude. You might have parsed it thus: positive, disappointment; comparative, disgust; superlative, silence. No woman could have made him see her. Every woman must instantly resent him as flowers fear a frost.

The other man was prematurely aged, not so tall, with heavy, stooping shoulders, and a large head. His hair was sprinkled with gray. He had a quick, brave eye, black, full, wide open, ready for visions, which accounted for the excitement of color in his face—altogether, a volcanic expression; but subdued now, as if there had been a recent eruption, as if his nerves still tingled from the effects of a great transgression. You could have parsed it also: positive, ardent; comparative, lover; superlative, repentant husband. The kind of man who sees every woman, who is born to explore them; whose ardor is also heroic; who could lead a forlorn hope, take a city if need be; but who is destined by nature never to conquer himself. One of those intoxicated souls to whom we can not impart an ascetic salvation, because it is not equal to his greater emergencies.

THE moment he laid aside his paper, he became a presence in the room, a kind of warmth which was enveloping. The old lady with the palsy felt it, and tried to fix her eyes upon him.

Being men, neither of them felt the antagonism of sex, because they had more than sex as the basis of consciousness.

"I see," began the younger one, "that

some one is writing to all the distinguished women in the country, asking them to give their opinion of the ideal husband, the kind of husband they think would make a woman happy. Wants to publish a symposium on the subject. Suppose they'll answer?"

"Oh, yes," replied the other, "if he promises to give their names. But they will not tell the truth."

"Why?"

"Distinguished women never tell the truth. Their minds are in the public eye. That is their fashion, like the gowns of society women. They play to the gallery. Ought to have asked the undistinguished women."

"Think they would have told it?"

"No; but they'd have written what they felt was the truth, and they would not have signed their names. Undistinguished women are generally inclined to modesty."

"Still, I'd like to see the thing when it comes out. Always had a hankering to know what a woman would consider an ideal husband."

"Well, you'll never find out. In the first place, there's no such thing, not a permanent being of that kind—although there are moments, hours, even a day or two, when almost any kind of husband takes a fit of ideality, and so poses before his wife; especially if all the rest of the time he's the very devil of a fellow, breaking her heart and the crockery, and driving her to prayers and distraction."

THE younger man looked uncomfortably self-conscious. The flush upon his cheek deepened. The other went on in his dry metallic voice:

"But he can't keep it up, being an

ideal husband, not and go on being a man at the same time. Can't serve two masters. And, if he could, she'd get tired of him and his performance. She would not admit it; she wouldn't even know it; but after a time she'd wish, without believing she wished it, that he'd go out and get drunk, or do something else to bring her heart."

"I think you must be wrong," protested the other gravely. "I've always thought a good, sober, faithful man, that she could trust anywhere all the time, would be an ideal husband for a woman."

"You are mistaken," said the old man, looking straight at his companion for the first time and freezing down to the subject.

"Nothing ideal is bearable for long at a time," he continued. "Least of all to women. That is why they change the fashion of their clothes so often. Can't stand the same shapes two seasons in succession. Can't sleep in their own bed, unless they move it to the other side of the room now and then. Can't even stand the same husband two years hand running, unless he does something they didn't expect him to do when they married—cavort a little, or fall in business, or fall in love with somebody else! Must have something to stir 'em up, to distress 'em!"

"You are the one who is mistaken!" the younger man retorted, with a warmth that approached indignation. "Women are remarkable for their constancy."

"Oh, yes! They are faithful enough, of course. That is not the point. You see, spiritually speaking, not morally, they are a kind of sediment. By nature they are inclined to settle down to the bottom. Can't rise much of their own accord. That is why they are more religious than we are. They pray more because they really have little capacity to rise to the sublimity of faith in themselves. They require a stimulant, something to lift their spirits. God can do it; but a good husband, who is never anything else but a good husband, can't do it. They drop down; they lose the animation of anxiety; they cease to make the effort to be dear and beautiful and entrancing by way of holding him. They lose the resonant quality of—Pshaw! I don't know what it is they lose, but it's something as essential to them as it is to us. Life—that tremendous quality of acquisitive femininity. They have nothing to acquire—got you—see? Nothing else to accomplish—they've reformed, or

made you to suit what they thought they wanted. Then, naturally, they've done with you, finished you. They lose interest—in you. And they get another interest: children, housekeeping, society, church work—something to occupy them—because you don't! That's the fate of an ideal husband—loses his wife every time!"

The woman seated in the tall-backed chair arose and started upstairs. As she ascended, she looked back at the fierce, lean old exponent of matrimonial femininity with angry eyes, as if he had accused her.

THE younger man went on lamely with his side of the argument. He became personal, as if he had discovered a limp in his antagonist, not in his logic.

"Say," he exclaimed, "you don't know what you are talking about! You must be a bachelor."

"Been an ideal husband for thirty years. And I do know. Used to be a sort of blade—jolly fellow. Married a fine girl; wanted to settle down, and I did. But I didn't reform myself. She did it. Never got over it, if a woman reforms you. She does it by taking the stuffing out of you. You are not all there when she gets through. Look at me! Haven't been drunk in thirty years; haven't risked a dollar in a game of chance; haven't flirted with any of my wife's friends. Been faithful to her, been a good provider, attended to my business, made a fortune, been elected to an honorable office in my State, done everything I ought to have done, and have done nothing I ought not to have done. And my wife's one of the leaders of the suffrage for woman movement in our section—gives all of her time to it! It's awful!"

"What is?" asked the other, leaning forward in his astonishment.

"The fit I'm in. Doing right all the time has a bad effect upon the spirit. Not natural. What I need is something to spring me. Not my energies, not my ambition, but me, you understand. I came down here thinking I'd have a little fling—nothing wrong, but do something to break the ice. Can't! Lost my taste for living."

"That's queer," said the other. "Now I've been doing that very thing—breaking too much ice. Comes on periodically. Have to get drunk. It's a fact, I have to! Done everything to stop. Can't. Married a fine girl, too. Thought she'd help me. And she does. Never loses faith in me. Anchors me up, when I'm down."

He was silent a moment, head lowered, chin on his breast, eyes fixed mournfully upon the floor.

"I'd give anything to make her happy," he continued in a lower tone; "and—well, we are happy between-times, very happy, as if we'd escaped something dreadful, you know. Then it comes on again. I do not know what it is that comes. It's like a terrible spirit armed to the teeth against the monotony, the very peace and content we want. If I could do something tremendous, I feel that it would pass out of me in the deed. As it is, I go down, clean to the ditch, every time. She knows how much I love her, and I know how much she loves me. But it doesn't work. I take a header every time. I can give her, do give her, everything but that—security from anxiety about me. She has that kind of calling love a man hears all the time ringing in his ears. Had a wire from her to-day. Nothing in it; just wanted me to know she was thinking about me. She—"

"I congratulate you!" his companion interrupted.

"Upon what?"

"You and your wife are still in love with each other. You have not destroyed that greatest of all ideals—love!"

BOTH men arose, separated, and passed out of the lobby.

The old woman with the palsy nudged her companion, who was asleep. She started, her eyes flying open like the eyes on a pivot in the wooden head of a doll.

"What is it?" she whispered.

"Did you see those two men?"

"Where?"

"Over there in this corner," said the old woman, her head wagging, and her finger shaking as she directed the gaze of the other. "I've been watching them all the evening. I am sure there's something wrong about them. Both of them had bad faces. I'm draf. I could not hear what they said, but they looked as if they were plotting a crime."

They both turned to the third old woman, who was also asleep in her chair. They shook her, whispered to her, and presently the three of them tottered forward and climbed the stairs, like little old girls with withered faces who are frightened of the dark.

What women do not know about men they suspect. One does not know why, unless it is because they are men. Although it may be because they are themselves only women.

The Old "Iroquois"

(Now o Fouderville House in Chicago)

By AGNES LEE

BY a new name they call the house to-day.
The balconies of blood are gilded o'er.
Tardy Precacution writes upon the curtain,
And lights a beacon-lamp at every door.

Where are we? Who hath told us all these things
Dreaming within us, till we know and see?
This is the Iroquois, the house of death.
Here echoed one united agony,
Muted how suddenly in char and ember,
Here, in this very place. The walls remember.

And bright the revel now, and loud the laughter.
But what is yonder swaying, faltering host?
Shall this gay vault give mirth alone hereafter?
No! Hark,—the sobbing of a little ghost!

House evermore to darken thought of man,
Let some stern Azrael above thy portal
Attest the sacrifice! Through all thine aisles
Let stanzas ring, horn sounding and immortal!—
Ah, not the strident slang, the castanets!
Ah, not the long cheap laughter that forgets!

Orators Who Have Influenced Me

By T. P. O'CONNOR, M. P.

W. E. GLADSTONE

AMONG the thousands of crowding images that come back to me from the many years I saw and studied Gladstone, the one most vivid and characteristic is his appearance when he came into the House of Commons while he was Prime Minister. It was a strange, a thrilling, an inspiring sight. As everybody knows, one of the rules of his life—and every rule he carried out with iron rigidity—was to take a couple of hours' walking exercise every day. He carried out this rule so rigidly that when he was Chancellor of the Exchequer for the first time, and was working some fourteen to sixteen hours a day, he took his walk after the House had risen. And, when the weather was wet, he would, rather than be cheated of his walk, take a hansom to his house, then array himself in waterproofs, and go out for his walk. This fact he told me himself during a (to me) memorable walk with him in Hawarden Park. You could see him any day during the sessions, striding along through the streets at a rapid pace, with his head erect and with his thin, long gray hair blown by the wind, if wind there were. And this walk he timed, like everything else, so that it should occupy just the allotted length of time, down even to a minute. And thus it was that he had finished it and reached the House at the exact moment which he had arranged.

IT is a well known practice of the House of Commons to put the questions addressed to the Leader of the House rather low down on the list, so as to give him more time and allow him to enter the House a little later than the average member or the subordinate Minister. So it was with Gladstone; and just three or four seconds before the first question to him was reached, you saw this strange entrance of Mr. Gladstone. He would be panting almost painfully; his hair would look wild and disheveled; but the most remarkable thing was the look in the eyes. They seemed to be positively wild. He would glance at the House as if he were trying to take it all in with a second's glance. Never was there such a picture of fierce energy, of strength pushed to its extreme possibilities, of a nature fiery, eager, and commanding.

Nobody ever had finer eyes than Gladstone. They were large, black, well shaped; but their most remarkable quality was their extraordinary flash and penetration. I have occasionally seen him as he was about to speak and was trying to make sure of catching the Speaker's eye. And they seemed to glow and pierce and almost jump out of his head. And there was no necessity for it at all. As soon as he rose, whatever the circumstances, he was sure to be called. But it was the fiery eagerness of the nature that thus imparted to even his commonest act this extraordinary intensity of look and ferocity—so to speak—of desire.

YOU must keep this background of Gladstone's extraordinary temperament when you begin to analyze the marvelous influence of his speeches. They were not, in any sense of the word, fine

literary performances. Rarely, if ever, were they brightened up by an epigram. Nearly every sentence was long and cumbersome; there were qualifications and parentheticals; and sometimes they resembled the crabbed and mysterious language in which Acts of Parliament are offered to a long-suffering and perplexed public. I think Gladstone's speeches will be less read in the future than those of almost any of the great orators of our House of Parliament. Once, when I was writing a biography of Disraeli, I had to read all the big debates in Hansard for something like forty years; and the last speech I looked at, always, was Gladstone's. I had to begin with other and much less notable men, who put the issue before the House with much greater clearness and in much briefer space. You could not see the trees for the wood; often, when reading a speech of Gladstone, you could not grasp the ideas for the words.

YOU may well ask, how it was that oratory so faulty should yet have had such tremendous effect? For the effect was tremendous. I never heard Balfour deliver in the House of Commons any of the big speeches, such as those during the Crimean War, which set that assembly crazy for the moment; and therefore I can not recall any of his greatest moments. But scores, I had almost said hundreds of times I have seen the House rock under Gladstone's oratory. I never, indeed, ever heard him make a poor speech or a commonplace, or one that did not produce great and immediate effect. What was the secret?

I put in the first place that strange and potent personality that was behind the speech. A Gladstone speech was like lava issuing from a volcano in fierce eruption. And this tremendous impression of strength came largely from his physical gifts, which, in their way, were quite as exceptional as his intellectual. Now and then he had a slight cold, and his voice was a little husky, but as a rule it resounded through the House like some big peal from a mighty belfry. Even in private, there was something almost affrighting in the sound of his voice. Once or twice I found myself close beside him at one of the little tables in the division lobbies while he was speaking to some friend; and even there I felt startled as I heard him say something, quite trivial perhaps, to his companion. It sounded as thrilling as if he were on his legs; it almost seemed too loud, almost too deafening, for the narrow space through which it flowed.

THIS perfection and strength of voice came not merely from its splendid quality, but also from the perfection of physical health and vigor that he always enjoyed, up to a few months before his death. And this same extraordinary vitality gave to all his speeches an immense force. I have heard Mr. Asquith deliver many speeches, in the last few years, which immeasurably surpassed Mr. Gladstone's in tenderness, in grace of language, in the perfect chiseling of their diction; and yet, I have made comparison between their effect, spoken as they were

in quiet voice, by a man who often appeared tired out by the labor of his office, with the boom of Mr. Gladstone's short-cut utterance; and it seemed to me like the soft music of a lute with the clang of bells in a steeple.

To all this you must add that Mr. Gladstone's face and figure were the most imposing almost ever seen since Chatham's eagle eye and thunderous voice and haughty mien could command a whole House with a look or a word. The extraordinary beauty of the eyes, the impressive ivory pallor of the complexion, the strong, well shaped nose; the mouth, large, wide, as mobile as that of a great actor; and the frame, robust, always in motion, and yet so refined and well knit. All these things added immensely to the effectiveness of the speaking. The splendid and massive head, the white hairs, the rapt look also were factors in his extraordinary appearance. I once heard an Irishman compare Mr. Gladstone's appearance on such occasions to a benediction.

I MAY have given the suggestion by this description that Gladstone was always treating a passion to tatters; if so, that impression would be quite false. Never was there a human voice under more perfect control. In elocution Gladstone was greater than any man I ever heard; greater even than Chamberlain, or than another and very splendid speaker—Sir Edward Clarke; greater even than Bright. He ran along the whole gamut in a single speech of any duration, from soft and cooing tones to the lighter tones of hunter and the deeper note of mockery and mimicry up to the thunder of a passionate appeal. When he was dealing with an argument, he would come to the end of a rushing sentence with some final phrase that sounded—I quote a figure I have used before, of another man—like the last thud of a great pile-driver sinking the gigantic blocks of wood for the foundation of a mighty bridge over a wild river. But again I must qualify this by saying that Gladstone's voice never reached a roar. Throughout all its infinite light and shade there was always the profound inner composure to which the man had trained, with such infinite trouble, his volcanic nature and uncertain temper.

It is an essential of success in House of Commons oratory—Disraeli laid that rule down long ago in one of his novels—that even the most excited speech must keep close to the tones of polite conversation in a drawing-room. It may be because the House is so small, or it may be the national and racial love of reserve; whatever the cause, no man who bellows succeeds in the House of Commons. The music of the House of Commons must be in the tones of the drawing-room. When it gets beyond that pitch, it is like loud cymbals in a small room; the noise destroys the music and the effect.

NO man was more conscious of this fundamental fact of House of Commons oratory than Mr. Gladstone. Sometimes he forgot it for a little while. Under the influence of hurry or strong emotion,

or a fierce eagerness to produce a crashing effect at once, sometimes perhaps because he was slightly indisposed and there was fever in his blood and nerves, Mr. Gladstone would begin a speech on a high and staccato note. So long as he did this, he did not produce the immense effects he usually gained.

HE was, indeed, deadliest, not in his prepared speeches, but when he rose suddenly and unexpectedly and spoke without preparation. Then he would start in the light, easy tones of ordinary conversation; he seemed to be thinking aloud and to be chatting to a few familiar friends. Then he would begin to gather strength and inspiration, and suddenly the whole House would be dazzled and thrilled by an unexpected outburst of a lofty passage of eloquence that really sounded more like heavenly music than the tones of the ordinary mortal. Then that would pass away, and Gladstone would relapse into the easy, familiar tone of conversation. But the enemy had then to be more cautious and more afraid than ever; for by that time Gladstone would have become

master of all his infinite resources. And then he would rush into a passage of bitter mockery and of positively comic acting that might have made one think of Garrick as he stood uncertain between the rival nymphs of tragedy and comedy.

The greatest comedian that ever strutted on the stage might have hurt with envy as he saw Gladstone in that mood. The whole man would act. Thousands of wrinkles of merriment would be formed in the great and mobile face; the eyes would laugh like a boy's; the voice would descend to a deep bass that made everybody roar; the whole person would seem to laugh. Once I heard him destroy the effect of a brilliant and damaging speech of Mr. Goschen by referring to his "right honorable friend's ungovernable conscience"—the last two words being pronounced with such comic force of mimicry of wrinkled face and laughing eyes that even the victim had to join in the universal laughter, and even when he surveyed his mighty edifice thus tumbling around him in the mere pronunciation by

this wondrous old magician of two words.

Even then, you were not at the end of the various effects which Gladstone could put into a single speech. You had scarcely done laughing with him and sometimes even a little at him—for when he was in the full comic vein there was something grotesque about his performance—even then you were not done with him. Easily flying from point to point, he would get on to some pathetic note; and the pathos would grow and grow until you saw him soaring aloft into the empyrean. The House would sink into an awed and spellbound silence; you heard nothing but the tremendous music of this wondrous voice, uttering words with a melody that recalled the song of the lark in the high heavens; and you actually gave a heavy sigh of relief as the speech ended in some mighty burst of melody; and you had to pause, with your breast panting, until you joined in the thunder of cheers which recognized this wonderful experience. You realized then that you had seen and heard something that never again would come into your life.

When the Fuzz Comes Back

By EDMUND VANCE COOKE

DID you lose your treasured top-knot ere you hardly lost your youth?
Did you watch it fail and wither, gnawed by some mysterious tooth?
Did you offer it libations, as you poured your prayers on high,
From crude-oil to cantharides, from ale to Extra Dry?
Did you surgerize and masseurate and cauterize and singe,
Till none was left to celebrate except a back-yard fringe?
Then, when your head was barren as a polished ostrich egg,
When no fly would light upon it, fearful lest he break a leg,
When your fate had sealed its edict and your doom rehearsed its crack,
Then—one morning—you discovered that the fuzz was coming back!

Oh, it might have been the mange-cure that you used a year ago,
The gasoline, the vaseline, the salt pork, or the snow,
The capillary vacuum which had its little run,
Or your carefully contracted hatless habit in the sun.
But, oh, a truce to might-have-beens, when joy has crowned despair
And your happy head has sprouted with a crop of virgin hair!
Your daughter's dainty giggle makes itself a prudent cough;
Your son is rudely cynical, your wife's inclined to scoff.
But in the glaring sunlight and against a field of black,
Even She—eternal doubter—says the fuzz is coming back.

In that hour of pride and pleasure, banish every traitor doubt
Which whispers of the score of years your hair was coming out.
For why peruse the dead, dead past? The future is aglow;
Faith has removed her mountain; heaven's started here below.
Aye, where was dearth and emptiness like unto that in U's
Is now a recrudescence which is symbolized by a fuzz!
The fount of youth is flowing; mortal man becomes divine;
And a stiff-necked generation is not waiting in its sign.
Thanks be for all our mercies, those we had and those we lack;
Heaven's hope is still eternal, and the fuzz is coming back.

Football Captains of the Season

H. H. Ketcham, of Yale, playing "loose center," is one of the greatest diagnosticians who ever stepped on the gridiron

AMERICAN college football has yet to produce a coach who was not in the long run heavily dependent, when the big game swung around, upon the captain on the field. Unlike a great many games, football has been a wonderful developer of leadership, and, all other things being equal, it is the quality of leadership that wins. Both East and West this year, the big eleven are peculiarly fortunate in their choice of captains. Yale, under a new system of coaching—new in that it returns to the first principles of Yale football—is especially happy in the leadership of a man like H. H. Ketcham, one of the greatest diagnosticians who ever stepped on the gridiron, and, playing what has come to be known as "loose center," strategically well placed.

At Harvard there is R. T. F. Storer, opportunist if ever there was one, and first class all-around line man. At Princeton "Hobey" Baker, one of the best runners in a broken field the game has seen, and a born leader, presides over the destinies of the Orange and Black. Louis Yang, a typically good Pennsylvania end, leads the Quaker eleven, and J. J. Munns, one of the coming men in the guard position, is at the head of the Cornell team. Michigan is led by G. C. Patterson, a center, the splendid Wisconsin team by Tandberg, a fullback, and the University of Chicago by Norgren, one of the best halfbacks the West has produced in many years.

To these men, quite as much as to the coach, we must look for success afield. There have been attempts innumerable to run a team from the side lines, and these attempts invariably have failed, for the simple reason that they took no account of that leadership which is one of the keystones of the game. It should be obvious that a man stationed on the side lines and looking across the field of play, cannot get the same idea of the arrangement and pos-

sibilities of the defence that appears like an open book to the man actually on the field of play, who faces the defence.

Ordinarily it might be said, and with considerable justice, that the ideal post for a captain was behind the line—especially in the position of quarterback—but some of the best leaders in the game, notably, Hinkley, Campbell, Hiddebrand, Toercy, Hare, Schultz, and Brown, were line men, and the kind of line men that really set a pace for the entire team. Probably Gordon Brown was one of the best captains who ever led a team, and undoubtedly James O. Rodgers was out far behind him. It would not be difficult, indeed, to make up a list of line men who had been successful captains, the institutions they represented being of less importance than their own personalities.

Strategically, however, the position behind the line is the ideal one, save in such instances as that of Ketcham, whose defensive position, at least, is practically that of a back. The Yale captain of this season has been at all times a quiet, effective player with a wonderful range and the capacity for inspiring the men who played with him. In temperament he is not unlike Howard Jones, the new head coach, another quiet man who obtains results by simple processes. Ketcham is one of the finest centers the game has seen in recent years, and his only trouble has been an occasional spasm of bad passing. However, even with another man occupying the position of captain, he has been the life of the Yale team, and this year, in the titular position, should add to an already sound reputation. I doubt, indeed, if there is any forward playing today who is a better all-around football man.

STORER, of Harvard, a natural forward, has profited by good coaching and worked his way to the front through ability to do a little more in a pinch than is asked of him. Here is a man who has played center and tackle and undoubtedly could play guard. It is possible, even, that he would be of value in the backfield should the necessity arise. In other words he is a sample of the adaptable player who is a keen student of the game and makes the most of the excellent instruction he gets. In the Yale game last year Storer was epitome of the Harvard type of play, which depends upon wonderful kicking and clever covering of those kicks by fast forwards. It was Storer who snatched up a loose ball for the first touchdown against Yale, and though well supported on the other side of the line by such a sterling tackle as Hitebreck, it was Storer who made the most of the opportunities "fed" to the Harvard forwards. Beyond a doubt Storer will make one of the best of leaders, and as he has the great gift of consistency, he should be able to keep the Harvard eleven up to his own pace.

Princeton is unusually fortunate in its choice of a leader, for "Hobey" Baker has the personal skill to raise havoc in a broken

field and solift his team by his own unaided effort out of any rut into which it might fall. The keynote of Princeton football, of course, is speed, and viewed from that standpoint the Tigers could hardly have chosen a better man than the youngster who was one of the sensations of last season. In Baker Princeton has a fine broken field runner, a good kicker, a safe man in handling kicks, and a leader who should leave a distinct impress on the team.

In choosing Young to lead the eleven, Pennsylvania seems to have done wisely, for good ends have often made good captains, and under the tuition of George Brooker a Pennsylvania end is a big factor in the game. From time to time the Quakers have turned out remarkable ends, such, for instance, as Metzger, Boyle and Scarlett, and even though the team led by Metzger came to grief, there was never a finer example of leadership. Probably every Pennsylvania man will remember the leadership of Dr. Schoff which resulted in the defeat of Princeton in New York, and it would seem that the choice of an end to lead the Red-and-Blue must prove a happy augury.

CORNELL, in the throes of football reconstruction, is led this year by J. J. Munns, a guard much underestimated last season, and a man who has had a year's work under the Sharpe regime. Some of Cornell's best eleven have been led by guards, and the new captain squares up personally with the types of years ago. Oddly enough both Army and Navy have chosen ends to lead their eleven, Hoge being West Point's captain, while Gilchrist is the leader at Annapolis. Both these men are unusually fine football players, and although last year Gilchrist seemed to have a shade the better of it in his immediate position, Hoge will probably prove quite as valuable a leader. At both government institutions there has been some excellent end coaching, and it is out at all out of the ordinary to find either an Army or Navy end at the top of the heap at the conclusion of the big service game. Either Gilchrist or Hoge could easily make a place on a college eleven, and both are well suited to a captaincy that means more, even, in the Army and Navy than it does in the colleges.

MUCH as we make of the captain in the East, he is probably even a more important individual in the West and Middle West. In the latter section the principal leaders are players well known to the best coaches and the undergraduate bodies of Michigan, Wisconsin, Chicago and Minnesota. Patterson, the Michigan captain, is one of the best football players in the West, while Norgren should prove better than the average leader. Throughout the Middle West it has been the custom to make much of the coach, whereas, as a matter of fact, the team captain frequently has been responsible for the victory. One remembers Ferber of Michigan, and Eckersall, of Chicago, and to mention "Germany" Schultz, of Michigan.

A Frenchman in the United States

Another attempt to help Americans
to see themselves as others see them

MD'ESTOURNELLES DE CONSTANT is no frivolous tourist. He is a pilgrim to Damascus. He has a serious purpose. Nothing could be further from his intention than being witty or amusing. In so far as a Frenchman can be ponderous, he is so. He has made four voyages to our shores ("always in winter") and enormous journeys from ocean to ocean and from Seattle to New Orleans, in the face of our national terrors, the sleeping-car, the drought of air, and the dinner à l'eau glacée. The result is a voluminous and painstaking survey which is intended to justify our ways to Europe and to dissipate the "inquietudes" with which we are regarded by the Old World.

WITH this laudable purpose, our portrait is slightly flattered, ignoring some defects, minimizing others. For example, our literature is not mentioned at all, while our art is dismissed in three lines, with a reference to Whistler. Most amiably colored are our co-educational and all other institutions, the freedom of our women, our philanthropic millionaires and political college-presidents, our large manner of harvesting wheat and moving houses with all the furniture inside, our noble sport of baseball, our pure family life. Not a word about corruption in politics, monopolies, child-labor or spittoons. And yet, in spite of this evident disposition to make the best of us, we doubt whether the Old World will be placated. We rather suspect that Europe will receive the impression that we are a somewhat crude and very energetic industrial people who will quite possibly insist on fortifying the Panama Canal. The Canal, it may be said at once, represents the dark shadow in the picture. But we do not get around to it till quite the end of the book, and meantime M. de Constant's impressions of us—and ours of him—are, as we have said, of the happiest.

WE behold him crossing the continent and arriving in the Far West, where he revels in "veritable baths of simplicity," sheds his old-world prejudices—some of them—and returns to nature. In California he is converted—by main force—to Woman Suffrage. He resists, but is literally taken by assault. What could he do against "the sudden and simultaneous attack of all the women of California?" He says, with plaintive astonishment: "Who would have thought that

I, a diplomat, would make a campaign, still more, inaugurate an electoral campaign in favor of votes for women at San Francisco? However, that is what happened. I did not yield without resistance. I concealed nothing of the struggle going on between my native good feelings and those due to my European education. The combat lasted during the whole week that I spent in California, without an instant's respite; long-distance telephone, night and day telegrams, messages, letters, visits. . . . Our polite and flurried Frenchman surrendered. He admitted that women ought to vote—in America. But he drew a touching contrast between American women and Frenchwomen. *La femme française*, according to him, rests placidly in the foyer, content with her conjugal power (always subject to the authority of the husband—*il est le chef d'œuvre*). She does not complain and does not claim the right to vote, asks nothing of the law. . . . And M. de Constant has never heard that there is a flourishing and militant woman-suffrage organization in France!

BUT our visitor really has an open mind, after it has been forcibly opened. He perceives, after escaping from California, that women will be valuable political allies in the fight for international peace, of which he is a passionate propagandist. Women naturally hate war. They have, he discovers, waged a successful war on alcoholism in various parts of the country. They will now proceed to fight other forms of violence. In his new enthusiasm for this idea M. de Constant is actually unfaithful to his cherished ideal of the European woman: "She is courageous only to suffer," he says with a perfidious touch of pity. . . .

AT Denver our traveler accomplished what was hailed as a miracle by the Colorado newspapers—he made peace between the Daughters and the Sons of the American Revolution, and the two rival organizations united to give a banquet to him in honor of "la France inspiratrice." At this banquet a blonde young girl played a solo on the *cornet à piston*, and M. de Constant shook both her hands in a frenzy of delight at her cool daring. "She must," he said, "be the happiest woman in America!"

Throughout our land M. de Constant found recognition of our debt to France. He met everywhere the old lady who as a child was kissed by La Fayette. He records the impression among our chil-

dren that Washington and La Fayette were twins. He is moved to tears, almost, by the sight of the monuments of La Fayette and Rochambeau in the place of honor facing the White House, "the most touching homage that a people can render to its liberators." Its liberators—well!

There is another beautiful banquet at Cincinnati, with a menu symbolizing at once Franco-American unity, aviation and arbitration—M. de Constant's three passions. Noble ones, too, but we wonder how they were arranged on the menu. M. de Constant says that just as aviation has triumphed over derision and incredulity, so will the dream of justice among nations. . . . His peace propaganda found a wide welcome over our whole country. Everywhere we were disposed to peace, to arbitration, condemning militarism—

But—

RETURNING to Washington, finding the Federal capital "so beautiful but so far in spirit from the country, so near to Europe," M. de Constant measures the distance that separates us from our government, marks the sharply cut division between the governmental weaknesses and the desire and aspiration of the people. A people of pure, patriotic, peaceful idealists, ruled by a materialistic, imperialistic government—that is what M. de Constant sees and mourns over. From East to West, North to South, he says, the country has but one ambition—to consolidate the work of the past, to develop, in peace with the world, its rich domain, to preserve the traditions of Mount Vernon. But the government has departed from this policy—it has fallen into imperialism, dawdling, flowering under Roosevelt, bearing its fruits under his successor. Its blackest and most poisonous fruit, of course, is the fortification of the Panama Canal.

M. DE CONSTANT can hardly find words harsh enough for this betrayal of the hopes of Europe. Europe, he assures us, looks to us to complete her declaration of the Rights of Man by our declaration of the Rights of Nations. She counts upon us not to compete for world-power, but to lead the nations of the Old World away from their errors into the path of peace. He sees a gleam of hope in the election of Wilson. And he ends with a fervent appeal to us to abandon the Eagle—that carnivorous and barbarous bird—and to follow the Star.

Lemuel Objecteth to Autofiltration and Rebuketh
His Daughter

LEMUEL'S racer was towed to its barn.
Lemuel viewed it,
Lemuel rued it,
Stroked his chin whiskers and grumbled, "Consarn
This automobilousness, sp'ilin' my liver!
Ther ain't nothin' in it, as I can diskliver,
'Cept time-bustin' dashes
And bank-bustin' smashes.
Here's a car that's cost more than the house we reside in,
Thirty days old, and yet useless to ride in.
Hang it all,
Dang it all,
Sideswipe and bang it all!"
Daughter Katury,
Tiptoeing in,
Noted his fury
And spoke with a grin:
"Why don't you send for a car doctor, Dad?
Maybe your car isn't busted so bad."

"MORE darned expense!" was her father's dark mumble;
Nevertheless, in a spirit more humble,
He rang up the autopath. Zachary Bumble,
"Hm!" quoth the expert, "she's had a bad tumble.
Bum radiator and faulty ignition.
Steering-gear twisted—tank out o' position—
Cylinder missin'—two plugs—guess they're lost.
How much the cost?
Three hundred dollars and thirty-two cents."
Lem dropped his teeth (artificial) and swore,
Spectacles flashing and finger-nails tense:
"This autofoolin' don't cost me no more.
Let 'er rot,
Let 'er rust!
I will not
Go ge-bust

Keepin' a pace with the Goubls and the Astors.
Gimme a wheelbarrow, somethin' on casters!"

Then upspake Katury,
Calm as a jury:
"Pa, I've got some cash in the bank, and I guess
I can do without shoes and a new autumn dress.
I'll pay the bill,
If you only just will
Let me take charge of your auto and run it."
Pa answered, "Yep!"
Then, retreating a step,
Scratched his old bald spot and sighed, "Now I've done it!"

PERCIVAL BROWN, summer boarder from town,
Ran a small roadster and often came down
To call on Katury—a program which Pa
Didn't approve quite so warmly as Ma.
"Handsome, perhaps,
But them smart city chaps
Is us'ally poorer than old leather straps."

WHEN the racer was mended, imagine Lem's wrath
On hearing "Honk! Honk!" down the old cedar path
And look! there was daughter in front of the wheel,
While amug
As a hug
In a rug,
Half a-hug,
Sat Percy beside her, the picture of zeal.
Giving first lessons in gear, brake, and clutch.
Lem's temper was such
That it prickled like a thistle.
"That do beat the Dutch!"
He gave a loud whistle.
"Katury, come here!"
She was slow;
But at last she drew near
With her beau.
Lem aimed his frown
At Reginald Brown.
"Would y' please answer me
What yer reasons may be
Fer givin' my daughter choo-fer lessons
free?"

YOUNG Percival smiled with an im-
pudent air,
Removing his hat from his smooth flaxen
hair
And catching Lem's bolts like a lightning conductor.
"I've watched, sir, so far,
How you've managed your car,
And I think that your family needs an instructor."

"GIT out!" thundered Pa.
"Oh, Pa!" faltered Ma.
But Percival, jauntily saying, "Ta-ta!"
Smiled on Katury divinely and strode
To his little white runabout out in the road.

(TO BE CONTINUED)

Awakening

By NEITH BOYCE

A GIRL, not much more than a child, was sitting curled up in the low fork of a pepper-tree near the house. A book was crushed under her elbow. She was watching some chickens that pecked about on the bare ground: stupid hens, a proud rooster with glancing green feathers, and a few pigeons, treading daintily like coquettish strangers. A breeze swept the long fronds of the pepper-tree; the hot afternoon sun drew out the spicy smell of peppers, blue-gum, and climbing roses.

A young man came out of the house and stood swinging a gold-handled whip. He was tall and very slender, with gallant blue eyes, a red spot on either cheek, and a little mustache twisted into points; his felt hat sat rakishly on one side of his handsome head. The girl watched him through the pepper-branches till he came toward her. Then she matched up her book and turned her shoulder to him. He pushed his way through the branches and stood looking at her with a slight, rather appealing smile.

"What are you reading, Milly?" he asked.

The girl did not answer. Her face, bent over the book, showed a brown oval between two thick hanging braids of black hair. She turned a page with an expression of absorbed interest.

"Can't you speak to a fellow?" demanded the young man impatiently.

She gave no sign of hearing him; and after a moment he turned on his heel and walked away. The girl's narrow dark eyes watched him over her book. She saw him stop a moment and speak to her mother, who had come out on the steps; then he went on toward the stable.

MILLY'S mother was a fair woman, with smooth bands of blonde hair. She had some white sewing on her arm.

"Milly!" she called in a soft, colorless voice.

"What?" said Milly, without moving.

"Come here; I want you to try on your dress."

Milly uncurled herself and dropped out of the tree. She wore a faded blue dress that stopped short above her shoe-tops. Her slim young body was childish; her arms and legs were long and thin. She walked up on the steps, and her mother slipped the white skirt over her head.

"I just want to see about the length," she said. And then, continuing in the same tone: "I wish you wouldn't act as you do to Walter. I can't see why you behave so to him. Milly, I think it's dreadful of you."

"Make it long," said Milly, looking at the hem of her skirt. "Make it down to my ankles—and make the waist tighter."

"Nonsense! I shan't do anything of the sort—you aren't old enough for long dresses. Did you hear what I said about Walter?"

"Yes, I heard. I want you to make this dress below my shoe-tops, mother, or else I won't wear it. I'm plenty old enough. I won't wear it as short as this; I look silly."

"You'd look silly if you tried to be grown up when you're only a little girl.

Well, I'll let down the hem a little. Now, Milly, I want you to treat Walter differently. I should think you'd be ashamed, when you know he's ill and is here to try and get strong, and we all try to make him comfortable—poor boy!"

MILLY'S mouth closed firmly and her narrow eyes looked out over her mother's bent head with an obstinate expression.

"Do you hear?" asked the mother, in a tone as near impatience as she could arrive at.

"Yes," answered Milly.

"Well, will you do as I say and be a little more pleasant to Walter?"

"No, I won't be pleasant. I hate him," said Milly, coolly.

"Milly! A poor sick boy like that! How dare you say such a thing!"

"I do hate him."

"Don't let me hear you use such language again! I don't know what you mean by it. What has he ever done, that you should speak so?"

"He hasn't done anything. I just hate him, that's all."

"Milly! I must make this dress a good deal broader across the shoulders—how are you growing?" said Milly's mother, sighing deeply.

"Well, I can't help growing," said Milly, with an injured look. "Don't you want me to grow up? You know you don't know what to do with me now."

"Why do you say that?"

"Well, mother, you often say it."

"You are a hard child to manage, Milly. You know, you don't pay the slightest attention to what I say. I feel dreadfully that you should treat a visitor in our house as you do, and without any excuse. Walter thinks he must have hurt your feelings in some way, and he—"

"He hasn't hurt my feelings," said Milly, with irritation. She stepped out of the white skirt, and her mother picked it up.

"Then why can't you speak nicely to him? He may not be here much longer—"

Milly turned round suddenly.

"Is he going away?" she asked.

"Well, I don't know. You know his lungs are weak, and they think the mountain air will be better for him this summer. I don't know. I wish his folks were here."

Milly's mother again sighed deeply.

"Why do you? Do you want him to go away?" demanded Milly.

"Oh, I feel the responsibility—I don't know what might happen."

THE gentle blonde woman stood looking off into the orchard, and her forehead wrinkled with a worried expression. Suddenly she said:

"I do wish he wouldn't ride that horse!"

A cloud of dust had risen beyond the stable, and it now approached in zigzags. Within the cloud was a pearly horse, and Walter, mounted on a high-peaked Mexican saddle with dangling stirrups. As the horse rushed by, the young man waved his whip and smiled gayly.

"Blither will throw him one of these days!" said Milly. "He doesn't know

how to ride a bronco. Doesn't he look silly with that whip!"

Milly's mother sighed and went into the house. Milly wandered off toward the stable. After a few minutes, she went in, untied the halter of a black horse that was fretting in its stall, put a folded blanket over the animal and cinched it tight, threw the halter up to serve as a bridle, and scrambled upon the horse's back as it trotted out of the stable. She took the road opposite the one Walter had taken, and perched sideways on the blanket, struck the horse's flank with the loose end of the halter. After a time she pulled the horse in to a walk and laid herself flat along its back, looking up into the deep sky, blue-black and mysterious when stared at between narrowed eyelids.

IT was supper-time when she returned to the house. At supper she sat between her mother and an old uncle, crippled with rheumatism, who lived with them. The uncle had scanty hair and a long reddish beard, and Milly hated the way he ate because of his few teeth. Opposite her sat Walter; and, though she never once looked directly at him, she observed him constantly—the dainty way in which he used his fork and spoon, his manner of crumpling bread with the delicate fingers of his left hand, the little cough that interrupted his cheerful talk. Often he glanced at Milly's face, impulsive and contemptuous, but he did not speak to her. It was five weeks now since she had spoken a word to him. He had almost ceased his efforts to be friendly with her. Sometimes Milly saw that he looked pained and puzzled, and this pleased her; and sometimes he laughed at her, and this filled her with rage.

AS soon as supper was over, Milly fled from the house. That night, at midnight, the water was to be turned in from the big wayside ditch to irrigate the orange grove. She ran down through the grove, where all day men had been at work digging little trenches from one tree to another and cuplike depressions round each tree. At the farther end of the grove was another ditch, bordered with dry bushes, and here Milly hid. She had taken a book with her—it was "Moll Flanders"—and for some time it was light enough to read behind the screen of bushes.

Milly lay flat, and pored over her book till she could no longer see the print. Then she sat up and looked about her. The golden glow had faded out of the sky, except a faint smear behind the trees. Stars were coming out by dozens; soon all the sky was thickly speckled. There was a line of tall eucalyptus trees along the edge of the grove, and in one of these a mocking-bird began to sing. His song was bold and liquid, with notes of poignant sweetness; sometimes he piped shrilly, and sometimes his song welled out with the softness of flowing water falling on thirsty land.

MILLY listened to the bird and to the stirring of some small furtive animal in the bushes and the chirping of insects above her head. Then she sprang up to follow and watch the Mexicans at

work about the trees. The air grew colder. It was late when she went down to see the lifting of the big gate and the inrush of the water. The men had torches that flared red on the brown flood. The girl's uncle was there, and Walter too, in a white sweater. She heard the old man say in his mumbling voice:

"You'd better go in now, Walter. You know what Abby said about your catchin' cold."

"Oh, let me alone! I want to see it. I may not have another chance," Walter answered impatiently.

The water poured into the main ditch and the side ditches, and spread out into levels about the trees, and the dry earth began to suck it in audibly. The light of the torches was reflected in gleaming reaches among the trees; the figures of the men moved gnome-like about in it.

Milly danced about wildly, partly because she was cold, partly because the scene excited her. It was strange, the lights and shadows, different from every day. She could hear Walter laughing. Suddenly he caught sight of her, and was beside her before she could elude him. He caught her by the shoulder.

"What are you doing out here? Your mother was looking for you! Where have you been?" he cried brusquely.

Milly pulled away from him, writhing in his grasp.

"Let me go!" she panted.

He caught her uplifted arm, laughing.

"What a little spitfire! You look as if you'd like to bite me. Gracious! what fierce eyes! I'm not hurting you."

Milly was strong. She wrenched her arm free and struck at him.

"How dare you touch me! Let me go or I'll kill you!"

She struck again, and the blow fell on his cheek, stinging. He gave her an angry shake and dropped his hands. With a cry Milly sprang back and stood staring at him. He turned to the old uncle, who was making clucking noises of protest, and spelled out emphatically, "V-i-s-e-n-i!"

MILLY turned and rushed away. She did not care to watch any more; she ran to the house, crept noiselessly to her own room, and bolted the door. She tore off her dress and scrubbed her shoulder where Walter had dared to lay hold of her. There was a faint red mark on the thin little shoulder, and when she lay curled up in her bed she could still feel it burn where he had touched her. She vowed that she would never look at him again, never sit at table with him—they could not compel her. It was dawn when she fell asleep.

But during next day and for several days after that Walter stayed in bed. He had caught a chill. Milly could hear him coughing as her mother, looking pale and worried, went in and out of his room, waiting upon him. Sometimes she heard his voice, gay as ever, though rather hoarse and weak, and heard him laugh. No one else about the house even smiled. The doctor came twice from town, and talked to Milly's mother, looking grave. Milly had been asked once to carry in a tray with Walter's broth, and had sharply refused.

"I will do anything else you want me to, but I won't go in there," she said.

And her mother looked at her with cold, condemning eyes, the lids reddened by tears, and said:

"Very well. You are a heartless girl, Milly."

Milly had made no reply. No one told her the result of the doctor's visits, and she would not ask. Some telegrams were sent and received, but she remained ignorant of what they meant. Then one night her mother told her that it had been decided that Walter should go back home—not to the mountains, after all. This information was curtly given, and Milly made no comment.

A DAY or so later Walter dressed and came outdoors to lie upon a couch under the pepper-tree. This was Milly's favorite haunt, but now she deserted it. She kept away just far enough so that she could see him, and observe what he was doing. But he no longer seemed to notice her. One afternoon he had been lying there motionless for a long time, and she thought he was asleep. Cautiously she crept nearer and put aside the sweeping leaves and looked at him. How white he was! The long brown lashes lay on his cheeks, his pale lips were slightly parted. One thin hand with its carefully polished nails hung by his side, almost touching the ground. Milly looked at him, hardly breathing, but all at once he opened his eyes upon hers. What weariness and melancholy in his eyes—and what strange trouble in Milly's wide gaze! He moved—and she dropped the curtain of pepper-branches and fled, her bare brown feet noiseless in the dust.

"Milly! Milly!" sounded from the house. But she could not bear to be spoken to just then, and she ignored her mother's call, and ran through the grove to where the tall eucalyptus trees grew. In the spring she was used to climb these trees after birds' eggs. She climbed up into one now, not seeking anything. High up among the thin branches she climbed, and clung there, swaying with the tree, the leaves rustling about her. She stayed there till she was too cramped to hold on any longer.

After that she kept away from the pepper-tree when Walter was outdoors. She always knew when he was coming out. She would watch him from the windows, keeping out of sight behind the curtains. He seemed to sleep a great deal. He had almost stopped smoking, but now and then she would see him roll a cigarette with his thin white fingers and light it, and then throw it away. He did not laugh much now, but when he did, the laugh sounded strange, so boyish and so gay.

THE day that he was to go away, Milly fled from the house in the morning and stayed away till dusk. When she came back the place seemed oddly quiet. The old uncle was smoking his pipe on the door-step; and he looked at Milly timidly as she passed him. Her mother was in the kitchen; her eyes were red, as usual. Milly began to help her silently; and in silence they sat down at the table and ate

their supper. Even the old uncle, commonly garrulous, had nothing to say.

Milly's eyes sometimes rested on his faded old face and trembling hands; sometimes she looked at her mother, pale, worn with patient endurance. Then Milly's black eyes, intense, full of life, brooding, questioning, would veil themselves again under inscrutable lids. The house seemed strangely empty. It seemed forlorn and shabby and dull and more than ever a place to escape from. And, more strangely, even outside it seemed dull and tiresome. Milly moped and was irritable and more moody than ever. There was no one to talk to. There never had been any one to talk to.

IT was three days after Walter had gone, and in the afternoon a telegram came. Milly was sitting under the tree, sewing—which she hated. Her mother came to the door, and opened the telegram. Milly heard her cry out and saw her sink down suddenly on the step. Milly got up and ran to her. She was staring at the sheet of paper; while the messenger was holding his book for her to sign, and she was groping helplessly for the pencil. Milly took the book and signed it. Her mother looked up at her and whispered:

"He is dead. He died on the way home—all alone—he had to take him off the train—oh, poor boy, poor Walter!"

She burst out crying.

Milly turned pale; her heart was pounding horribly.

AFTER a moment her mother rose, holding her apron against her convulsed face. She went into her own room and shut the door. And Milly stared at the closed door. The telegram had fallen on the floor. She picked it up and looked at it; then she flung it away and rushed from the house. Down by the stable the pinto horse that Walter used to ride was hitched; one of the men was going into town. Milly unfastened the horse and swung herself up into the saddle as the animal broke into a run. A shout followed her, but she did not turn her head. She loosed the lariat and struck the horse viciously.

THE pinto snorted, shook his head, shied, and galloped on. Miles away in the country, when Milly had dropped the bridle loose, the horse shied violently again and stopped short. Milly was thrown. She landed on her side in the road. The fall hurt her. After a few moments she got up, looked at the horse, which stood a short distance away, cocking a black eye at her. She did not try to catch it, but sat down in the weeds by the roadside. She felt pain from her bruises—but it was not this pain that brought the tears into her eyes. She sat staring before her across the plain into the western sky, where a flood of golden light was welling up. The plain was a broad dazzle of light, and the larks were singing in a sweet chorus. Soberly Milly's breast.

"Why am I crying?" she said aloud.

And there was no answer. She could not tell why she was crying as if her heart would break.

Songs from Panama

By BERTON BRALEY

The Spiggoty

(The Spiggoty is the native Panamaian)

THE Spiggoty's a liar,
The Spiggoty is slow;
He rouses us to ire,
He plunges us in woe;
He's languid and he's lazy,
He don't know how to "drill;"
His morals they are hazy,
His sanitation's nil.

His government's a bungle,
His towns are something vile;
But—in the trackless jungle
He's on the joh in style.
In spite of flies and fever,
Of swamps and snakes and sweat,
He wields his trusty cleaver,
His razor-edged machete.

His pack would make you stagger,
And drag along behind.
He bears it with a swagger,
And never seems to mind.
Mosquitoes?—Never fret him!
The heat?—He laughs at that.
No tropic ills can get him,
The little jungle rat!

He gets the anvil chorus
Wherever we may meet,
But—when he goes before us
In jungle damp and heat,
Where trails are not, he breaks 'em,
So we can see 'em plain;
He finds the ways, or makes 'em,
For transit, rod, and chain!

We've chained the Chagres River,
We've cut the Isthmus through;
We'll presently deliver
Our finished work to you;
But when we first began it,
Before the way was clear,
We thanked our lucky planet
The Spiggoty was here!

The Spiggoty Cop

THE clerks in hotels form a very proud clan,
And they act in the lordliest way;
And a nigger gang-boss is a dominant man—
With pride he is prone to display;
But *their* pride and *their* arrogance dwindle and pale
And into obscurity drop;
Their highest conceit wouldn't show on the scale
With the pride of a Spiggoty Cop!

Nobody could ever determine his use—
He never was known to be there;
When actual danger or trouble breaks loose
He's out of the precinct somewhere.
But let an American go on a skate
(We're all of us likely to flop),
He's promptly assaulted by seven or eight
Of the tribe of the Spiggoty Cop!

To hammer a white man is pleasure indeed,
And pleasure he frequently takes;
For the Spiggoty Cop is a cowardly breed,
With a heart and a soul like a snake's.
But he struts on the street like a circus parade,
Or a floor-walker guy in a shop,
And he sure makes a hit with the Spiggoty Maid,
As she ogles the Spiggoty Cop!

Now, when I have finished my work on this joh,
And pack my trunk ready to blow,
There'll be just one thought at the back of my knob—
One thing I would do e'er I go.
I'll wait till the ship's casting off from the quay,
Then down from the gangway I'll hop,
And just before making my way out to sea,
I'll trim Mr. Spiggoty Cop!

Frank P. Walsh

—The Man Chosen by President Wilson to Lead the Commission on Industrial Relations

By DANTE BARTON

LORD ELDON said that a successful lawyer must live like a hermit and work like a horse. Frank P. Walsh, of Kansas City, a successful lawyer, has worked like a horse; but he has not lived like a hermit. He has been active and out in the open, helping to put the law itself to work for the public service.

That is why President Wilson reached over from Washington and selected Mr. Walsh to be chairman of the new Commission on Industrial Relations. Also, it was why Mr. Wilson and his adviser, Mr. McAdoo, asked Mr. Walsh to come to New York and direct the Bureau of Social Service in the Democratic Presidential campaign. Mrs. J. Borden Harriman, who is to serve with Mr. Walsh on the Industrial Relations Commission, had something to do with that first selection. Mrs. Harriman had heard of this Western Democrat who had come to Eastern headquarters to learn from personal contact whether Mr. Wilson was as fine as his speeches and the press notices indicated. Mrs. Harriman said that was the kind of man the Democratic managers should gather in. And Mr. McAdoo gathered him.

UNTIL the past year Mr. Walsh had never been officially in the public service. But for many years he has been a public servant. As a lawyer, he severed all connection with corporation clients in 1909. It was about this time, too, that Walsh got actively into social service. Before then he had been, as he is yet, a strong supporter of union labor; and his private charities were many. But in that earlier time politics seemed to him about the only worth-while field for a man to work in, and he was a strong party man. "Why, actually," he says, with a smile, to-day, "I thought it was immodest for a man to set up his own opinion against that of his party."

The Board of Public Welfare of Kansas City is in development of a board of pardons and paroles which Frank P. Walsh established. It is a development that he has fostered as legal adviser and political manager. This Welfare Board expends annually about \$130,000 of public money toward making private charities unnecessary. It supervises recreation. Employers are made to walk the chalk by it. Free legal aid is one of its services.

This board of public welfare is, by the old canons of constitutional interpretation probably unconstitutional. The New York court of fifteen years ago would consider it as "flat burglary as was ever committed." But Mr. Walsh and his co-workers and the *Kansas City Star* have so fortified it in public opinion that it is quite certain the courts will sustain it. Frank Walsh two years ago, when he

declined to be a candidate for the Democratic nomination for Governor of Missouri, spoke of the unsympathetic attitude of courts toward the efforts to smooth out industrial relations. "Well," he said, "we can't amend the Constitution, but we can put men in the courts who will be for the rights of man rather than for the wrongs of property. We can put a progressive sentiment behind the laws so strong that the judges, from the lowest to the highest courts, will be afraid to overthrow the people's will."

THIS readjustment of the courts to life is an important part of the Walsh philosophy. It implies more than "packing the courts," to use the 1896 phrase. It is in harmony with an admirable expression of Professor Samuel McCune Lindsay. Writing in the *Survey* of August 2 concerning this industrial commission, Professor Lindsay said: "I am sure it is already clear to every thorough student of labor conflicts that we have entered upon a well defined era of industrial constitutionalism, just as political constitutionalism took shape in the Western world in the eighteenth century."

To build up a body of laws affecting industrial relationships, to develop an administrative capacity along the same lines, and to do this with the sanction of courts that shall still be the arbiters of constitutionalism, has seemed to Mr. Walsh to be the big task before the American people.

He is fitted for that technical part of the work. He is fitted better for the fight that lies ahead—for the human side of it.

Professor John R. Commons was in Mr. Walsh's office when the telegram came from Mr. Wilson offering the appointment. Professor Commons was considering an offer to a place on the Commission.

After talking with Mr. Walsh he wired the President that, with Walsh as chairman, he would accept.

"My strength is executive," Mr. Walsh had told Commons. "I'll be an excellent chairman. I shall lean heavily on such experts as you, and I promise you that I will work." Men like Walsh very much—unless they dislike him. They trust him implicitly—unless they distrust him. He is "radical and searching and uncompromising" in the sense that Dr. Edward T. Devine has said that the work of the commission must exemplify those qualities.

MR. WALSH was born in St. Louis forty-nine years ago. He has known what life is at its hard angles. He fought poverty as a boy—really fought it; never liked it or accepted it. The iron entered his soul. The iron is still in his soul against poverty and suffering—other persons' poverty and suffering. He hates poverty as an unnecessary evil.

Of thirty boys he remembered of his neighborhood, only three had come through to normal, useful manhood. Twenty-seven lives was too great a price to pay for three that were "fit to survive."

One political service of Mr. Walsh is profitable to recall in getting his measure for the industrial service. It was in the time, ten years and more ago, when the job before the country was to clean up the political machinery—as now the job is to determine what work the clean machinery shall do, and do it. Walsh was a member of the Democratic State Central Committee of Missouri. In 1902 he was already a feared fighter of the "Old Guard."

IN that year a State convention was held in St. Joseph. Mr. Walsh forced through the convention a denunciation of corporation contributions to campaign funds. A few months earlier he had proved in court the corrupting of his own party machine by corporation contributions. He went to the convention with his resolution of protest. "Aim it at the Republicans, and we will put it in," begged the Old Guard. "No," said Walsh; "I am more interested in purifying my party than the other fellow's party." The machine leaders offered to make him chairman of the convention if he would hold back his resolution. He wouldn't, and they said they would run over him. Walsh rented a hall, and made a red-hot speech against the machine.

The leaders did "run over him" in the convention; but they put his resolution into the platform. In effect, they denounced their own record. That was the definite beginning of the political reform in Missouri.

Finance

By ALBERT W. ATWOOD

The Bond That Straddles

IN a recent week only ten bond issues were bought and sold to the number of one hundred separate bonds on the New York Stock Exchange. Finance is always local, in the sense that traders know, or think they know, more about local concerns than distant ones. This is true in London and New York no less than in the smallest towns, and so there is nothing surprising in the fact that three of the ten bonds were securities of the great local traction companies. Of the remaining seven, six were "convertibles," that is, the kind that were invented for the man who promised his wife not to speculate in stocks.

Convertible bonds prove that oil and water for once mix. They are both strictly an investment and a speculative security. There is no better way of beating the devil around the bush of inherent desire for taking risks and yet not taking them. A bond that has such qualities is sure to be popular. Just at the present time there are special reasons for drawing attention to this active and important class of securities.

Let it not be supposed that convertibles combine all qualities of perfection. They do not. But they are at times indisputably attractive.

Rail as we will against speculation, no means has yet been found to eradicate the instinct. Few bankers or other authorities on finance are willing to admit how large a proportion of those who are called investors are half-way speculators. Of course, there is always a market for absolutely sound securities, devoid of any possibility of going up; but there is a broader market, a more eager reception, for the security that may advance.

What It Means to Convert

FIRST, let it be clearly understood what a convertible bond is. Essentially it is a bond with a prospective bonus, first employed by railroads in the hard times of the sixties and seventies. In the last ten years or so it has been revived with great and apparently ever-increasing popularity. There are several varieties of convertibles, but quite the most important is that which is exchangeable at a fixed price, at the option of the owner, into common stock of the same company. Take for example, a large new issue of New York, New Haven & Hartford convertibles. These bonds are exchangeable into stock par for par, that is, at the price of 100 for the stock, any time between 1918 and 1928. The owner, if he so desires, may receive ten shares of stock for one \$1000 bond any time within that ten-year period. In other words, this privilege of exchange is a call on the stock at par. Of course, if the conversion price as fixed by the directors were above par, then the bondholder would receive less than ten shares. At the present time this particular conversion privilege is worthless, for New Haven stock is selling around 90. But suppose New Haven stock, which has sold above \$50 in its day, should within six or seven years again creep up to only 125. It is clear that the bondholder has a fine profit in sight, for he can exchange his bond for ten shares of stock

at 1000, which he can turn around and sell at 1250. If he does not choose to make the exchange he is not compelled to. Conversion is always optional.

When to Convert and When Not To

THE most important issues of convertible bonds, and the only ones to be mentioned in this article, are those of such great railroad systems as the Aetna, Atlantic Coast Line, Chesapeake & Ohio, St. Paul, New Haven, Norfolk & Western, Baltimore & Ohio, Pennsylvania, Southern and Union Pacific and two other companies, the American Telephone and the General Electric. All these companies, with possibly one or two exceptions, have extensive stock issues, paying large dividends and representing huge assets. Excepting the Chesapeake & Ohio, a reduction in any of the stock dividends would be a real event and disaster. It would create endless debate and point many a moral. In other words, most of these concerns make such great profits that reasonably large dividends seem almost institutional.

In every instance the convertible bonds are a direct obligation of the corporation. They come ahead of the stock. The American Telephone Company, for instance, would have to reduce its dividends by no less than \$27,500,000 before its convertibles would be endangered. That is, the convertible of a strong, dividend-paying corporation is an excellent investment without giving any consideration to its conversion privilege. The convertible of a company like the Pennsylvania without any mortgage security is better than the first-mortgage bond of a railroad whose earnings are relatively small.

But no bond is a good investment if the price paid for it is too high. The great danger with convertibles is of buying them too high. Owing to a speculative value given them by a possible rise in the stock, they naturally follow the stock up. Last year Norfolk & Western convertible 4's went as high as 117, an absurd price, on a purely investment basis, for a mere promise to pay. But if this same bond should fall to a price where it returned 5 per cent., even without considering the convertible feature, it would be worth looking at.

When to Buy Convertibles

EXPERIENCE shows that convertibles go up with a rising market, and go too far at that. But experience also proves another interesting fact regarding this class of bond. In a declining market they do not drop as low relatively as the stock. In 1907 Union Pacific stock dropped to 100, and the bonds would have fallen to 57 on a purely convertible parity, but they only fell to 78½. Of course, the reason for this is that the bond comes ahead of the stock, and interest upon it is always a prior charge. That is, the bond has an investment safety which the stock lacks. It will not fall below its true investment value.

When stock market feeling is one of depression, convertible bonds often sell

on a strictly investment basis, with the convertible privilege thrown in, as it were. Although there has been a recovery in convertible bond prices, as in stock prices, since the low point of last June, there are still at the present writing attractive purchases among the convertibles.

At 97½, Baltimore & Ohio 4½'s, which have twenty years to run, return 5.1 per cent. on the straight investment. After them comes \$152,000,000 of stock upon which 6 per cent. is being paid. The profits must shrink at least \$0.180,000 a year before this bond reaches the danger-line. The conversion price is 110 and the stock is now at 97. It must go up thirteen points before the conversion privilege avails. In two of the last four years Baltimore & Ohio has sold above 110. There is at least a good speculative chance.

Another bond, with a greater margin of safety, is the Southern Pacific convertible 4, running for sixteen years. The rate of return in this case also is just above 5 per cent. In the opinion of the best judges, this bond is wholly safe, but the speculative feature is a long-distance one. The stock is now selling around 89. It must go to 150 before bonds can be exchanged. The highest the stock ever sold was 150½. But it must be borne in mind that even a moderate advance would carry the convertibles up to some extent, even if not enough to make the actual exchange worth while.

Union Pacific 4's are convertible in stock at 175, which is now 20 points below that figure. As an investment solely the bonds are quite safe, and return 4.8 at current prices. A substantial rise in the stock would, of course, carry up the bonds. On several other issues the rate of return is low, but the possibility of profit is thought by many to be so much the greater.

Objections and Their Answer

THERE are numerous mathematical annoyances and complications in making the actual conversion of bonds into stocks. All companies do not have the same method of figuring interest and dividends, and allowing for fractional parts.

The convertible bond is not for those whose peace of mind suffers from any fluctuation in the price of what they own. Charles W. Morse was recently quoted as saying:

"Stock Exchange speculation serves very largely to make investors uneasy. They are influenced by quotations. If a man invests money in a mortgage, he looks it up, gets his interest, and never worries about the principal. If he puts money into a stock or bond and the price declines ten points, he thinks less about the intrinsic value of the investment than about the price. He imagines something is wrong."

Morse is an expert observer, and if his remarks apply to you, don't buy convertible bonds. But if you desire to combine securities that possess an unusually high degree of intrinsic worth with a speculative feature, then a broad, active market is most to be desired. And that is just what the convertibles of our great, strong corporations possess to a high degree.

How the Cabinet

AN INSIDE STORY

The layman next repeated Mr. Wilson's reply to a commuter who nodded vaguely. "A college professor can't be expected to know much about the under side of life. But I think Wilson will outwit them all. He is so thoroughly in earnest and takes the ordinary man's welfare so seriously that he will find that he will have to learn to play politics. His word is good and if he said he didn't feel pressure, he didn't. It's a shame that as big a man as he is should have to stoop to play politics."

ONCE more the reply that the President made was repeated this time to a delicatessen man at the corner.

"How do you suppose the big men do things?" he asked. "I have been trying to understand what Mr. Wilson has been writing in the magazines, but an ignorant man like me can't understand it. Why don't they get down to facts and tell us how they really do things. Then we can judge for ourselves whether they are straight or crooked. Now how did Mr. Wilson go about getting that cabinet of his? What kind of politics did he play?"

Even a delicatessen man in America knows the meaning of "playing politics!"

THE old idea has been that it was not only unnecessary but unwise to let the average man know the details of Administration making. The average man was supposed to be fully satisfied that he had done his share when he cast his vote and to have received full compensation when the secret conclaves which gave him government were organized at Washington. But with the coming of Mr. Wilson's regime has come a new idea of light; the idea that so long as government is for the average man, those at the head of the government miss the whole aim of their work when the average man fails to understand them and to believe in them.

WHAT is "playing politics" and why should Mr. Wilson have to play them? From the ethical standpoint, a good policy ought to win on its own merits. If a President wants such a policy made into a law by Congress, it looks to the lay mind as if he should have no trouble in getting it done. Yet if a simple, straight-forward gentleman, like Mr. Wilson, says that he will not stoop to using patronage to induce Congress to pass the measures he wants, what happens? Congress blocks his measures. Again, to the lay mind, this looks as if Congress were despicable. But this does not follow at all.

THE average Senator or Representative dislikes patronage as much as Mr. Wilson does. For every appointment that a member of Congress has to make there are perhaps twenty applicants. Only one appointment can be made, so while the member makes one friend by his appointment, he makes nineteen enemies! The member who belongs to the party not in power has a far pleasanter time in this matter than his opponents. He has no patronage to give. There is little use in his trying to get a measure through. All that he can do is to vote consistently against every measure of the opposition and for the rest, watch the struggles of his

political enemies toward the political feeding trough.

THERE is something about thrusting a measure through Congress by the means of patronage that smacks of bribery to the unsophisticated onlooker. And yet, under existing conditions, what else is to be done? This elaborate system of patronage has become a seemingly inseparable part of administering the government. Ask almost any Congressman his opinion of it and he will agree with you that it is bad. But almost always he will close his remarks by suggesting that after all it is the voter who demands the patronage and that it is the voter only who can change the system.

"Playing politics" consists of winning your end by any means within the law. If you play politics for your personal gain more than for public good, the public when it knows will not forgive you. If you play politics for the public good it would be an unsolvable problem in ethics for the average man to decide as to the morals of the case.

THE average voter takes it for granted that Mr. Wilson responded to pressure when he made up his cabinet. And yet the story of the forming of the Cabinet as told by different friends of the President and by members of the Cabinet themselves entirely upholds Mr. Wilson's statement that he was not conscious of pressure. In spite of the often repeated statement that the Cabinet could not be formed without politics being played, there are only two or three politicians in the Cabinet!

MR. WILSON went about choosing his official family exactly as you or I would have gone about it had we been actuated by the President's skill and great hope for the future. He did the simple, sensible thing in this as in everything else that he undertakes. He had a number of friends whom he trusted close to him during his campaign and afterward. The President forms his friendships absolutely on his own opinion. He is very keen about reading people, and when he makes up his mind to trust a man, all the pressure in the world will not change him.

One of his friends had been a friend of Bryan for many years. People warned the President that the friend would work always for Bryan when forced to a choice. But Mr. Wilson did not seem to bear the warnings and the friend is still one of his staunchest supporters. The President can tell a friend when he sees one!

AFTER the Baltimore convention, Mr. Wilson began to think and talk over every man in public or private life whom he knew or of whom he had heard who might be possible for his Cabinet in the event of his election. This was not counting his chickens before they were hatched. This was merely being sensible. If he were elected the time between election and inauguration would be too short for Cabinet making.

THE problem before Mr. Wilson was greater than had confronted any President for years. If he went into the White House, he would go loaded with romies

SOMEBODY said to President Wilson, "I suppose that in making your Cabinet appointments there was tremendous pressure brought to bear on you."

The President answered very clearly, "I was not aware of any pressure being brought to bear."

When Mr. Wilson's reply was repeated to an old time politician who is also an ardent admirer of the President, the Old Timer groaned:

"There you go again, trying to make Wilson out a baby at the game when he's the cleverest politician who has been in the White House since Lincoln! Do you suppose the voters want to think they have a man at the head of the government who doesn't understand every side of politics? They are willing that he should be cultured and a philosopher but at the same time they want him to know how to play politics so well that he can block the opposition at their own game. He got good men but he played politics in getting them. And we are proud of him for knowing how!"

THE abashed layman repeated Mr. Wilson's reply to a man of science.

"You must remember," he said, "that American politics are bad from top to bottom. If Mr. Wilson wasn't aware of pressure then he is more unsophisticated than I thought he was, that's all. It was the big interests that Brandeis had prodded in New England that kept Brandeis out of the cabinet whether Mr. Wilson knew it or not. Don't let them deceive you. They all play politics."

Was Selected

By HONORÉ WILLISIE

to the people of a fundamental change of government. The changes that he proposed were so completely opposed to the drift of government for nearly a generation that he knew that every administrative move would be fought with unbelievable bitterness by the old régime. He knew that he would be fought by men who were consummate politicians and financiers who were used to handling administrations. Mr. Wilson would be the head of his administration. But unless his Cabinet were one with him he would be in the same case with the man who had the mind of the sculptor but whose fingers refused to understand the hidding of his brain. His efforts would be fruitless.

ONE of the most remarkable things about Mr. Wilson is that with all his idealism his common sense never deserts him. He said to the men who were with him at this time that he must have in the Cabinet men who had passed the acid test of honesty. Men who were brave. Men who were efficient. Men who had imagination.

Not once only did Mr. Wilson say this to his friends but he repeated it over and over and explained each quality until the men about him were saturated with his ideas.

HIS first searchings were by the process of elimination. He began to strike out from Congress the men who were not possible. And the reason that he began with Congress is because he is sensible. He knew that unless he was on friendly terms with Congress and unless he had two or three men in his Cabinet who understood the inner workings of members his policies would be blocked. It is not the personality of a president alone that makes an administration strong. It is the laws that an administration gets onto the statute books that gives a four years' régime premanency. Mr. Cleveland was a strong man but he constantly antagonized Congress. The net results of his administrations were negative. Mr. McKinley was a great politician. He knew now to get along with Congress. He could get any law passed that he wanted. You may say that something is wrong with a system that forces a man to use Machiavellian methods to make his ideals into laws. Or you may say that it is human nature demanding the application of common sense.

MR. WILSON let it be known that no men who applied for a job on the Cabinet would get one. He didn't want a man who left the job he was on to seek office. And it made no difference to him that a man had had no experience in the sort of work he would have to do in the Cabinet. Mr. Wilson knew that most of his new family would be unknown and untried by the very nature of the type he demanded.

THE group of men would go over and over members of Congress in this way:

"There is Smith. He's clever, but he's a corporation lawyer." The President would not consider anyone with corporation affiliations. "There is Jones. He might swing a great many votes and in his

home State he is a big man. But in Congress he has consistently voted 'no' on all things progressive. There is Brown. He knows a great deal about money but he has big banking interests. Then there is Burleson. He has a good record at home and a good record on the Appropriations Committee. He ought to be a good fighter because he comes of fighting stock. His grandfather was an old Indian fighter and president of the Republic of Texas. We don't know about his imagination but we do know about his honesty and that he has some good ideas about Parcel Post." And so Mr. Burleson was asked to be Postmaster General.

THERE never seemed to be any question in Mr. Wilson's mind as to whom he would make Secretary of State. There was much doubting by the public and by the President's advisers as to the wisdom of it. Mr. Wilson was told that Mr. Bryan would find it impossible to so smoothly his own ideas as to follow the President's lead. This was a place where the President's capacity for recognizing a friend was invaluable. Many say that Mr. Bryan is over-ambitious; that he is inefficient in his work; that he neglects his office while he takes the Chautauqua tour. But Mr. Wilson says that he has no more loyal adherent in the Cabinet than Mr. Bryan; no one who so persistently puts himself last; no one who is so little insistent on patronage. The other members of the Cabinet love him and speak of him as "dear old Bryan." He more than any one else made possible the holding together of the party and will make possible that passing of the President's measures. He represents six million votes. Mr. Bryan has never been so great in his life as he has been in the Cabinet where he has made himself persistently second for the welfare of the President and the party. No one does any one in the Cabinet spend more hours at his job than does Mr. Bryan. He is at his office twelve to fourteen hours a day and the work of the Department of State, contrary to popular report is all completed to date. Not for several administrations has any Secretary of State given the time to his work that has Mr. Bryan.

MR. BRYAN and Mr. Burleson were the only purely political appointments. Mr. Daniels had fought hard for the party; he is honest and loyal and an old friend and Mr. Wilson made him Secretary of the Navy.

Some of the members never received formal notices of their appointments but were told by one of the President's confidential friends. Sometimes an informal little note from Mr. Wilson told them that he wanted them to help make the administration a good one.

THE old time politician and the commuter and the man of science are inclined to be skeptical. They say such a listing as this of the men in the Cabinet pictures them as too good to be true. Only time will show whether or not Mr. Wilson is as clear visioned with regard to the men for his policies as he is in recognizing a friend. One thing is certain even now. The President has some good fighters in his official family. And he orders them.

"Courage," he says, "courage, courage, is what we want. Fighters who never stop going. And after that, the simple thing which is the sensible thing."

THE President is so big that he dares to recognize bigness in other people. That is one thing that makes us have faith that he has found some big men for his Cabinet.

IT seems somehow a curious thing, a thing that the man who seems destined to give back to the average man the opportunities that his fathers knew should be of a type little likely to be understood by the average man. And yet the recipe for understanding a big man is very simple. Mr. Emerson gives it:

"The youth, intoxicated with his admiration of a hero, fails to see that it is only a projection of his own soul that he admires— He is curious concerning that man's day. What filled it? The crowded orders, the stern decisions, the foreign despatches, the Castilian etiquette? Behold, his day is here—in the workman, the boys, the maidens, you meet,—in the hopes of morning, the ennui of noon—in the disquieting comparisons; in the regrets at want of vigor; in the great idea and the puny execution-day of all that are born of woman. The difference of circumstance is merely costume. You are tasting of the lifeless life, its sweetness, its greatness, its pain which you so admire in other men."

"What's th' use o' goin' clean t' New York unless you see everythin' that's there?"

Seeing New York

By LEWIS ALLEN

"OF course you saw the Woolworth Building when you were in New York, Mr. Barlow?"

"Oh, yes, of course."

"Lucky dog, to see all the sights. I've seen pictures of it. Say, is it real marble or bricks painted yellow? You never can tell from them souvenir post cards."

"It is—it was—" and Mr. Barlow, being a truthful man, hesitated. There were reasons why he didn't care to admit a number of things, but he finally skated over the thin ice by declaring, "Like as not it's marble. It looked pretty light."

"Great guns, didn't you walk around it and into it?"

"Why no, fact is I was in—er—we were in a hurry that mornin' and didn't have much time and we rode past it pretty speedy. It was mighty tall, though, mighty tall," he added hurriedly and reassuringly.

"Rode past it!" snorted Mr. Barlow's inquisitive friend, "what's th' use o' goin' clean t' New York unless you see everythin' that's there?"

Mr. Barlow didn't answer him. Perhaps he couldn't have quite explained it. It was true, however, he had traveled and traveled up and down New York, and, after getting back home, all that remained to him, try his best, was a mingled and mangled memory of skyscrapers, wonderful mansions, glittering lights and green parks.

And Mr. Barlow's experience is the experience of more than ninety per cent. of those good people who journey from other haunts, to see all there is worth seeing in America's miraculous city, New York.

It isn't that these visitors are not intelligent. It isn't that they do not know how to use their eyes, nor is it that they are awed into a state of semi-coma, by stupendous sights.

It is not the fault of the visitors at all. It is the fault of the guides, whether they be professional or amateur; whether they sing-song rapid and mumbled and more or less accurate information through a megaphone from the front of a "Rubberneck" auto, or glibly rattle it off to Uncle Albert or Cousin Stella from Homedale, Ill., or wherever it is the visitor comes from.

Here comes Cyrus P. Steele from Homedale, accompanied by his wife and daughter. In Homedale Mr. Steele is the banker and all-around heavy citizen. He is, like thousands of other citizens, keen, able, educated. Furthermore, he

is determined to see all there is in New York worth seeing. After sauntering around for half an hour, keeping his bearings so he may return to his hotel, he decides he cannot see much or explain much to "Mother and Stella."

"COME, we'll see everything," he cheerfully announces and leads his party into one of the great flock of sight-seeing automobiles. Seated comfortably, he catches sight of a tall building standing alone in a busy square.

"What's that building, son?" Mr. Steele asks of the young man with the megaphone.

"That's th'—START RIGHT AWAY! START RIGHT AWAY! SEE EVERYTHING WORTH SEEN! STEP RIGHT IN!" yells the young man.

Why should he stop to give out information when there was a chance of getting more passengers? He had started to answer the passenger when he caught sight of other strangers. (There *is* a difference in them.) These strangers might be induced to take the trip, hence his neglect of Mr. Steele and his vociferous call to the sightseer.

"I guess 'tis," chuckles Mr. Steele.

By this time the auto is filled. Off they go, past the Seventh Avenue side of the "Times" Building.

"ON YOUR RIGHT is the 'Times' Building! Located in what is known as the 'Great White Way!'" shouts the guide with the megaphone. He shouts it slowly and distinctly.

Meanwhile the traffic cop has blown a blast on his whistle, opening up the right of way, and the chauffeur shoots hastily across the square and on to Broadway with a jerk that yanks the passengers sharply against the narrow backs of their seats.

Mr. Steele regains his balance, glances to see that Mother and Stella are safe, then essays to look straight up to the towering top of the "Times" Building. What he really sees is a large cigarette sign on the top of a six-story building.

Turning hastily until he nearly gets a crick in his back, he obtains a fleeting glimpse of the wedge-shaped "Times" Building, and then is whisked out of vision of it.

"Where's the 'Great White Way,' Pa?" anxiously asks Stella.

He looks about. "Say," he says to the man with the megaphone, "where's the—"

"ON YOUR RIGHT," bellows the megaphone, "is the Torrid Music Hall, noted for its sensational productions."

"Oh, I know, Pa!" exclaims Stella; "that's where that girl that made a young king lose his throne is playing. She—"

BUT Stella and the others are jerked into silence as the car turns into Forty-sixth Street.

Wheeling again down Sixth Avenue they catch sight of a massive but gloomy building.

"Some armory—" Mr. Steele makes a guess.

"ON YOUR LEFT is the Hippodrome," chants the man with the megaphone. An elevated train rattles overhead, surface cars rumble beside them, a motor truck thunders past.

"What did he say?" asks several in the car.

"Say Mister, what's that—"

"LISTEN carefully, I cannot repeat," warns the megaphone man.

"That's the Hippodrome, sir," ventures a little chap whose sharp ears had heard.

"Oh say, look, that's the Hip—" but Mr. Steele can say no more, for the car makes another turn, this time to Forty-second Street.

"I wanted to get a good look at the Hippodrome," grumbles Mr. Steele, "I've heard so—"

"ON YOUR RIGHT is the PUB- LIC LI-brary," comes the megaphone information.

Everyone turns to view the Public Library. Just as they are getting a glimpse, around the corner, of the great carved lions, the sight-seeing car turns again, up Fifth Avenue.

"That isn't much," says Stella, "I thought—"

"WE ARE NOW on Fifth Avenue," informs the guide.

And so it goes, up the great avenue, hurrying on to cover the route as quickly as possible. The sooner covered, the sooner another load is picked up, and this means more money.

There are people in New York who are trying to grab money.

"ON YOUR RIGHT—"

Everyone turns to see. They look ahead. The object to which the megaphone man referred is now slightly back of them.

"ON YOUR LEFT is the Senator Clark house!"

Surely everyone had heard of that. Every eye is turned to the right.

"Which one, the light one or the dark one? That big one there or the squatty one—" but before the questions are asked the megaphone man is shouting something else.

"ON YOUR LEFT is Central Park."

Oh yes, everyone knows about Central Park. They look and look and look.

Green trees show above the wall. They might be passing the Evergreen Cemetery in Kokomo, or the grounds of the Hoo. Hiram Plunkett, richest man in Sogus, Indiana, for all they could see.

"ONE HUNDRED AND TENTH STREET CURVE, the highest part of the elevated," chants the megaphone.

Every one promptly gazes at the partly finished St. John's Cathedral and only realizes when it is too late that they should have looked straight up at the elevated road.

Just as they turn into One Hundred and Sixteenth Street, West, the megaphone man says something about "Morning-side."

Some gaze at the chewing gum girl sign half a mile away in upper Harlem, some take a look at the little brick residence of Nicholas Murray Butler, prexy of Columbia, and some point to the dome of the Columbia College Library. Not one of them has had time to grasp the fact that "Morning-side" is a sort of side-hill park.

"COLUMBIA COLLEGE FORMERLY KING'S COLLEGE—" the megaphone man says.

"Which side— which side?" queries a number of the so-called sightseers.

"CO-LUM-BIA COLLEGE IS ON BOTH SIDES," the megaphone man informs them, but at this moment the car shoots ahead to pass in front of the surface cars at the subway station.

"ON YOUR LEFT is the School of Journalism." It was all a part of the megaphone man's program and he was bound to say it, although at that moment they were going down the slope to Riverside Drive, and so the sight-seers took away with them the impression that a certain tall apartment block was the home of the school that teaches the young idea how to shoot news items into the homes of the masses.

"WE ARE NOW ON Riverside Drive, ON YOUR LEFT IS THE HUDSON RIVER. Beyond the river is New Jersey and the Palisades."

EVERY one ducks or stretches or leans, trying to get a glimpse of the river through the thick foliage. Glimpses of water are visible, but it is rather hazy and the Palisades might be either a clay bank or a row of tenement houses, for all the people know.

Our visitors do get a good view of Gnot's Tomb. It is not the fault of the megaphone man or of the chauffeur. The tomb is sizable and stands alone on a hill and the car makes a trip around it.

Then they spin back downtown again.

The visitors enjoyed the ride, but they didn't see very much. And they know they didn't. But what of that? New York is New York and they don't know enough to do things quietly and calmly and surely there.

Or perhaps the trip is made downtown. "ALL ABOARD. START RIGHT AWAY. SEE WALL STREET. SEE THE TALLEST BUILDING IN THE

WORLD. SEE THE CANYONED STREETS. SEE—" and the megaphone man continues to advise everybody as to what he should see until the car is filled. Then they are off.

"ON YOUR LEFT is the Municipal Building—ON YOUR LEFT is City Hall—ON YOUR LEFT is City Hall Park and Newspaper Row—ON YOUR LEFT is the Postoffice—ON YOUR RIGHT is the Woolworth Building, the tallest building in the world—ON YOUR RIGHT is the old Astor House where Daniel Webster used to stop—ON YOUR LEFT is St. Paul's Building—ON YOUR LEFT is old Ann Street—ON YOUR RIGHT is St. Paul's Church where the office girls eat their lunches on the graves—ON YOUR LEFT we are now approaching Wall Street—"

How much of this has Mr. Steele or his good wife or Stella seen? How much of all this has any of the visitors seen?

Do you wonder that Mr. Barlow could not tell his friend whether the Woolworth Building was made of marble or brick or plain cedar shingles?

Not their fault, but just the New York style of "grab-all-the-change-in-sight-from-strangers-never-mind-value-received-there'll-be-more-visitors-tomorrow."

These guides are there not really to entertain the sightseers, not carefully to show them everything, but to rattle off their lessons just as little Reginald would rattle off "Littledropsofwaterlittlegrains-of-sand;" they are there to rush that trip through and get another "hunch."

BY the time friend Steele and Mother and Stella had started to look at the great Municipal Building the guide was thundering something about City Hall and while they were trying to differentiate between a municipal building and a city hall the megaphone sprung something about a park, then about Park Row.

Now every one knows about Park Row where all the great oaks of the world is handled in this country. Naturally they looked and looked hard, and paid little heed to the stenographic information concerning the postoffice. Everyone knows what a postoffice is. But by the time the guide shouts "WOOLWORTH BUILDING" the car is down in Post-office Square and it is necessary to twist the neck about and tilt the chin upward—and what sort of an idea of that building do you suppose anyone could get under such conditions?

DOWN in Wall Street they rush through and see the Sub-Treasury. They hear about the J. P. Morgan offices, take a run down to 66 Broadway and hear about the Standard Oil offices and are trying to tell which is Bowling Green and which John D. Rockefeller's office window when they are whisked away again.

And when Cyrus P. Steele and family return to Homedale, the *Werkly Herald* will print an item to this effect:

"Our esteemed fellow townsman, the Hon. Cyrus P. Steele and his wife and daughter, Miss Stella Steele, have returned from a protracted stay in New York, N. Y. While there they saw all that was worth seeing. Mr. Steele says he prefers Homedale. So say we all of us."

Wise visitors buy forty or fifty New York souvenir post cards and study them carefully in order to find out what the "sights" they have "seen" actually look like.

U. S. Marston loading Post Toasties on Battleship Michigan at the Norfolk Navy Yard—(From actual photograph).

Post Toasties Follow the Flag

Uncle Sam provides the best of food, so it naturally follows that his fighting men have these delicious golden-brown bits of toasted Indian Corn, afloat as well as ashore.

The use of Post Toasties has become so general in our Naval service that one may find Jack Tar enjoying "Toasties" wherever the Flag takes him.

Many carloads of this appetizing food leave the model factories of the Postum Co. at Battle Creek each day and provide the world with one of the daintiest breakfast dishes imaginable—

Wholesome Nourishing Easy to Serve

The best proof is a trial in your own home.

Post Toasties are sold by grocers everywhere—so you may

Get Yours

**"I Tell You—
These 'Holeproofs' Are Wonderful Socks"**

Go to a furnishing, clothing or department store and see the original guaranteed hose—famous Holeproof Hosiery. Note its *tenure, light weight and style.*

Buy six pairs of Holeproof and begin to know them, as a million wearers do.

Buy three today. They will last six months or longer. If they wear out—if even a thread breaks—you get new pairs free.

We pay an average of 74c per pound for the yarn in Holeproof. Common yarn costs but 32c. But ours is three-ply and long-staple cotton. That means strength

with light weight. It means *soft pliability*. The wear you get in these stockings or socks has nothing to do with the weight of the yarn.

Holeproof dealers now have the new Fall colors in many weights. Both Cotton and Silk. Go see them now.

Write us for your dealers' names. We ship direct where no dealer is near, charges prepaid on receipt of remittance! Ask for new Mercerized Holesproof Socks for men at \$1.50 for six pairs. Write for free booklet telling about Holesproof.

What They Think of Us

Saraswati (Gita) Press

Norman Hapgood has given HARPER's a new dress, and it isn't a hobble skirt, either.

Springfield (Ill.) News

"A friend of ours," writes Norman Hapgood in his remodeled *Journal of Civilization*, "who has traveled much, asked whether an educated Filipino would think that the record of the Illinois Legislature at the last session indicated that the citizens of Illinois were fit for self-government."

Harper does not tell us the reply he made to this query. Undoubtedly he answered the question in a truly Harpoid style, which was necessarily sententious and comprehensive. However, this supposititious Filippine would probably know, without asking the editor of HARPER'S WEEKLY, that the record of the Illinois Legislature does not differ materially from the record of the legislatures of other States, and that his question, had he propounded it, would have been an impertinence.

General (N. Y.) Times

With due respect to those who have previously conducted the magazine so successfully, we can not help admitting that the Hapgood publication bids fair to be a big improvement. The editorial department seems to bear evidences of the characteristic work of Mr. Hapgood, and the publication has all that spice and snap that used to characterize COLLEGE in the days when Mr. Hapgood was editor, and which have been rather conspicuously lacking since he resigned. The illustrated departments of the remodeled publication are strikingly noteworthy and will be watched with interest from week to week. There is a field for a magazine of the type Mr. Hapgood says he intends to make HARPER'S. Mr. Hapgood is a fearless and able editor, and we predict good things for HARPER'S and from HARPER'S under his ownership.

Richmond (Va.) Dispatch

For the benefit of those unfortunate discontented persons who are not placidly content to read the *Times-Dispatch*, without seeking other mental pabulum, we announce that the new *HARPER'S WEEKLY*, under Norman Hapgood as editor, bursts into print this week. The most pleasing thing about the babe is its dress. The form of the magazine is the most comfortable, neat, and esthetically satisfying we know. The first issue otherwise creaks with newness. The ship hath not found herself, though the old Hapgood trademarks gleam brightly in the dawn.

Wilmington (Del.) *Energy Evening*

Much was attached to the old HANSEN'S WEEKLY that the former clientele will miss, and somewhat sadly. Especially will they feel the omission of Colonel Harvey's editorials, trenchant, racy, informing, and so convincing.

Omaha (Nebr.) Bee

Norman Hapgood's new HARPER'S WEEKLY comes out in time to be of some service to Congress at this extra session, which must have been prolonged specially for the advice.

Lebanon (Pa.) Report

Few changes in the administration of periodicals have provoked the interest following the announcement that Colonel George Harvey had retired as editor of HARPER'S WEEKLY in favor of Norman Hapgood.

New Haven (Conn.) Courier

The second number of HARPER'S WEEKLY, under the editorship of Norman Hapgood, promises that, unless great ingenuity is exercised, a really live and interesting periodical will greet the country weekly.

Topela (Kan.) Capital

Norman Hapgood has taken charge of HARPER'S WEEKLY, and everything out of "kilter" shortly will be adjusted satisfactorily.

Under Norman Hapgood, HARPER'S WEEKLY is restored to the preeminence among weekly magazines that many years ago gave it a claim to the title of the "Journal of Civilization." It is widely sympathetic, overlooking no social interest of these alert times.

Los Angeles (Cal.) Tribune

Norman Hapgood is now editor of HARPER'S WEEKLY. Outwardly the appearance of the publication has been improved.

Hapgood is capable of expressing a sound opinion, when he has it, and doing this in clear English.

The illustrations in his paper are rotten beyond all precedent, the trouble being that they do not resemble anything ever seen of man.

Aberdeen (Wash.) World

Norman Hapgood, new editor of HARPER'S WEEKLY, announces in his initial number that he hopes to make the WEEKLY the organ of the "feminist movement." Ed. Bok and the *Ladies' Home Journal* will no doubt sue Norman for an infringement of copyright.

Columbia (S. C.) Record

Mr. Hapgood is one of the reformers who has been helping along the fight against the "white slave" traffic, both with voice and pen. It is to the credit of his candor as well as that of his intelligence, therefore, that he points out the defect in the Mann "white slave" art.

Detroit (Mich.) News Tribune

Mr. Hapgood's work on *Collier's* long ago established the character of any publication which might come under his control. He is a rare scholar, with vision, with extraordinary power of expression, with tolerance. But from the outset he makes it plain that his tolerance is not to be mistaken for willingness to compromise. The short editorial on "Vivisection," in this number, is the Hapgood way of conveying this assurance. The WEEKLY, Mr. Hapgood promises, will publish a little fiction, something about sport, and as many substantial, informing articles as possible. He looks to the illustrations for much assistance in expressing the policy which he adopts for the publication and hopes to maintain. Neither the fiction nor the illustrations will be, if he can help, of the ordinary sugar-pill sort. It is easily discoverable that Mr. Hapgood is so close, friendly sympathy with the Wilson administration, and especially with the economic ideas of the administration. One of his dearest friends is Louis D. Brandeis, the Boston lawyer, perhaps the foremost exponent of

All-Weather Treads

Another Goodyear Invention. Flat, Broad, Smooth on Dry Roads—The Sharpest Grip on Wet

Now comes the solution of the All-Weather tread. All the advantage of smooth treads on dry roads, plus an invincible grip on wet.

A tread for all wheels and all seasons double-thick, tough, economical.

Grips that last thousands of miles.

Which spread the strains like smooth treads.

Which are flat, smooth and regular for nine-tenths of your driving. Yet they become—the instant you need them—the most efficient of anti-skids.

These All-Weather treads, even now, outsell our smooth treads with users.

Exclusive Features

This All-Weather tread is an extra tread, affording double thickness. It is made of very tough rubber, toughened by a secret process.

The blocks are so deep, so wear-resisting that they last for thousands of miles. They never all wear off.

The edges are sharp and they stay sharp. Rounded edges can't offer a grip which compares with them.

The edges all face the skidding direction, which we find to be usually 45 degrees.

The blocks widen out so they meet

at the base. Thus the strains are distributed over the fabric just as with smooth-tread tires. It was separate projections, centering the strains at a single point, which made former anti-skids so expensive.

The blocks are regular—in perfect alignment—avoiding the vibration caused by irregular projections.

They are flat and broad, offering on dry roads the smoothness of plain tread tires.

Compare them with other anti-skids. Note how in each

point they excel. You will then see why they outsell smooth treads on the largest-selling tires in the world.

Safety demands these All-Weather treads on every wheel every day. You are bound to come to them.

Other Features

All-Weather treads, if wanted, come on Goodyear No-Rim-Cut tires.

The tires that can't rim-cut—the only tires which—to lessen blow-outs—are final-cured on airbags at an extra cost of \$1,500 daily.

The only tires which employ our patent method to prevent tread separation—a method for which we paid \$50,000.

Our dealers are everywhere.

Why Cook's Imperial Extra Dry Champagne

When you buy a 6th read you pay for the bone and the "trim" (which you can't eat) as well as the meat, which you can eat.

If a butcher came along who would sell you as good or better meat and who did not charge for the bone and trim, you would buy from him—that's not being "cheap," it's being intelligent.

When you buy a foreign made champagne you're paying \$1.00 for import duty and ocean freight (which you can't drink—that's the "bone and trim"), and \$1.00 for the rest of wine.

When you buy Cook's Imperial you pay \$1.00 (no bone—no trim) for import duty and ocean freight (which you can't drink—that's the "bone and trim"), and \$1.00 for the rest of wine.

Should Read
"Marriage Today and
Tomorrow"
in the next HARPER'S WEEKLY

"competition restored." Yet those who have read Hapgood for years know that under his editorship HARPER'S WEEKLY can not be the partisan organ of the Democratic party that it was so long under Colonel Harvey. The new HARPER'S WEEKLY, if the friends of the old will only set aside prejudice long enough to read a few numbers of it, will be found less radical than "Old Subscriber" perhaps expects. Nevertheless, it is to be kept, if Norman Hapgood can keep it, a little ahead of the times. We are certain that it will be an influence in the forming of public opinion, rather than a reflector of opinion already crystallized. This in itself may be too radical for a part of the old circulation; certainly it will be; for they have received letters already denouncing the change—one of them from as far off as Korea.

Louisville (Ky.) Post

"To understand a thing," says Mr. Hapgood, in his first issue of HARPER'S WEEKLY, "is to be interested in it." Not necessarily. It is only a half truth, as labored platitudes, intended for epigrams, always are. It is just as true to say that to understand a thing is to lose all interest in it; that was Emerson's view:

The heavens that now draw him with sweetness untold.
Once found—for new heavens he spurneth the old.

But, read the anagram either way, it matters little; only applying the Hapgood rule to Hapgood's discussion of the feminist movement, we hope he will understand it better before the winter is over. Then he will not assume that fifty years ago the women were any less attracted to our forefathers than Mrs. Pankhurst and Mrs. Vanderhilt-Beaumont, and even Miss Addams, are to the men of the present hour.

Atchison (Kan.) Globe

Norman Hapgood declares that, while woman will be conceded full political and social rights on an equality with man, she will be placed in a position of power which will render her his superior. A man who talks like that about woman suffrage is henpecked, all right.

Boston (Mass.) Herald

In the current number of HARPER'S WEEKLY David Starr Jordan makes an exposition of the high cost of living which every man who legislates for city, state, or nation ought to be compelled to read and taught to understand. It is a most remarkable compilation of facts. It points to an unpalatable truth, but one from which no intelligent student of economics can dissent.

Rochester (N. Y.) Democrat and Chronicle

The new HARPER'S WEEKLY has variety and vitality, it is interesting from beginning to end; the touch of a master hand is to be seen on every page. "Something that everybody wants to read," might well be its motto.

Aurora (Ill.) Beacon-News

IF HARPER'S WEEKLY were published in the sign language, a blind man would know that Norman Hapgood is now the editor. If this splendid journalist is allowed free rein, the American people are assured that they will learn something of the conduct of their own government which it is well for them to know.

Burton J. Hendrick, Washington, D. C.

I am glad to see that we finally have a periodical with a real note of distinction about it. My testimony is of some value, because I was rather pessimistic about the HARPER enterprise when I first heard of it.

Houston (Tex.) Post

Norman Hapgood says he intends to make HARPER'S WEEKLY the organ of feminism on this continent. Is that what we have been waiting for so patiently, and will Mr. Bok stand for the competition?

Frederic Hutton, in Chicago (Ill.) Evening Post

A critical pen too long idle has been taken up again as one of the results of the rejuvenation of the venerable HARPER'S WEEKLY. It is that of Norman Hapgood, who announces that after ten years of activity in other directions he will again devote himself to more or less expression on the subjects of plays, players, and playwrights. A dozen years ago his poignant views of things theatrical delighted a wide public. The public interested in the playhouse, and particularly the literature of the drama, has greatly increased in the meantime. When Mr. Hapgood wrote his book "The American Stage" there were no drama leagues, no theater societies, no uplifter-playgoers in America. People ten years ago regarded the theater as a place of amusement, not as an avenue for the expression of national life and ideals. An increasingly large element is coming to the latter view.

San Francisco (Cal.) Bulletin

HARPER'S WEEKLY began its career long before the Civil War and played a considerable part in the journalistic phase of that struggle. In the generation following the war it became almost an institution, especially in the New England States. New Englanders used to read it with almost as much faith as they did their Bibles. In late years it fell under the able but reactionary control of George Harvey. Harvey failed to keep up with the spirit of his times. The WEEKLY lost its hold on progressive thinkers. It came to stand for nothing; it sneered, albeit very charmingly, at the beliefs of a growing party, and it ceased to pay.

Under Hapgood the WEEKLY is certain to be intelligently progressive. As another champion of liberalism it will be welcomed.

Chattanooga (Tenn.) Times

Mr. Hapgood is one of the brilliant writers of his day, a bit inclined to get forward too fast for his time and hence regarded as somewhat of a radical. He is, however, unafraid and has a reputation for sincerity, which makes amends for much of his headstrongness. He will make the WEEKLY readable—never doubt that—and likewise he will impart to it that elemental attractiveness out all editors can give to their writings, which means that the reader can take what is said or let it alone, and no special satisfaction will be felt on the one hand or offense taken on the other.

In other words, HARPER'S Weekly will become a medium for Hapgoodism, and those who like that sort of independent, devil-may-care, and out too deep or dry comment on men and things, events and happenings, will find all they are looking for in the new HARPER'S. An example of Mr. Hapgood's breezy and altogether self-reliant way of doing things appear among his first editorials.

A Series

SINCE the publication in our issue of August 16 of Mr. Brandeis's article on the New Haven Railroad, the expression "Banker-Management" has been used so much that it may be said to have entered at least temporarily into the language. Our plan had been to begin next month a series by Mr. Brandeis on competition, in preparation for the probable discussion in Congress about Sherman Act amendments. We have decided, however, that the competition series will be in time enough if it begins a little later, and there are cogent reasons for beginning a money-trust series at once, while the New Haven lessons are in everybody's mind and while the whole subject is stirred up by the discussion of the Currency Bill. Beginning, therefore, in the issue of November 8, Mr. Brandeis will contribute a series which will make very clear what harm is done by the existence of a money-trust, and what steps need to be taken to bring about desirable conditions. This is the most difficult business problem he has yet discussed, and the results of his thought cannot fail to be national in their importance.

Tammany

EIGHT men decided that Gaynor should not have Tammany approval, because they looked out over the field, and decided there was much booty to gather in, and they would take a chance, and put into office, if they won, a man who would let them have *all* the offices and *all* the contracts; for Murphy and his friends care more about contracts than about anything else in this little world. All the rest is vanity; but contracts are real, juicy, fat. They lead to wealth for the lenders, and automobiles, and dresses for their wives, and diamonds, and a rise in the world for their children, and paunches for themselves. Vast contracts are to be let to somebody the next four years,—vaster than usual. Why should not Tammany have them? Why should a strong man like Gaynor, who sometimes disobeyed, be permitted around, when there were plenty of docile instruments like McNill?

So Gaynor was put out of the way, like Sulzer, only by a different route. The method is chosen according to circumstance and opportunity; but the idea is always the same, to wit: if you become fresh with Tammany, it will be your end. The wigwag will get you, and you will serve as a warning to later Tammany mayors and governors. McClellan also tried to be good, and what did the Tiger do to him? Van Wyck was the kind of a man that gives satisfaction to the

chieftains, and they have selected that kind of man in McNill,—commonplace, beefy, docile, a product of the machine, owing to it his every step upward, without personality,—the very ideal of a rubber stamp. If New York City wants him for mayor, it has a legal right to choose him.

The Fusion Ticket

JOHN PURROY MITCHEL, if elected, will make an excellent, brave and honest mayor. Young as he is, he has had much experience, and experience of exactly the most valuable kind. As Commissioner of Accounts, President of the Board of Aldermen, acting Mayor, and for a short time as Collector of the Port, he has shown his qualities. He is idealistic and progressive, but at the same time cautious, adaptable, and exact. He is devoted to figures and the modern study of efficiency. He has a natural understanding of politics and political conditions, and will, therefore, be difficult to deceive and successful in selecting men. His associates will be of the best. He gets on admirably with the most enlightened Progressives and Republicans, and the favor with which he is looked upon by the Democratic administration is well known. He has thought much about the police problem and believes that, in co-operation with Mr. Whitman, he can put an end to "the system."

With him on the Fusion ticket is probably the strongest Board of Estimate ever nominated in New York. A number of the men, as Prendergast, McAneny, Pounds, and Cromwell, have already served with the highest credit and have all the advantages of full experience. To go with them have been chosen business men of the first class. The ticket is so remarkable that if it is elected many of New York's difficult financial problems will be largely solved in the next four years, all departments will be made more economical and more effective, the police scandal will be ended, and then, if the city can be freed from being bossed from Albany, which forces on it expenses and bad laws, it will be on the way to becoming governed as the biggest city in America should be governed.

La Follette

EVERY member of either House who refrained from trying to embarrass the Democrats on the Tariff Bill deserves credit, but to one man falls the greatest share of glory for independence, because it cost him most. Especially did Senator La Follette's situation require strength of character; not only had he always been a Republican, but he had, since the

Roosevelt split, come to be looked upon as likely to dominate the party in the future. As progressiveness seemed needed to save it from destruction, La Follette's influence had suddenly been multiplied. In voting for the Democratic tariff, he gave a final proof that no consideration can prevent him from following always his conviction. This man has fought the straight fight all his life. Often the sacrifice has been great. He has given up friends, money, comfort, party praise, easy advance. He has stood abuse and suspicion. Nearly always the country and his party have come around finally to La Follette's position. This last proof of patriotism may annoy the Republican senators for the time being, but it will probably mean that La Follette's influence, even over them, will be strengthened in the end; because a man who is so experienced, strong, far-sighted, and fearless is badly needed by the party now.

Sports

ATLETICS are among the healthiest occupations of life. Any publication which undertakes to reflect the world that is worth while should be generous in the space devoted to sporting events. This applies not only to baseball, the most popular of all the sports, and to football, but includes such interests as skating, hockey and basket ball. All forms of sport constitute an aspect of life and one that is worth encouraging. A man at play is at his best or at its worst; often one so gets most clearly his real character. That is why the English initiated the custom of speaking of a man as a good or a bad sport, when they meant that he had or had not the qualities of magnanimity, courage and fairness.

Writing about sports, the person to be considered is primarily the spectator, although the discussion or narrative should have sufficient technical quality to interest the participant. There is a good deal of opportunity in this field for weekly periodicals. Jones of Cornell broke the world's mile record one day in the Harvard stadium. So much we learned from the morning papers. We learned that he beat Paull of Pennsylvania and Hanavan of Michigan. But, having read that morning newspaper story, did we know Jones any better than we did before? Were these questions answered: What does he look like? How does he run? Does he swing his arms as most of us do, or does he hold them close to his hips? What is his style? Did he win through sheer natural speed, or did clever coaching help him?

There will come a day when no man in this country will be without some sporting affiliation, some out-of-door interest.

Passing the Batter

THE big leagues, although they have discussed it, have not yet taken any steps to prevent the very unpopular practice of having the pitcher intentionally pass a strong batter in an emergency. One suggestion is that the umpire, on making up his mind that the pitcher had intentionally passed the batter, should remove the pitcher from the game. Another suggestion is that when a batter is purposely passed, the runners already on the bases should be allowed to

advance one base as in the case of a balk. Passing is frequently done with the bases empty; for instance, if two were out and one run were required to tie the score, and Myers or Zimmerman were at the bat, he would very likely be passed. A third scheme allows the passed batter to go to second. A rather interesting suggestion is to allow the batter to remain at the bat until he does get a good ball. Another thing that has occurred to us personally is that if the umpire decides that he was passed intentionally the batter may let someone else take his place on the bases and he up the next time himself. Whatever is done, however, this particular defect in the game should be remedied.

A Baseball Change

CONDITIONS shift gradually in the national game. One of the changes this year is that left-hand batsmen are not in as great demand as they have been in preceding years. Stengel, who was the sensation of the spring as batsman came near losing his place because he batted left-handed, and Dahlen wanted a right-handed hitter. Therefore, he signed Meyer, who was a .330 man in the International League, but Meyer fell down and Stengel got his chance.

Up to 1912 scouts were ordered to watch for stars who hit on the side of the plate nearest first base. Their special value lay in the fact that they start several feet nearer first base, and that it is easier for a left handed batter to hit a right-handed pitcher. The reason that the left-handed men have become less desirable is that there has been such a development of left-handed pitchers.

If this condition proves to be permanent, the boys in the lots will stop their present practice of learning to bat on what is, to the majority of them, the unnatural side of the plate.

"The Obvious"

MR. JUSTICE HOLMES of the United States Supreme Court is a very remarkable man. He is a profound philosopher, and he knows how to write. Speaking to Harvard men this season at a law school dinner in New York, he took up the subject of the need of education in the obvious. In the intimacy and ease of the surroundings, and also in the intimacy and ease that a man like Justice Holmes feels anywhere in the world, he confessed that he sees less immediate use in committees on the high cost of living, and its relation to gold production, narrowing cattle ranges, and population, than he does in impressing a few obvious truths. The main remedy for all the troubles that confront us, whether evils in the present state of the law or evils in public opinion, is for us to grow more civilized. As this philosopher looks ahead into the future, he wonders whether competition from new races will not cut deeper than workmen's disputes, and test whether we can hang together and can fight. He feels that we are running through the world's resources at a pace that we can not keep. He sees civilization ahead, perhaps with smaller numbers, but perhaps bred to greatness and splendor by science. The way he feels about the universe found a symbol as he

walked homeward the other day on Pennsylvania Avenue near the Treasury. Beyond Sherman's statue to the west, the sky was aflame with scarlet and crimson from the setting sun. "But, like the note of downfall in Wagner's opera, below the sky-line there came from little globes the pallid discord of the electric lights." Thinking of these things, his last reflection, after all, was that after the sunset and above the electric lights there shone the stars.

Eugenics

THE view that the human race can be improved in quality only by different standards of selection is becoming rather widespread. Undoubtedly the increased interest in health and efficiency and morality as bearing on marriage will do something toward fixing habits of thought that will affect falling in love. People fall in love not only on account of their individual make-up, but also on account of the ideas that may prevail in their community. Whether very much of this work can be done by legislation is possibly open to doubt. Mr. Wallace, certainly as high an authority on the subject as there is, thinks it is absurd to attempt to determine by legislation those relations of the sexes that shall be best, alike for individuals and for the race, in a society in which a large part of our women work long hours daily for the barest subsistence. With an almost total absence of the rational pleasures of life, they are driven into uncongenial marriages in order to secure some amount of personal independence or physical well being.

Mr. Wallace argues that if the legislature can not cure the conditions that force such life on millions of workers, it is a mockery to suppose it capable of remedying some of the more terrible results. If women are freed from the temptation to marry for subsistence and a home, Mr. Wallace thinks they will be very careful in their selection. Many of them will prefer not to marry at all. They will, on the average, marry much later than they do now. It will be looked upon socially as a degradation for a woman to marry any man she does not both love and esteem. Moral standards will be such that man will have no substitutes for marriage acceptable to them, and therefore they will be much more eager for marriage than they are now, and the number of choices open to the average woman will, therefore, be greater.

From this general and economic and moral development, Mr. Wallace expects a selective agency to be created which will have an extremely improving effect on the quality of the race. His estimate of the way in which this improvement is to be made seems to us the most intelligent. When women are free to choose absolutely, the worst men will be almost universally rejected.

In Her Place

ONE who looks out of the window of a railroad train entering a large city, or who looks out of the window of an elevated road, sees women sitting at dingy windows, gazing vacantly out of the small flats which their families inhabit. They have no sufficient occupation in taking care

of two or three rooms, and the fact that they have not any adequate call on their energies and ability turns them into slatterns, so that they do not even do properly what little work there is to do. Mr. Sloan's picture on the cover this week depicts such a woman. When steam was harnessed, and the factory was created, all these multiform domestic industries which belonged to woman were taken away. She ceased to be the spinner, the weaver, the dyer; she ceased in large measure to make butter and cheese and to put up preserves; and along with the disappearance of the most important household industries came the march of general education and took the children off into the public schools. If she follows her traditional industries into the factory, as it is at present conducted, she destroys her own constitution and deteriorates the race. If she remains at home, especially in what the modern tenement furnishes as home, she is cramped and confined in her life without having nearly enough genuine usefulness and interesting work to fill the needs of her nature. There are two tasks for society implied in this predicament. One, of course, is to make home conditions as attractive as possible; the other, a much more difficult one, is to find some way by which women can continue to occupy the important place in industry that they always have occupied. In fact, that place ought naturally to be somewhat larger than it was, since families are smaller, and ought to be smaller, on account of the decreased death rate among children, and since the education of children has been undertaken by the State.

It is very improbable that any form of work will ever again be possible and profitable in the home. The best outcome we can look forward to is that the community, especially the women, will grapple with the factory problem in such a way that women will be able to work outside the home under conditions that will not be damaging. The use of steam to do our work, and to increase immeasurably its material results, has given us no more profound ethical and social problem than this.

Variety

SOME of the most penetrating remarks of our generation about women have been made by George Meredith. The lines we are about to quote are not included of course under the heading of his penetrating remarks, but they have interest as the conclusion of a deep student of the subject:

"She can be as wise as we
And wiser when she wishes;
She can knit with cunning wit,
And dress the homely dishes.
She can flourish staff or pen,
And deal a wound that lingers
She can talk the talk of men,
And touch with thrilling fingers."

It is a childlike idea that women, as they increase their rights and privileges, and therefore as they enlarge and develop, will lose their sex characteristics. This is about as absurd as to state that a man who becomes interested in civil service reform will lose his taste for tennis. Broadening one's interests does not lessen the predominant one, but makes it more enlightened and more effective.

Is American Business Failing?

By C. M. KEYS

Illustrated by Maurice Becker

IT seems time to look a few industrial and commercial facts squarely in the face and draw a few honest conclusions about American business. That is the purpose of this article. It does not pretend to solve any economic problems. It purposes merely to state them, if they exist.

When you come to the place where you want to look at business, you turn to basic industries. You do not care that Henry Ford has just made a score or two of millions out of an automobile factory—for automobiles are not a basic industry as yet. You do not pay much attention to the fact that a quiet little biscuit company changed its policy a year or so ago, spent a million or so of real money on advertising and became, almost over night, a national concern. That is entertaining talk for those who always boast and never stop to think—the kind of leaders of the world of finance who have the habit of running past danger signals. It has nothing to do with business, *per se*.

Steel, sugar, paper, cotton goods, woolen goods, boots and shoes, men's clothes, women's clothes, machinery and food—these are basic things, the things that one must look at if one cares to study industry and trade, in its contortions, symptoms of something wrong, or find, in its easy flow, the signs of everything all right. Let us look at the facts about a few of these, citing instances and reciting records in the language of the man in the street.

Wherever, in this world, any liquid or gas is handled in large volume under compression, you may find certain pumps doing their share of the work, and bearing labels to indicate that they were made by one or another of the subsidiary concerns of a big industrial company organized fourteen years ago in New Jersey. You will find them pumping water to the cities of Rangoon and Benares as well as to most of the cities of America and Europe; pumping air into the deep workings of the Rand as into the deep workings of the coal mines at Scranton; flooding the rice fields of Louisiana and the sugar fields of Hawaii; driving oil from the western fields to the refineries of the eastern seaboard and from the inland plains of Burmah to the Indian Ocean; operating elevators or

"lifts" wherever in the world they use them; compressing gases and liquids for the largest and the smallest of chemical operations;—working, in fact, as servants of the world of commerce without national boundary or racial prejudice. Their plants you may find in England, France, Germany, and Austria, as well as in a dozen home cities.

The making of steam pumps, or the making of any other perfectly standardized machinery, is a basic industry. This particular company seems to have the patents, the brains, the organization and the courage to carry on its business in all the markets of the world in competition with whoever cares to compete.

Business on its books has been enormous. It makes no public statement of its gross business, so that one may have its semi-official statements only for proof; but these would seem to show that in the year 1912 it did about as big a business as it ever did in its history. Certainly its banner year has been a very recent year. In actual volume of business done, 1911 would seem to be the biggest it ever enjoyed.

Yet, in the spring of 1913, within two months following a statement by its president that 1913 would be a banner year for this company, the directors were forced to cease paying any dividends on the preferred stock, and even the first mortgage bonds of the company slipped down to a price barely over half their face value. This company tottered. It seems to be tottering still.

Why is it that in this great industry, with its enormous home and foreign business of a staple sort, growing and expanding in an apparently normal way, the shadow of ruin falls upon the executive council?

WHEN you come to analyze it, the answer is that the cost of manufacture, the cost of administration, the cost of selling and the cost of competition left no real margin of profit to be divided.

Keeping this fact in mind, glance at a few of the other basic industries, to see how they have fared.

In sugar, which is consumed, directly or indirectly, by every human being in the country every day, the largest

company in this country making sugar for the people reported for the last year the smallest margin of net profit that it has recorded since the disastrous days of twenty years ago.

In steel, the increasing use of which is perhaps the greatest industrial marvel of the age, the gross profit gathered by the largest manufacturer in 1912 was a few cents more than half as much per ton as in 1902.

In paper, in its various branches, disaster has been elected to the Board of Directors of nearly all the best known companies. The leading American company manufacturing paper bags and kindred lines not only passed its preferred dividend this year, but came perilously near something much worse. You may buy its securities for a very small fraction of their price of a year ago. The biggest of the news-print makers is as sickly a giant as ever was born. In August the best known of the writing-paper companies ceased paying dividends on its preferred stock. The official statement concerning this matter stated, very simply, that the main subject for discussion at the meeting consisted of "the advance in the price of rags and wood pulp and the increased cost of labor." It must have been a cheerful meeting.

The story of the textile trades is fairly well known. The Lawrence and Paterson strikes are still of recent enough date to be remembered. The underlying cause of them was the same, namely a recognition on the part of the employers that the margin of profit is already so small that it requires but little additional advance in the cost of labor to wipe it off the slate for good.

Boots and shoes are not, for the most part, manufactured by mobilized capital. With two possible exceptions, they are almost in the factory stage of financial development. Both these larger companies report fair earnings; but one of them, at least, seems barely able to show profits, in spite of large gross business, sufficient to justify confidence that even the dividend on its preferred stock will be continuous.

THE heart of the clothing industry lies in New York City. It is the biggest industry in the country, far exceeding the output of steel, for instance, or of paper and publishing. In a single morning edition of a New York newspaper in July, the writer found twenty-one notices of bankruptcy in the clothing trade of New York. The past summer has been the worst summer in this respect that has been experienced in many years. Of course, the trade is disorganized and bad, all through. It is also difficult to do more than guess at its real condition. There is no definite way to study it and say that today its margin of profit is smaller than at any other day. One may only guess at it, from what one has to go on.

The last of the staple industries listed in a previous paragraph was food. That is pretty broad. Most of the concerns that make or market food products have been mighty prosperous. The reason may be set down here, for a purpose that will be made clear later. You will find it excellently stated in Bulletin No. 110 of the United States Bureau of Labor. In that bulletin Uncle Sam compares the prices of last autumn of fifteen of the principal articles of food with the average prices of the same products for the ten years 1890-1899. Every article, of course, advanced. Ten out of the fifteen advanced more than 50 per cent. Sugar made the smallest advance, 5.2 per cent. Pork chops made the largest, 118.6 per cent.

The case of sugar has already been discussed. There is no pork chop trust. No doubt, if there were, its profits would show up quite well for 1912. They ought to, for the price of the product changes every day. The making and marketing of food products, generally, is not an industry. It is hardly even a trade. It is almost a profession.

If this were a book instead of an article, it would be possible to go much further, and recite the sad tales of the fertilizer companies, the one or two harvester companies and many other more or less important concerns that have met disaster in 1913, sometimes because they had too little business and sometimes because they had too much and sometimes because they tried to play the tricky games of high finance. Since this is not a

chronicle, enough has been cited from the industrial staples to illustrate a fact that seems to have been ignored in the making of America's commercial policies.

THERE is, however, a staple line of manufacture greater by far than any of these. It is the making of transportation and the selling of the same to the ultimate consumer, Mr. Jones, who always pays the freight. No other industry plays a more important part in the making of American commercial prosperity or woe. No other employs a larger army of men or supports and educates more children. The railways are the circulation system of the body commercial. If they go wrong, everything goes wrong. Let us examine into their margin of profit at the present time and see how things go.

Because this article deals with general trade conditions and not with special industries, it is well to use the main line railroads of the country as illustrations. The latest available period is the first six months of 1913. These were good enough months in trade, as things go, neither abnormally good nor abnormally bad. What the figures show may be taken, on the whole, to be honest enough facts.

In that period, as compared with the same time last year, the Pennsylvania gained \$11,700,000 in gross, and lost \$3,300,000 in net, earnings; the Baltimore & Ohio gained \$3,400,000 gross and lost \$1,200,000 net; the Boston & Maine and the New Haven, together, lost a little in gross and lost \$3,500,000 in net; the Louisville & Nashville and the Southern combined, gained \$3,600,000 gross, and lost \$1,300,000 net; the Atchafalpa and Southern Pacific together, gained over \$6,000,000 in gross and managed to add about \$95,000 to their net earnings out of that sum; while the roads of the Great Northwest, including the Union Pacific, the Hill roads, the St. Paul, Illinois Central and dozens of others, combined, made the best returns of all, with an increase of more than \$5,000,000 saved, nearly half of it in net. That was due, according to the experts, to the fact that last year they had a very bad time, and this year was merely a return toward normal results.

In this quick and offhand snapshot at railroad conditions, one thing stands out quite as clearly as a crack in the plate. That is that our big railroads seem to grow a little bit poorer the more business they get. One may almost repeat, in this instance, the diagnosis of a former paragraph and write it down that the "cost of manufacture, the cost of administration, the cost of selling and the cost of competition" eat heavily into the margin of profit in carrying on this greatest of American industries.

Of course, the obvious answer to all this compendium of facts and figures is sure to be made. It is that everything is very much over-capitalized anyway and that profits on capital are not a criterion of prosperity or the reverse. It is well to add that simple argument at once. In no case cited in this article have the facts presented any relation at all to the capital account. Net profits are reckoned in every case before even the interest on bonds is deducted. This article is concerned only with operating profits and not with surplus after debts are paid and dividends are disbursed. We are talking about business and not about finance.

THE facts here recorded are not by any means the most obvious commercial facts of the day. A very large majority of the business men and railroad leaders of the country are still busy watching gross earnings grow. The commercial agencies, students of commerce at large, bankers and political leaders of the country note that the volume of business moving, the volume of clearings, and the volume of tonnage on the railroads keep on expanding. There is no immediate contraction of business in sight.

The declining profits of business, in truth, are little more, so far, than a cloud upon the horizon, no bigger than a man's hand to the eyes of many. Here and there, in some thin industry where the control of retail prices has passed away entirely from the hands of the manufacturer, as, for instance, in the business of making

transportation, the cloud begins to look ominous. A few dividends have gone by the board. Such veteran investment stocks as the New Haven, the St. Paul, the Illinois Central have been forced to take in said. A few railroad men are worrying a little about tomorrow and the day after. A few manufacturers, mostly the makers of the world's staples, begin to sleep badly at night. That is all, so far.

Profitable commerce, in 1913, has become a matter of specialties. The manufacture and merchandizing of staple goods has ceased to be the main profit-producing function of American business. So much is this true that in some of our staple lines the dividends of today are almost wholly earned from the making of one specialty. The rubber manufacturing industry, for instance, is admitted to be living largely, so far as divisible profits are concerned, on the making of automobile tires. The largest profits, in proportion to volume of business, flow into the treasuries of men who make and sell strongly advertised brands of goods, for which the public pays enough to meet the excess cost of selling and a goodly rate of interest on the good-will of the company.

In the financial markets we have seen, in the past two years or so, the flotation of more than a hundred big industrial companies. A few of them were makers of staples; but the vast majority of them were companies engaged in some extra-profit industry far removed in character from the standard markets for standard goods. Capital, in fact, would be extremely shy in these days in backing new enterprises in steel, in clothing, in food products of wide use, or in any other standard trade where the margin of profit is made in direct competition with others in the same trade and in the open unprotected market.

GRANTING, then, that in the great lines of commerce American business has been for some years past and is today declining in its ability to earn profits on the business done, what is the remedy? What can we do about it?

The first and most obvious reply is furnished by Bulletin 110, cited in a previous paragraph. The maker of steel, of boots and shoes, of clothing, of food, finding his profits growing smaller while his business grows larger, can set to work and make a new schedule of prices. He can charge us more for what we eat, and wear, and use in building, and for the carrying of our goods hither and yon.

Can he? He cannot. The railroads have been trying for five years past to do just that thing. They have failed, so far, because public opinion, blind, perhaps, a little, was against them. So far have the makers of steel been from getting better prices for their goods that the market is split wide open whenever the slightest scarcity of demand sets in.

It has already been noted that there are exceptions. The makers of meat make prices that show a margin of profit, no matter what happens. Meat is a necessity of life. We shall pay, for pork and beef, next winter whatever price will show a profit to all concerned, after that meat has been fattened on corn and alfalfa at new high record values on account of the hot wave of August and September. We shall talk a lot about it, no doubt, but we shall pay the bills nevertheless.

It must be noted that the dearth of profits today in staple lines is not due to the falling of prices. On the contrary, the prices charged the public for commodities, whether food, clothing, or any other essential of life, come very near to being the highest prices collected in civilized times of peace for these same commodities.

IT is admitted not only by economists but by the men of business themselves that the dearth of profits is due, fundamentally, to the era of very high commodity prices. To attempt to cure it by raising prices still higher would be in line with the ancient proverb about the hair of the dog that did the biting; but there its virtue would end. An era of still higher prices for manufactured staples would give temporary relief to a few lame companies; but it would only tend to accentuate the troubles that must be met.

The cure lies farther along the road. Every man who thinks about these things knows what it is. Instead of the cost of living and of doing business going upward,

those costs must come down. For such a condition as seems imminent civilization has devised no other remedy. Costs must be cut. The supply must again be made equal to or larger than the demand.

Labor is the heart and crisis of this matter. It is largely the cost of labor that has created the situation, and it is to the cost of labor, with all that means, that one must look for the remedy. The phrase "liquidation of labor" is seen in print quite often this year. Men talk of it lightly, as though labor could be put in peaceful liquidation like a body of free assets or a collection of merchandise. The United States knows better. Labor liquidated means labor unemployed. It means a long continued era in which men seek for work, instead of being sought by work. There has been no considerable period of labor liquidation in the United States since 1894. That year brought Coxey's Army and the Chicago Union Railway strike.

To say that the wages of labor must come down is to hint at national tragedy. Yet many students of events take the obvious risk of entertaining that opinion in 1913. If labor itself, or the administration, or any man in the land, can devise some new method whereby the eternal cycle of prosperity and disaster can be interrupted, it is time to devise it now.

All men in business look back with something like longing to the good old days that followed the election of Mr. McKinley in 1896. All men look forward to the coming of another similar era. The men of this generation expect that they too will have the opportunities their fathers had to win forward in the great commercial and industrial lines that are so truly typical of American business life.

THE great expansion and growth of American commerce in the first McKinley administration was only possible because there was an abundant supply of high-grade labor looking for work at low wages. It is conceivable that American commerce might creep slowly forward for many years even under the conditions of today, but it may almost be taken for granted that there will be no great weeping and conquering advance in any sense akin to the McKinley boom until the very basis of business, the fundamental costs of doing business, have passed through a period of readjustment. The next great forward movement in America must await the day when labor is again abundant and cheap, raw materials again pressing upon the market at low prices, and the markets of the world again wide open to our goods at our prices.

In such a readjustment there is no hint of conflict between capital and labor. The demands of labor today are probably justified by the actual cost of living. The demands of capital are probably equally justified by the cost of doing business. The causes of the discontent of capital are practically identical with the causes of the discontent of labor. Capital refuses to go to work in the staple industries of America today because it cannot find in those industries what it considers adequate returns. Labor refuses to work without what it considers adequate returns. In the course of time the two will meet on common ground. Both will seek a new employment in the great affairs of commerce and of transportation at returns that at first will be merely adequate. In time, they will move forward together into that wonderful commercial era which will realize, in the next few decades, the recent prophecy of Lord Haldane, and make this country the leader of the world in all material things.

There seems little possibility of a panic. On the contrary, signs seem to point to a slow and gradual and perhaps easy drift downward on an ebb tide of commerce. Capital is not in distress, nor even in great fear. It is getting slowly ready for readjustment. Labor seems blind; but even here there is room for hope that common sense will be stronger than tradition and that the cost of labor, the cost of living, commodities, and the cost of doing business, will move together in an orderly and peaceful decline.

So long as real and thorough liquidation takes place, it does not matter what its manner or its method may be.

COMEDIANS

By EVERETT SHINN

An Open Letter to W. J. B.

By EDMUND VANCE COOKE

DEAR W. JENNINGS:

It would be
A gracious deed of fine felicity
If you would hut impart to me
Your little secret of publicity.
Why is it everything you do
Is promptly placarded and pageanted?
What is the plan which puts it through
So cleanly, cleverly press-angented?

WHY, even before I heard your view,
I scorned the monetary sciences
And breathed (tho' Wall St. never knew)
The usual passionate defiances.
But did that gain me praise or curse?
Was my name trumpeted and tooted?
No, not a toot! And what was worse,
I wasn't even persecuted.

I, too, have served the unfixed grape
Upon my humble supper table,
But did the gartered guests escape
And send the story home by eable?
Nay, nay! but when you serve it—hing!
Ambassadors slide down the bannister
In haste to spread the wondrous thing
As tho' you'd served them grape—and cannister.

I'VE travelled the Chautauqua route
From Passamaquoddy to Matanzas,
But no one seemed to give a hoot,
Not even the Senator from Kansas.
They call you "Commoner," but why,
Why do they always Upper-Case you?
You are no commoner than I!
Why shouldn't I, sometimes, displace you?

THEY'VE thrown so many bricks at you,
You've made a mansion of the missiles.
They've barbed and haried you. Next day
They found you gathering figs from thistles.
So please, oh please, reveal your plan;
Please let me work at it, or play with it,
Please tell a struggling fellow-man,
How do you always get away with it?

Salt Lake City

A Municipal Democracy

By OSWALD RYAN

SALT LAKE CITY, after a year and a half of experience under a reform government, lays claim to being the latest success to the credit of the commission government idea, which started in Galveston twelve years ago. In these days of popular interest in municipal achievement, it seems strange that the city of Brigham Young should have been overlooked by the chronicler of current municipal history, for the Mormon movement has a story to tell which is both interesting and significant.

For Salt Lake City does not offer the usual commission government reform story. The student does not have to scrutinize with minutest care the contemporaneous political situation in the Utah capital in order to feel the presence of a new note, and to understand that somehow this experience is different from the others. But let's to our story.

Most American cities, suffering from misgovernment, have cried out in their distress that the influence of the great national parties in their local affairs was responsible for their ills; national parties and national issues dominated the city, which was mercilessly sacrificed on the altar of national and state politics. But Salt Lake City, for several years preceding 1912, was not dominated by the national parties or national issues; yet the issue in the local elections was as foreign to city government as the questions of the tariff, the currency, or trust regulation. That issue grew out of religious prejudice: Had the members of the Mormon Church be permitted to hold any city office or exercise any political influence in municipal affairs?

HERE was the element which was to make the Utah capital unique among the politics-ridden cities of America. Its appearance resulted several years ago in the formation of a political party—"The American Party,"—which was dedicated to the task of excluding Mormons and Mormon influence from the city administration. That party, based on no principle either of municipal, state or national administration, governed Salt Lake City almost without interruption for several years, until a non-partisan, commission government dislodged it from power in 1912. There had been the usual Democratic and Republican parties in Salt Lake City, but these did not count; the "American Party" ruled the city.

The origin of this anti-Church party dates back to an interesting combination of circumstances. Several years ago, Reed Smoot, high official of the Mormon Church, was a candidate for the office of United States Senator from Utah, and his opponent, a citizen of Salt Lake City and a "Gentile," as the non-Mormons are called, conceived the plan of drawing to his support all elements of opposition to the Church. For a time, it appeared that the "Gentile" candidate would be sent to Washington. Smoot was elected, however, and practically all clear-thinking citizens of Salt Lake City agree that the defeated candidate's desire for revenge achieved the formation of the "American Party," first the "Liberty Party," which immediately followed Smoot's election.

But the spirit of revenge, which moved the managers of the new movement by

no means moved the great mass of its supporters in the years that followed. Hundreds of people believed that the powerful Church on the hill was a dangerous political influence and should be curbed, and they were the bulwark of the new party. "In what way did the Church interest itself?" the writer asked a score of citizens. "Well," came the invariable answer, "just about election time whisper would come forth from a high official of the Mormon Church, and the Mormons would all vote one way."

The members of the Church stoutly denied the charge of Church influence, but the magnificent temple upon Temple Square, shrouded in eternal secrecy, represented an ominous influence in the minds of many citizens, who continued to register their votes for the "American Party." Then the aggressive business influence of the Church added weight to the popular charge. "The Church, in the person of its rulers, owns a hotel, a bank, a great department store, a powerful sugar concern; such an organization cannot possibly keep out of politics." So reasoned the majority of Salt Lake voters, and the majority were "Gentiles." Whether the "Church of Jesus Christ of Latter Day Saints" was guilty of the charge is unimportant so far as this story is concerned; the vital fact is that a ruling majority thought the Church guilty, and feared to vote for any other than the "American Party" candidates.

THE result of municipal government by a party which was the instrument of anti-Church crusade, was what might

he expected. People voted according to their religious sentiments, not according to their municipal convictions; questions of municipal policy and of good city government had no place in the civic consciousness of Salt Lake citizenship. As the issue of Monarchism for years cut across the natural party divisions of France, frightening great masses of voters into the anti-Monarchist ranks; or as the race issue for half a century has demoralized the natural party divisions of our own Southern states, forcing voters into the white man's party; so the question of whether the members of the Mormon Church should be permitted to exercise their right to hold office or to be politically influential stifled the political voice of Salt Lake City by driving hundreds of her voters into the ranks of the only municipal anti-Church party that has ever appeared in this country.

Secure in the thought that the "Gentiles" would not dare to desert the anti-Mormon standard, the managers of the "American Party" did not trouble themselves to give the people a high quality of government. Contracts were awarded to political favorites, regardless of cost to the city treasury, and one of these favorites received so many municipal jobs that people ironically referred to him as the "Official Contractor." The police department was so successfully dominated by petty politics that all forms of vice flourished without interference. The fire department, a crib for the faithful, became so inefficient that, according to reports of leading citizens, valuable properties were allowed to burn to the ground a few years ago, because the firemen were too intoxicated or too inefficient to fight the fire effectively. There were no startling cases of official corruption, but there was abundant evidence of municipal inefficiency. While good citizens of Salt Lake City rested in the peaceful thought that the government was secure from the influence of the Mormon Church, the petty politicians ruled with free hand. Then, suddenly, the idea dawned upon several leading spirits that their city was the victim of a false idea and a groundless fear, and that if Salt Lake City were to hold her place in the march of the cities she must revise her municipal point of view. From the moment the new idea got abroad, dates the new era for the Utah capital.

A JUST regard for political science demands the admission that the idealism of her citizens was not the sole motive which moved Salt Lake City to reform herself. Here, as in all previous history, we can find traces of the economic motive which Karl Marx made the foundation of his case for modern Socialism, and we must admit that, to many citizens, the new movement represented primarily a gain in business prosperity. "This Church issue is hurting business," wailed some. "I can't afford to antagonize my Mormon customers," declared others in their despair. How the followers of Marx and the Materialistic Interpretation of history would have chuckled at these evidences of the truth of their creed!

But there were idealists in Salt Lake City, too—people who dreamed dreams and saw visions, people who saw the moral and civic needs of their city—and, be it said to the credit of Salt Lake City, these people took the lead in the battle for good government. It was they who undertook the task of getting a new commission charter drawn up by

a self-appointed committee of citizens, and who, when the committee had drawn up a new charter embodying most of the ideas of the commission government, took the responsibility of putting the new charter through the State legislature.

It was when the new charter was projected into the Utah legislature that an event occurred which made certain that Salt Lake City would get its commission government, and that was the alliance of the Mormon leaders in the legislature with the proponents of the new charter. The Mormon political leaders in control of the legislature were willing to give Salt Lake City a commission government if by so doing they could break the power of the anti-Mormon party in the capital, and the non-partisan primary and election features which formed a prominent provision of the proposed charter offered an apparently effective means to this end. The result was that an act was passed in March, 1911, placing cities of the "first and second" classes, which included Salt Lake City, under commission government.

To Mormon leaders the measure meant an opportunity for putting an end to the "Babylonian Captivity" of the Church; to the good government people it meant an opportunity for civic betterment and expansion. The anti-"American" feeling had played into the hands of the reformers.

AFTER an exciting municipal campaign in which all of the old political elements combined to elect candidates who would carry on the old anti-Mormon tradition of misrule, the good government element elected their candidates and the new government was installed in January, 1912.

The new commissioners were not politicians. The head of the government, Mayor Parke, a young University man, was the leading member of a jewelry firm, and had been state senator and brigadier-general of the State guard. The other commissioners included a former mayor, a young Harvard man of wealth, who had entered the lists for good government from a sense of public duty, a Socialist of advanced political and economic ideas, and a warehouseman. They were not men of brilliant administrative ability, but they were efficient and earnest men, and were sincerely bent on instituting an administration that would measure up to its highest public obligations.

The new government began its work by overhauling the police department, placing in charge as chief of police, one who, as special officer, had for many years been regarded as an expert in the detection of crime. The new chief lost no time in notifying law-breaking saloon-keepers, gambling and "dope" house operators and the proprietors of the "red light" district that there was to be a change of policy, and that they would be expected to abandon their unlawful activities without delay. The prostitute was ordered to leave the city, and the gambler invited to do the same or secure an honest job. It was made clear to these people that the alternative was the jail, and the whole troop took Hobson's choice and either changed their residence or their occupation.

IT must not be thought that the captains of the underworld calmly accepted the new régime without making any effort to understand it. "Surely," exclaimed one of these to the chief of

police, "surely, this but is another of the old-time political spasms, and surely," he added with a knowing wink, "an envelope, properly filled, and dropped in the chief's desk at the beginning of each month, would make things all right again." The chief always endeavored patiently to explain to these callers that something had happened to Salt Lake City which was different from the things that had happened before, and that it would be useless extravagance to leave envelopes in the chief's desk. Needless to say, the would-be benefactor of the department always departed with so uncertain an idea of the new policy of law enforcement which was to be imposed on the city. One of these, a Chinese manager of an opium den, went so far as to solicit the aid of members of the chief's family in trying to win the new office away from his "fanatical ideas of law enforcement!" "Mr. Chief, he velly nice man," asserted another Mongolian, "but he no savvy."

THE fire department underwent a similar reorganization. For many years, firemen had been appointed and discharged on basis of political expediency and naturally the efficiency of the department had gone steadily down, while the fire insurance rate in the city had gone steadily up. The commission now added equipment and new men to the service and placed at its head an expert who spends part of his time in a comparative study of the best methods of fire-fighting which have been worked out in other cities. People now inform you in Salt Lake City that Chief Bywater, and not the chairman of the fire committee of the council, is in control of the fire department, and that it's a more efficient department.

As a business investment, the new Salt Lake City government has measured up to the high traditions of commission government. For example, the first semi-annual report of the commission showed a saving of over 60 per cent. in the legal advertising of the city, and \$18,000 in the purchase of supplies. The first annual report, issued last January, discloses a saving of \$53,739 in the purchase of supplies. Other savings may be noted in the various departments. Contracts are now awarded to the lowest bidder, and the good old days when there was an "official contractor" who was patriotically chosen over outsiders who had offered to do the work for one-third less, have passed away with the old council government. Another feature of the new business policy is the collection of interest on the city funds deposited in banks. In the old days, the banks paid interest, but the city never received it. Now, it goes into the treasury.

BUT, after all, the success of the new Salt Lake City government, after a year and a half of experience, cannot be measured by its administrative economies. It is in a new civic consciousness that one sees the change. The old order of boss-ridden administration, of unrestrained license for the lawless elements, of ceaseless religious strife, has given way to a new, and somehow the people as a whole seem to be thoroughly satisfied.

The visitor will now see in the heart of the city a large "stockade," enclosing long rows of uniformly built houses—a notorious pen in which were accustomed to gather the most vicious elements of the Utah mountains; silent and deserted, today it stands, an eloquent argument to the new order of things in Salt Lake City.

"I finished the flight and won the race"

Flying Ten Thousand Miles

By CLAUDE GRAHAME-WHITE

THUS an elderly and irascible gentleman:

"Flown for four years? Then, thank God you're alive, sir, and don't fly again."

A view, no doubt, that might represent the opinion of many. But I do not propose to retire. Instead, profiting by experience, I hope to pilot aeroplanes for more thousands of miles through the air.

How have I, in a pursuit reckoned so perilous, preserved myself intact? "Luck," is the natural answer of the layman; and if I had to respond merely "yes," or "no," I should be obliged to say "yes." But qualifications are needed and important ones too.

Let me cite an early phase, when I was learning to fly at Pau, and had reached the dangerous stage during which I began to "fancy myself" at the control-lever of a Blériot. One afternoon I said: "I will fly over Pau." The fact that my engine was low-powered, and became overheated after a few minutes' flying, did not deter me. You, perhaps, who remember the intoxication of some new pastime, will recognize the symptoms. Reason had departed, temporarily, and sheer exhilaration reigned in its stead.

It was when, from a height of 800 feet, I was peering down upon tram-lines and houses, that the motor did what I might have expected it would do. It lost power rapidly, and then stopped—too hot to run any more.

METHODICAL airmen nowadays, when they pass through the routine of a flying school, learn to make a *not-plane*, or gliding descent without engine-power, before they attempt a cross-country flight. But I had not troubled about this formality. Hence, when need for action came, I had no knowledge to help me. An aeroplane flies by reason of its speed; and if it loses this, it falls. If its motor fails, therefore,

the pilot must bring gravity to his aid, and maintain his pace by a downward glide. When robbed of power his machine does not, as is sometimes imagined, fall sheer to the ground. A well-designed aeroplane, when gliding, will move 6,000 feet forward for every 1,000 feet that it descends.

I remembered enough theory, even at this moment, to realize that if the monoplane stood still in the air I was a lost man. So, with a jerk of the lever, I tilted my elevating plane, and found myself looking down upon a panorama of streets, which rose rapidly to meet me. Off a likely landing-place, I could see nothing.

The suspense, although acute, was not long-drawn-out. A street leaped to hit me, then slipped away somehow underneath the machine. A house loomed next, growing monstrously and crazily large; and I nerved myself to pierce its roof. But this, like the street, seemed to trick me; the peak of the roof slant away, as if jerked by a string, just beneath the wheels of my landing-chassis.

"What next?" was my thought.

And then—with a flicker of white planes—I flashed down into the garden which lay at the rear of the house. What its owners thought was written clearly upon their faces; but I was so amazed at finding myself alive that I scarcely observed their pell-mell advent. I hadn't a scratch, the monoplane was undamaged. Here, indubitably, was luck itself. But the lesson sank home; I did not try a trick like that again.

Over more, I must confess—in that critical period when, although able to fly, I lacked judgment and experience—good fortune stood my friend. It was in such a freakish fancy as comes to a man sometimes, when tired of sitting soberly at his levers, that I did a silly thing—a thing which, so the saying goes, was "asking for trouble." As a law unwritten

but unailing, I had been instructed that in planing earthward to land one should *not* face the wind. The reason was understandable: the thrust of the wind might check the machine in its glide, and cause it to drop, rather than to move forward.

But, circling above the aerodrome in a practice flight, I was seized in my ignorance with a desire to do just the opposite—the perilous impulse of the novice. I thought, vaguely, something like this: "I may have to land against wind, some time; let's try now."

So I faced into a puffing breeze, switched off the motor, and began to plane down. The descent was normal at first; but when about a hundred feet up, and feeling a little pleased with myself, I realized suddenly that I was losing speed. I steepened the glide instinctively, but this made matters worse. A gust brought me practically to a standstill, and the machine dropped vertically. We hit the aerodrome with an echoing crash, the monoplane turning completely over and resolving itself into sticks and splinters; and then—after a fateful pause—I crawled forth ignominiously from the cockpit which held the driver's seat. It had shut down upon me like a lid; I had a deep wound just under my left eye and over the bridge of my nose, which necessitated several stitches in hospital, and I also suffered from what doctors would call "general shock." However, after three or four weeks' rest I was flying once more. Luck again, without doubt.

I LUCK, obviously, I had, in early in-life's discretions; but there was a drastic lesson in each, and these I learned thoroughly, and did not forget. I acquired, once and for all, a deep-rooted respect for the tracheotomized element I was invading; and familiarity has not, in my case, bred contempt. Nor should it with any pilot, the air being still an uncharted

sea. It sank into my mind that, at any rate when flying, one must never make mistakes, and that the penalty for carelessness may be death.

Flying should mold its man. If he cannot be molded, he may possibly be killed. As an education, aviation develops one's finest qualities. The airman must be efficient, patient, and helpful. Irritation, even in wearisome delay, must be banished sternly. He must be a student of wind and weather; his judgment must be unswerving sound; and, upon the stability of the machine he flies, he must be able to rely without question or thought. Hurried preparations for a flight must be rigorously avoided. Hasty work is a menace—as was illustrated to me once with painful emphasis.

On the eve of the Gordon-Bennett aeroplane race, and within thirty-six hours of the actual contest, I had obtained delivery of a new and entirely untried 100 H. P. Blériot. Trial flights had to be snatched, and some overhaul work upon the engine done—all at breakneck speed; and then I found myself flying in the race. Perhaps a couple of circuits of the course had been made, when I detected a smell of burning, and a puff of smoke blew towards me from the front of the machine.

"The heat of the motor," I told myself instantly, "is setting fire to the wooden framework."

The thought was unpleasant. At that moment, I was flying at 80 miles an hour, and the ground streaked by several hundred feet below. The obvious thing to do, of course, was to alight at once; but I was flying against time, and knew winning or losing to be a matter of minutes. To stop, therefore, and examine the engine-mounting, would practically lose me the race. So I flew on—smoke still wisping back in the rush of wind.

CONSCIOUSNESS of personal daring hardly enters into such a moment as this; the competitive instinct, when fully aroused, seems stronger than all else. I meant to keep on, and win if I possibly could; and that was all. But visions, none the less, lurked in the corners of my mind: I seemed to see flames burst from the woodwork of the body, lick over the cloth fabric of the wings, and the machine pitch earthward—its wings no longer operative—as does the stick of a spent rocket.

In fact, really, the smell grew fainter, and the smoke ceased. I finished the flight, and won the race; and then the danger stood revealed. My mechanics had forgotten, in the confusion of eleventh-hour work, to replace a metal plate which should have rested between engine and body; and so, this protection being absent, the heat of the former had charred some wooden struts, but had just fallen short of igniting them.

The Wrights, knowing the peril of haste, would never be hurried; neither will Blériot. Farman, nor other pioneers who have survived. It may mean death, and nothing less, to fly on a quickly assembled machine. But it will happen sometimes that a machine fails in flight, even after the keenest scrutiny; and for such emergencies—*orve-trying* though they be—the pilot must be alert.

IN the category of impending accidents which examination fails to reveal, should be placed that which befell Mr. Lorraine, when flying the Irish Sea. His machine, like mine, had been pronounced in perfect trim; but when a waste of water lay below and no ships were in sight; his engine "pop-popped," and ceased its work. Commencing to plane down, he wondered how long the biplane would remain aloft. But then, the engine, which was still turning slowly, began abruptly to fire again and he flew ahead once more. Thrice did it play this trick, stopping merely to start

into a vague, black void, nothing showing in front save the outline of my elevating plane. Soon, however, some bright sparks twinkled far below; they were the lights of the local railway station. At this moment my motor, which had been firing smoothly, spluttered several times and stopped. Mechanically, I tilted down the machine, it being the only thing to do, and dived towards the shrouded earth with not the vaguest notion where I should alight, or what obstacle I might strike when I did so—house, tree, church, or wall. And then, as unexpectedly as it had stopped, and while I was seeking in vain to pierce the pall through which I was speeding, the engine resumed its task. But such an experience, though it lasts a bare two or three seconds, is not readily forgotten.

This risk of engine failure, while in flight, was ever-present in the mind of the pioneer. But the pilot today is not apprehensive, even when over mountains or seas; modern motors, indeed, have a reliability which was undreamt of a year or so ago. When Blériot flew the Channel, he did so in dread that his engine might stop at any moment; it was thought a miracle, in fact, that it should run without breakdown for 36 minutes. The late Hubert Latham's—one may recall—let him down into the Channel upon both his attempts.

"Flying should mold its man. If he cannot be molded, he may possibly be killed"

again, and giving its pilot, each time, the foretaste of a watery plunge. And then at last, when the airman was close upon the Irish shore, it actually stopped for good. The machine fell into the sea, and Mr. Lorraine completed his journey with a hundred yards' swim. This eccentricity of the engine had, it was found, been due to the presence in the petrol tank of some loose pieces of solder—relics, quite evidently, of its making; and these, with the swish to and fro of the petrol in the tank, as the machine rode the gusts, had momentarily blocked the mouth of the outlet pipe, only to be washed out again. In the end, as might have been expected, a fragment jammed itself in the orifice, and refused to come out; and it was then that the motor failed in earnest.

ONCE only, I think, when a motor has stopped in flight, have I felt that intake of the breath which probably represents the sensation, "having your heart in your mouth." It happened during my second "London to Manchester" flight. Pursuing the victorious Poulhan, I determined to make up ground by a night flight, then an unheard-of exploit, and ascended from the little village of Roode, some sixty miles from London, Poulhan being so far ahead of me as Lichfield. It was pitch dark, and I rose

descending involuntarily on the tops of trees and houses, and into rivers and seas, pilots have today almost as much confidence in the engines of their aircraft as in those of their motor-cars. At first, built with extreme lightness and running continually at high speed, aeroplane motors were always in trouble—overheating, hustling cylinders, or breaking some small working part. In their experimental stage, in fact, they were nothing more than motor-car engines, ruthlessly lightened. But now experience has taught their builders lessons. They produce a piece of mechanism designed specially for the air, which is light where weight may be spared, and strong where practice has shown that heavy stresses fall.

There is no need, though, to limit oneself to a single motor when flying. Biplanes have been equipped, already, with a power-plant comprising two engines; and a large waterplane has flown with three. With such dual or treble motive-power, should one engine fail the other will maintain the machine in flight. When commercial aeroplanes carry passengers and goods, as they will by a process of development, engines in series will be fitted, and mechanical breakdown become almost impossible.

The second of this series of articles by Claude Grahame-White will appear next week.

Marriage Today and Tomorrow

By ANNA GARLIN SPENCER

MARRIAGE in the yesterdays was certain and simple. No man could shirk his duty to ancestors by failing to secure descendants. No woman could be allowed to remain outside the domestic order, although here and there one might become "outcast" through irregular sex-relationship.

The first problem to enter the realm of matrimony inhered in the man's right, won long ago, to remain single; in the woman's right, far later gained, to become an "antient mayde" and yet remain respected as virtuous even if denied as "superfluous." Celibacy chosen for religious reasons became dignified in the older time for those of Christian antecedents. Negative answers to the question "shall I marry?" induced by social, temperamental or economic reasons, require today no ecclesiastical excuse. To be sure, bachelors are even now sometimes threatened with a special tax as penalty for their choice of single blessedness; and if "bachelor maids" win many more opportunities for distinction and large income through single-eyed devotion to their chosen vocations, envious wives and mothers may appeal for tax discrimination against them. The fact, however, that freedom not to marry is at last gained, not to be gained or lost, is the significant one.

THE second problem entered the matrimonial realm with the social grant of the lover's Magna Charta, namely, freedom of choice in marriage. Where parents or the collective family council arrange the nuptials, there can be no problem of choice for the principals involved. Today, in our own civilization, individualism is not only secure, but rampant in marriage choices. Only the "blood-royal" is still subject to the bidding of other rule than the dictates of the heart. Gentles and commons of all degrees now mate at the urging of selective affection. Marriage choices may, indeed, still be swayed to unwelcome standards by family autonomy, worldly wisdom, and that subtle "arrangement" of parents that provides the "temptation of propinquity" within a preferred and narrow range; but it is possible and common for all these bonds to be overcome, and the widest social extremes be united at the marriage altar. Normal persons, and some not normal, who have reached their legal majority, today "do as they please" in this as in lesser matters. This modern individuation of marriage has opened a Pandora box of problems. Marriage choice is made in youth, often in extreme immaturity. It is often made without regard to family inheritance or condition, to physical health, mental power, moral stamina, or economic efficiency. Who pays the cost if the choice thus made prove mistaken, or worse, and its results in parenthood deplorable? In the last analysis society at large pays this cost. The married pair pay the first price of disillusionment and unhappiness. If the relationship is repudiated, as it has too often begun, in selfishness, in wilful assertions of personal claim to happiness irrespective of duty to others, then no freedom from hated bonds can prevent character deterioration. Fathers and mothers, brothers, sisters and friends, pay a second and heavy price for each

mistaken marriage, for each divorced husband and wife; especially when forced to act as substitute parents for children deprived of their birthright. Since, however, the family is the most vital of social institutions, and the home the essential nursery of good citizenship, all of us, in collective social life, pay the final cost of failures in marriage and parenthood. Counting up that social cost, in the insane, the feeble-minded, the vicious, the criminal, the diseased, the wretchedly poor, the incapable and unhappy, and above all in the neglected children of the rich and the poor alike, the total appalls the thoughtful. Growing perception of the ultimate outcome of extreme individualism in marriage has led to a rising demand, which will soon become too insistent to be denied for efficient and strong social control of this center of human organization.

THE marriage of tomorrow will substitute for ancient tribal and family arrangements, and for the domination of church and synagogue, a State supervision and legal guardianship in marriage which shall curb freedom at the point where it degenerates into selfish whim and lusty passion, and shall fitly represent the interests of society at large in every private union of man and woman. As unfettered competition in business is becoming obsolete, so uncontrolled individualism in marriage contracts will become out of date, when once we have learned the true social meaning of the private home. An earnest of this coming social control of marriage is shown in the new "Domestic Relations Courts" and their highly useful work of family rehabilitation.

Modern substitutes for more ancient forms of discipline to youth are shaping themselves in public opinion, also, in the present-day attempts to check divorce. These attempts, often crude and childish, and addressed to but one symptom of a domestic disease having manifold expressions, show how little the traditional ethical leadership in church and court and society comprehends the real sacrament of marriage. This sacrament is celebrated alone by free men and women, in loving union on the higher ranges of spiritual life, and in humble obedience to the laws of social well-being. No ceremony in state-led cathedral can insure its celebration. No refusal to divorce legally married persons or to remarry those legally divorced, can prevent its desecration by hideous mockeries. All our social thinking is marred today by the present overmastering sense of the pathological. We need in this realm, as in all other areas of social reform, to fix our attention first and most upon the normal, the healthy, the ideal, and how to attain it. Only second and least should we dwell upon the abnormal, the diseased and the perverted, and what social medicament should be chosen for their amelioration. While the increase in divorces in the United States is cause for serious study, and especially for constructive and helpful agencies for strengthening the weak and disciplining the wayward within domestic bonds, it is still more a challenge to society to learn how to insure more marriages of a sort from which no one could wish to escape.

IT has been elsewhere insisted that the State alone of all social institutions, as representing most fully the common social interests in the success of each marriage, should be the arbiter in decisions as to who should be allowed to marry, and as to what obligations each married pair should assume. I do emphasize that control over the family by the State alone should legalize marriage, and never subsidiary office the Church, to obtain in solemnizing or beautifying, but no legal permission to found a family.

WHEN the State has become conscious, logical and constructive in its mechanism for the control of individualized marriage, the question what sort of men and women should be forbidden to marry will receive more definite and adequate answer. Several States in our Union now forbid the marriage of persons afflicted with infectious diseases, of those markedly defective, or those who have been within a certain period inmates of almshouses, prisons, or reformatories. These statutes approach their object crudely, and are awkwardly and weakly administered if at all. They indicate, however, that society is at last accepting the principle that family descent must be protected against taints of blood. Some socially-minded and radical clergymen are emphasizing this belated acceptance of the A B C of eugenics by requiring "certificates of health" from those who would secure their services at wedding ceremonies. This action of clergymen is not, however, along the main line of progress; since, if the State did its duty in the matter of social control of marriage this responsibility would not rest upon the clergymen of any church. It is a responsibility too heavy for any private individual or volunteer and sectarian organization to bear. If health certificates are necessary, they should be required before the State license could be obtained; and courts, and not church organizations, should be the arbiter in decisions as to permission or refusal to those desiring such license. No great headway will be made toward the ideal marriage of tomorrow until ministers of all faiths understand that they are not the chief instruments of society in any compulsory standardizing of marriage, divorce, or family condition. There is no longer a Church to command. There are manifold and varied churches to educate and inspire. The State must socially demand what social health and social progress require. The churches must help men and women personally to meet that demand, and to exert the letter of the State law in the spirit that giveth light and growth. Meanwhile the straws of "eugenic marriages," in obedience to the demands of clergymen, show which way the social demand is moving.

IN view of the fact now demonstrated past question that feeble-mindedness and other forms of congenital abnormality constitute the supreme producing cause of race deterioration, family distress and individual misery, the State must soon rescue the marriage of today from such pollution. Crime is a disease of youth; much of it, 50 to 75 per cent. in the judgment of many experts, due to bad homes, weak parental control, and an environ-

ment that has in it no morally safe area for play and adventure, and which contains much economic injustice. Crime due to these causes can be effectively checked, in its first manifestation, by expert examination and diagnosis, leading toward prolonged reformatory treatment, physical, mental, moral and vocational, suited to each person. The inertia of society alone prevents the cure of all accidental criminals. That portion of crime, however, that is due to constitutional weakness or perversion demands for the morally incompetent, permanent segregation from a social order in which they are proved unfit to live. All rational care of confirmed criminals must include the prevention of such family relationship as would bring forth seed after their kind. Vice is also a disease of youth, much of it due to the same causes that produce curable criminals. Among vicious women, however, who are caught in the meshes of the law, a very large percentage are obviously subnormal and incapable of self-protection against greed and lust. No one social effort should so move the reformer's zeal in the realm of eugenics as this, to secure permanent custodial care, under humane and cheerful conditions, for every feeble-minded and obviously abnormal person, child or adult. When this is accomplished it will be quite time enough to get feverishly excited over the failure of good and wise people to have large families.

THE modern health crusade has already in several States induced efforts toward stringent physical requirements of those seeking marriage licenses. In so far as actual disease, present in either of the parties, is concerned, especially in the case of venereal disease, and other disorders proved most inimical to marriages and parenthood, there can be no question that society should forbid the unions. "Probation" until health is gained or the hopeless nature of the disease demonstrated, seems to be indicated as necessary to prevent tainting the blood of the nation. That such restrictions upon legal marriage would often lead to illicit sex-relationship is certain, but does not alter the case. As the ancient patrician family was custodian of the legal union of men and women in the interest of a pure, strong and socially useful family descent, so the modern State must become the efficient guardian of the marriage altar. Aberrations from the normal, in this as in other realms of human relationship must be treated on a different plane,—as a part of social therapeutics applied to social disease. The family ideal must not be lowered to meet the weakness or perversion of the undeveloped. Above all, innocent women must not be left to become the unwitting instruments of race degradation, or to bear in themselves or through the sufferings of their children the punishment of the sins of the fathers. Nor should women marrying in good faith, in hope of family completeness, be doomed to a childlessness for which they are not to blame.

AS regards those subject to inheritance, in tendency at least, of diseases which the modern health crusade has listed as scourges to be fought against, both in individual and in collective ways, society should go slow in forbidding lawful marriage to persons of good character, of normal intelligence, and of fairly healthy body. Every decade we witness the transfer of many diseases to which

flesh has been heir for ages from the list of the surely inherited and inevitably fatal, to that of the curable and preventable. This fact must give the State pause before dooming the living by the "causes of death" cited in the physicians' certificates at the demise of ancestors. The influence of specialized environment, carefully suited to particular constitutional weaknesses, is now so well known as to make men and women more and more masters of fate in this matter of physical inheritance. A finer diagnosis than present Boards of Health are capable of, a wiser discretionary power than Courts now possess, a clearer idea of what social value in the individual consists, must guide us in making arbitrary health rules for the marriage of tomorrow.

WHAT of the economic interests involved in the marriage of today? Some one has said that many divorces result from the fact that "he" earns twelve dollars a week and "she" six dollars a week before marriage, and afterward they try to live on his twelve dollars and take care of several children beside. It is certainly true that many domestic complications follow "her" exchange of a "pay envelope" however scanty its contents, for the board and clothes and shelter "his" earnings can supply, especially when divided among a family of four or five persons. The outcry for a "minimum wage for women" has much justice in its demand; but a minimum wage for fathers of families which shall exceed that now secured by the majority of manual workers is a far more vital demand from the point of view of society's need for reasonably early marriages, for three or four children to each "eugenically eligible" married pair, and for the right up-bringing of each child born into a household. The revolution in the industrial order which has sent maidens who have always worked, but who used always to work at home, out into factory and shop has confused household conditions in two ways; first, by making the vocational training of the average working girl anti-domestic, and second, by giving her a new sense of the economic value of her labor outside the home. The result of this confusion, combined with the failure of the home and the school to balance her vocational training in the shop or factory by any intimate acquaintance with domestic arts, makes the marriage of today often a difficult experience to men and women alike.

THE economic adjustments needed today are two-fold: one through a higher and more secure protection against economic disaster to the home; and the other through a more efficient use of women's work-power both within and without the household. These economic adjustments within the home, the last and most difficult, as well as the most interior and vital process in that democratizing of industry to which society is pledged, must take generations of race-discipline for realization in the common life. Meanwhile, the mental and moral elite are showing how these adjustments are to be made. The union in marriage of equals in educational and vocational opportunity, in economic independence, in legal rights, and in political and social relationships is no new, so startlingly new, that humanity may well be excused today for some rather serious blundering on the domestic path. That so many men and women now illustrate "the world's great brands" that finer type of wedded life which is to

be common tomorrow, translates our faith in humanity to joyful assurance.

MEANWHILE, however, the people who are not able to pioneer in spiritual adventure, and thus demonstrate today the race-experience of tomorrow, must be our chief consideration. It seems likely that society must needs reinforce, and by conscious aim, the average good intent and honest effort of the average man and woman by some sort of family insurance which shall make parenthood a less strenuous bout with fortune; as well as by some sort of social supervision which shall standardize the average home on a higher level. The time has come when we cannot let so many babies die, or children fail of efficient life, because of the ignorance of mothers or the poverty of the home. But if we hold mothers accountable for the new demands of medical science in child-care, and raise the standard of living in ideal while it is still impossible to get the wherewithal to meet the new wants that greater intelligence makes conscious, we but increase the misery that follows knowledge without power. And if the mother has to fall back upon the father alone to support her in obedience to the new social demand to keep her babies alive and her children well, then, in too many cases this over-mastering movement to standardize the home-life on higher levels breaks down at its crucial point. If at marriage each man were required, on a basis of health and capacity easily determined, to insure against sickness, accident, unemployment and old age, an insurance to which the State as well as the employer of labor were obliged to contribute along with the laborer himself, it might be a help. We shall see how somewhat similar provisions for easing the family burdens work in other countries. If, also, every woman at marriage were required to insure herself for motherhood's demands, on a basis of health and capacity determined wisely we might find the coming of the baby a more welcome incident in many poverty-bound households, and the commands of the Boards of Health better obeyed. We need not wait, as France has done, until prudence has helped to lower the birth rate below the national danger line, to recognize that society has now assumed a control over child-care, and nurture which implies an obligation on the part of society to enable the average parent to better and more easily provide what society now demands. The care of expectant mothers, and the State bonus for every healthy child of three years of age which is urged as social statesmanship in France may prove helpful in countries with a higher birth-rate.

THE marriage of tomorrow then, we may be sure, will call the State in to ordain its conditions, to make the purity and strength of family descent and the well-being of children and the higher interests of society its prevailing ideals. The marriage of tomorrow must, also, through constructive social ingenuity, receive the benefit of economic enforcements which will more justly divide the cost to one generation of raising the next.

While this is being accomplished, the experience of the ages must be justified in holding sacred that personal choice of selective affection, that unique intimacy and interdependence that have made, still make, and will probably always make, individualized marriage and parenthood the supreme spiritual discipline of the race.

FATHER KNICKERBOCKER (SUSPICION)

By O. P. Morgan

"WHAT KIND OF A HOUSE IS THIS?"

Oscar Wilde as Editor

By ARTHUR FISH

THE position of editor of a woman's magazine was perhaps one of the most extraordinary ever occupied by Oscar Wilde in his extraordinary career. It was, indeed, a case of "Pegasus in harness." True, it incurred his attendance at the office only twice a week—on the mornings of Tuesday and Thursday—but the very fact that regularity in any form became a factor in his life seemed an incongruity.

It was in 1887 that the poet accepted the editorship of *The Lady's World*. The first number which bore his name upon the cover appeared under the title, *The Woman's World*, a change entirely due to the new editor.

At first the work was taken quite seriously and eleven o'clock on his appointed mornings saw the poet entering the dingy portals of "The Yarn," but after a few months his arrival became later and his departure earlier until at times his visit was little more than a call. After a very short time in his association with him I could tell by the sound of his approach along the resounding corridor whether the necessary work to be done would be met cheerfully or postponed to a more congenial period. In the latter case he would sink with a sigh into his chair, carelessly glance at his letters, give a prefatory look at proofs or make-up, ask "Is it necessary to settle anything today?" put on his hat and with a sad "Good morning," depart again.

On his cheerful days, however, everything was different. These were fairly constant in the spring days of the year—there would be a smiling entrance, letters would be answered with epigrammatic brightness, there would be a cheery interval of talk when the work was accomplished, and the dull room would brighten under the influence of his great personality.

IT was ever a source of annoyance to him that the rules of La Belle Sauvage debarred him from smoking whilst in the office and perhaps this fact largely accounted for the irksomeness of the work after the novelty had worn off.

The Woman's World, nevertheless, was without doubt the finest magazine with an exclusive appeal to women that has ever been published. Its editor secured a brilliant company of contributors which included the leaders of feminine thought and influence in every branch of work, and the high level of its literary contents had never before been attained by any publication of its kind. The first number contained the following:—

"Is it necessary to settle anything today?"

The Woodland Gods

By Lady Archibald Campbell

The Position of Women

By the Countess of Portsmouth

Above the Cloud Line

By Mrs. Bancroft

The Children of a Great City

By Lady Francis Jeane

A serial story by "George Fleming"; a short story by Amy Levy; an anonymous article on "Oxford Ladies' Colleges"; *Madame de Sevigne's* "Grandmother," by Anne Thackeray (Mrs. Richmond Ritchie); a poem, "Hazel Heath," by "Violet Fane"; five pages of editor's notes, and a fashion article.

Among his subsequent contributors were, Ouida, Lady Dorothy Nevill, "Carmen Sylva," Olive Schreiner, Lady Constance Howard, "Violet Fane," Dr. Anna Kingsford, Mrs. Craik, Clementina Black, Mathilde Blind, Lady Wilde, Madame Darmesteter, Marie Corelli, and indeed, every writer who counted for anything in the literary world of women. The keynote of the magazine, indeed, was the right of woman to equality of treatment with man, with the assertion of her claims by women who had gained high position by virtue of their skill as writers or workers in the world's great field of labor. All the contributions were on a high literary plane. Thus Lady McLaren wrote on "The Fallacy of the Superiority of Man"; Miss Lucy Garrett on "The Fallacy of the Equality of Woman"; Miss Julia Wedgwood on

"Woman and Democracy"; Miss Caroline Biggs on "The Need for More Women Guardians of the Poor"; Margaret, Lady Sandhurst on "Woman's Work in Politics"; Mrs. Fawcett on "Women's Suffrage" and Miss Garrett on "Reasons for Opposing Women's Suffrage"; Professions for women were dealt with by H. R. H. Princess Christian—"Nursing"—Dr. Mary A. Marshall—"Medicine"; Miss Simcox—"Elementary School Teaching"; Miss Annie Glen—"Music" and Miss Hetherington on "Typewriting and Shorthand for Women."

THERE were articles on women of history, such as Queen Christina of Sweden, Madame de Becarnier, Josephine Beauharnais, Madame Tallien, Madame de Maintenon and the Princess de Talleyrand. French history of the First Empire period and French art generally were favorite subjects of study with the editor and his readers were treated to some intensely interesting articles upon them by writers of note, among which may be mentioned specially, "A Walk through the Marais" by A. Mary F. Robinson (Madame Darmesteter) "Marie

Bashkirtseff" by Mathilde Blind, while articles on Pierre Loti, Georges Ohnet, and Villiers de Lisle Adam (by Arthur Symonds) expressed in a "measure the Editor's admiration for modern French literature.

The humbler workers among women, and their claims to consideration were not overlooked for Miss Clementina Black wrote on "Something about Needlewomen"; The Countess of Shrewsbury on "Our Girl Workers"; Mrs. Harriette Brooke Davies on "Another Voice from the East End"; Miss O'Connor-Eccles on "The Poplin Weavers of Dublin" and Miss Dorothea Roberts on "The Knitters of the Roses."

Some of the articles on women's work and their position in politics were far in advance of the thought of the day and Sir Wemyss Reid, then General Manager of Cassell's, or John Williams the Chief Editor, would call in at our room and discuss them with Oscar Wilde, who would always express his entire sympathy with the views of the writers and reveal a liberality of thought with regard to the political aspirations of women that was undoubtedly sincere.

IT was, of course, expected that the editor's own contributions would form the chief feature of the magazine and it was arranged that he should write "Literary

and other Notes" for each month's issue. These duly appeared in the first four numbers, but, alas! then came a falling off, and the first annual volume contained but five contributions from the editor's pen. The second—and last—contained six—the result of a direct hint from the publishers that the Editor was not sufficiently in evidence. But they demanded great effort and oftentimes the press day found the printers awaiting "copy" for the pages left for the Editor to fill.

A letter such as the following, received a day or so before "closing down" time, became almost a regular incident:

"Dear Mr. Fish,

I have not been at all well and cannot get my notes done. Can you manage to put in something else? I will be down tomorrow.

Truly yours,
O. W."

The notes are probably unknown to many Wilde-lovers, and yet they are full of brilliant gems, well worthy of preservation. In the first of these, in reviewing a novel by a woman, he wrote, "Characterisation, that enemy of literary form, is such an essential part of the method of the modern writer of fiction, that Nature has almost become to the novelist what light and shade are to the painter—the one permanent element of style."

In a note on women's dress in the same number occurs the following passage: "Women's dress can easily be modified and adapted to any exigencies of the kind; but most women refuse to modify or adapt it. They must follow the fashion, whether it be convenient or the reverse. And after all, what is fashion? From the artistic point of view, it is usually a form of ugliness so intolerable that we have to alter it every six months. From the point of view of science, it not infrequently violates every law of health, every principle of hygiene. While from the point of view of simple ease and comfort, it is not too much to say that . . . there is not a single form of really fashionable dress that can be worn without a certain amount of absolute misery to the wearer. . . . In fact, the beauty of dress depends on the beauty of the human figure, and whatever limits, constrains, and mutilates is essentially ugly, though the eyes of many are so blinded by custom that they do not notice the ugliness till it has become unfashionable."

BEFORE the first number of *The Woman's World* was published Mrs. Craik, the author of "John Halifax, Gentleman," had passed to the "Great Beyond" and one of the editor's "notes" was devoted to an appreciation of her and her work in the course of which he wrote:—"Mrs. Craik was one of the finest of our women writers, and though her art had always what Keats called 'a palpable intention upon one,' still its imaginative qualities were of no mean order. There is hardly one of her books that has not some distinction of style: there is certainly not one of them that does not show an ardent love of all that is beautiful and good in life. The good she perhaps loved somewhat more than the beautiful, but her heart had room for both. . . . her last work was done for the magazine which I have the honour to edit. She was very much interested in the scheme for the foundation of *The Woman's World*, suggested its title, and promised to be one of its warmest supporters. . . . Few women have enjoyed a greater popularity

than Mrs. Craik, or have better deserved it. It is sometimes said that John Halifax is not a real man, but only a woman's ideal of a man. Well, let us be grateful for such ideals. No one can read the story of which John Halifax is the hero without being the better for it. Mrs. Craik will live long in the affectionate memory of all who knew her, and one of her novels, at any rate, will always have a high, honourable place in English fiction. Indeed, for simple narrative some of the chapters of 'John Halifax, Gentleman' are almost unequalled in our prose literature."

In the second number, in reviewing a book by Lady Bellairs on "Gossips with Girls and Maidens," he wrote:—

"I am afraid that I have a good deal of sympathy with what are called 'empty idealistic aspirations'; and 'wild flights of the imagination' are so extremely rare in the nineteenth century, that they seem to me deserving rather of praise than of censure. The exclamation 'Bother', also, though certainly lacking in beauty, might, I think, be permitted under circumstances of extreme aggravation, such as, for instance, the rejection of a manuscript by the editor of a magazine."

And again, "There is always a certain amount of danger in any attempt to cultivate impossible virtues."

FASHION again received his attention in this number, prompted firstly by the statement made in the course of a lecture delivered by a lady at St. Saviour's Hospital, that ladies of the day were known "to hold onto a cross-bar while their maids squeezed them into fifteen inch corsets." After commenting on the self-inflicted tortures of women to secure a fashionable figure, the editor wrote, "To begin with, the waist is not a circle at all, but an oval: nor can there be any greater error than to imagine that an unnaturally small waist gives an air of grace, or even of slenderness to the figure. Its effect, as a rule, is simply to exaggerate the width of the shoulders and the hips, and those whose figures possess that stateliness which is called stoutness by the vulgar, convert what is a quality into a defect by yielding to the silly edicts of Fashion on the subject of tight-lacing. The fashionable English waist, also, is not merely far too small, and consequently quite out of proportion to the rest of the figure, but it is worn too low down. I use the expression 'worn' advisedly, for a waist nowadays seems to be regarded as an article of apparel to be put on when and where one likes. A long waist always implies shortness of the lower limbs, and from the artistic point of view has the effect of diminishing the height."

A critic in the *Pall Mall Gazette* having expressed surprise that in the first number of the magazine the Editor has allowed to appear an illustration of a hat "covered with the bodies of dead birds," the Editor thus stated his "exact position in the matter":—

"Fashion is such an essential part of the *mundus muliebris* of our day that it seems to me absolutely necessary that its growth, development, and phases should be duly chronicled; and the historical and practical value of such a record depends entirely upon its perfect fidelity to fact. Besides, it is quite easy for the children of light to adapt almost any fashionable form of dress to the requirements of utility and the demands of good taste. . . . I must, however, protest against the idea that to chronicle the

development of Fashion implies any approval of the particular forms that Fashion may adopt."

IN a note commenting on an article by Mrs. Craik on "Miss Anderson in 'The Winter's Tale'" in which she dealt *inter alia* with the condition of the English stage the following interesting passage occurs:

"For my own part I must acknowledge that I see more vulgarity than vice in the tendencies of the modern stage; nor do I think it possible to elevate dramatic art by limiting its subject matter. On *l'art pour l'art* quand on lui interdit de servir l'humanité. As far as the serious presentation of life is concerned, what we require is more imaginative treatment, greater freedom from theatrical language and theatrical convention. It may be questioned, also, whether the consistent reward of virtue and punishment of wickedness is really the healthiest idea for an art that claims to mirror nature."

"The best way to make children good is to make them happy" is a delightfully characteristic aphorism that appeared in a little note on the Ministering Children's League.

THE third series of notes was distinguished by the inclusion therein of Oscar Wilde's views on 19th century British fiction. ". . . in England we have had no schools worth speaking of. The fiery torch lit by the Brontës has not been passed on to other hands; Dickens has only influenced journalism; Thackeray's delightful superficial philosophy, superb narrative power, and clever social satire have formed no schools; nor has Trollope left any direct successors behind him—a fact which is not much to be regretted, however, as admirable though Trollope undoubtedly is for rainy afternoons and tedious railway journeys, from the point of view of literature he is merely the perpetual curate of Puddington Parva. As for George Meredith, who could hope to reproduce him? His style is chaos illumined by brilliant flashes of lightning. As a writer he has mastered everything except language: as a novelist he can do everything, except tell a story; as an artist he is everything, except articulate. Too strange to be popular, too individual to have imitators, the author of 'Richard Feverel' stands absolutely alone. It is easy to disarm criticism, but he has disarmed the disciple. He gives us his philosophy through the medium of wit, and is never so pathetic as when he is humorous. To turn truth into a paradox is not difficult, but George Meredith makes all his paradoxes truths, and no Thesauri can thread his labyrinth, no *Œdipus* solve his secret."

IN the fourth series of notes he thus comments on a novel, "a very sad and suggestive story":—

"Darwin could not have enjoyed it, as it does not end happily. There is, at least, no distribution of cakes and ale in the last chapter. But, then, scientific people are not always the best judges of literature. They seem to think that the sole aim of art should be to amuse, and had they been consulted on the subject would have banished *Melpomene* from Parnassus. It may be admitted, however, that not a little of our modern art is somewhat harsh and painful. Our Custody is very salt with tears, and we have bountied the brows of the Muses with cypress and with yew. We are often told that we are a shallow age, yet we certainly have

the saddest literature of all the ages, for we have made Truth and not Beauty the aim of art and seem to value imitation more than imagination. This tendency is, of course, more marked in fiction than it is in poetry. Beauty of form is always in itself a source of joy; the mere technique of verse has an imaginative and spiritual element, and life must, to a certain degree, be transfigured before it can find expression in music. But ordinary fiction, rejecting the beauty of form in order to realize the facts of life, seems often to lack the vital element of delight, to miss that pleasure-giving power in virtue of which the arts exist."

In the second volume the editor's first contribution was a review of Ledebore's "History of Embroidery and Lace" under the title of "A Fascinating Book," in which occurs this interesting passage:—

"Our own keenly intellectual art has more than once been ready to sacrifice real decorative beauty either to imitative presentation or to ideal motive. It has taken upon itself the burden of expression and has sought to interpret the secrets of thought and passion. In its marvellous truth of presentation it has found its strength, and yet its weakness is there also. It is never with impunity that art seeks to mirror life. If truth has her revenge upon those who do not follow her, she is often pitiless to her worshippers."

ONE of the most noteworthy of his contributions was "A Note on Some Modern Poets" in which he gave his opinion of W. E. Henley's verse.* The two men were as the poles apart in character and temperament and it is no matter for surprise that the ruggedness of Henley's poetical expression jarred on the super-refined soul of Oscar Wilde. He wrote: "His little 'Book of Verse' reveals to us an artist who is seeking to find new methods of expression, and who has not merely a delicate sense of beauty and a brilliant fantastic wit, but a real passion also for what is horrible, ugly, or grotesque. No doubt everything that is worthy of existence is worthy also of art—at least one would like to think so—but while echo or mirror can repeat for us a beautiful thing, to render artistically a thing that is ugly requires the most exquisite form of alchemy, the most subtle magic of transformation. To me there is more the cry of Marys than the singing of Apollo in the earlier poems of Mr. Henley's volume the 'Rhymes and Rhythms in Hospital' as he calls them. But it is impossible to deny their power. Some of them are like bright, vivid pastels; others like charcoal drawings, with dull blacks and murky whites; others like etchings with deeply bitten lines and abrupt contrasts, and clever colour-suggestions. In fact, they are like anything and everything, except perfected poems—that they certainly are not. They are still in the twilight. They are preludes, inspired jottings in a notebook, and should be heralded by a design of 'Genius making Sketches.' Rhyme gives architecture as well as melody to verse: it gives that delightful sense of limitation which in all the arts is so pleasurable, and is, indeed, one of the secrets of perfection: it will whisper, as a French critic has said, 'things unexpected and charming, things with strange and remote relations to each other', and bind them together in indissoluble bonds of beauty; and in his constant rejection of rhyme Mr. Henley

seems to me to have abdicated half his power. He is a *roi en exil* who has thrown away some of the strings of his lute, a poet who has forgotten the fairest part of his kingdom. . . .

"However, Mr. Henley is not to be judged by samples. Indeed, the most attractive thing in the book is so single poem that is in it, but the strong humane personality that stands behind both flawless and faulty work alike, and looks out through many masks, some of them beautiful, and some grotesque, and not a few mis-shapen. In the case of most of our modern poets, when we have analysed them down to an adjective we can go no further, or we care to go no further, but with this book it is different. Through these reeds and pipes blows the very breath of life. It seems as if one could put one's hand upon the singer's heart and count its pulsations. There is something wholesome, virile and sane about the man's soul. Anybody can be reasonable, but to be sane is not common; and sane poets are as rare as blue lilies, though they may not be quite so beautiful. . . . Mr. Henley's healthy, if sometimes misapplied, confidence in the myriad suggestions of life gives him his charm. He is made to sing along the highways, not to sit down and write. If he took himself more seriously his work would become trivial."

IN the same note he comments on a preface by William Sharp to his "Romantic Ballads and Poems of Phantasy." "I cannot imagine," he wrote, "anyone with the smallest pretension to culture preferring a dexterously turned triquetra to a fine imaginative ballad, as it is only the Philistine who ever dreams of comparing works of art that are absolutely different in motive, in treatment and form. If English poetry is in danger—and according to Mr. Sharp the poor nymph is so in a very critical state—what she has to fear is not the fascination of dainty meter or delicate form, but the predominance of the intellectual spirit of beauty. Lord Tennyson dethroned Wordsworth as a literary influence, and later on Mr. Swinburne filled all the mountain valleys with echoes of his own song. The influence today is that of Mr. Browning. And as for the triquetras, and the rondels, and the careful study of metrical subtleties, these things are merely the signs of a desire for perfection in small things, and for the recognition of poetry as an art. They have had certainly one good result—they have made our minor poets readable, and have not left us entirely at the mercy of geniuses. . . . Poetry has many modes of music; she does not blow through one pipe alone. Directness of utterance is good, but so is the subtle re-casting of thought into a new and delightful form. Simplicity is good, but complexity, mystery, strangeness, symbolism, obscurity even, these have their value. Indeed, properly speaking, there is no such thing as Style: there are merely styles, that is all."

"We are always apt to think that the voices that sang at the dawn of poetry were simpler, fresher, and more natural than ours, and that the world which the early poets looked at, and through which they walked, had a kind of poetical quality of its own, and could pass, almost without changing, into song. The snow lies thick now upon Olympus, and its scarped sides are bleak and barren, but once, we fancy, the white feet of the Muses brushed the dew from the anemones in the morning, and at evening came Apollo to sing to the shepherds in the

vale. But in this we are merely lending to other ages what we desire, or think we desire, for our own. Our historical sense is at fault. Every century that produces poetry is, so far, an artificial century, and the work that seems to us the most natural and simple product of its time is probably the result of the most deliberate and self-conscious effort. For Nature is always behind the age. It takes a great poet to be thoroughly modern."

THE editor's remaining notes contain very little beyond extracts from the books he reviewed. Only here and there is a flash of his personality. Such as:—

"The difficulty under which the novelists of our day labour seems to be this: if they do not go into society, their books are unreadable; and if they do go into society, they have no time left for writing."

"Many of our novelists are really pamphleteers, reformers masquerading as story-tellers, earnest sociologists seeking to mend as well as mirror life."

"The heroine is a sort of well-born Becky Sharp, only much more beautiful than Becky, or at least than Thackeray's portraits of her, which, however, have always seemed to me rather ill-natured."

"The aim of most of our modern novelists seems to be, not to write good novels, that will do good; and I am afraid that they are under the impression that fashionable life is not an edifying subject. They wish to reform the morals, rather than to portray the manners of their age."

"Plastic simplicity of outline may render for us the visible aspect of life: it is different when we come to deal with those secrets which self-consciousness alone contains, and which self-consciousness itself can but reveal. Action takes place in the sunlight, but the soul works in the dark."

"The family ideal of the State may be difficult of attainment, but as an ideal it is better than the policeman theory. It would mean the moralisation of politics. The cultivation of separate sorts of virtues and separate ideals of duty in men and women have led to the whole social fabric being weaker than it needs be."

"Well, to be put into fiction is always a tribute to one's reality."

DURING the two years in which he occupied the editorial chair only on one occasion did I see Oscar Wilde angry. This occurred on a certain day when John Williams, the then Chief Editor of Cassell's, came down to see him with a copy of Marshall P. Wiltier's book "People I have Smiled With" of which Cassell's were then preparing an English edition. In a paragraph dealing with Oscar Wilde the American "smiler" wrote, "The first time I saw Oscar he wore his hair long and his breeches short; now, I believe, he wears his hair short and his trousers long." Striding up and down the room Oscar Wilde ejaculated "Monstrously! perfectly monstrous!" and on his objection the offending—and offensive—paragraph was deleted.

On another occasion he received repeated demands at "The Yard" from the Income Tax officer for a return of his income. At length came the final demand for it to be sent within a certain number of days, or a penalty of Fifty Pounds would be enforced. He dictated a reply to the effect that he had always made a return from Cheben and protesting that both the form of application and the threat of the penalty were annoying; he finished up his letter by saying "The threat of a fine of £50 seems to me a relic of medieval barbarism." I have often wondered whether it provoked an official smile!

*It is a matter of interest that W. E. Henley was also at one time editor of a Cassell publication (but he had left a year or two before Wilde joined the staff).

Open Air Theaters in America

By ARTHUR ROW

THE past summer was made notable at Mount Kisco by the first production here in America of "Aglavaine and Selysette," the finest play written by the man who is now regarded by many as our greatest living poet. At the first English production of this play in London in 1904, it was a failure, derided by the critics and scorned by the audience. The idea of doing this play out of doors came to me a year ago though I only broached the subject to Miss Leonard three weeks before its production on July 11 at her Brookside Theater in Mount Kisco. Miss Leonard decided to reduce the performance to one hour and half's duration and prepared a version of the play in twelve scenes. For dramatic purposes we decided to repeat nothing, so when an incident happened in one scene it was not discussed in the following scene. The result was a swift-moving, poignant drama that held the audience tense, and excited applause at the termination of each of the twelve scenes.

We were fortunate in interesting Walter Hampton in the production, for he originated the only male role, *Melander*, in the first production at the Court Theater, London, under the direction of Granville Barker.

Mr. Hampton's acting has a simplicity of style that is essential to this play. His perfect diction and untutored dignity helped to create an ideal performance. Mahel Moore (Mrs. Hampton) as *Selysette*, imparted a hindlike quality of wild fervor and recalled the artistic sense that marked her performance of the child in the first production of "The Servant in the House." Caroline Newcombe realized perfectly the difficult role of the old, paralyzed Grandmother—*Mafgrane*—the silent witness to the tragedy she was powerless to avoid.

IN the outdoor theater the poetic drama can spread its wings, and fancy is unhampered. The Macbeth-like dramas especially are possible only out of doors—their very essence is the filmy air; their secrets are hidden in the

rustling of the trees; their throbs is felt only in the heart of Nature.

It was my privilege to see recently the witch scene in *Macbeth* acted out of doors and at night. Its mystic qualities were realized marvelously indeed in a much greater degree than in the more pretentious productions of Henry Irving, Modjeska, Sothorn and Marlowe.

"We should return to the Greeks, play in the open air; the drama dies of stalls and boxes and evening dress and people who come to digest their dinner."

Eleanor Duse's prophetic words are slowly becoming realized here in America where the outdoor drama is increasing steadily.

Volumes might well be written as to the unique advantages of the outdoor theater. It is an acid test of any play; in it no untrue play can live; it is a pitiless revealer. In the Greek theater art can unroll itself and the most tender secrets of the theater be revealed—that art which Gordon Craig describes as "Neither acting nor the play; it is not scene nor dance, but it consists of all the elements of which these things are composed."

A decade has passed since Ben Greet began his tours of outdoor performances of Shakespeare and the classics. The Cohn players also are increasingly successful, and play an extensive repertoire. Nor should one forget the performances occasionally given out of doors by Constance Crawley, the Howard Kyle Players and the Frank Lea Short Company.

IN California there are five Greek theaters, the principal one being at Berkeley, and conducted under the auspices of the University of California. This theater seats eight thousand people and yet the acoustics are perfect—the slightest word can be heard distinctly. Dramatic performances of great distinction have been given on this stage—Sarah Bernhardt in Racine's "Phaedra"; Sothorn and Marlowe in "Macbeth"; Margaret Anglin in "Antigone," stand out boldly in an imposing list of successful performances.

The outdoor amphitheater near Mount Kisco, N. Y., is the only one thus far built in the Eastern States. For it we are indebted to the enterprise and energy of a woman—Miss Martin Leonard, a young lady of much initiative and especially of that spirit which is "the will to perform."

This theater was opened September 9, 1911 with a production of "The Treason and Death of Benedict Arnold," by John Jay Chapman. Since then performances have been given with an increasing interest and patronage. The plays presented include Euripides' "Electra," "Twelfth Night," "The Taming of the Shrew," Edmond Rostand's "The Romanesque," "Lysistrata," by Aristophanes, adapted into English by Miss Leonard, and "A Sunday Well Spent," an original modern comedy.

IT has been said that all effective movements have come from people of little or no means—in Ireland Lady Gregory started the now famous Irish players under discouraging conditions and beset by many so-called practical difficulties—but with the right ideals, true unselfishness, unflinching faith and energy go far and accomplish what is thought impossible. Only one fortunate discovery is necessary. The one thing absolutely necessary to a producing theater is a director—almost all else can be created or attracted or discovered—suitable plays; competent, or at least useful actors; costumes, etc.,—but a really, truly director cannot be dispensed with. Gordon Craig in his book on the theater emphasizes this fact precisely and brilliantly. He may be extreme in relegating actors to the position of puppets, but there is no mist enveloping his starry idea that the director is the captain; the helm—the everything. There must be one mind to direct all, else there is confusion or at best a mixed idea! *Il faut tout savoir au theatre.*

To know the theater is indeed to know everything—poetry, architecture, music, sculpture, painting, dancing, archaeology, one might continue almost indefinitely—all the sciences and all the arts!

SOME people ask me if I think
It hard to catch Bill Bryan's wink
Now I have done it you can see,
He is as simple as can be.

What the Kid Did to the Kelly

"I spent my last Ten Dollars on a new hat to propose to an actress in —
she gets a Thousand Dollars a week."
"Did you bring it off?"
"No. She kicked it off."

Musings of Hafiz

(The Persian Kitten)

I SEE by the Dog Papers that the Pom and the Peko are going out of fashion. This would be good news if it were not that Pettogals like Potentates are perpetual—as soon as one goes out there is always another to take his place.

HUMAN BEINGS are the most fickle of all earthly creatures. Their affections are as changeable as the patterns of their detachable skin. They are worshippers of a goddess named Fashion who rules them with a whim of iron.

The latest word of Fashion is their law. At her bidding they change their houses, their hats, their hair, their religious beliefs and the length of their horses' tails.

It is Human to say "*Caelum non animum*," but often as they change their residence, human beings

change their friends still oftener. Sometimes, indeed, they change their residence for the very purpose of changing their "set."

OF their four-footed friends, we (I speak as a Persian) are the only ones to whom they have from time immemorial been faithful. This is due to the feline reserve that keeps us from condescending to a doggy intimacy which is the father of familiarity and the grandfather of contempt.

How different is the Dog. The Syrophant, the Tailwagger! No sooner has he wagged himself into human favor than he is wagged out again by the finger of Fashion.

THE Pug, the Poodle, the Collie, the Fox terrier, and the Chow, all and many more have had their day in the house of Fashion—and vanished "like snow upon the desert's dusty face."

And now it is the Pom and the Peko. Fashion has said the word. Only the Aberdeen and the Ayrshire are to be worn by exclusive human ladies this coming season and the silly Pomeranian and the saucy Pekinese must go. Where they go matters not to me so long as they stay there and never come back.

OF all the obnoxious canine family the Pomeranian is to my thinking the most objectionable. His vanity is unspeakable, and his affectation of the Angora *coiffure* is not only in wretched taste but is apt to be misleading.

The Shortstop of the Admirals

By GERALD MORGAN

Illustrated by James Preston

ONE August evening, at about nine o'clock, Tim Mullane, the manager of the Admirals, was seated, according to his custom, at a table in the café next the Arlington Club. He was eating a club sandwich, and drinking a glass of beer.

Opposite the manager sat Jim Warren, his veteran pitcher and old friend. The waiter brought Warren's order, which was that form of Welsh rarebit known to chophouses as a Golden Buck.

Tim Mullane looked up.

"Welsh rarebit, eh?" he exclaimed.

"Say, Jim, you know you got to pitch tomorrow. You might as well eat Portland cement as that stuff!"

"I've been eating rarebits all my life," replied the pitcher, peevishly. "They're more digestible than club sandwiches, anyhow."

But the manager's attention had wandered from the subject of food, to one of more moment to him.

"Say, Jim," he said, "I got that hole at short filled at last."

"You mean Willie Oates," replied Warren, still thinking of the rarebit. "He's no world-beater."

"Who said he was?" the manager retorted. "I said he filled the hole at short. You watch him in the field. He's no flash of lightning, but he knows what he can do, and he does it. If he can't do it, he don't try. That's baseball. And at the bat, he's just the same. He never goes after bad ones. He may not be a .300 hitter, but there's not a man in the team who has the pitcher in a hole more often. No ivory about Willie Oates!"

"Well," said the pitcher, bolting the last remnants of his rarebit, "I never knew a man play good ball who didn't enjoy ball-playing. Willie Oates wishes he was back milking cows, in Juliopolis, Ohio, where he comes from. All he does, when he isn't working, is to dope out three time-tables. The whole team knows all about it. You can go to South-field junction on the P. & S., or you can go to Black Rock, on the Central; or you can go to Owl Hollow, on the C. & O. C. Then, you drive about fifteen miles in a huggy;—that's Juliopolis."

THE manager stared. "Well, Jim," he said, "Willie Oates can go to Hoppopolis, in October. That's when he can go. It beats me what makes a guy want to go back to one of these jay towns. A muddy pump, a whitewashed church, a grocery store, a saloon, and about seven rickety houses. That's Hoppopolis. You'd think a guy would be so glad to get away, that he'd never move off the asphalt again."

"Oh, come now, Tim," replied Warren, meditatively, "these little towns are not so bad. I came from one, myself, you know. Fine Plains, Pennsylvania. I can still smell those pines on a fall morning."

"Maybe you can," replied Mullane, briefly. "All I can smell is Welsh rarebit. Good-night; I'm going to bed."

NEVERTHELESS, on the next day, which was the last home date for the Admirals, before going West, Manager

Mullane took a particular interest in the behavior of his new shortstop, Willie Oates. The Admirals were leading the league by a safe margin, but Mullane wished to take no chances. He feared the "August slump," and in case the play of Oates fell off, he had no satisfactory substitute for the shortstop's position.

Sure enough, Willie Oates was not in evidence. Batting practice not having yet begun, most of the team were tooting the ball about or batting flies or playing in positions other than their own, just to show what they could do. But Willie Oates was lying out, flat on his face, close to the left field foul line. From his hip pocket protruded an orange-colored pamphlet.

"The Hoppopolis time-table," said Mullane to Jim Warren, pointing in that direction.

Warren laughed. "Sure!" he replied. "Didn't I tell you?"

"He'll have to bat in a minute," said Mullane.

"Watch him when he does," Warren retorted. "He just wants to get it over with."

"He warn't like that this spring," Mullane said, "he was all over the field. He used to pull off the damndest throws—"

"That's just it," Jim Warren said. "And now he's gone to the other extreme. He's got too much temperament."

"Whaddymean,—temperament!" exclaimed the manager, crossly. "Talk English."

"Too excitable," Warren said. "Aw, he's just settled down!" concluded the manager, positively.

BUT, watching the batting practice at the net, Mullane was forced to admit that Warren's arguments were not without foundation, for Oates swung away at the ball, not caring, nor even looking to see, whether he had hit it solidly or not. And in fielding practice, he was equally uninterested. Mullane shook his head.

Then the game began, and Mullane at once cheered up, for Oates did his work as well as any manager could wish. He made a hit, a sacrifice, got first once on balls, scored two runs, and accepted six chances without an error. Mullane went home, his mind at rest.

The team started for the West, that night, and Mullane, after a late supper in the dining car, strolled through the sleeper where his men were quartered, on the way to the managerial stateroom.

The berths were not yet made up. In one double seat, Betz, the Polish pitcher, sat alone with an English dictionary and two books purchased on the advice of the keeper of a second-hand book shop;—a volume of Emerson's "Essays," and a "History of Bob Fitzsimmons, by Himself." He was reading Fitzsimmons.

At another seat, Mike Tuthill and Pete McGowan,—the two crack outfielders—were playing High Low Jack and the Game, with a very dirty pack of cards. They invariably slammed the table when they took a trick.

THE rest of the team was grouped around a single double seat, packed in the aisle, leaning over the adjoining cushioned backs. They were carrying on

a low-voiced discussion, with frequent pauses, and remained quite oblivious of their manager's presence. Mullane, surprised, stopped to listen.

"The best way to get to Juliopolis is by the Central and Black Rock," said Willie Oates, for the twentieth time.

Mullane waited for the ensuing laugh, but to his surprise, it did not ensue. Instead, Oates was allowed to continue, uninterrupted.

"There's the hedge by the old meeting-house, and the Virginia creeper old Deacon Brown planted. Gee, I'd like to be back!" he said.

"I'm from the Berkshires," Kenny, the boyish-looking two-hundred-pound first baseman, took up the strain. "I'd like to get a glass of milk from the farm,—all warm and frothy."

"And the doughnuts!" said another.

"And the cider!" said a third.

"Gee!—the country's the place to be," said still another; and to the manager's intense surprise, the voice was the voice of Jim Warren, his veteran pitcher.

"It's only fifteen miles from Black Rock," continued Willie Oates. "The train gets in late in the afternoon, and you drive through the woods. You get home at dark. Gee!—I can see those lights, now, and smell the apples baking."

There was a long pause, broken only by Pete McGowan, who had won four dollars from Mike Tuthill, and was correspondingly cheerful.

"What you guys got over there?" he asked, pleasantly. "A dead baby?"

"Going to get buried, Willie?" Tuthill called out.

TIM MULLANE retired to his stateroom, wholly at a loss. To be sure, he knew that all his team except McGowan, Tuthill and Betz were small-town men, but on the other hand, most of them had several years' experience of cities. His reverie was interrupted by a knock at the door. Willie Oates opened it.

"Mr. Mullane," he said, "can I go to Juliopolis on . . ."

"You can not!" said Mullane, shortly.

The door opened a little wider, and behind their spokesman, Oates, the manager perceived a small group of men, their mouths open for the purpose of making similar requests.

"Not a blame one of you," snapped Mullane. "You'll get off on October Twenty-two, and not before. You, there,—Jim Warren, come in here. The rest of you clear out."

"Well, Jim," he said, "what in hell's up?"

"They're homesick," replied Warren. "I am, myself. You don't understand. You can't get homesick for Lenox Avenue."

"You're all crazy," replied Mullane, briefly. "I believe it's Willie Oates doing it all. It's a spell he's east on ye."

There was always a suspicion of the wild Irish in Mullane's remarks, when he was excited.

"I'm going to bed, now, and I'll hear no more of ye," he added.

THE first engagement of the Admirals, in the West, was with the Pathfinders, a weak second division team which

had long since ceased to deserve its name, but the best the Admirals could get was an even break. Littlestness pervaded the entire team; or, as Mullane put it, they handled themselves like a lot of dum-mies. Oates, to be sure, played exactly the same game which he had hitherto played, but where one or two mechanical players balance a team, a whole team of mechanical players will get no results at all, and every evening the talk was of county fairs and harvest homes and swimming holes. The atmosphere was that of a country meeting-house.

At the home of the Lamplighters, a somewhat better team than the Pathfinders, the slump continued. The Ad-

mirals lost three out of four. When they moved to meet the Owls, a young and rather enterprising team at the foot of the first division, Mullane was at his wit's end. The loss of a series there, would cut his lead to a mere thread.

BUT events over which he had no control, worked in Mullane's favor. Between the Owls and the Admirals, there was bad feeling; chiefly owing to the conduct of one Gavegan, second baseman of the Owls, who had had a fight with Pete McGowan, when the teams had last met on the Admirals' home grounds.

In the first inning of the first game of the new series, Gavegan was safe on second, with two Owls out. Betts was pitching. Betts's weakness was not watching the bases closely enough, and Gavegan thought he could steal third. He tried it at the wrong time, and the throw

of Tom Betts, the Admirals' catcher, reached Curtis, the third baseman, in time to catch Gavegan standing up. Curtis moved slightly out of the base line, holding the ball ready; but Gavegan, instead of standing up or of sliding at the bag, threw himself as hard as he could, straight at Curtis. Both the players rolled together, over the third base coaching line, and when Curtis picked himself up, the first thing he did was to swing on Gavegan.

IT took a quarter of an hour to restore order, and when play began again at the end of that time, Mullane realized with joy, that his team had snapped back.

round in corners, with time-tables, and asking for vacations, and slushing about new-laid milk?"

"It will," said Oates. "I'll play my head off for you, Mr. Mullane."

"All right then—beat it!" said the manager. And fifteen minutes later, looking out of the hotel window, he saw Willie Oates, suit-case in hand, on the dead run for the railroad station.

THE Admirals lost their last game with the Owls, chiefly owing to the errors of Willie Oates' understudy, who fell all over himself trying to make good. Mullane was a trifle nervous. His lead, since leaving the East, had been cut from ten

"Miss Brown said if she saw me make a home-run today she'd marry me"

The Admirals won the game, and that evening, Willie Oates was left quite alone with his everlasting time-tables. When Mullane heard one of them say to him, "Aw, cut it out, Doughnuts!" his confidence was quite restored.

The Admirals, playing right at the top of their form, took the second and third games, also. The fourth game was scheduled for a Sunday;—Monday was an open date—and on Tuesday, the concluding series of the trip opened with the Wildcats, who were in second place, and going strong.

It was just here that Mullane took a chance. He sent for Oates.

"Willie," he said, "if I let you leave for Hoppopolis, or wherever it is, Saturday night, will you be on the job, Tuesday?"

"You bet!" said Oates.

"And, Willie," Mullane went on, "will this be the end of this snooping

full games, to five-and-a-half; and the Wildcats, very wabbly at the beginning of the season, had hit their stride at last, and were now tearing through the league. Anything like a clean-up for them in the approaching series, would make it anybody's pennant; so that when, at half-past eleven on Tuesday morning, Willie Oates, wearing an unaccustomed grin, arrived at the hotel, with his suit-case, Manager Mullane was considerably relieved.

"Go on up and change your clothes, Willie," he said.

"All right," replied Oates. "Say, Mr. Mullane, can I have a box seat for a friend of mine, for to-day's game?"

"Sure," said the manager. "I got one right here. Hurry up, now, and get ready."

WILLIE OATES had not been on the field five minutes, before Manager Mullane saw that this was a new and

altogether changed Willie. He arrived on the run, grabbed the first baseball which he saw, facetiously knocked off a comrade's cap, and departed into the outfield, where he caught flies with the substitute fielders. After that, in batting practice at the net, he put two balls into the left field bleachers both of which, incidentally, were lost;—a joke which has never at any time, appealed to baseball managements.

"They must put something blame strong into that Hoppopolis milk," said Mullane, to Jim Warren.

Sam Walker was to pitch for the Admirals that day. Walker was a pitcher who did not have much "stuff," but who knew how to use what he had, and his opponent, for the Wildcats, was a man of similar caliber. Hitting was, therefore, to be expected; for both pitchers depended on the fielding behind them.

BEFORE the first inning was over, Mullane's attention was fixed on Willie Oates. Every play he made was at top speed. His first two throws reached first base before the runner was much more than half way down there. Being spectacular, these plays were received with cheers.

"Cut out the grand-stand stuff, Willie," said Mullane, angrily.

But Willie would not cut out the grand-stand stuff. At the bat, instead of waiting out the pitcher, he was swinging like a gate, and swinging uselessly; but two phenomenal stops in the field, about balanced his record. His one wild throw,—a question of time, only—happened not to affect the scoring.

The ninth inning opened with the score tied, four to four. Curtis, first up, for the Admirals, reached first on a short fly which fell safe. If the Admirals could score that run, Mullane figured that he could put in Jim Warren to pitch the last half, and hold the Wildcats safe. Oates was next at bat.

"Sacrifice, Willie," said Mullane.

THE Wildcats had, also, a new pitcher this inning; and this pitcher, having faced Oates before, remembered his old habit of letting the first ball go by. He had not, however, watched Willie that day, because he had been warming up all the afternoon, near the right field fence.

Mullane was on the third base coaching line. With the swing of the pitcher's arm, he saw Curtis take a good, satisfactory lead off first. His mouth opened to shout the usual "Right at 'em!" then, suddenly, he snapped that shout off short; for, with rage, he perceived that Willie Oates meant again to disobey instructions.

The swing which Willie made,—Willie, ordered to sacrifice—took him half way out to the pitchers' box, and his chance of hitting the ball was about ten to one, against. But, luckily for Willie, the Wildcat pitcher had given him the one ball which, under these circumstances, he could have hit. It was straight, and waist high.

Willie landed on it, square. The ball whizzed over the infield, just to the left of second base, and rolled onto the fence. As the center fielder relayed it to the shortstop, Willie was nearing third, and Curtis was crossing the plate.

MANAGER MULLANE, on the coaching line, held up a warning hand to Willie, only two strides from third. The Wildcats' shortstop, playing deep, was just turning, with the ball in his hand.

Entirely ignoring Mullane's warning hand, Willie Oates rounded third like the Empire State Express. His manager dived for him too late, and missed the tackle.

The Wildcats' shortstop was taken utterly by surprise. His mind was fixed on a throw to third. He hesitated, then threw too hurriedly. The ball went wild;—and over the plate rushed the flying Willie Oates.

But Manager Mullane had had about enough. He was behind Willie a few steps, only. Past the players' bench, where Willie should have stopped, he pursued him.

Willie Oates ran straight to one of the field bases. In it a very pretty girl was sitting, alone. When Mullane reached them, they were already talking.

"Oates," said Mullane.

Willie turned. "Oh, Mr. Mullane," he said, "this is the lady I asked the box seat for. Miss Brown said if she saw me make a home run to-day, she'd marry me, to-morrow."

Tim Mullane was left tongue-tied. First, he surveyed Oates. He had intended to punish him heavily, but he was Irish and he turned to the girl.

"The sight of you, Ma'am," he said, "has explained everything to me. I congratulate ye."

Current Athletics

By HERBERT REED ("Right Wing")

The Quarterback Outlook

IF football offers more opportunities to the player in a particular position than to his comrades that player is the quarterback. Exceptional men will occasionally make so much out of other positions as to dominate the play of the team, and it may be that the eleven is so strong that it needs only an average man in the post of field general. As a rule, however, it is the little man with the hot heart and the cool head who runs the team that proves a large factor in the victory.

So it has been from the early days of football and so it will continue to be until some body of radical rule makers rebuilds football along entirely different lines. There would seem to be no prospect of that, so the fast, ambitious youngster who is a lightweight, save above the collar, may continue to feel that if he can get a chance at quarterback and will use his brains there he can count for far more than the giant whom the undiscriminating have come to look upon as the ideal player.

There will be good men in the field this year, I think, both East and West. Princeton and Harvard seem to be especially well provided with quarter back material, while there are stars at several of the smaller institutions, notably Gas Welch at Carlisle and Costello at Georgetown, the last named a fine leader and a dangerous kicker in any company. These two are captains, and among the

other captains playing the position this year are Lutick of Ohio Wesleyan, Miller, the little Pennsylvania State man who was such a whirlwind last year, Clark of St. John's (Annapolis), Marks of Tulane, Fenker of the University of Cincinnati, Sutherland of Utah, Hardaway of Washington (St. Louis, Mo.), Goodwin of Washington and Jefferson, and others too numerous to mention.

THIS tendency to elect so many quarterbacks to captaincies is natural enough, aside from any popular personality, since the quality of leadership must be there if the player in the position has been a success. No man can "flunk" in the position without its being plainly apparent to men off as well as on the field. There have been many personally popular players who have failed utterly and more than one occasion when it has been found necessary to send in a man whom no one wanted to see get his "varsity letter, in order to whip the team down the field to victory. Even the inexpert among the spectators can spot the difference in the play of two quarterbacks nine times out of ten.

Oddly, it is the one position on the team where weight has not seemed to count to any extent, although the range in the past has been great—all the way from Wurttemberg of Yale and Fishon of Dartmouth, both of whom played at 125 pounds, to Knipe of Pennsylvania,

who was seldom below 190 and frequently above that figure. But in the old days there was less freedom in the quarter's play, I believe, in that he was frequently called upon to keep his backs on their feet after handing them the leather, besides leading the interference from time to time, catching kicks, and attending to quite a little more heavy work than is the case today.

In those days, however, the quarter seldom did the kicking, and of course there was no forward pass to trouble him. There was far more heavy running, and this was maintained for longer distances. The quick line-up was common, which involved a lot of hustling—and all in all the old time quarter had to stand a deal of hammering, exhausting work.

QUARTERBACK play of today requires if anything even more brains, although perhaps it is not so exhausting, even with the added burden of the forward pass and frequently much of the kicking. The variety of it makes it a fascinating position, and one of the greatest responsibility. With pushing and pulling eliminated everybody knows now how hard it is to score without the cleverest use of every resource, the conservation of both speed and energy and practically perfect choice of plays. It is indeed a thinking game.

In the old days the quarter had only to pick out the weak spots in his op-

Much is expected at Princeton this season of Stewart Baker, who ran the eleven so well against Yale last year

ponent's line and hammer them steadily until the goal line was crossed. The problems that bewilder the field general of today the old timer seldom confronted. He kept on banging away, as a rule, save when he had a really fine kicker at hand, until his team was stopped, and then kicked. Thus the kicking was almost invariably done on the same down.

Some of the old timers were far sighted enough to use their kicker now and then for other purposes, but as a rule he was called upon only on the last down, and the burden of his work came on defense, when it was not uncommon for a man of the calibre of Hunsman of Princeton or Gordon of Wesleyan to hold off a superior team for an entire half, only in the end to crumble under the heavy running attack which had at last worn out the line.

THE quarters of those days ran so like wonderfully powerful engines of attack, notably when the "guards back," the "tackles back" and the flying interference were in action; but the use of these plays did not require of the quarterback the judgment that the more subtle formations and the choice between them and the part of the field in which they are to be used demand today. I do not want to be understood as belittling the work of such old timers as Phil King, Carl Williams, Adair, Fincke, Ferbert, Vail and a host of others, but I know that these men wonder today what they could have done with the new game.

DROPPING the attack for the moment, let us see how hard was the lot of the quarter who undertook to play the last defense in the old days against the kicking game. There were great ends, and they made matters extremely uncomfortable for the smaller chap trying to make the catch. No man who saw it will forget the pounding of Metzenthin of Columbia in a game at the Polo Grounds in New York, on a day when Shrivin and Rafferty were at the top of their form. How the slender quarter ever stood up under it it is hard to tell.

Again, when kicking in the proximity of his own goal line, the quarter was not

protected by rules to the same extent as now, and knew that he would be knocked down anyway

whether or no the kick was blocked. Today the forwards are not allowed to bowl over the kicker after he has sent the leather away, and his is a bed of roses compared with that of the old days.

With some of the good men mentioned above in the field this year the quarter-back position, already at a high standard, should make even further progress. The openings for the quarter's judgment are greater than they were even last year, for last year he had to do a deal of experimenting while this season the extra down which he can work—returned to the game a year ago, should enable him to "Mix 'em up" in the offense, at the same time avoiding frakish play.

MUCH is expected at Princeton this season of Stewart Baker, who ran the eleven so well against Yale last year, while certain of the coaches think they have a find in Boland. By the time these lines appear the fight between the two should be beginning to develop, but young Baker, I think can be trusted to handle a big game with plenty of skill and judgment. An experienced quarter is a very real asset.

ONE of the real quarterback puzzles of the season is young Llewellyn, of Dartmouth, who is a born quarter if ever I saw one, but who used execrable judgment in last year's Princeton game. It is true that he had what should have been a remarkable eleven going to pieces around him in the face of a furious assault, but the method of play he chose right under shadow of his own goal I think was indefensible on any grounds. Llewellyn is galled just right for one of the finest quarters of recent years, and it is to be hoped that he will make the most of himself.

HARVARD, richer even this year than last in material for practically every position, probably will try out Mahan, Bradley and Freedley as quarters, and whatever the final result, the Crimson should be a well driven team, as it was last year. Mahan already has a splendid reputation. He is one of these clear-eyed young players, who seems to be extremely good natured when you first meet him off the field but still has the best of fighting spirits. He is a well set up young man and even if not finally selected for quarter, should add a deal of power to the already husky Harvard backfield.

IT probably will be fairly along in the season before Yale and Pennsylvania make their decision about the quarter-back position. The material at both these institutions has not been remarkable for some time, and Yale especially has been unfortunate in the man who did the driving. Since Howe, and he, a first class field general, had more than his share of hard luck, there has not been a really high class quarterback at New Haven. What

the prospects are this year a little more time will tell.

There is almost an ideal man at Ithaca in the person of Taber, but he is also so good a half that Dr. Sharpe may decide to continue the development of another man to fill the shoes of Eddie Butler, the latter a great loss to Cornell.

ONE of the remarkable features of the Eastern season at this writing (on the eve of the first game of any moment), has been the early institution of scrimmage practice, which means a quick start and an early development of team play. The reason is simple enough. For the first time in many years the weather has been cool enough so that the big men could be worked fairly hard from the start without losing weight too fast, and without suffering from exhaustion in the practice. In the past, as a rule, September practice might better have been conducted in bathing suits. It may not appear just what this has to do with our friend the quarterback. As a matter of fact it is a big help to him, for the sooner he begins to handle a whole team instead of a mere set of backs the faster his progress will be.

IN this respect the East has a big advantage, for the Conference teams do not get under way, even with their preliminary work, until some time after the Eastern squads. For this reason it is impossible to tell much of the quarterback situation in the West just now, save that Chicago looks promising.

There are two fast and heady candidates for the kingpin place with the Maroons, in "Pete" Russell and John Breasted. Little is known in the East about them, but both are stars according to Westerners. Russell has an especially fine record as a member of the Oak Park High School team, with which he played both quarter and half. Breasted, according to my informants, will push him hard, however. These two men, at this writing, in common with the other Chicago candidates, are unable to do more than track work to get themselves into condition.

FOOTBALL is not without its humorous side, and the quarter-back has had his fun with the opposing team from time to time. Many times a forward, desperate because his team is being driven down the field, has called out, "Why don't you send one at me." "All right," the little field general has replied, "you can be accommodated. The captain will take the ball and the play will be a crumbuck on your position." It is the history of these incidents that the laugh has been with the quarter-back.

Almost an ideal man at Ithaca is Taber, who is expected to fill the shoes of Eddie Butler, the latter a great loss to Cornell

The Autopilgrim's Progress

By WALLACE IRWIN

Illustrations by James Preston

VIII

Lemuel Riseth in Haste but Maketh
No Speed

WEEKS of tranquillity followed, in which
Lemuel's racer reposed in the barn;
Only a semi-occasional itch

Urged him to put on his don't-give-a-darn,
Daredevil air and, though Fate might explode,
Eat all the middle-sized cars on the road.

Stern moderation

Quelled the temptation;

Lem sat his porch in a cool contemplation,
Thinking of how he had browbeaten down
That friend of Katury's, fresh Percival Brown.

'Twas late in September,

A night you'd remember

For mild autumn winds and a clear harvest
moon.

Lem rose, scared but sleepy—

A feeling quite creepy

Ticked his spine; for a low, humming tune,

A hr-r-r-raggetty-drag,

Now a purr, now a chug.

Rose from the barn. Lem stiffened like steel—
Someone was cranking his automobile!

DUMB with amazement,
Fixed was his gaze

As behold! the big racer stole out of the base,
Stopped at the gate where, as swift as a bantam,
A feminine figure swept forth like a phantom,
Leaped to the front of the mighty machine;
Lemuel's face, like the moonlight, was green

As he murmured in fury,

"Katury!

Daab-him,

With him!"

DOWN the steep stairway with startling *esprit*
Lemuel dashed in his short *robe de nuit*,
Raced to the road, but discovered too late
His car had already departed the gate.
Over the way, 'neath a juniper tree,
Stood something white which the father could see
Was Percival's little white runabout, only
It looked sort of empty and awfully lonely.
Pinned to the starboard acetylene lamp
Fluttered a paper.

When Lem lit the taper

He saw that the scrawl was from Percy, the scamp!
"Dear Sir:—

Since your daughter admires more than you do
My knack with a car—and I have raised your hoodoo—
And since your machine, as you freely admit,
Can beat all the rest to a nine-penny hit,
And since there is haste for a lady and me
To get to the house of J. Burrows, J. P.,

We've borrowed your car.
We're not going far
And hope you will join us at leisure.

R. B."

PAUL REVERE, Sheridan, Balaam, O'Shanter,

Each has enjoyed his historical canter;
But what were their rides beside Lemuel B.
In a runabout car and a short *robe de nuit*?
For cranking the little white auto of Brown,
Lem jammed the gas on and started her down,
Rattling o'er cross lots, hurdling deep ditches,
Riding the night as though baited by witeches,
Covered with glory, though lacking in breeches.
Jubb's Crossing, Bunnyhurst whizzed to the right,

Joptown shot by in the mythical light;

But nary ahead could he catch any trace or

Sight, sound or smell of his wonderful racer.

Oh how he cursed

The day he first fussed

And bought that fast racer a record to bust!

But just as he swore by the Mede's darkest law,

A ruby red light in the distance he saw—

"It is them—

It is they!"

Muttered Lem,

"Hip hoorsy!"

But, buzzing up closer, the worst he

could see,—

His car, near the door of J. Burrows,

J. P.

The justice's door.

Open wide to the night

This tableau outbreak

To Lemuel's sight:

One glorified bridegroom cavorting with
pride

While Burrows, J. P. was saluting the
bride.

CLAD in a night-shirt, and that somewhat tooe,

Lemuel Bogg bounded into the door,

Stood like a prophet of Israel's clans

Shouting, "Hold up! I forbid them there bans!"

"Too late," said J. Burrows, "the law's took its course.

The only help now's either death or divorce."

Katury cried, "Popper,

You do look improper!"

But Reginald Brown, being always at ease,

Led Lem aside and said, "Pa-in-law, please,

As a matter of sport, now, I think that you oughter

Forgive if I borrowed your car and your daughter;

And while I'm about it, I've this much to say—"

(Here his lover's eyes blazed) "She's as sweet

as the day,

She's tough and she's noiseless and swift as

they are—"

"What! meanin' my daughter?"

Brown smiled. "No, your car!"

(TO BE CONTINUED)

Finance

Shall We Trust In Rolling Stock?

By ALBERT W. ATWOOD

WHATEVER difficulty the railroads have experienced in raising capital for general needs, and their troubles have not failed of generous advertisement, the comparative ease with which a certain special class of security has been disposed of in the last few years is a direct challenge to investor's curiosity. I refer to that general type of obligation known variously as equipment trusts, car trusts, equipment bonds and equipment notes. The output of these securities has increased in a surprising ratio. Ten or fifteen years ago equipment obligations played a minor part in the investment concert. In 1900 there were not more than \$60,000,000. In 1910 there were \$350,000,000 of them. To-day there are probably \$450,000,000.

EQUIPMENT is a single word for the railroad's double necessity of cars and locomotives. Rolling stock is a more accurate description. A railroad has two distinct physical parts, maintenance of way and equipment, the former consisting of track, bridges and buildings. Pounded as the overweighted, over-speeding express trains will upon the relatively fragile steel rail, it is the rolling stock that bears the essentially temporary relation to railroading. This is so obviously true that securities based upon cars and locomotives have become stalemated into short term, serial repayment obligations, the transient character of the security being scientifically adapted to a temporary obligation.

THUS the equipment bond is timely in its appeal to investing funds. The latter are timely, in these days of progressive income and inheritance taxes. The owner of capital shudders at the thought of what may be his fate forty or fifty years hence. The direct appeal of securities running for short periods and growing stronger from being paid off in part every year is self evident.

Necessity, The Mother of Invention

EQUIPMENT trust notes were once a makeshift, but they have come to be a standard form of investment, combining high income with almost unequalled safety, and in a certain sense, considerable marketability. About forty years ago the railroads were in an impoverished, impetuous condition. They could not designate perishable cars and locomotives as security for long time mortgage loans, and were forced to pay a small amount of cash down to the car builders, giving their notes for the rest. The car builders also refused to give complete title to the railroads until all the payments were made. Of course the manufacturer sold the notes for what they would bring.

Like so many existing institutions the equipment obligation owes its essential character to earlier necessities. But in this instance there were advantages which still are advantages. These obligations usually run for two years being payable in twenty semi-annual instalments. The

average life of the bond, or note, or certificate, is thus about five years. The actual title is usually vested with a third party, such as a trust company, as trustee, and the trustee holds full title to all the cars and locomotives until the last instalment comes due. In theory these twenty payments cover the depreciation of the equipment, but in practice there is much real value left in the equipment at the end of ten years, and the payments much more than cover depreciation. In any well-regulated issue of these obligations, the total is under the actual cost of the rolling stock. The railroad pays down at least 10 per cent. to the manufacturer to begin with, which acts as an immediate margin of security. As an example one company recently issued \$1,500,000 of equipment notes, the cost of the purchase, actually being \$2,345,000.

ORIGINALLY adopted by the weaker railroads, the equipment obligation was seized upon by the stronger as well. It provided a method by which the cost of cars could be met from income without actually paying out great sums from earnings all at once. On the other hand no big debts were piled up which before long would have only scrap heaps for security. In the words of an authority no dead horses were being paid for.

Safety in Theory and in Practice

IT is only fair to say that the forms of equipment obligations are subject to many technical variations. Their legal status also is somewhat complicated and peculiar. Although the cars actually go into the possession of the railroad, which cannot operate its property without them, and although the cars are in effect sold to the railroad, which pays for them by piece-meal, as it were, the sale is conditional, and there arise various technical legal relationships far beyond the sphere of mental interest, if not the comprehension, of most investors.

Yet as regards the actual business record of these securities there is a most uniform story of bed rock security. In practice the rolling stock of a railroad is usually as necessary to it in case of insolvency as a mechanic's tools which are exempt from seizure in bankruptcy, are to that person. In practically all railroad receiverships the courts have provided for the payments of equipment obligations, to prevent the owners from taking the cars away, even when mortgage bonds have suffered. In a sense equipments stand almost as high to priority of payment as wages.

RAILROADS are nearly always required to serve the public, no matter how poor they are. This means they must have cars and locomotives. There are a few exceptions to this rule, those of companies so extremely poor and with so little traffic to take care of that only a nucleus of rolling stock is needed. With these few marked exceptions equipment obligations are unlike other corporate obligations in that they are not entirely de-

Nearly Always Some Bad Judgment

about food or drink causes the headaches, sleeplessness, bowel troubles, heart failure, nervousness and a dozen and one other disturbances.

It's easy to prove
Whether or not
Coffee
is the hidden cause.

Some persons are really anxious enough to recover lost health, to make the experiment and find out.

Quit coffee absolutely for 10 days and use hot, well-made

A genuine food-drink made of wheat and a small percent of New Orleans molasses. It supplies a hot table beverage with a coffee color and a snappy flavour much resembling Old Dutch Java. Postum is pure and absolutely free from caffeine, or drug of any kind.

If the aches and ails begin to disappear in a few days, you will know how to avoid that kind of trouble in the future.

Postum comes in two forms:

Regular Postum—must be well boiled.

Instant Postum is a soluble powder. A teaspoonful dissolves quickly in a cup of hot water and, with the addition of cream and sugar, makes a delicious beverage instantly.

It's a lot of fun to be perfectly well.

"There's a Reason"
for
POSTUM

Simply press a button and electricity shifts the gears

Shifting the gears in the new Haynes models is a mere matter of pressing push buttons located in a handy dial on the steering wheel.

The wonderful Vulcan Electric Gear Shift removes ninety per cent of the bother of driving a car, and eliminates all work. Starting, lighting, horn and gear shifting buttons are under your finger tips, while you sit back and enjoy care-free driving.

HAYNES

America's First Car

has many other new improvements, including mechanical tire pump, pressure cooling fan, increased beauty of design, and superior cow-hood equipment. We invite you to inspect the famous Haynes motor—the result of 20 years experience, of the fundamental mechanism of the Haynes.

Write for Elwood Haynes' great book, "The Complete Motorist." In this book the creator of America's First Car gives a brief explanation of how an automobile is built and the reasons for different types of construction. Tells how to care for your car so as to get the most service at least expense. Tells about the Vulcan Electric Gear Shift, and the other great points in the new Haynes models. Send your receipt of six cents in stamps.

The Haynes Automobile Company

41 Main St.
Kokomo, Ind.

"There comes Haynes and his pretty American carriage," falls in and near Kokomo we'll say, at their houses begin to move and plow. Enjoy the automobile and the Haynes motor vehicles on these same streets and roads.

pendent upon the financial condition of the corporation itself.

Since 1885 there has been an average of at least one railroad a year, including many small ones, to default on its direct obligations. All these companies had equipment securities and yet there are certainly not more than two or three well authenticated cases of failure to pay up on this class of bonds. There appears to be only one really striking instance of loss and that was where the railroad was hopelessly poor and devoid of traffic. Another company, now in receivership, has delayed payment, but the final outcome has not been announced. Both of these companies are small and relatively unimportant.

Physical and Financial Safety

ADMITTING the strictly historical possibility the financial safety of equipments, how about the physical side of the subject, assuming that the two can be separated? Are not cars and locomotives prone to destruction from accident and fire? Railroad accidents appear to increase. How about the recent New Haven collision? The wear and tear upon rolling stock is tremendous. Well, all that has been cared for. The agreements between railroads and trustees provide for proper insurance and replacement. The average life of equipment has been figured out minutely by the Master Car Builders, and the increasing use of steel makes the average life of cars much longer than formerly. The vital point, however, is that rolling stock does not lose value as fast as the mortgage covering it diminishes in size. It is all a question of arithmetic. Unless the trust company which acts as trustee is in criminal collusion with the railroad, as yet an unheard-of form of rascality, there is no physical danger.

It Is Easy To Buy, But,—

ONE suggestive fact to be observed is that equipments are quoted solely on a "basis." This means that if you were to buy Illinois Central equipments the broker would not say the price was 100 or 105 or any other figure indicating the per cent. of par value at which these securities were selling. He would quote them to you at from 4.90 per cent. to 5.35 per cent. Here then is an investment measured solely in terms of income return, investment yield. It is solely the net return with which men are concerned in this case. Apparently no thought is given to the principal.

Equipments are measured thus exclusively in terms of income for several reasons. Certainly they would not be quoted in this manner if the principal were not so safe as to be beyond the reach of worry. Another reason is that this class of security is created for such a short period that any possible fluctuation in the market price of the principal is almost out of question. The brokers are not dealing in market fluctuations. They are dealing in incomes, the fine shades of variation in these incomes being largely determined by which one of the twenty semi-annual instalments is under consideration.

SINCE securities are payable at their face value there is never much likelihood that a bond shortly to be paid off will go above or below that figure. No one will take the chance of pushing it above or below par knowing how shortly

Your Money and How to Make It Earn

A New Department in McClure's Magazine

If you have a hundred dollars, or a thousand, there is a good investment waiting somewhere for you—an investment which will give you the greatest possible return on your principal consistent with absolute safety.

You want to know more about real estate, insurance, mortgages, before you place your capital in any of them.

HOW TO MAKE MONEY MAKE MONEY. as told in the new Financial Department, will be a regular monthly feature in McClure's, beginning in the October number.

What shall I invest in?
How do I go about it?
Are the securities I have safe?
Where can I sell them?
What sort of insurance do I want?

These and any other questions will be answered by the Financial Service Bureau of McClure's Magazine. Address all communications to Albert W. Atwood, Editor Financial Department.

McClure's

All News-stands

Fifteen Cents

it is to be liquidated at a fixed sum. A bond that runs for one hundred years can with impunity be put up or down, for who can tell what may not justify such movements within a century's span. Five year securities are too short lived to be well known, or actively bid for over and over again. These facts together with the lack of public familiarity with equipments have not only kept them from being actively speculated in, but in the main account for the high rate of return which they afford.

It is possible to buy equipment bonds of the richest railroads to yield 5 per cent. when even in these times of low bond prices the first mortgage issues of the same companies return not more than 4.60 per cent., and in most cases appreciably less. Equipments are not listed on any exchange and they have no open market. But the best class of bond firms deal in them more and more. They need no open market, a fact that is true of any exceptionally short term bond. Although not legal savings bank investments in New York state, equipments are extensively purchased by insurance companies and with even more reason by banks. The latter class of investors always seek securities which will shortly be paid off, thus maintaining their funds in fluid condition. So there is always a demand for very short term "stuff." It makes its own market, as it were. The individual investor need have no fear on the score of salability. It is a bond which because of its nearness to pay day automatically sells itself.

NATURALLY a bond of this type does not offer the attractiveness in times of market depression that others possess because it is not subject to the forces that play upon the open market. The growing popularity of equipment obligations has in it certain seeds of danger. It is unfortunately true that any class of investment whose merits become conspicuous is open to abuse. Restrictions are thrown to the winds and everything and anything is converted into the popular form. But no such unfortunate condition has yet been reached.

What They Think of Us

Thos. Speed Mosby (Jefferson City, Mo.)

Permit me to express my great delight at the manner in which you are conducting the new HARPER'S WEEKLY. You are making it the leading periodical of the world.

Los Angeles (Cal.) Tribune

A friend objects strenuously to the statement that the illustrations in HARPER'S WEEKLY are rotten. He explains that they are of the impressionistic school and wondrous fine.

Every person to his taste. The friend clearly is within his rights. To others less esthetic, there seems more merit to a picture that looks like something than in one that suggests that the artist soul has been torn by a passing idea and had made an effort to set down in black and white a map of its emotions.

When in the construction of a picture there is occasion to portray a man, why

Fairy Magic—Telephone Reality

A tent large enough to shelter his vast army, yet so small that he could fold it in his hand, was the gift demanded by a certain sultan of India of his son, the prince who married the fairy Pari-Banou.

It was not difficult for the fairy to produce the tent. When it was stretched out, the sultan's army conveniently encamped under it and, as the army grew, the tent extended of its own accord.

A reality more wonderful than Prince Ahmed's magic tent is the Bell Telephone. It occupies but a few square inches of space on your desk

or table, and yet extends over the entire country.

When you grasp it in your hand, it is as easily possible to talk a hundred or a thousand miles away as to the nearest town or city.

In the Bell System, 7,500,000 telephones are connected and work together to take care of the telephone needs of the people of this country.

As these needs grow, and as the number of telephone users increases, the system must inevitably expand. For the Bell System must always provide a service adequate to the demands of the people.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY AND ASSOCIATED COMPANIES

One Policy

One System

Universal Service

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor Harper's Weekly, McClure Building, New York City.

not portray a man? Even a prize fighter is human in shape, and not a cross between a gorilla and the typical figure of Satan.

Louisville (Ky.) Herald

We like a spirit of modernism and freedom about the new HARPER'S WEEKLY. It is going to talk frankly. It has an attitude of looking life in the eye. We are glad to see the work of such artists as Cesare, Sloan, Glackens, and Davis featured in its pages. These men do strong work that compels thought. They are real commentators on life. It is hard to dodge the blood of John Sloan, for example, or to side-step the thrust of Cesare.

The Denver (Col.) Times

It may be well to keep away from department store journalism, whatever that is, but when the quest for something new in art leads to the psychopathic ward and padded cell the public should call for protection from the postal laws. Fence painters who fall down stairs with a bucket of lamp black and then try to put over there result as modern magazine art ought to be gently but firmly shot instead of being encouraged with real money.

M. D. Hite (Gentilly Terrace Company, New Orleans, La.)

This is simply to express my appreciation of the revivifying influence that HARPER'S WEEKLY has received thru you. The August 10th issue is like nothing else I've seen and it is a very splendid beginning. I for one shall henceforth become a regular reader of this new modern and clear-seeing journal. If it shall only be what its old-time sub-title states, *A Journal of Civilization*, one can ask for no more. But it all depends on what the interpretation of that civilization is, and my faith goes out to you for its correct expression.

Your artists are great delineators of character! Print more like those of this week.

Philip Mindil (Universal Sales Co., New York)

Permit me to compliment you on the quick change for the better in HARPER'S WEEKLY. Having spent my life in the newspaper and magazine business, I can appreciate the achievement.

Columbia (S. C.) Record

Mr. Haggood is one of the reformers who has been helping along the fight against the "white slave" traffic both with voice and pen. It is to his credit, therefore, that he points out the defect in the Mann "white slavery" act.

Charles L. Billings (Chicago, Ill.)

For more than twenty years I have been a reader of HARPER'S WEEKLY. During that time I have not always agreed with it in matters political, but have, nevertheless, thought it interesting, entertaining and instructive both in illustration and reading matter. I was, therefore, surprised and grieved at the shocking display of bad taste shown in the "November Moon" cover design. I hope to continue to be one of your readers, although I confess I may "first endure, then pity, then endure."

Chas. F. Sundell (Chicago, Ill.)

Your editorial in HARPER'S WEEKLY on the danger of such laws as the Mann Act, I consider very timely. I do not

believe that in this glorious land of the free (?) government has a right to interfere with the personal relations between men and women; that is after they have come to man's and woman's estate. I hold that I have absolute right over my person, to do with it as I see fit.

Raymond Crawford Ever (New York City)

You seem to delight in reaching down in the garbage can of evil and dragging it before the public in all its seeming reality, when how in the name of God are we going to conquer evil unless we make an *avowal* out of it?

Lewis C. Gandy, Editor, "The Printing Art" (Cambridge, Mass.)

Permit the writer to join the chorus of those who have congratulated you upon the improved appearance of the new HARPER'S WEEKLY. Aside from the characteristic editorials, the interesting articles, and the merits of the cartoons, what interests me most is the typographic arrangement of the magazine, which is almost beyond criticism.

New York Shipping, Illustrated

The brilliancy of its articles—and their authors' names alone would speak for that—is only eclipsed by the rare delights of a fascinatingly clever "make up." Politics, poetry, pictures, philosophy, feminism, finance are all staged for their best effect; and well to the front—not, however, in its usual advertising pose—is the drama, "most popular of all the arts."

Waterbury (Conn.) American

In presenting his idea of what such a journal as HARPER'S WEEKLY ought to be, and of the kind of material he proposes to use in making it such, and considering the kind of people who would buy and read it, Editor Norman Haggood said: "We are not to be a high-brow publication, in the limited sense, but we do not intend to collect a lot of low-brows." This adds to the interest of the experiment. Too many publishers think they have got to have low-brow money to make it go.

San Francisco (Cal.) Chronicle

The first number is full of promise, and if Haggood can keep up to this standard, his will easily be the first among the weekly papers. We believe there is a big enough constituency of educated Americans to make a weekly paper, edited on the lines indicated by Haggood, a great success.

F. W. Forsee (Rome, N. Y.)

It is a long time since I have seen such a magazine as HARPER'S WEEKLY degenerate into the kind of magazine it now is. It seems almost a shame to think that HARPER'S WEEKLY which formerly represented everything good and noble should have fallen to be the means by which degenerate artists are brought to the notice of the public.

H. C. Brown (New York City)

The first issue of HARPER'S WEEKLY under your management is before me, and I hasten to extend my congratulations on its greatly improved appearance.

I was hoping that possibly you might give us a larger measure of foreign subjects in the illustrated pages. By that I mean something of the London *Graphic* or *Navy* flavor—something that would give it more of a world-wide atmosphere. A few of us have been farther west than You-

kers, and farther south than Jersey City, and are ridiculous enough to entertain kindly memories of other peoples and other lands.

That cartoon idea is good, and the work shown in this number has a quality of rare interest.

Journal of the American Medical Association (Chicago)

The affectionate readers of HARPER'S WEEKLY—the oldest illustrated weekly newspaper in the country—will hardly recognize it under its new ownership and editorship. The change is radical; everything is new but the name; typography, make-up, arrangement—all are different, and better. But the greatest difference is in the character of its contents—and of course this might have been expected with Norman Haggood as editor. HARPER'S WEEKLY is no longer mainly political; it is so only incidentally. As its sub-title has already had it, it is indeed again "A Journal of Civilization"; or probably it would be better to say "for civilization." . . . We congratulate Mr. Haggood on the fact that he has the courage of his convictions and is not afraid to express them. Also, we congratulate him on the various good things he has introduced into this new journal published under an old name.

Rochester (N. Y.) Chronicle

The new HARPER'S WEEKLY has variety and vitality; it is interesting from beginning to end; the touch of a master hand is to be seen on every page. "Something that everybody wants to read" might be well its motto.

Texasian (Ark.) Texasianian

Probably the old HARPER'S WEEKLY would not have exposed quite so many "isms" or approved the same varieties of "ist" art as the new HARPER'S WEEKLY.

Lafayette (Ind.) Courier

Whether one agrees with him or not, no man in the United States is more capable of editing a weekly, of country-wide circulation, than Mr. Haggood. It is a job he was born to perform, and it is gratifying that he may keep to work for which he is so markedly fitted.

Oakland (Calif.) Tribune

In the initial number of HARPER'S WEEKLY under the new management, Norman Haggood says the political enfranchisement of women necessitates revising our moral and intellectual standards. Mr. Haggood mistakes the effect for the cause. Women are being relieved of their political disabilities and permitted to share in the activities of government and the making of laws because the intellectual and moral standards are changing. It was the change in men that gave the ballot to women in California. In every State where women have been enfranchised, the enfranchisement has been the work of men. The readjustment has been due to the fact that the masculine attitude toward women has changed as a consequence of the male point of view being altered and masculine opinions revised.

William Griffith, Editor, "Semi-Monthly Magazine", New York City

Personality is always startling when it finds successful expression in a magazine—and there can be no doubt but that the man and the medium have found themselves in the new HARPER'S WEEKLY. It's different.

Zo-Ophilism

ANTI-VIVISECTIONISTS are incurable in their stupidity and their ostrich-like disregard for facts. They never cease in their insane hostility to Pasteur and Lister and in their kindergarten rejection of the germ theory of disease. A certain Dr. Hodge has been indulging in an extraordinary diatribe, which entirely ignores the absolute demonstrations of Reed, Lazenby, and others in Havana, the work of Gorgas at Panama, the diagnosis of malaria by finding the parasite of Laveran, the diagnosis of typhoid by finding its germ, the value of the anti-typhoid inoculations in our army in Texas, and all the rest of the rapid contemporary progress. His letter is published with obvious sympathy by a magazine devoted to the cause of zo-ophilism. He is one of those few doctors who have forgotten nothing but also have learned nothing. A physician, he well represents the extremely small number in his profession who are stupid enough to block the path of progress.

The Cincinnati Election

THE principles at stake in Cincinnati in the November election are very much like those at stake in New York. Henry T. Hunt is the leader against the old Cox machine. He is running on a modern, intelligent platform, and he has a record which shows he is very exceptionally qualified to bring city government in this country up to the standard it ought to reach. Opposed to him is a machine which is the Tammany Hall of Ohio. We can hardly believe that the citizens of Cincinnati will fail to give Mayor Hunt an overwhelming victory.

If ever a Mayor of Cincinnati deserved reelection, Mr. Hunt does. He has shown courage and judgment in equal parts. He settled a particularly difficult street-railway strike in ten days. When there was a strike among the ice-men during the heated spell, he obtained the authority of the Board of Health to seize and operate the ice plant. Regarding tenement houses, disorderly elements, schools, loan sharks and other aspects of general social problems, he has not only been very progressive and well informed, but he has been wonderfully successful in action. The candidate running against him is a judge who unsuccessfully endeavored by the use of the injunction to thwart some of the Mayor's work. Mr. Hunt is not afraid of anything. He has even attacked the smoke nuisance, which, in Cincinnati, means a great deal. He is brave and a wise executive and Cincinnati needs him.

Regulation and Ruination

REPRESENTATIVE GLASS made a good point against the bankers who have been fighting the Currency Bill, and their political allies, by quoting, in his opening speech in favor of the bill, from the opinions of the notable Senators of another generation concerning the Interstate Commerce Commission Bill. Senator Hoar said that it would be "destructive to great business interests"; Senator Aldrich, that it would "demoralize the whole commerce of the country"; Senator Platt of Connecticut, that it would "ruthlessly demoralize business"; Senator Leland Stanford, that it would be "most disastrous to the various business interests of the country"; and Senator Joseph E. Brown of Georgia, that it would "seriously cripple the great railroad interests of the country and destroy the property invested in by hundreds of thousands of people." *The National Republican*, of Washington, said: "It is fair to suppose that Congress did not intend to wreck railways, ruin communities, destroy private property, impoverish whole sections of the country, give foreign traders the advantage over home ones, discriminate over one port in favor of another, advance the interests of the Canadian Railways, or renege the Civil Rights Bill, yet it did all these things when it passed the bill entitled 'A Bill to Regulate Commerce.'" Mr. Glass might have quoted from Dickens' "Hard Times," to show how often the millers of Coketown had been "ruined." Ruined when inspectors insisted that they should not chop up so many people, ruined when it was suggested that the child-workers should be sent to school, ruined when it was hinted that there ought to be less smoke. And their final threat was, that, rather than submit to another regulation they "would pitch their property into the Atlantic."

Four years from now, if Congress proposes to amend the Glass-Owen Act, our bankers who are now predicting all sorts of dire results will protest that the Act as it stands is an admirable one and should not be tampered with.

Tariffs and Panics

APANIC is a state of mind. It has been the somewhat ungracious task of the high-protection Senators to prophesy that a financial panic will follow the enactment of the Tariff Bill. Senator Sutherland, of Utah, like one of Milton's characters whom we shall not name, skilled "to make the worse appear the better reason" based his prophecy on the old allegation that the panic of 1893 was due to the Wilson Bill.

The logic books declare that *post hoc, propter hoc* is an unsafe method of reasoning. But this is a case of *ante hoc, propter hoc*—the panic was the result of the law which followed it more than a year afterwards. Senator Hoke Smith, who was a member of Cleveland's Cabinet, and therefore spoke with the authority of experience, made a masterly reply to this shelf-worn contention. He showed that the lowering of tariff rates in 1846 was followed by abounding prosperity, that the panics of 1873 and 1907 occurred when high tariffs were in force, and that the panic of 1893 came upon the country under the McKinley tariff, which by prohibitive duties reduced the revenue fifty millions a year, while appropriations had been increased a hundred millions annually. He quoted from Secretary of the Treasury Foster, who stated in December, 1892, that heavy deficit in revenue was impending and that the whole machinery of government was imperilled, and showed that Harrison turned the government over to Cleveland with less than a million dollars above the traditional gold reserve of a hundred millions, and with only twenty-five millions of available cash in the Treasury. Today, the Treasury contains \$1,250,000,000, in gold, and is able to lend a hundred millions for moving the crops. Conditions began to improve with the repeal of the Silver Purchase Act. The prophet of evil, just now, is neither a philosopher nor a patriot.

Montesquieu Again

IT is refreshing to see a Democratic Senator questioning Montesquieu's infallibility. Senator Thomas of Colorado is one of the new Senators who has come to the front rank in his first session of Congress. He made a notable speech during the tariff debate in defence of President Wilson's exertion of his powerful influence in the modifications of the Tariff Bill and for its passage. Senator Thomas said: "I believe thoroughly in the alliance of the executive with the legislative authority. Montesquieu's theory of the division and coördination of powers, has, I think, no place in government beyond the United States of America. He based it upon the assumption that such was the government of England, a fallacy which Burke immediately exposed. The latter declared that these powers could not be wholly separated and he was right. He also said that if separated they would be productive of what he termed 'hideous corruption,' and in that he may have been right. I do not pretend to say whether he was or not, but I am confident that if the heads of our departments were Members of the House and entitled to seats in that body, with power to initiate and direct the course of legislation, the great cause of democracy would be better served than it is at present. And our democracy has distinctly gained from what are called the legislative activities of Presidents Roosevelt and Wilson, which, in my judgment, have been entirely within the range of their constitutional prerogatives, and wholly consistent with the demands of an enlightened public opinion."

Now let us listen to Senator Cummins: "Its

author is now the most powerful man in the world. His word is law to more members of Congress than ever before listened to the word of an executive . . . for whom I have personally the highest esteem and of whom, as much as I criticize what he is doing and his interference with the legislative branch of government, I am glad to be able to say that I believe he is, from his point of view, trying to serve the American people. His name is Woodrow Wilson."

Cummins is undoubtedly a man of great ability and unswerving integrity. He grew indignant at the aspersion upon the honor of the Senate when the President made his remarks about the powerful lobby that was attempting to poison the springs of public sentiment, and was doubtless the most surprised member of the investigating committee when the facts came out.

We think he is needlessly troubled by the assumption that the Senate and the House have abdicated all their powers and made the White House supreme. We used to hear that Governor Cummins had some influence with the legislature of Iowa.

An Inverted Sign-Post

THE thought is sometimes suggested that, in spite of all appearances to the contrary, the presiding genius of the *New York Sun* must be in favor of social and political reforms, only it has learned that the best way to secure them is for it to oppose them. It may have been for this reason that the *Sun* fought Cleveland in the days of Dana, and Roosevelt in the days of Laffan, as today it opposes Woodrow Wilson and all that he stands for in national affairs and sides with Tammany in municipal contests. It was a brilliant paper in former days and people read it for other reasons than that they agreed with its policies. But now that it is not even smart, and has lost the power to amuse, how shall those who once enjoyed it know how to vote, if they no longer note the way it points so as to take the opposite course?

The Children's Bureau

THE Southern Sociological Congress which recently met in Atlanta adopted only one resolution, which "heartily endorses the work of the Federal Children's Bureau and earnestly petitions the Congress of the United States to grant this Bureau adequate appropriations for the task assigned, of investigating and reporting upon all the facts relating to children and child-life in this Republic." The present annual appropriation of about \$30,000 does seem rather insignificant for this task. The Bureau, under the direction of the only woman who is chief of a Federal Bureau, Miss Julia Lathrop, has already justified its existence in the publication of the monograph on the care of babies and its agitation for birth registration so that every child may have a birthday record; and incidentally has given one illustration of the need of women in public life. It is hoped that Uncle Sam's association with Aunt Julia will help to humanize the old fellow and open up his purse in the effort to give better care to some twenty million children.

A Prudent Prophet

SENATOR SMOOT was careful to cast an anchor to windward in his predictions of calmity sure to follow the lowering of tariff duties. Not discerning any cloud on the financial sky now, even so large as a man's hand, he declared that with prices high all over the world and workers employed, we should be able for a while to stand the competition of foreign goods, but whenever these conditions changed we should be flooded with cheap foreign wares while our factories would close, and so forth and so forth. The Senator has put himself in position to say "I told you so," whenever trouble comes.

Undesirables

SENATOR TILLMAN got into hot water not long ago by inserting in the Congressional Record an article, which he had not read, attacking woman suffrage but also containing a diatribe against "Northern women" in general, which was written by a Dr. Bledsoe who has been a long time dead. Why should the Senator now cumber the Record with the letter of a man so ignorant as to assert that "last year, 500,000 people—undesirables—were dumped on our shores?" As for the number, the records of the Immigration Bureau are public, and as to all being undesirables, does not the Senator rather invite comparison to the desirables, all of "pure Anglo-Saxon stock," of South Carolina, who used to desire Tillman and now desire Bleace?

Era of Good Feeling

THE welcome extended the Grand Army of the Republic by Chattanooga, where it met in September, celebrating the fiftieth anniversary of the Battle of Chickamauga, was not to be distinguished from the hospitality the same Southern city showed to the Confederate veterans who held their reunion there last spring. One incident, unfortunate in some respects, served only to reveal the spirit of fraternity between the soldiers of the two armies. Colonel Hanson of Forsythe Post, Toledo, Ohio, invited the Forrest Camp of Confederate Veterans, under Colonel L. T. Dickinson, their Commander, to march in the G. A. R. parade, and the old Confederates put on their grey uniforms and made ready to fall in line, when there came an emphatic reminder of General Order No. 10, which read that "Women and civilians are prohibited from participating in the parade," and the invitation had to be withdrawn. Colonel Dickinson, instead of manifesting any resentment, said: "We regretted the incident very much, but I believe our comrades, especially those in the Forsythe Post, were even more distressed. The boys in blue are with us and for us and we are with and for them. We are tendering an invitation to visit our camp tomorrow night." However, several Confederates were captured from among the cheering crowds that lined the sidewalks and made to march anyway. The soldiers on either side at Chickamauga did not regard each other as "civilians" then.

It was a Union or a Confederate victory according to the taste and fancy of the historian. The Confederates held the field of battle, the Union

troops retained Chattanooga, with its mountain passes, North, West and South. It was General Thomas, the "Rock of Chickamauga," who saved the Union Army from disastrous rout. English General Wolseley ranks Thomas as the third great soldier developed by the Civil War, Lee coming first in his estimation and Jackson second, and all three were Virginians. The nation owes a peculiar debt of gratitude to the quarter of a million soldiers from Southern States who regarded the Nation rather than the State as the Fatherland.

Soldiers in the Senate

WITH Gettysburg and Chickamauga and the other great battles of '63 fifty years ago, there are still eleven soldiers of the Civil War in the United States Senate. On the Union side were Bradley, du Pont, Goff, Nelson, Warren and Works, and on the Confederate, Bacon, Bankhead, Catron, Martin and Thornton. Catron is the first Republican Confederate since the days of General Mahone of Virginia, to attain a seat in the Senate, and his Republican colleague from New Mexico, Senator Fall, is the son of a Confederate soldier and was one of the Rough Riders in the Spanish War. Five of these old soldiers have recently come to the Senate, so there may be others yet to come. Bradley relates that at the age of fourteen he ran away from home twice and joined the Union army but "on account of youthfulness" was taken by his father from the army on each occasion. Fortunately, none of these soldier Senators is a wearer of the bloody shirt, and it is hoped that with the departure of Senator Heyburn we have seen the last of that article of apparel.

Kicking Long Ago

IF in this autumn weather the strenuous game of the colleges seems altogether out of proportion in the general scheme of disorder, reflect that this is no new thing. For in the Kuei-chien-lu you shall read of that most human of emperors of the Han dynasty who, one hundred years before the Christian era, "made football his chief occupation so that literary studies fell into disrepute." When tousle-headed youths in padded jerseys divert more than their just share of attention from impeachment, murder, and the social evil remember Hsi Tsung, that magnificent sportsman, who two thousand years ago put to death his prime minister for daring to butt into the game with trivial matters of State. Of that modern time, so long ago, it is also written that the people came in great numbers to the football grounds where "the ball flew across like the moon." Just as it is now, victory then was glorious, defeat bitter. For while the winners, their foreheads bound with flowers, broke training with fruit and wine and "rich gifts of brocade," from a neighboring compound rose the sound of mighty lashings where the captain of the losing side was being publicly flogged. So in these crisp afternoons, in key with the changing seasons, it is an age-old motif that now dominates the symphony of sport. Staccato notes of baseballs meeting bats grow momentarily crescendo before they fade into a sonorous prelude of wood winds appropriate to the falling leaves and a football booms into the major with the note of a big bassoon.

Bryan of the Nineties

By C. S. THOMAS

United States Senator from Colorado

Copyright Underwood and Underwood

I

MY acquaintance with Mr. Bryan began in 1892. Mr. Bryan was then about thirty-two years of age. His powerful figure was well proportioned. His singularly handsome features bore a strong resemblance to those of the late Samuel J. Randall of Pennsylvania. The likeness was indeed so marked that I at once referred to it, asking if others had noticed it. He said that it had been observed by those who had known Mr. Randall in his younger days, that he had never seen Mr. Randall, but felt much flattered by the resemblance. There was, however, one great dissimilarity between them. Mr. Randall, though a strong and impressive debater, had a somewhat harsh and raucous voice especially in its upper registers; while Mr. Bryan, with the possible exception of Wendell Phillips and the late Justice Brewer, has, as a public speaker, the most beautiful voice to which I have ever listened.

THE silver question, as it was popularly called, was then an active and persistent issue. It appened with special force to the masses and particularly to those of the West. Mr. Bryan had given it much study and was even then its enthusiastic advocate. We discussed it, but in somewhat academic fashion on that occasion, yet enough to convince me that in him it had a supporter whose ardor would soon transform him into one of its foremost apostles. I do not suppose that Mr. Bryan retains any memory of that short and somewhat hurried interview, but it is indelibly stamped upon my own. His youth, his earnestness, and his wonderfully attractive personality made a lasting impression upon me; and I felt that if his constituency appreciating his worth would continue him in Congress, he would undoubtedly become one of its most useful and powerful members.

I did not see him again until the National Democratic Convention met at Chicago in July. He was there as a visitor, the leaders of his party in Nebraska having denied him a place on the delegation because they disapproved of his radical demands for silver. But they could not keep him away from the Convention where he

met and mingled with delegates, extended the circle of his rapidly growing acquaintance and inspired many of them with the zeal of his own convictions.

Mr. Bryan was re-elected to the Fifty-third Congress by a narrow majority. He was one of its most conspicuous members. It was called into special session by Mr. Cleveland in August, 1893, to repeal the purchasing clause of the Sherman silver law. Needless to say he resisted its unconditional repeal with all his might. Long before the end of that Congress he had become a national figure. He did not attempt to succeed himself, and so his legislative record closed with four years of service. During that period Mr. Bryan had visited many parts of the country addressing audiences upon current issues, coming into contact with the people and extending his acquaintance with men and women everywhere. With the end of his congressional service he devoted himself almost wholly to this sort of political evangelism; so that before the next two years had passed he had visited and addressed audiences in every accessible portion of the country.

IT was during this period that I came to know him intimately: although I never dreamed until the spring of 1896 that he was an aspirant for immediate Presidential honors. I knew in a general way that he had lofty ideals and ambitions, and hoped in time to attain them. But he had never said a word in public or in private remotely suggestive of an intention to compete for the nomination of 1896. Moreover, his whole environment negatived the realization of such a purpose had he entertained it. But such was nevertheless the fact as I learned very abruptly and very soon afterwards.

The masses of the Democratic party always advocated bimetalism. Their faith in the gold and silver money of the Constitution was so strong that the assaults of their own administration upon it, only seemed to intensify their devotion to it. This Mr. Bryan knew. He was therefore able to make it a test of party faith in 1896, against the uncompromising opposition of nearly one-half of its members, backed by the authority of President Cleveland's administration. He formulated the silver plank which in the spring of that year was adopted by nearly every State delegate convention in the country, and which was afterward incorporated without any change into the national platform of that year.

THE Colorado Convention was called for April 15. Four or five days before it met, I received a letter from Mr. Bryan enclosing a draft of his plank, and urging its literal adoption; which was done. Two days later I received a letter from him, bearing date the sixteenth, which I have treasured ever since; at first because of the audacity of its announcement, and afterward because of its historic value. In that letter, after expressing his pleasure over the insertion of his plank into our platform, he said: "I don't suppose your delegation is committed to any candidate. If we succeed in getting a sixteen-to-one plank in Chicago, our delegation may present my name. Whether it goes further than a compliment will depend upon the feeling of other states. I am not saying this to the public but write you in confidence. The State would instruct for me, but I prefer to be a delegate so that I can help to secure the right kind of a platform. I think I can be more useful as a worker than I could as an ornament."

I READ this missive, and then I read it again, to be sure that I correctly comprehended its contents. I then laid it down, and wondered whether I would ever again encounter such an exhibition of superlative assurance. Here was a young man barely thirty-six years of

age, living in a comparatively unimportant Republican State west of the Mississippi River, audaciously announcing his probable candidacy for the Presidential nomination of the national Democracy. The very seriousness of the suggestion emphasized its absurdity. I had never suspected such a situation and hence was at a loss just how to meet it. I did not want to encourage the notion, but on the other hand I was equally reluctant to say anything in disparagement of it. A third reading of the letter made me realize that neither my counsel nor support had been solicited; and that relieved me from all embarrassment. So I laid it aside as an unanswered curiosity.

Mr. Bryan's delegation to Chicago was contested, and the National Committee, of which I was a member, was charged with the duty of determining which delegation should go upon the preliminary roll. This was a matter of grave importance, since its decision might determine the fate of the silver issue. A small majority of the Committee with the Chairman, Mr. Harrity, were gold standard men, Mr. Tobias Castor, the Nebraska member and a member of the contesting delegation, being one of them. An extended hearing was given, and when the roll was called Mr. Castor was permitted over my objection to vote for his delegation. The decision was against Mr. Bryan who was thus excluded from taking part in the exciting controversy over the preliminary organization in which the silver men were finally victorious. But the credentials committee made short work of Mr. Bryan's opponents. Upon its report his delegation was seated and he took his place upon the resolutions committee to which I had been assigned by my delegation.

AN interesting story could be told of that committee's conferences. Many of its members were eminent men nearly all of whom have passed away. I recall the names of Senators Hill, Vilas, Jones, George, Turpie, White, and Governors Altgeld and Russell. Its majority formulated and presented to the Convention the famous platform of that year. Needless to say that Mr. Bryan was largely instrumental in its construction.

The minority of the committee under the leadership of the late Senator David B. Hill of New York withdrew and formulated a report of its own. Hill, Vilas and ex-Governor Russell of Massachusetts were selected to present it to the Convention. Shortly before the two reports were submitted Mr. Bryan said to me that he desired very much to close the debate in the majority report, and requested me to make the fact known to Senator Jones of Arkansas, the Chairman. This I did promptly. Senator Jones was equally prompt in making the designation, and pursuant to this arrangement Mr. Bryan made that historic speech which carried the Convention away and gave him his first nomination for the presidency.

The debate was opened for the majority by Senator Tillman, who was followed by Senator Hill for the minority report. Then came Jones and Russell, each of whom spoke briefly. Senator Vilas closed the discussion for the minority. His argument was most able and scholarly, but his voice soon broke under the strain; after which the audience, naturally hostile, treated him with scant courtesy.

I was seated with Mr. Bryan on the floor of the Convention when Vilas began. Later, one of his colleagues brought to Mr. Bryan a huge sandwich and a cup of coffee, both of which he vigorously attacked. I ventured a suggestion to him relative to one of Mr. Hill's arguments. He said he was thoroughly prepared; that he should reply neither to Hill nor to Vilas; that he would speak to the Convention for the platform, as though nothing had been urged against it; that the time for argument had passed, and the time for action had arrived. As soon as he finished his sandwich he arose and proceeded to the platform, taking his seat to the right of the Chairman, Senator White of California. Ten

minutes later he was on his feet, with twenty thousand people hanging on his every word.

THE effect upon the vast audience that heard it, of that marvelous speech, has been so frequently described that all are familiar with the story. I shall not dwell upon it. The enthusiasm was spontaneous, overwhelming, and long continued. After the hysteria had somewhat subsided and a semblance of returning reason became manifest, I gradually forced my way through the disorderly mass of delegates to the Nebraska section whither Mr. Bryan had returned as soon as his speech had ended. He sat in his seat with a face as white as chalk and streaming with perspiration. A cordon of Nebraska delegates massed between him and a howling crowd. When he saw me he reached out, grasped my hand and drew me toward him, saying, "Well, I think everybody will admit now that this is a silver convention." I replied that he had made it unanimous. Then for the first time I referred to his letter of April sixteenth. "Yes," he said, "my name will be presented to the convention and I shall be nominated. In a few minutes I shall go to my hotel and stay there. I shall not return to the convention." I expressed grave doubt as to such a result, which greatly surprised him. He asked why there could be any doubt about it. I referred to the misfortune at Cincinnati, of Blaine, who would have been nominated had the balloting begun soon after Ingersoll's nominating speech. But the convention adjourned to the next day, and the golden opportunity was gone. I said that history might repeat itself here, for all candidates would now make common cause against him with time as their ally.

"No," he said, "I shall receive the nomination. It is as certain as any human event can be." In the afternoon of the next day, he was acclaimed as the Democratic nominee.

Before the day closed I saw him at his hotel. He had a modest apartment at the Clifton on Monroe Street opposite the Palmer House. The lobby and passageways were crowded with people eager to get a glimpse of him, and making it extremely difficult to gain access to his floor. The hodge of a National Committeeman was finally effective, however, and I was admitted. In the room were Senators Jones, Cockrell, and White. As I passed through the door, his face broadened into a grin and he said "Are you still a doubting Thomas?" I readily acknowledged that my faith was now as firm as the mountains.

WHILE there, we discussed ways and means for the ensuing campaign. We had to make a poor man's fight with all the wealth of the nation against us. We would have to depend upon scanty and uncertain contributions from the country at large and upon volunteers in the field. I felt that I could pledge some substantial assistance from my State and said so. Similar assurances from other mining States were given. The conference was brief, and at its close Mr. Bryan said: "Gentlemen, it is of course understood that as much as we need money for our expenses we promise nothing beyond the platform. That is our pledge, and our only inducement." And I know that the meager campaign fund of that year came from the pockets of men whose devotion to the party program and whose faith in the integrity of its leadership had all the fervor of a religious enthusiasm. It was pitifully inadequate for the campaign demands, but it was capably and efficiently administered. The Democratic vote of 1896 was the largest in its history. Mr. Bryan was overcome by the sinister influence of the most enormous corruption fund ever placed at the disposal of a campaign committee; and when we reflect that a change of 25,000 votes would have elected him, we are able to estimate the hold which Bryan and his platform had upon the hearts and consciences of his countrymen. His defeat was a personal triumph; for it entrenched him the more securely in the confidence and the affection of the masses of his party.

Why Not Be Interesting?

By LINCOLN STEFFENS

"TIM SULLIVAN lies thirteen days in the morgue."

That is news. It's news about the newspapers. It shows that they don't "cover" the morgue any more. It shows that they don't "cover" mystery, crime or human interest stories the way they did in the "good old days." What do they "cover"? I think myself that it shows they don't "cover."

"Big Tim" was the best beloved Tammany leader of the lower East Side; a state senator, a congressman, and a millionaire. He was old and ill, but his face and figure were known to more people and more newspaper men than any other man's in New York. Because of the weakening of his mind, he was kept under the watch of guards in a country place in the Bronx. One night he escaped. The guards and his relatives did not report to the papers that he was missing for some four or five days, so the newspapers did not know it for some four or five days.

IN my day as a news editor "we" would not have to be told. Tim was killed the night he escaped. He was struck near Pelham by a train which stopped and went back, and the train-men reported the accident to the police, who took charge of the body for the coroner and reported to headquarters, with a description of the unknown man. The newspapers have access to such police reports; to the coroner's reports; and to the morgue. When I was a police reporter some one or more of the "headquarters hunch" would have gone out on that report. If we hadn't, the reporters who covered the coroner's office would have inquired into the case. If they hadn't, the reporters who covered the morgue would have looked at the body. And that would have been all that was necessary. That is all that was necessary in this case. "A policeman happened to look," the newspapers report, and he recognized those well-known features.

BUT until the policeman happened to look at him. Big Tim lay there, first in one morgue, then in a second, then in a third, for thirteen days. And, meanwhile, the papers had been told. What did they do then? What would "we" have done in the good old days? We would have sent a reporter to the morgue; not a star man; the star would have been put on the search and he would have been told to look for accidents around Pelham. Any reporter who knew Big Tim personally would have been good enough to go to the morgue. And he would not have got the "scoop" that lay there for over a week in these degenerate days. He would have dashed into the morgue almost at the same moment with reporters from every paper in town.

What did the up-to-date news editors do? They reported what the relatives told them: that Big Tim was missing. They "hit it up" for days, which shows that they still are willing to print a mystery story, if anybody will kindly tell them one. They will gladly report even the old-fashioned news. They reported all that they were told by the police, relatives, friends and guards of the search for Big Tim. They simply don't like themselves to "cover" anything. They will take news given them even from the morgue. As one of them naively, honestly, but shamelessly reported, when the "policeman who happened to look at the body, recognized Tim" (from his pictures), he "ran and told the reporters." Then they ran and told us the news, the news about Tim, and the news about themselves—that Tim Sullivan had lain thirteen days in three morgues while the police, his friends and—not the newspapers, had been looking for him. I am not complaining of this; I'm only laughing at it. I like that line of news: "the policeman ran and told the reporters."

Will Irwin, after his study of the newspapers all over the country, said that he couldn't help won-

dering what had become of those old-fashioned reporters who went personally to the scenes of news, saw things with their own eyes and painted them so that we, the readers and the editors, saw the pictures; wonderful pictures; such as we get now-a-days only in the moving-picture shows. There were so many of these reporters and they "covered," actually "covered" so much of the daily news that the newspaper reader had a sense of seeing the world go round. Now-a-days we only hear it. Irwin said that he found, in all his search, but one such reporter left; an old chap on some Southern paper. "Where are the rest gone?" he asked.

I KNOW where they have gone. They have all gone to the telephone to let some layman tell them some news which they will telephone to the office where some desk-man will write it third-hand for me to read fourth-hand and blind-eyed. "The desk," which used to be a few copy-reducers, has grown in the last few years, and instead of merely editing the reporters' copy, the many desk-men write a lot of it. The reporter is a messenger; he doesn't have to be able to see and to write; and he, therefore, often can't. That's one change. The second is like unto it. The city news bureau, which is a common news-gathering service akin to the Associated Press, has grown along with the desk. It collects the news systematically for the newspapers. In brief, the profession of going and seeing and showing the events of the day, has been organized and reduced to a business, like the rest of journalism.

It will be called a change for the better—"progress", an "improvement". But the question I would like to ask is, "What are they giving us—by telephone? Are we getting the new-fashioned news which the old-fashioned journalism never saw or heard of—I mean the news you can't see with the eye and picture with a pencil: the news in ideas? HARPER'S WEEKLY has been "running" a good example of it in Honoré Wallis articles on "Mr. Lane and the Public Domain". She shows how the new Secretary of the Interior is working in the new spirit of this new administration. And it is so simple, so "undignified," so human and so democratic that it shocks the old spirit which is the gist of all that we all are fighting in this country.

"I rode up home on a street car," Mr. Lane told the reporter. "A government man caught me at it, and remonstrated all the way up. It seems that a Cabinet man must subscribe to the caste system or be accused of playing politics."

This is a trivial example of a big thing: the New Freedom which President Wilson is putting into all his legislation and all his policies. It's the big news of the day. But the newspapers don't report it; they don't even hear it over the telephone;—not with understanding. Their reports and their comments on Bryan's lecturing shows that they are with the government man on the back platform of the street car, remonstrating with Secretary Lane for being there. They aren't "covering" Lane, so they don't know about him, but they have been told about Bryan, and so they are writing him up—on "the Desk." The Secretary himself has noted and exclaimed that the reporters seem never to have "covered" a Chautauqua entertainment. I have.

THE Chautauqua and the Lecture Lyceums represent the New Freedom that President Wilson represents. They are one of the chief sources of that spirit; they made both Wilson and Bryan possible. They are great seasonal gatherings of the common people for rest, for fun, for common thinking. And more effective thinking has been done there than in all the editorial rooms of all the newspapers put together. And more "news" is published there and more "news" is made

there; new news, I mean—ideas; new-fashioned news. There is freedom there; free thought; free speech, and some day there may be a free people there.

MR. BRYAN knows all this. When he was defeated for the presidency—both times—the newspapers pronounced him dead, politically, and they proceeded to kill him. The Germans have a good word for what they did: *Todtschweigen*. They set out to "silence him to death." They ceased to "cover" him. They would report nothing that he said or did, and he might have been killed and forgotten. But the Lyceums and the Chautauquas said: "No. There is still some freedom of speech in this country. Come and talk to the people." And he went, and he lectured, and "the galoots" heard him gladly. They not only heard, they paid him for the service, so that he could not only preach, he could live.

Others besides Bryan have been saved by the people of the Chautauquas and the lecture Lyceums. In the old days, Garrison and Wendell Phillips—all the old fighters who could get no hearing from the press and the better people, were welcomed and they were sent on to victory by the Lyceums. And in our day, La Follette, Henry, Dr. Wiley and others, oh, many others, have had that appeal from the press and the system, to—the people.

It may be thought that the newspapers are jealous of the Chautauqua. I doubt it. That would imply a sort of malicious intelligence which they have not. And they don't say that the Chautauqua is dangerous. They say it is undignified; it is a business and run for money;

it provides vaudeville entertainment, along with lectures by Dr. Wiley, Senator La Follette and Mr. Bryan; and that it is undignified for a secretary of state to appear there as part of a "show." The history of the Lyceums, including the Chautauqua, is at least as dignified as the history of the Supreme Court and more so than that of most of the newspapers. And the gatherings I have seen were all dignified in the real sense. They are democratic; they are very unaristocratic; they are utterly un plutocratic; and they may sometimes seem pretty radical—to the press. But there is decorum, always. The Secretary of State is treated with more respect there than he is by the newspapers. There is music, there is what might be called vaudeville. But the vaudeville Secretary Bryan appears with at the Chautauqua is not so offensive as that of the comic supplements with which he would have to appear in the newspapers.

They say that it is very objectionable for Mr. Bryan to take pay for his lectures; that his salary should be sufficient. I agree with this last. I'd like to see nobody in the world get more than \$12,000 a year, but the newspapers wouldn't stand for that. And they do stand

for presidents, cabinet officers and other public officers practising law, speculating in real estate, and in the stocks and bonds of corporations which are forever for or against legislation, etc., and let even Bryan publish a newspaper! And what business is more businesslike than that?

FROM the new point of view, which, unreported by the newspapers, is coming to prevail, it would seem to be better for a secretary of state who thinks he needs more money than his office pays, to go and get it from the people direct than by some parasitical, round-about Wall Street, Business method. It keeps him dependent upon and in the hold of the people. And that's what political "reform" is after: to make the government represent the people.

But, say the newspapers, he is neglecting his work. I don't believe it. I don't believe William Jennings Bryan would neglect any public work, and I do believe that he will quit lecturing if he finds that he can't do both jobs up to the haddle. But neither do I believe that all the newspapers that are raising this, the strongest objection, are sincere in it. Too many of them want him to neglect his job more. They want him to resign. They don't like his Mexican policy. They want to intervene in the interest of American Business down there.

And that brings us to the last stated reason for the newspaper criticism of Mr. Bryan. They are dreadfully afraid lest the foreign embassies and foreign nations will lose all respect for Mr. Bryan. I'm not. In the first place I rejoice to have the secret, aristocratic, plutocratic, diplomatic service of Europe see that "dignity"—what they and our newspapers call dignity—is not needed in honest, open, democratic relations with other nations. And I feel quite sure that the agents here of the foreign embassies are telling them that it's no use: that President Wilson and his Secretary of State are being fair, patient, sincere friends of Mexico and the Mexican people; that the American government will not make war on or even try to bluff them in the interest of American business; and that we will not let any other foreign nation "intervene" in the interest of European Business.

And they know this; all the European chancelleries do; they know about President Wilson's New Freedom policy of letting people alone whether in Mexico, in the United States or even in the Cabinet; and they know about Mr. Bryan's practice of it, in Mexico, in the Cabinet and at the Chautauqua. In a word, the European chancelleries know the news; and for a very good reason: they "cover" it. And our newspapers do not. And that's what's the matter with them, as shown in the case of Big Tim and also in the case of Bryan. They don't know the news when they don't see it.

Copyright Underwood and Underwood.

"There is still some freedom of speech in this country; come and talk to the people."

And they know this; all the European chancelleries do; they know about President Wilson's New Freedom policy of letting people alone whether in Mexico, in the United States or even in the Cabinet; and they know about Mr. Bryan's practice of it, in Mexico, in the Cabinet and at the Chautauqua. In a word, the European chancelleries know the news; and for a very good reason: they "cover" it. And our newspapers do not. And that's what's the matter with them, as shown in the case of Big Tim and also in the case of Bryan. They don't know the news when they don't see it.

After a fight at a great height an aviator frequently suffers severely from the cold.

Flying Ten Thousand Miles

Part II

By CLAUDE GRAHAME-WHITE

ALWAYS, in writing of aviation, one feels the presence of a wall of prejudice. If you leave terra-firma in an aeroplane, you risk your neck every moment you fly—such is the delusion; and there is, no doubt, some excuse for it. In the newspapers, day by day, one sees reports of aeroplane accidents; and, should you read enough of them, you picture the pilot as an aerial equilibrist, balancing himself perilously in every gust.

Yet, for every accident that happens, if sceptics would only realize the fact, many thousands of miles are flown safely. At the aviation schools, for instance, now springing up on every hand, hundreds of miles a day are flown without mishap; while aerial journeys between London and Paris and Paris and Berlin have lost their novelty, for the reason that they are made so often, and in high winds as well as in calms.

It is not easy, unless one has flown, to realize the stability of a well-designed aeroplane, or to grasp the fact that a machine, losing its equilibrium in a gust, may pitch earthward, only to regain its balance—sometimes automatically—before there is danger of striking the ground. An instance occurs in what is known as "side-slip." Here an aeroplane tilts over laterally under the impact of a gust, until it ceases to move forward, and begins to skid like a car on a greasy road. But the aviator, granted that he be flying high enough, is not unduly concerned. He dives abruptly, checking the sideways slip by a forward plunge, and then brings back his craft to an even keel. Strange illustrations, which are well authenticated, have been given on the inherent stability of aircraft. While being flown in France in a gusty wind, a monoplane turned

completely upside-down, and one might have been excused for reckoning its pilot a dead man. But what happened actually was this: the aviator clung grimly to his seat and the machine, after flying a little way in an inverted position, righted itself as unexpectedly as it had turned over.

Caught in a squall, while upon a reconnoitering flight, an English military pilot fell 1,300 feet in a biplane that had rolled over sideways, and was completely out of control. The machine being lightly loaded, however, its big planes acted as parachutes, and it fluttered down so gradually that the pilot, jumping clear when some ten feet from the surface of a field, escaped with a few bruises.

WHERE risk does exist is in flying low in a wind. Then, should a gust destroy your equilibrium, you "side-slip" or dive, and your machine, before it can be righted, wrecks itself upon the ground. Proof of this was afforded me at Dover, when flying above the cliffs in the test of a new biplane. The machine needed adjustment, and did not "climb" well; thus I was at low altitude when a dangerous gust caught me. Heeling over, the aircraft refused to answer its controls, and fell heavily. I was cut by wires and rather badly shaken, but otherwise little the worse; and the accident impressed upon me the fact that the higher you fly in an aeroplane the safer you are. Hence, when upon long journeys today, a pilot will sometimes rise as high as 10,000 feet; and at this altitude, should low-lying clouds make the earth below invisible, he steers accurately by aid of his compass.

But when flying a year or so ago, it was scarcely wise to reflect upon the risks

one ran, there were too many; today, in the air, one's mind is easy, and a tour by aeroplane has become practicable and pleasant.

ONE peril of the pioneer lay in the breakage of his machine: and this risk was grave, through insufficiency of knowledge as to strains set up in flight. Analyzing thirty of the early fatalities, I found that almost half were due to the weakness of machines. On one of my London-Manchester flights, the canvas fabric of my lower tail-plane became unstuck, through the machine having stood out in the rain. The loosened fabric belled out suddenly, like a sail, and put an effective brake upon the biplane's progress. Sitting in front, I could not see what was happening; but, observing my speed grow less, I glanced over my shoulder, noted what the trouble was and made a rapid descent—fearing the whole plane might rip itself off, and the machine become unmanageable.

An experimental flight at Pau which I made as a passenger with M. Blériot, is still in my mind. We were trying a plane of his own invention; the machine had a powerful motor, and was very fast. Also—but this we discovered en route, so to say—the new craft was awkward to turn. We rose and flew at a great pace; then a wood appeared ahead. M. Blériot sought to circle before reaching the obstruction, seeing that we were not high enough to pass above it. He tried to swing round, but the rudder of the machine was too small. Hence it responded sluggishly; and the pilot realized he must alight instantly, or crash into the wood. Our descent was so hasty we could not pick our landing. We hit a hedge first, at the speed

of an express train, then plunged into a ditch; and little was left of that experimental craft save fractured spars and strips of fabric. We, however, were not more than shaken. I should explain perhaps without delay what one may term the elasticity of an aeroplane. When a machine strikes ground, and wrecks itself, the process of fracture is to a certain extent gradual—one stay or strut breaking after another, with a cushioning effect that absorbs the shock before it can reach the pilot in his seat. Thus, if he is placed safely in his machine, it may shatter itself all round him without his suffering more than cuts and bruises. Illustrations are forthcoming in the case of "side-slip" near the ground. Here a machine falls often upon one wing, and this crushes like a concertina, deadening the shock before the body of the machine can strike ground. In many biplanes,

chester race, I flew on even after a wing had sprung up,—my pursuit being in the nature of a forlorn hope. But gusts began to hit me so hard that the biplane swung right round under their impact, then passed temporarily out of control, and was at length benten down into a field. A modern-type machine would have forced its way through such a wind.

THE first men who could fly watched flags before ascending; unless these hung limp—indicating a flat calm—they did not dare to leave the ground. Now, at our aerodromes, men fly cheerfully in winds that blow spectators' hats off, and we see a sixty-mile-an-hour machine, a thousand feet or more above the earth, fighting gusts which blow it backwards with the violence of their thrust. During eighty per cent of the year—so stable

and it is now so familiar they prepare themselves for it. But cumbrous of eddies—many no doubt of perilous strength—lurk in the air unknown; accidents which are inexplicable may be due to them; and we need urgently an aerial chart, like that of the mariner, indicating danger zones.

Over rivers, notably the Thames eddies are to be found; and an amusing experience, bearing upon the Thames eddy, befell me in carrying a passenger from Hendon to Ranelagh. I was using a biplane with extensions to its mainplanes. It was stable, but slow flying, and in disturbed air it rolled. The wind was fluky; and I guessed that over the river there would be pronounced eddies. So I thought it fair to tell my passenger—a traveler and shooter of big game—that our journey might be "bumpy," and that perhaps it would be wise to postpone it. But this he would not hear of.

For every accident that happens many thousands of miles are flown safely

nowadays, an airman sits well behind his engine and main-wings, and such craft can crash down bow-first, breaking their landing-gear and planes but without injuring the occupant who is strapped firmly in his seat.

THIS is how apparent miracles happen, and a man emerges unscathed from the wreck of a fallen machine; and it also explains how 130,000 miles were flown, with the crudest of first machines, at a cost of only three lives.

But many lessons had to be learned and it was dangerous to learn them in air. B&riot, for instance, who seemed really to hear a charmed life, broke one machine after another with almost monotonous regularity while perfecting the monoplane upon which eventually he crossed the Channel. We did not realize the faults in early aeroplanes, or we should never have flown. The first biplane I owned was slow flying, and offered much head-resistance to its own passage through the air. Hence, in a wind, it was buffeted mercilessly; and even in moderate gusts was extremely difficult to handle. When following Paulhan in our London-Man-

chester race, I flew on even after a wing had sprung up,—my pursuit being in the nature of a forlorn hope.

THE atmosphere, none the less, is full of treacherous currents, and many of its movements are incompletely understood. The unexpected is always happening, and a pilot who makes a manoeuvre safely one day, finds it dangerous to repeat it on another. While aerostomizing myself to the monoplane, I was circling one day above the aerodrome, and had made several turns with planes banked steeply. Then I tried a last. But this time, though I repeated my previous actions precisely, the machine slipped sideways, and a moment or two later I found myself, with a badly-damaged craft, in the bed of a shallow stream. The monoplane had passed suddenly beyond control.

The contour of the ground over which it blows has curious effects upon wind. Sometimes two hills and a wood, placed in peculiar relation to one another, will set up an eddy which persists—should the wind be in a certain quarter. At a flying school in England there is an eddy all pilots feel at a particular spot,

"If it's possible to fly," he said, "let's start."

As the wind was not dangerous, I agreed; but the machine rolled even before we reached the river. Then we were caught up by the up-river eddies—rising one instant, falling the next, and rocking sideways until it seemed we could not right ourselves. Unpleasant it was, but not actually dangerous—the biplane being quite within control. I was not sorry, though, when we planed down to our landing; and then, for the first time, I had an opportunity to inspect my passenger.

He climbed from the machine without speaking; then, being habitually a man of few words, he expressed himself tersely. A wounded lion might cause our qualms, he said, but no incident of that sort, however perturbing, could compare in unpleasantness with the experience he had just been through. Strong-nerved man though he was, he had been shaken; and he walked away from the biplane like one who, after a storm at sea, sets foot thankfully upon dry land.

The third of this series of articles by Claude Grahame-White will appear in the next number.

CINDERELLA

By HARRIET MEAD OLCOTT

In Backyard Bohemia

By ROBERT W. SNEDDON

AN almost imperceptible hreeze stirs the gas-jets overhead and gently undulates the twined French and American flags. There is a faint smell of warm damp earth from the little flowerbed in the corner. A loose cord taps against the awning above, almost unheard in the clatter of plates, the buzz of talk, and the scraping of chairs on the wooden flooring. We have just finished the soup and are nibbling at our bread in anticipation of the entrée. Will it be veal cutlet or pig's feet? Bottles clink on glasses as the red wine is poured in, and for the hundredth time I marvel at the barbarism which impels us to add ice and still more ice. The air is warm, moist and still.

THE bolder spirits among us have flung convention into a corner and sit airily divested of waistcoat and jacket. We flaunt delicate shirt fabrics, girdled at the waist by leather belts, and fear no reproach. The heat and what we once thought was good form are unfriendly for the time. One daring fellow in a freshly laundered linen suit, who has regarded the passing of the soup tureen with vigilant preparation for mishap, now leans back in his chair and smiles. Bare arms rest on the table, heedless of nursery manners—elbows off the table, children. There is not a woman there whose neck does not show the skin of the sun. For it is a hot season even for New York, and the knowing ones have sought the hospitality of the *Maison des Trois Soeurs*. That is not the real name—publicity would ruin the tiny paradise, but many a New Yorker, and many a traveling stranger now in studio, author's den, editorial office, or behind the foot-lights in London and Paris will recognize it at once. Who does not know and pay tribute to Marie, Josephine and Célestine, those brave and comely maidens from Brittany?

THE long table at the end of the little backyard, presided over by the Seigneur, the oldest of us all, is full. Still we can always squeeze a little closer to admit a friend, and we have many. And there is talk and again talk. Snatches of it reach my ears.

"A woman has only two means of charming a man—by yielding or by holding him at arm's length—"

"Wills, the dramatist, was never happy till he was engaged to some girl and wretched till he was free again—"

"I try to like him but he is only an American child—grown up!"

"Why are Galsworthy, Bennett, Conrad and Maefield coming to the front here? I wonder if it is because American authors aren't allowed to be original—"

"Patriotism kills art. You can't change an imported play and expect it to have the same value. You don't turn Wagner into ragtime surely?"

"American hustle! Oh, Britishers aren't so sleepy after all. Little English girl wanted the kid part in *Preserving Mr. Pamure*. They told her she was too big. Did she say 'Thank you' and retire to cry her eyes out? Not a bit. Went away—put on a short frock, a little girl's hat, put her hair in pig-tails and came back. She got the part all right—"

SUDDENLY a cold nose rubs against my hand and I start. It belongs to the intelligent Spot—puppy beloved of all for his bonhomie and his skill in the merry dance-waltz—"What's wrong with my tad?"—but his investigation is abruptly cut short. The dark-eyed Célestine snatches him up and he vanishes in squirming submission. It is growing darker. The sky deepens to turquoise blue against which the trees interlacing in the neighboring yards stand darkly silhouetted. What a night it is—a night for lovers and poets. The young moon climbs lightly up the ladder of stars and pauses to smile down upon us. A yellow light flickers behind a darkened window and a gas-jet is lit. A bare arm hurriedly draws the curtains of mystery closer. Somewhere a dreamer is plucking the willing strings of a guitar—chorus—snatches of plaintive melody. Shut your eyes and you can hear in fancy the slow passage of gondolas on enchanted canals.

"Wake up and pass the salad!"

Our Englishman, the Star of Comedy, noisily proclaims that I must surely be preparing another extempore epigram, and I hastily help myself to the salad and pass it on. It is sacrilege to think of eating on a night like this, but what would you?

THE determined looking woman with the tender eyes fans herself energetically in spite of the scowls of those who have even the suggestion of exercise.

"Don't tell me that the place for woman is Home. It isn't," she interrupts suddenly.

"Then you would have her and her children slave in factories," asks the literary editor, lighting his fourth cigarette.

"Work—yes. Under well-regulated sane conditions. She needs something to occupy her mind—to prevent her becoming a social mollusc—"

"Ah," demands the Star of Comedy—"Isn't man her oyster? That's enough surely?"

THE determined looking woman squares her shoulders.

"I never knew a man who could discuss the question fairly. Why should it always be war?"

"Economic conditions," mutters the socialistic subeditor, smiling into the eyes of the girl at his side.

"I deny—" says the Seigneur, and the battle of words is on.

THE wife of the celebrated portrait painter is busy with a pencil behind the curtain, and I know what that lady of the auburn hair and the violet eyes is doing. The determined looking woman is being immortalized in a caricature such as I would challenge Max Beerbohm with. She will not mind—for we are all models for that satiric pencil.

A WISTFUL-EYED woman is murmuring into my ear.

"I just love to sit all day and write at my novel!"

"Don't use such a word as 'love' about art," says the Seigneur; "in painting or writing it's not love—it's pain—anguish. There are only two short moments of pleasure—the conception of the idea and the realization of its completion. The time between is torture!"

"I'm so sorry. I know what you mean—but you know—I can't express it. I always use such trite phrases—that's my newspaper work—" she says penitently.

"It was Goethe said that. . . ." the Seigneur begins.

"Oh, I just date on Goethe!" the novelist sighs.

The Seigneur's eye regards her with momentary irritation. Ah, well, who could be cross with her lang?

WHAT a deal of talk and laughter there is at the smaller tables! Here and there one can see literary gods who have descended from Olympus for the time, forgetful of royalties. "Five hundred for every one of the series and one a week," whispers the poet with the mop of hair over his eyes. He is looking happier tonight. Last week he scuttled past me with a muffler round his neck—was it to hide the lack of a collar?

"Your turn next," someone says consolingly, as we look at the jolly exile from Manchester who is making such a hit with his stories of Hebrew cloakmakers. The merry fellow next to him ought to be weeping. His first play ran a week. Still it is something to get a play on, so why worry. That newspaper man has been an English army captain and war correspondent and knows the secrets of European politics backwards. The man who seems to know nobody is an American who served in France's Foreign Legion. He compiles school books now. The man who is laughing loudest in the corner has just finished playing lead in Strindberg's grim play—"The Father." The quiet smiling man with the tight lips is the editor of a weekly with a million and a half circulation—for the people. The lady in riding dress is a noted sub-editor at one of the leading newspapers. The Englishman with the drooping moustache who has just convulsed his party with mirth is the American editor of two large English mouthpieces. The three men with pipes are noted English illustrators hired hither by hopes of American dollars. The disturbance in the corner proceeds from one of the editors of a humorous weekly. He has just been told by one of his contributors that if his paper is meant to be humorous it is a serious affair, and if it is a serious weekly then it is a joke.

AT the next table is a French group. Among them I can see a contented couple from Marseilles, a barber and his wife—a hair-dresser. They sit silent and happy, for the farm they are going to buy in the south of France gets nearer daily.

POP! Behold the two young waiters—the kids generally known as the "keds" are having a night off. American champagne is the only drink for them in the corner with the pretty French milliner. There is constant huddling of laughter from the fountain of Youth, and Mlle. Josephine smiles upon them. "Eet is good beemes for the 'ouse, n'est ee pas?"

OH, we are a motley crew out of the hungry lands who rub shoulders here. Friends all, for we are not guests rather than clients of our three hostesses. The cash bond hardly exists between us.

True we do not hesitate to pay and they to receive our modest addition but we do it in a manner fitting their attitude. If one is liked that will almost pay the way, and many a Bohemian whose sky is overcast for the moment knows that his credit is still unclouded and that he can count on a good meal to sustain his efforts. Ah, the good hearts of those Frenchwomen! (The French heart is superior to the Saxon in a matter of this sort, and the evidences of a sympathetic race are never plainer than in the courtesies of a French restaurateur to his clients.) A guest is welcomed for his or her own sake—the monetary consideration is secondary. Croesus knocking at the gate, were he an overbearing fellow who desired to give his command rather than his request would find no entrance, and strangers who have carried in manners acquired in eternal warfare with waiters have been plainly shown that a second visit was impossible. To dispute an account is to cast you out of all favor, for the house has a reputation for honesty—are not the

Bretons honest as the day—and the reckoning is kept with proud and scrupulous care.

WE are pleased if the house is full—*les affaires marchent bien*—and our hostesses, you may be sure, will not fail to share that good fortune with us in the shape of some extra delicacy on the night following. Christmas and New Year's Eve are occasions for a party to their guests and we are made to feel that we are indeed welcome. To anyone living a solitary bachelor life, or an exile from his own land there could be nothing better than the kindly feeling of fellowship engendered by this treatment. I have often smiled at the inscription in British theatrical lodgings—"A Home from Home"—but here it is verity of the verities, and when I count the friendships I have made about this hospitable board I bless the day which took me first to the *Maison des Trois Sœurs*. It was my first taste of that abundant hospitality given so freely and without thought of return which

makes an American the most charming of hosts and the dearest of friends.

"This is jolly," says the Oxford don and historian, breaking upon my musings with a chuckle. "I shall come every night I'm in New York. Everyone is so equal here."

"There can be no progress nor liberty for that matter without inequality," says the *Seigneur*, lighting his cigar, and the challenge is accepted.

THE smoke hangs heavy in the air. It is the smoke of battle. A mosquito like an aerial scout dashes its planes into the gas-jet. Mile. Marie, her cooking over, stands at the doorway of the kitchen. Behind her one can see the serried array of liqueur bottles which Mile. Célestine as willing *vivandière* will presently bear from table to table to revive the fainting conversation. The night is young and we are all poets, playwrights, artists and comrades. Let us remember we are in Bohemia and forget the bills of tomorrow. Let me light my pipe and plan a masterpiece.

Ballade of Cities

By MICHAEL MONAHAN

OF all the cities that ask my praise
From slant-eyed Pekin to aly Parce,
In one alone would I pass my days
While the Lord He letteth his servant be:
Dear little Dublin is fair to see,
And Shandon bells ring a peal to Cork
That sits so snug on the river Lee,
But—what's the matter with old New-York?

THERE'S a charming town on the river Seine
Where the Goddess of Pleasure holds her sway,
And if for a frolic you're in the vein,
Not a demoiselle there will say you nay.
And then they have such a winning way,
You could not demur without remark;
But should you at home elect to stay,
Why—it might be arranged in old New-York.

LONDON'S the place, the swells all say,
Where the sun of fashion doth rise and set,
And Piccadilly has precincts gay,
Which he that has seen will not forget.
Then 'Is Majesty's there, and for a bet
You can see 'im 'andle 'is knife and fork
Like a bloomin' imperial cove—but yet
We've Tenny himself in old New-York!

BERLIN has lovers, an endless tale,
While Antwerp schnapps has inspired a few,
And some do swear that no words avail
Till Peter's city and dome you view.
Prague hath her praises; Venice too,
That holds the horses of brave St. Mark,
But the' of these I would none eschew,—
Pray let me tarry in old New-York.

"SEE Naples and die," was said of old;
See York and live, I would fain amend;
Whate'er your quest be it beauty or gold,
Your heart's desire shall have here an end.
But should you fail, then on this depend:
Steer not elsewhere your wand ring bark,
For the world hath not the thing to leud—
The sum of all is in old New-York.

L'Envoi

PRINCE, let us toast with glasses high
All fair cities of shining mark
Where a man would gladly forget to die—
And the Queen of them all is our New-York!

PEN AND INKLINGS

By OLIVER HERFORD

Confessions of a Caricaturist

I'M sorry William Taft is out
Of Politics, without a doubt
Of all the Presidential crew
He was the easiest to do.

FEW faces interest me less
Than Rocketteller's I confess,
'Twould vastly better suit my whim
To draw his bank account, than him.

AT THE COLONY CLUB

"I would never marry a man who smokes"

Joking Aside

THE evil that men write or paint
lives after them. The good is oft
interred in their tomes. Too often only
the worst mannerisms of a great artist
are perpetuated by the imitators that live
after him.

In a late number of *Collier's* is an example of the evil that has lived after one of the most original artists of this generation, Aubrey Beardsley. The picture in question resembles that inky product of an idle pastime known as the Gobolink, achieved by folding the paper over a wet signature or smudge of ink and getting a kaleidoscopic effect of design by repetition in reverse.

Underneath this evil relic of Beardsley is printed a quatrain which if it were intended for obscene verse might be taken seriously as an evil that has survived Lewis Carroll. It is entitled "The Soul of a Spider." Before inspecting the freak, however, let us listen to the megaphone of the Showman who exhibits it in the pages of *Collier's*.

"These words," he says, "will bear moulthing both mentally and physically. The boldness of that figure, the undying soul of a monster spider crouching on a vast gloomy beach and eating rotting stars is all but stupefying; yet significance breaks in like a lightning flash when the poet compares this giant spider soul

in the banal influence of materialism."
—Whew!—Now for the quatrain.

The Soul of a Spider

The thing that eats the rotting stars,
On the black sea beach of shame
Is a giant Spider's deathless Soul,
King Mammon is its name.

Once more the megaphone, this time announcing a curiosity called "The Trap."

"Take these lines from "The Trap" and read them aloud with emotional but well-weighted utterance—What close-eyed sympathy! What blasts of scorn! What realistic portraiture!"

The Trap

She was taught desire in the street,
Not at the angels' feet.
By the good no word was said
Of the worth of the bridal bed.
The secret was learned from the vile,
Not from her Mother's smile.
House spoke not; Aod the girl
Was caught in the public whirl.

A school of "Desire" at an angel's feet ought to succeed without the aid of a megaphone but as the Browningsque Brontë remarks in the *Century*—"But that's enough, let's talk of something else."

Spoken of the *Century* since that dear old lady discarded her crinoline and felt slippers for French heels and a

slit skirt, she has been trying her best to make up for lost time. Conceded in the October number is a batch, or should one say a covey, of Beauties drawn by W. T. Benda, which, had they been used for cover designs, would have made up for centuries of sobriety and high art.

A remarkable thing about them is that, besides being well drawn, each one represents an individual type. Their piquant presence in the *Century Magazine* is a pleasing illustration of the "enthusiasm of the convert."

The Blizzard

How the young radical is sometimes merely ignorant of life

By C. A. NESOM

Illustrated by O. E. CESARE

SINCE early afternoon they had been flying along hard prairie roads amidst a spring-like calm; but at about four o'clock the man was vaguely disturbed to discover a gray mist hanging in the northwest and to note that the calm had given way to sudden gusts of wind, that rose and fell and then rose again with increasing chill and vehemence. In a brief half hour the blizzard was upon them.

The girl was too ignorant of the changing western weather to share the man's fear. To be sure, she was accustomed to snow-storms, had ones, too; but these merely caused inconvenience, they were never dangerous. Besides, she was excitedly happy, the shifting walls of snow swaying about them only adding to her sense of shut-in security with the man beside her. She snuggled comfortably down into the buffalo robes as the wind made more furious onslaughts, her eyes shining up at her companion like blue stars.

The man did not want to stop. It had taken long waiting and endless pleading to achieve this moment; he wished to take advantage of it, now that it was here. But he had already in his lifetime passed through three cyclones and half a dozen blizzards, so he had the frostier man's awe of the elemental forces of snow and cold and wind. "It's no use," he muttered. "We'll have to turn in at the next house."

The girl's face paled as though he had struck it. She sat up straight, drawing one hand from her muff and grasping the fur of his coat sleeve. "We mustn't stop," she gasped.

The man shook his head slowly, not once glancing at her as he picked his machine's way through the baffling snowy mists ahead of them. He knew the peril of stopping as well as she, but he had no wish to subject this animated creature at his side to any physical danger. "You never saw a March blizzard in Colorado," he explained. "They'd find us in the middle of the prairie, frozen stiff. Now if I had horses they might keep the road. I can't do it with this machine. I'm sorry."

IT had grown unreasonably dark in the few brief moments since the storm had struck. They crossed two culverts, narrowly missing the edge of each one. They went so close that the man gasped after clearing them. "I hope we don't have to chance another one," he said. "The snow gets in my eyes—" It was just then, when the girl's fear of stopping was rapidly giving way to a greater fear of remaining out among those threatening ever-shifting walls of snow, that a feeble light came streaming down a bank at the right, and with a final burst of energy the automobile drew up before the low, deep door of a "soddy." A man's form was framed in the doorway as the muffled note of the auto-horn was split into a thousand fragments by the driving wind.

The man at the door fell back with a cry as the two travelers entered the room. "God," he said. "Ain't it the doctor?" His look was wild. "Oh, my God, my God," he repeated frantically.

The house they had entered was the typical one-room soddy of the plains. In

one corner glowed a stove red-hot; in another was the kitchen "safe" on the top of which stood the lamp that had guided the strangers thither. In another corner stood a new oaken dresser, its top decked out with dollies and palpable wedding presents of glass and crockery. The floor of the room was covered half way across with rag carpet to mark off the living-room from the bedroom, and the windows displayed white curtains, that fluttered feebly with each new gust of the fury outside. The bed had been drawn from its corner and placed as near the stove as possible. It, too, was new, and of white enamel. Upon it, beneath the heaped covering lay a human form and from the depths of the quilts came the long, tortured moan of a woman in her supremest agony.

THE suffering creature paid not the slightest attention to the intruders, but called unceasingly for her mother, in tones that struck white the young girl's face and brought her to her knees beside the bed.

"What is it?" she cried pityingly. "What is the matter? Can't I help?"

As she patted the woman's cheek and futilely rearranged the bed-coverings the girl became aware of a murmured colloquy between the two men behind her, and presently she found her companion standing by her side. His voice was gruff in his efforts to appear matter-of-fact. "The lady is about due," he announced bluntly. "And the doctor isn't here. I know what to do if you'll help."

She staggered to her feet, her lips parted, staring at the speaker, as realization beat upon her brain. Through all the intimacy of their love she had maintained a spirit of delicate reserve. They had never in their conversation touched upon the deep issues of life and of sex. And to be thrust in a moment into the midst of the primitive and naked and elemental—it was like taking a forced leap from a precipice. But her voice was as composed as the man's own as she asked him what she was to do. She remembered now that he was the father of children.

Trembling with the shock of the unexpected situation, yet yielding to the position demanded of her by her companions, she dutifully joined him in a search through the poor little home for articles necessary for the coming crisis. In the dresser they found clean sheets and clothes neatly ironed and folded; in its bottom drawer they came upon little shirts and dresses laid out in pitiful preparation.

"Sure you know what to do, all right?" The young husband turned suddenly to the strangers when they seated themselves, silent and watchful, at the moaning woman's side. The man, masterful and efficient, silenced him with a nod. As the birth-pangs tore the slight body of the mother soon-to-be, the sensitive girl sat silent and appalled. The man had lost himself in the role of physician.

IT was after midnight when the man and the girl ceased their labors at the bedside. The mother lay silent and rapturous. The young husband was

holding his wife's hand and whispering to her. Their faces reflected frightened smiles. "Tough luck, old girl," he was saying, as he pushed back a strand of her hair, "but you're all right now, and so's the kid. You'd better go to sleep, haul's you?"

The strangers prepared a meal, going about it with the same impersonal detachment. The girl was grave and pale.

"We don't live very high," the young father turned to remark. "My corn wasn't no good last year. But such as we've got, take it and welcome. I guess you've saved her—" he dropped his head suddenly upon his wife's bosom.

The farmer, ashamed of his emotion, was talkative and jovial throughout the meal. "I couldn't place you right off," he remarked, genially, to the man across the table. "But I know you now all right. I've seen you at the county conventions, and then I was on the jury in that case you had with the railroad. Your name's Knapp, ain't it? And I s'pose this lady—" with an awkward obeisance toward the girl—"is Miss Knapp?"

THE girl started, panic-stricken, but her companion maintained his usual self-control.

"No, this is Miss Mary Riley, the teacher up at the ranch school-house. You know, it's the spring vacation now and I'm taking her to Bruce to catch the flyer. Every time she has a vacation she runs off and leaves us and puts back for Iowa. Funny about these Iowa people. She says the only reason why she left Iowa is because she couldn't bring it with her."

Mary Riley was feverishly thankful for his composure. The blood hammered at her temples, and she was afraid. With all her depending nature she leaned toward his stronger one; he had never suffered defeat. And for love of her this master of countless acres was about to become a fugitive from his kingdom of a thousand hills.

The time dragged wofully in the two days that followed. Spring blizzards and spring rains in Colorado usually continue throughout three days, and this was true to precedent. The young farmer had stocked the little house with food and fuel against the day of the coming of the child. The two men improvised a bed for themselves in the corner. Mary Riley slept, when she slept at all, at the side of the woman. During the interminable hours of the gray days she read from the old books and papers she found about the house. The second day she chanced upon a little, dilapidated Bible, from which she read furtively, yet eagerly. She found in the ragged book a strange solace. Shut in with the very presence of the miracle of life, famed subtly with the passing breath of death, the self-sufficiency of youth fell away; with the humility of those who have heard the Voice in the flaming bush she tried to grope her way to something she had never before needed.

There were meals to get and dishes to wash; and the baby took much care. She had never in her life held a baby in her arms for five minutes at a time, but the mother praised her for her deftness. The feel of the little warm body against

her own was a wonder and delight, and the joy shining in the young mother's eyes whenever the baby was laid by her side appeared to Mary Riley as the finest thing she had ever seen. She began to understand the meaning of "the light that never was on sea or land."

THE two men talked for hours in a friendly fashion, about the crops, the cattle business, the storm. Sometimes they turned to playing cards on the oil-cloth-covered table. When chafe time came they went out together to the barn, guided thither by a rope the farmer had

mind." Knapp said to the farmer, as he buttoned himself into his fur overcoat. "That is, if you'll let me have those ponies out there for the rest of the trip. I'll send them back tomorrow if I don't come this way myself."

"Sure Mike!" the farmer responded with fervor. "I ain't a very good hand at thankin' people, but I just want to say that anything the old lady and me can do for you—"

Knapp waved a restraining hand. "The doctor'll be along now pretty soon, I guess," he assured his host. "I hope he finds everything all O. K." It took

The man reached over and tenderly pulled the covering away from her eyes. "That's right," he urged. "Do talk. I'm as blue as a weaned calf. Those cattle up in the ravines get on my nerves."

He had to explain to her what the spotless, glistening mounds at the ravine heads meant. "It's a shame," he ejaculated. "Damn this country, anyway, I'm glad I'm leaving it."

Mary Riley did not know how to begin the words she had tested over and over to herself back in the little sod house. She had never seen anyone come out victorious in a contest against the will

"What is the matter? Can I help?"

stretched at the beginning of the storm. The husband and wife were enjoying the stay of the travelers; they talked wistfully of the time when the storm would "let up" and the two must go. "The Lord sent you," the young mother said to Mary Riley on the morning of the third day, hiling as best she could the emotion that arose to her lips with the words. "I only hope somebody will be as good to you when you come to have your baby." The girl turned quickly away; her throat ached for the relief of tears.

That afternoon, at almost precisely the hour when the blizzard had begun three days before, the wind began to subside. It died away to a bitter breeze, the sun came out in a vivid western blaze, and the snow ceased falling. The travelers prepared to depart.

"I'll leave the machine, if you don't

both men to harness the unruly ponies. "By the way," Knapp remarked lightly as he hooked the last tug. "I left a birthday present for the youngster in the sugar bowl. I thought I'd better tell you."

A little later he was tucking the buffalo robes about Mary Riley's feet. "So long, partner," he called to the farmer. He leaped in beside the girl and the lean ponies bounded away.

The frozen road was swept entirely bare in some places, while throughout most of its length enormous drifts blocked the passage.

Mary Riley's face was shrouded in a thick blue silk veil, behind which she lay thinking, thinking. When the capering ponies had quite settled down to an even trot on a particularly long stretch of level road she spoke. "Please pull this veil up, Ed," she said. "I want to talk."

of the man beside her; it seemed foolish to put her strength against his. By tilting her head to the left a little she could just see his strong chin, above the burly chest panting beneath his fur overcoat; she knew that under the shielching cap visor blazed a pair of shrewd, unconquered eyes. She was glad she could not see these as she haltingly began to speak.

"You're not going to leave this country," she announced. "At least not with me. And I'm not going to San Francisco. I'm going home, and I'm not coming back. You'll have to get somebody else to finish out the term."

FOR five full minutes the man did not reply. Then he leaned toward her, looking down upon her with the smile one uses when one must coax a child out of its whim. "Come, come," he said. His heart was leaping wildly at the hard

note of decision the girl had managed to put into her trembling voice, but it would never do to let her see his agitation.

"I hope I can persuade you out of that notion before we reach the burg," he said cheerfully. "We'll just about make it, with fifteen minutes to spare if the trains are right. I suppose everything is off schedule since the storm, though."

The girl shook her head, appalled by the fierceness of frustrated desire showing in the man's face, belying his careless words. "It's no use, Ed," he repeated weakly. "You can't talk me out of it now. I couldn't take you after that." She nodded back in the direction from which they had come. "Is it always as bad as that poor woman—" her voice trailed off into silence.

"Oh, she got off easy," Knapp assured her largely. "If there had been a hitch anywhere they'd be walking long behind her, and the kid too. You needn't worry about her."

"I wasn't worrying about her; I was thinking of another woman entirely. I was just wondering—Where did you get your knowledge? At the birth of your own children?"

The directness of the question nettled him, but he answered calmly enough. "Oh, yes, some of it. But I tried to study medicine once. I stuck at it three years, and then I told father I'd rather brand steers than cut up cadavers. So he sent me out here. However, I couldn't help picking up some of the rudiments in three years, and if we hadn't happened along just when we did—if that woman I'd been alone with that green-horn of a husband—well, I guess she wouldn't have had a much better chance than those cows up under the drifts."

The girl gave a long, tired sigh. "Poor, poor women, all of them," she murmured. She reflected a moment before she delivered her next remark. "A man is a coward and a cur who would desert a woman after she had gone through that three times."

She could see her companion's face

go red, then white, then settle into grim lines of anger. "And a woman is a fiend who would take him," she concluded.

During the remainder of the journey he wooed her with every resource of which he was capable; but as the town loomed up between them and the setting sun he knew himself to be beaten. "Go back to Molly," she reiterated. "She wouldn't hurt me as I intended to hurt her. She doesn't need to know what we planned to do."

Just at the edge of the town he asked her to kiss him. She did so gravely, sealing her renunciation.

"You'll have to let me have a little money," she told him. "I haven't ten dollars to my name. I sent it all home. I thought I wouldn't need it."

He reached into the bosom of his overcoat and pulling out his purse tucked it into her muff. "Lord, Lord, how I had planned to spend that money," he groaned. Mary Riley made a swift mental reckoning, then counted out four of the bills and returned the red leather case to its owner.

THEY drove straight to the station, where the east- and west-bound flyers were due to meet at half-past five. They learned that the train that would bear Mary Riley eastward was the one that should have gone through at the same hour the day before. The west-bound had not yet been heard from, the agent told Knapp.

The delay of the trains had filled the little waiting-room of the station with tired, impatient travelers. The foal air drove Mary Riley out to the bare board platform; thither, in a few minutes, Knapp followed and the two paced silently. A truck-load of empty cream-cans rattled by them and disappeared into the baggage room; the station agent, shivering without an overcoat, came out and deposited his express packages in readiness for the hurrying train; the bus came over from the hotel with its freight of traveling men and mail-bags;

lean cowboys happened along, eyeing the man and girl curiously. Finally, in the gathering twilight Knapp became conscious that one of the men had stopped and was staring at him with wide, astonished eyes. "Good Gawd!" the cowboy shouted. "If it ain't them!"

Knapp turned to the intruder suavely. "Well, Sport—" he began; it was then that he recognized in the stammering cowboy one of his own men. "We thought sure you was under the drifts along with the cows," he hastened to explain. "Your misus has had every man of us out sence midnight and we tracked you to Waverly, but nobody'd seen anything of you sence the blizzard struck. They's a posse formin' down to the hotel now to go out and search for your bodies. I'll go tell 'em, and then it's me for the high places. The misus was most crazy when I left this morning. The phone wires is all down and she won't know till I get there."

The man's evident desire to relieve the suspense of the woman waiting out beyond the hills was not soothing to Knapp's pride. A sudden challenge of resentment sprang into his eyes. He called after the fellow. "Say, Jim, get me a horse and I'll be with you in ten minutes. And say, tell that livery man to send Si Barry's team home tomorrow. Pay the bill." Jim seized the fluttering bank note from the extended hand and hurried away. The next moment Knapp was escorting a trembling girl to the rear Pullman of the train which that instant came shrieking and thundering in. Behind the film of the veil which swathed her face he could see the lights from the car windows gleaming on streaming tears.

He stood and stared after the train as it sped on through the dreary, huddled little town. His thoughts were on the name that she had called him. "A coward and a cur!" he muttered. The returning cowboy cut short his bitter thoughts and the two men galloped off together across the darkening, snow-patched prairie.

The Racing Cars

By WILLIAM ROSE BENÉT

THE great cars careening come roaring round the curve,
The dust clouds screening their onslaught as they swerve.
The dense crowd watching exhales a thrilling sigh,
Their quick breath catching as the cars boom by.

SPEED on the straightaway—speed is what they need!
Speed down the level—at the banked curves, speed!
Their sharp staccato thunder awakes the hills to wonder
At the grimed, masked devils that drive the dragon breed.

I CLOSED my eyes glazing, and saw them in my mind
Up the far hills blazing, and roaring up the wind,
On the star-roads leaping, black hulks that shoot and sway,—
Their fierce pace keeping on the fearful Milky Way.

SPEED across the heavens—speed was their need!
Speed, with the meteors,—to Doom's gate, speed!
Their sharp staccato thunder shook sun and moon with wonder,
And the stars whirled wildly before the dragon breed.

THE great cars careening went roaring round the world
With madness for their meaning, 'mid wild dust swirled
And faster still, and faster, their engines ripped and raced
While man who was their master must drive in haste!

SPEED across the cities—speed was their need!
Speed down the valleys—up the high hills, speed!
Until, a dying wonder, their sharp staccato thunder
Throbbled away through chaos that claimed the dragon breed!

The Autopilgrim's Progress

Lemuel Taketh an Auto-Suggestion from
Percy the Fresh

PERCY the Bridegroom (they'd lingered a week
At Lemuel's place, ere they started to seek
Honeymoon joys) sat with Father-in-law,
Talking the finest that ever you saw;
He was sure very nice
About giving advice
On pertinent subjects. At last he began,
"Look hither, old man!
I've been thinking a hit"—here he puffed an Egyptian—
"That fast racing-cars are a sort of conniption—
Too tearing
And wearing
For settled old age."
"Such beans,
Go to grass!"
Rumbled Lem, in a rage.

"**N**OT old, then, perhaps, hut—well, somewhat
advanced."
His father-in-law snorted twice, fairly pranced,
"I be older 'n you, s'r, and therefore
Don't care for
Advice from no dudish and dapper
Whip-snapper."
"The fact that I'm young," Percy's lip kindly curled,
"Means, of course, I've lived more and seen more of the world.
And, as I was just saying, a fast racing-car
Ill fits an old man at the age where you are.
It's like seeing grandpaps in college boy clothing
Singing in glee clubs. I do view with loathing
That which undignifies
Age; for it signifies
Lack of perspective
And proper selective—"

LEM chortled suddenly, "Haw-haw! hy gar!
I know that you want, sir—to borrow my car!"
"O mercy!
Not borrow!"
Cried Percy
In sorrow.
"I thought, sir,—a fact—what a chaceer this would be
To give your machine to Katury and me."
"Well, of all the—" Lem started, hut Percy broke in,
"I like a fair trade, though detesting a skin.
Now here's what I'll do,

If it's pleasant to you:
I'll trade my small car for your big one—how's that?"
"No good, and that's flat—
Why, drat
And scat!"

"**Y**OUR car ain't with *half* mine." But Percy spake true,
"My car would be worth twice what yours is—to you.
She's a trim, cozy thing with a twenty-mile gait,
Her engine is simple, her manners sedate;
She can climb, her own pace, all the hills that there are—
What more does a grandfather want with a car?
Where once you lost patience and nerve-furce and breath
Coaxing an engine that scared you to death,
You now might meander through long, happy hours,
Stop to see cities, drink water, pluck flowers,
A little, happy tourist, hy night and hy mornin',
Seeing the sights of the land you were born in."

"Biago,
By jingo!
As sure as yer hat—
Wonder
Why 's thunder
I ne'er thought o' that?"
And the next thing Katury's new husband and Pop
Went to the barn and effected a swap.

"**H**ONK HONK!" Looking fully as handsome as glad,
Daughter Katury in bright, brily blue,
Percival Brovo in a brass Highload plaid,
Set in the big, sporty gazabaroo,
"Good-bye, Ma-ma!
Happy days, Pa!"
"Bless you, my children!" the old folks were saying
When whizz! Like a rabbit let out of a bag,
Straight down the road thundered Hiram J. Scagg,
Driving his Cannibal Six. As he passed
Percy cried, "Not much!"
Threw in the clutch
And flew after Hi like a hawk from a mast.

CRANING his neck from a window above
Lem gazed, excited.
See! It was gaining, his scorcher, his love—
"Bully! Dee-lighted!
Rah for our Percy! Rah for the flag!
Glory to fish-hooks, he's beat Hiram Scagg!"
But Mother, who also had witnessed the
race,
Smiled when 'twas finished, though pale
was her face,
Murmured, "I'm glad,
Though it does seem too bad—
Glad that she's gone, and I don't care
how far."
Lem acquired, shocked, "Who, our girl?"
"No, our car."

"**A**ND Pa, I've been thinking. Since son-in-law Percy
Left us his roadster (it does seem a mercy
It can't go much faster than twenty an hour)
Don't you think we might, too, start our own bridal tower,
Two in a car, all the time that we want;
Set of an elderly boneymoon jaunt?"

And Lem murmured soft, as he kissed her cool cheek,
"Cracky, we will—if it takes a hull week!"

Otis Skinner and his daughter at their home in Bryn Mawr

Lost—A Romantic Actor

By OTIS SKINNER

IT was Sterne's starling that beat its futile wings against the bars of its cage and cried, "I can't get out! I can't get out!" Could the Reverend Laurence journey—sentimentally or otherwise—through the labyrinth of the present somewhat complicated theatrical situation, he might detect the voice of many starlings.

The stage men who in conclave diagnose the health of the body dramatic have been shaking their heads for a decade and crying for the shows and actors of yester-year. Of a certain kind of actor there appears to be a plentiful supply. It is a pretty good kind, too—the sort that become favorites with theatergoers, who possess the power to amuse, whose personal idiosyncrasies are molded by their owners into methods that sway audiences to moods of acceptance and delight. The actor of to-day is a specialist—as much so as the patent lawyer or the throat doctor. He knows the thing he can do, and does it. If he is wise, he will look well into his assortment of oddities, and cultivate them as carefully as a gardener does his roses. Should he be lucky enough to have the galumphing stride or the vocal peculiarities of the late Sir Henry Irving (I allude only to the eccentricities of this fine actor), a squawk like Stuart Robson, or a crooked smile like our own beloved Edith Foy, let him put up his stand of "Hands off"; for every little while a manager will take his nets and go fowling for precisely such a strange bird as he. And the more frequently he is exhibited, the oftener the playwrights will put him into plays and build incidents around his legs, his lip, his grimaces, or his clothes. Having created a steady market for his wares, the specialist actor soon learns the kind of thing that sells best, and he brings his product to perfection. This is a fine thing for the actor's peace of mind, his self-satisfaction, and his bank account; but it does not make

for his advancement as an artist, or his ability to impersonate.

IF your hair is silvering with years, dear reader, and your experience has led you along the lanes of delight that the theater has afforded, you may remember when one man in his time played many parts, and his acts were more—many more—than seven ages. The managers of that golden country of Long Ago did not go about looking for "types." There were two main divisions of players—the serious and the comic; and of these the first group was often subdivided into romantic actors and villains. Then, of course, everybody was either young or old. The man with fair, round belly and *ris comica* was never required to play Hamlet, nor the tragedian to play Mr. Tootle, but otherwise it was the player's province to impersonate; and be the part light or heavy, grave or gay, he must give it semblance and smoothness.

THIS school was of particular value in developing one kind of actor—the leading juvenile. *Romeo*, *Claude Melnotte*, *Elliot Grey*, *Charles Surface*, *Marc Antony*, *Alfred Eedye*, were his especial property, and while he might be better in some than in others, he had no difficulty in giving free expression to a spirit of grave and romance in them all. It seems as if this race of players has become extinct. Whenever I or my associate managers have made a production of a play, our inevitable vexation comes in the search for the young romantic actor. The other kinds are known by their labels, and are found in goodly assortment; but the anxious manager's oft-repeated cry is: "You don't seem to be able to find a decent young man for the romantic parts."

I can not believe that this condition is caused by the death of sentiment. Lovers love just as hard as they always did, and the world is made to go around by the same means; but the motive power is

no longer exhibited on the stage. The young fellow of the playhouse is a smart-flip, manieured person, conscious of his hands and his coat, monotonous of utterance, and ashamed of expressing a tender emotion. His attitude toward the object of his affection has the air of confident possession, like that of the Apache toward his dancing partner at the Moulin Rouge. Of fervor, sweetness, and tenderness there is small trace. Could there be a reincarnated Charles Thorne, his *Armand Dural* upon Broadway would blaze brighter than all the electric signs.

BUT the fault does not lie wholly with the actor. The voice of passion often cries within him, but, like the starling, it can't get out. In the present mode of stage management the free expression of emotion is often prohibited, but by far the greater bar lies in the poverty of opportunities for such demonstrations in the work of our dramatists; they are afraid of frankness in a love scene, and *Romeo*, even though he sigh like a furnace, can not make bricks without straw.

Perhaps the pendulum of the stage fashion will swing back again—it has a way of doing such things—and give us a renaissance of tender emotions and their expression. It would be a great relief from the plays filled with politicians, crooks, cadets, white slaves, gunmen, grafters, gamblers, saloonkeepers, and detectives that are fretting their hour—let us pray it be a brief hour—upon our stage.

The announcements that various producers are making for the present season lead to a suspicion that such renaissance may not be far distant. It will be welcomed by every one—the public, the critic, the actor, and above all by the producer of plays who may plan a process of cultivation for the benefit of the young men and women who feel it all, and can not express it, and who one day may learn the art of "putting it over the footlights."

Tammany and Harper's Weekly

Pictures drawn by Nast and published in this Weekly during the Tweed campaign

**"THE ONLY THING
THEY RESPECT OR
FEAR"**

Nast took his idea for this picture from a remark in the "Nation" that if these men closed their careers in peace and affluence, it would be a terrible blow to political and private morality. The cartoon fits today as well as it fitted at the time of Tweed.

This (right) was one of Nast's real inspirations. If he were alive today he could probably draw a head consisting of a money bag with a dollar sign on it and make it look just like Charles F. Murphy.

This (left) cartoon bore the remark: "As long as I count the votes, what are you going to do about it?" The chances for an honest count are better today than they were forty-two years ago, but they are none too good.

It is still much easier for our police to knock about petty law breakers or loafers than it is for them to cooperate with the political rulers in protecting the city treasury.

The Tammany leaders still grow rich out of contracts. They still make a great show of individual charity among the poor, at the same time that their bad government makes the poor grow poorer. They force up expenses through mandatory legislation from Albany, and they make every bit of street building, and policing, and rehousing, and lighting cost more than it would cost under an honest system of government.

The Tammany Plot

By NORMAN HAPGOOD

EARLY in February, a certain conversation took place between me and a man very high up in Tammany Hall. Please remember that this was seven months before eight men met at Delmonico's and decided that William J. Gaynor should not be re-nominated by Tammany Hall. Here is the conversation:

I: "Why was McCall picked out for Public Service Commissioner?"

He: "They are grooming him for mayor."

I: "I thought ——— was likely to be chosen."

He: "Do not believe it. They don't want anybody with so much independence."

I: "But Sulzer made the appointment of McCall. What is he going to get out of it?"

He: "He has already gotten it. He got it last summer during the campaign."

I: "To what form?"

He: "Campaign funds."

If you realize how long that was before the campaign funds were heard of by the general public, and before McCall was selected by the eight men, you will realize that this man had some knowledge of inside Tammany affairs. To proceed with the conversation:

I: "I thought Sulzer could not be reached with money."

He: "Well, he can."

I: "If Tammany intends to nominate McCall, what about Gaynor? Won't he make trouble?"

He: "Oh, they will find some way to manage him."

Of course, Fate came in to put the Gaynor question at rest, unless, indeed, his ghost returns to trouble Murphy. But this conversation shows that Tammany looks a long time ahead. Later, it went through the comedy of pretending that Murphy did not want McCall and that McCall did not want the office, and all the rest of it, just like the tricks at a country fair. But the fact remains that the inside

The Collector

Tammany man mapped the plan out to me just seven months ahead.

Now, who is McCall? All his life he has been nothing but an exponent of Tammany and rewarded by Tammany for his services. But there is more to be said about him than that. Charles E. Hughes drafted the report of the insurance investigation. And that report as well as the evidence on which it was based are accessible.

According to the report, Edward E. McCall actively cooperated in a scheme by which his client, the New York Life Insurance Co., covered up and concealed from the State Insurance Department payments made to Andy Hamilton, the notorious insurance lobbyist who maintained "the house of mirth" at Albany. If these payments were made to Hamilton for proper purposes there would have been no reason whatever for concealing them from the State Insurance Department. Nobody will credit McCall with being so stupid as not to have understood fully the improper purposes for which these payments presumably were made; and in no case can he justify his actively cooperating in concealing the payments from the State Insurance Department, the public and the policy holders of the New York Life.

Edward E. McCall took a retainer from the Provident Savings Life under the following conditions: (a) the president of the Provident Savings Life understood that McCall was receiving for his services payment from no other source than that Company and made the agreement with McCall for reasonable compensation on that basis; (b) at the same time McCall had an arrangement to be paid by the New York Life a contingent fee consisting of a percentage of whatever benefit the New York Life should receive from a favorable decision in the Provident Savings Life suit; (c) under this contingent fee agreement McCall appears to have received \$40,000 from the New York Life for the payment of which the Hughes Report properly states there was no reason, that is, no justification; and (d) McCall's brother was at the time the president of the New York Life.

Here is an extract from the Report itself:

"It is said they were 'for general purposes of his

The District Lieutenant

*The Dirvekeeper*

legislation and taxation bureau expenses." Why the New York Life with its vast resources should have required moneys for the expenses of its department to be raised upon the discounted paper of its employees has not been explained. The Company has not and never has had any record, voucher or statement justifying the conclusion that the avails of the notes were used for its purposes. Nevertheless, in December, 1901, pursuant to an arrangement made by George W. Perkins, at President McCall's suggestion, these notes were taken up by J. P. Morgan & Co. on the payment of \$56,720.55, apparently the balance then due upon them, and were carried by that firm until the following October. At that time, under the same arrangement, J. P. Morgan & Co. repaid itself by deducting this sum with interest (\$59,510.79) in accounting to the N. Y. Security & Trust Co. for certain profits upon a participation in the United States Steel Corporation Syndicate. The New York Life had a three-quarter interest in this participation, and the amount retained by J. P. Morgan & Co. was charged against its share in the profits, the balance being remitted to the Company. The result was that the amounts thus in effect paid by the New York Life to Hamilton were not charged to the legal expenses of the Company, nor in any ledger account, and hence it would appear are not included in any statement of the expenses of the company reported to the Department of Insurance."

After McCall went upon the Bench, Andy Hamilton conducted for the Provident Savings Life Insurance Co. begun by McCall. The Hughes Report on this subject says:

"The Provident Savings paid Mr. E. E. McCall in the matter a retainer of \$1,000 in 1902 and paid Andrew Hamilton \$3,000 in 1903 and 1904. The compensation paid Messrs. McCall and Hamilton by the Provident Savings was entirely adequate for the services rendered. Yet upon the basis of this decision it is claimed that the New York Life through a contingent arrangement made with Mr. E. E. McCall and Mr. Hamilton, both then under a general retainer, became obligated to pay upward of \$150,000, or one-third of its total refunds of statutes providing for

reciprocal taxation. (Hamilton getting \$90,000 of this, McCall's share would be \$60,000.)

"UNDER the decision obtained by the Provident Savings the New York Life became entitled to a refund in this State of \$474,703.27. In the case of this company and others the refunds were provided for by credits upon the books of the State Comptroller, but in order to provide moneys for Hamilton, the New York Life assigned its credits to other companies to the extent of \$90,386.47, from which Hamilton received that amount. There appears to have been no reason for any agreement on the part of the New York Life to compensate either Mr. E. E. McCall or Mr. Hamilton for services rendered in the case of the Provident Savings."

WHY, therefore, did it pay McCall so much? We leave our astute readers to surmise. Those same readers will also surmise why Tammany can easily have the very biggest campaign fund it can desire in order to elect Mr. McCall mayor of New York City.

One of the eight men who chose McCall was James E. Gaffney, an intimate friend and associate of Charles Francis Murphy. Gaffney received \$30,000 for giving expert advice upon contracting to one individual. No doubt, the "advice" was worth the \$30,000!

Croker is pretty rich.

Murphy is pretty rich.

Where does that money come from?

If Murphy gets in on November 4th, a lot of men will be pretty rich.

Mayor Gaynor knew how they got rich. His last statement to the people, just as he left for Europe, includes these words:

"Do you understand the vast amount of contracts which the Mayor's thirty-two departments give out in a year for work and material and also for supplies? If you do, you understand how much these hungry grafting leaders wish to control the heads of these departments. They want a mayor who will appoint their favorites as heads of departments."

Everybody knows how Croker got so rich, and a touch of ideal completeness is added to the situation

*The Bawdy Floater*

Designed by A. C. Wright

when Mr. Croker, with characteristic frankness, makes a vigorous assault on Mayor Gaynor. He maintains that he attacks Mayor Gaynor because he left "five million or six million dollars," after having a large family to support on a small salary. If his assault on the former mayor had been justified, instead of being a gross exaggeration, the influences that led to the attack would have been exactly like those that led to Tammany's attack on Sulzer. What Croker objects to is not any money that Gaynor made but the way Gaynor limited the chances of the organization to make money after their accustomed methods. Mr. McCall gave out, within a few days of the same time as Croker's diatribe, that he too would make a great point of defending Tammany's honor against the aspersions cast upon it. It is certainly a man-sized job,—this white-washing of Tammany undertaken by Croker and McCall. When Croker sets about a thing, he is thorough. He says, for instance: "Vice and crime were never so great in any administration as under the late Mayor's term of office." Presumably, this sentence means that Richard Croker thinks as innocent enough to believe that Gaynor created the vice and crime, or a large part of it, instead of its being a natural product of the long history of Tammany methods in our biggest city. To Croker himself, indeed, belongs no small share of the responsibility, and in this very statement he recognized his power in various ways. For instance, he said of a commissioner of the Fire Department: "It had always been his policy to carry out my ideas." And of a man who was supposed to be the leader of the Democratic party in Albany, he said: "I told Senator Grady to acquiesce in the passage of the bill." He always exercised absolute power, and it enraged him when he saw Gaynor disobeying. What made Croker angry at Gaynor and what made Murphy angry at both Sulzer and Gaynor was their interference, to some extent, with the system on which

Croker and Murphy and their hundreds of followers secured their living.

It is not only money that Tammany destroys; it is also human life. In the triangle fire, one hundred and forty-six young girls were sacrificed through inefficiency and greed, and there are one hundred and fifteen thousand women and girls employed in factories in New York in similar perilous condition. After this horror, there was a great demand for a fire prevention bureau. The law was passed, signed by Mayor Gaynor, and went into effect October, 1911. As soon as the money for it had been appropriated by the Board of Estimate, a raid was made upon the Fire Department by Tammany, and the positions distributed at the rate of one position to a district, with no test of fitness, many of the employees recruited from pool-rooms and gambling houses. The result will be other similar fires and other similar tragedies.

THE chance to steal through contracts is larger in the next four years than ever before. The rapid transit extensions involve the spending of about \$350,000,000. The subway scheme is second only to the Panama Canal in the engineering enterprises of today. If Tammany has the control of all this work, the amount stolen along the lines so graphically indicated by Mayor Gaynor will reach high in the millions. One subway question is ended. There was a difference of opinion about whether the financial help was secured on the most favorable possible terms to the City, but that question of judgment is not an issue now. The subway issue of today is whether the lines shall be built by honest men or by thieves.

Tammany hopes to accomplish two principal things in the election of November 4.

1.—To control contracts and thus to grow rich.

2.—To control the police and thus to grow rich in another way.

Mr. Kemble has drawn certain types of Tammany leaders which you see illus-

trating this article. Tammany could never win an election in this City without the active aid of the criminal and semi-criminal classes. Given with their aid, it could not win if we had intelligent ballot laws; that is, if we had a short ballot and an absence of party columns. With ballot laws which put a premium on ignorance and party passion, the machine has its chance to survive but, even then, it needs the devoted assistance of the lowest members of the community.

WE are accustomed to thinking of a haunted house as hidden in a clump of sighing evergreens beside a lonely stretch of country road. The window panes are shattered, weeds stand high in the front yard, and a hanging blind creaks dolefully in the breeze. A modern contrast to this impression may be found in the heart of New York City. A vacant hotel stands so close to Times Square that the glare of Broadway is the only illumination required to show the real estate agent's sign that the property is to be disposed of. A little more than a year ago, some gunmen drove up before this building in a yellow motor car. They murdered a gambler, and drove away. They felt safe, for they were in co-operation with the powers high up in Tammany Hall, who had been accustomed to delivering immunity for the worst of crimes. This time, the gunmen did not get the safety on which they counted. They are in prison, and they are among those most interested in the outcome of this election. The hotel, soon after the shooting, went out of business for lack of custom. It opened under another name, but met no better fortune, and had to close again. For months, it has stood vacant. Is it haunted by the blood of Hermann Rosenthal? At any rate, the people of New York, if they have any sensitiveness must feel that episode as a horrid dream. If they have any enterprise, any character, any will to achieve free government, they will not vote on November 4 to put the gunmen back in power, and to open the treasury of the city to Charley Murphy and his friends.

By HERBERT REED ("Right Wing")

Big Teams and Their Preliminary Games

YALE and Cornell opened the football season impressively, the former disposing of the Wesleyan eleven rather handsily, the latter taking care of Ursinus, a team that now and then

has made considerable trouble for the big fellows. The Elis showed better football than was the case a year ago, and gave promise of increasing in strength as the season advances. The material was such as has been seen at New Haven in the last few years, but the feature of Yale's play that caught the eye of the spectator was the clever interference, much of it made beyond the line of scrimmage.

It was apparent before the game was two minutes old that the Elis had gone back to the style of football for which they were famous some years ago—turning the runner in sharply and bowling over the secondary defense. Backed by good kicking it was small wonder that the Blue attack was able to run up a fair sized score. Yale

showed a powerful line, and an aggressive set of backs that seemed to have absorbed more coaching than has been the case in recent years. There was little in the nature of "star" playing, merely a coordination rather unusual so early in the season. Did the rules permit of helping the runner this particular Yale eleven undoubtedly would be able to make much of that type of game, but even under the restrictions of the modern game the Elis should show a first-class offense in their two big games.

Among the most interesting features of the team are its evenness in height and weight, the steadily good work of backs who are all-round football players, and the keen charging of a line that ought to be in top form for the November games. It was impossible to escape the impression of the effect of clever coaching both in line and backfield, and the earnestness of a set of players that works as if it was the first that ever took the field for Yale. Wesleyan turned out the

Storer of Harvard should keep up to his last year's form if the burden of the captaincy does not prove too heavy

high class eleven that one expects from Middletown at the first stage of the season, and the Methodists showed the effect of the smart coaching of "Danny" Hutchinson, of Pennsylvania. Wesleyan had a good kicker, good ends, and a fair set of backs. On defense the Middletown team was not quite as good as previous eleven that have worn the black and red, but the conception and execution of the forward pass were all but beyond criticism.

It was the forward pass that made most of the trouble for Yale, and that put Wesleyan once in a commanding position. The clever execution of the pass bore out the prophecy that the smaller eleven would use this form of attack in the earlier games in the hope of scoring a victory over one of the big teams. Wes-

season. There is every indication that the Blue wing men will come up to the best Yale standard when they reach their big games.

The general character of Yale's attack reminded one of Arthur Howe's team, albeit the backs did most of their heavy execution from the simple, old-fashioned formation, and without using any form of the shift. It may be that later in the season the Elis will go back once more to the Minnesota manoeuvre, but at this writing it would seem that there was enough strength in the straightaway play to do considerable damage.

It is indeed refreshing to find an eleven with faith enough in itself to play the simple football that proved so successful years ago, leaving whatever "trimmings" may be considered necessary for the latter

THE Yale line is once more a powerful one, and if these Blue forwards realize on their latent strength they will be something of a handful for both Princeton and Harvard. Doubtless there will be considerable shifting before the team is picked from tackle to tackle, and the final make-up of the line will hardly be known before Yale strikes faster company than Wesleyan, but it seems certain that there will be plenty of weight, and that the old-time, steady Yale defense will be in evidence. Yale teams of the past have built their attack rather slowly, perfecting themselves in defense first, the coaches apparently feeling that half the game was the ability to keep the other fellow from scoring, and if I read the signs aright this particular Yale team is working

YALE'S PROMISING BEGINNING

Clever interference by the Blue that led to a high score against Wesleyan. The new coaching system at New Haven made an excellent start, and the Elis showed promise of power and versatility

leyan's type of play was well suited to an early season game, but it remains for the Middletown men to build up an all-round, sound attack by the time they strike the heavy part of their schedule.

From the Yale point of view the opening game was more than satisfactory. It is apparent that the Elis since more are digging deep into the system that earned them so many victories in years gone by, and are putting together a team that, whether beaten or triumphant, will play the sort of football that is an open book to coaches like Hickey and Camp, who have seen many a successful season. Even this one game was enough to prove that the Elis had made no mistake in pinning their faith to Howard Jones as head coach, and had been more than fortunate in choosing the men who are instructing the ends.

UNLESS I am greatly mistaken, ends will figure this year quite as much as they have in the past—not merely in looking after the "loose ball," but in making interference beyond the line of scrimmage. The Yale ends in the play against Wesleyan were almost always good for one man in the Middletown defense, and when it was necessary to cut in and care for one of the secondary defense they did better work than I have usually seen on Yale Field so early in the

part of the season. I have always believed that the simple run from the formation of three men in a row and the quarterback to feed the ball to them was as effective in these piping times of open football as at any time in the past, and Yale's opening performance certainly proved that it was good enough for the early part of the season.

Shifts depend no more upon accurate timing than the simple plays with which the Elis opened their season, and the fact that these simple plays were nicely timed was a vindication of the coaching system. Certain of the Yale backs, notably Kuowles, may achieve stardom before the season is over, but even if they should fail in that they have already shown that they were considerably above average, taken as a quartet. It would not surprise me were Kuowles to be taught to kick as did Mitchell some years ago, for to my way of thinking he is one of the most promising men who have booted pigskin in recent years, and the quick kick close to the line will be one of the most important factors in the big games.

Kuowles kicks quickly and easily, and his punts should be difficult indeed to block. He is the type of man that can be run from a position very close to the line, and if the threat of a kick can also be used, he will make trouble far Yale's backs later in the season.

along that line. Only, the attack is better than usual at this stage of the season.

Since the Elis no longer play West Point it will be more difficult than usual to obtain an accurate estimate of their strength on the eve of the big games, for most Yale teams have been made or unmade by the Army game—have gone uphill or down thereafter. Even a Yale team that was beaten on the "plains" has sometimes won both of its big games, and it has usually taken the match against the Army to bring out the individual and team faults that are to be found in mid-season even among real champions.

The Yale schedule this year is not particularly difficult, save that the Elis probably will tackle more weight than usual, and whatever the outcome of the earlier games it will probably remain for Brown to provide the crucial test, for no matter what the character of the material at Providence the coaching system is so good that the Brunsmans will take a lot of beating. Indeed the Brown game is an excellent test for both Harvard and Yale, because the Providence men are usually in good form for both. Even when Brown defeated Yale by the score of 21 to 0 the Brown coaches had a good word to say for the Elis line. And at that time Yale was far from being a favorite for the big games.

Cornell's topheavy score against Ur-

sians came as something of a surprise, for the Ithacans, although beginning scrimmage work unusually early, were not supposed to be much stronger than last year. Apparently Dr. Sharpe's coaching has taken root, and the foundations laid a year ago have proved stable. Cornell faces a hard schedule this season, although there is no game with Dartmouth, and it will be interesting to see what the Ithacans do with such elements as the Carlisle Indians and Harvard.

ONE of the most interesting figures on the gridiron this year is R. T. P. Storer, captain of the Harvard eleven. It was his recovery of a kick on Yale Field last year that led to the rout of the Blue, and it was only natural that he

should have been chosen to lead the Crimson this year. He finds himself at the head of a team that has played remarkable football, and that worked its way to an undisputed championship. Not an enviable position for a football leader. A first class all-round player and a man who has shown the effect of excellent coaching, Storer should keep up his last year's form if the burden of the captaincy does not prove too heavy.

Dartmouth and Pennsylvania should provide one of the best games of the season for both the Quakers and the mocs from Hanover seem to have fair material this year, and in Whitsey Dartmouth has one of the best backs in the country. Under the new coaching regime at Philadelphia there seems to have been less

emphasis on speed and more weight in the back-field, and if the two teams come together with anything like evenly matched lines the work of both sets of backs should be well worth watching. Both teams are likely to have clever kickers and good ends, so that if they take to open play the game should be one of the prettiest of the season.

BY the time this appears the season will be in full swing and the big teams will have had a chance to sift their material and work out their type of play. It will probably be well into November, however, before the more progressive of the coaches will be able to try out new theories. In the meantime, if Yale lives up to form the Elis will be hard to beat.

Finance

By ALBERT W. ATWOOD

Riveting The New York Central

TO most readers, travelers and other citizens, the New York Central Railroad seems like a fairly completed enterprise. There is a certain solidity and permanence about this concern which smacks of nothing unfinished. Not to mention the long connection with the railroad of perhaps the best known family in the American oligarchy there are patent facts about the New York Central, such as its location, entrance into New York City, and certainty of trunk line traffic, which invests the company with all the dignity of great wealth, age, and stability.

But the New York Central lines are akin to all other great American railroad systems to their historically corporate and financial complexity. Even the New York Central & Hudson River Railroad Company, which as all men know, operates a well-advertised four-track line from New York City to Buffalo, is a nexus of many, many older and smaller corporations. Only in the last few months has this legal person consolidated with or absorbed into itself nearly a score of other legal persons, or as they are better known, corporations, such as the Tivoli Hollow, Mahopac Falls, New York Central, Niagara River, Buffalo Erie Basin, Carthage, Watertown & Sacketts Harbor, Little Falls & Dolgeville, Utica & Black River, Rome, Watertown & Ogdensburg, Oswego & Rome, Spuyten Duyvil & Port Morris, Mohawk & Malone, Carthage & Adirondack, Gouverneur & Oswegatchie, New York & Putnam, New York & Ottawa and numerous other corporations chartered by the sovereign State of New York for railroad purposes.

The reader may dodge from the infliction of such a list, but it is reproduced here as but a fraction of the corporate complexity which goes to make up a typical, large American railroad system. From Buffalo to Chicago the New York Central owns more than 90 per cent of the stock of the great Lake Shore & Michigan Southern Railroad, and this company in turn owns such powerful railroads as the Big Four and the Pittsburgh & Lake Erie, the latter commonly known as the Little Giant. Two there are the Michigan Central, a railroad empire in itself, the New York & Harlem, the Boston & Albany (controlled by lease for 999 years) the West Shore and the Nickel Plate. The mind wanders at even an enumeration of these companies.

There is no end to these subsidiaries. There is no limit to the number of directorates a man may hold by merely being an official of the New York Central.

Evolution from Little to Big

PUT in simple language, the history of the New York Central like that of other great systems has been in the main the acquirement of more and more railroads, and for the most part the retainment of these railroads as separate corporate entities. It is a cell formation, one upon another, a piecemeal growth. Probably the acquirement process is done, or nearly so. Harriman is dead. There is no further disposition upon the part of our Morgans and Rockefellers and Bakers to form giant combinations. The pressing, imminent problem is to cement and simplify what was long ago brought together by stock certificate, to consolidate for economy and efficiency and not merely for aggrandizement.

J. P. Morgan, banker for the New York Central, recently testified that the "assets and earnings are there." Every person will know at once what Mr. Morgan intended to convey, and his statement of facts is indubitable. The assets and earnings are there, but of late years the stock has sagged and new financing through stock issues has been impossible, which as a rule is an unhealthy symptom. Further issue of bonds was not feasible. So to raise needed capital huge emissions of ordinary promissory notes have been the rule. At present there are more than \$100,000,000 of these notes on the entire system.

Why has the stock dropped? Well, there are persons unkind enough to say that a sort of absentee landlordism has been partly responsible. Professor Tansig of Harvard speaks of the securities owned by those who live on their income especially where several generations have lived in that way, as a sort of distilled property. New York Central in the hands of the Vanderhills is quite conceivably a more languid form of property, as it were, than the stock in trade of a newly landed Italian peddler. But a more immediate and tangible reason for the decline in New York Central has been the enormous and not immediately productive expense which the company has been put to for improvements such as the new passenger terminal in this city,

I do not wish to arouse the ire of anyone connected with that marvelously efficient railroad machine, perhaps the most efficient in the country, the Pennsylvania Railroad. But it is true that the New York Central is in a sense the first and most prominent railroad in the country. That is a fine advertisement, but it is a discouragingly expensive one to live up to. So much is demanded of a railroad in its position. A hundred million dollar passenger station is the worst. But there is electrification, new passenger fares, almost hourly express trains for 300 or 1000 miles where most other so-called trunk lines run two or three trains a day, and similar decorative but none too remunerative outlays.

Two Kinds of Minority Stockholders

THE New York Central maintains that these improvements benefit such railroads as the Lake Shore, the Michigan Central and Pittsburgh & Lake Erie, and that these companies should pay their share. But an apportionment of expense is difficult. They are separate corporations. The maintenance of proper financial relations is intricate and adjustments are hard to make. So the New York Central proposes to consolidate as many of these companies as it legally can into itself. Then their surplus earnings, which are large, will benefit the whole system more directly than is now the case.

It is proposed to consolidate and simplify the corporate and financial structures that go to make up the New York Central Lines. The purpose is a commendable one in every respect. If there is one thing which makes for more graft than another, it is a corporation within a corporation. If, for example, it were conceivable that a small strip of railroad line between Spuyten Duyvil and the Harlem River, or the bridge over the Hudson River at Albany, were owned by separate corporations, most of the stock of which was owned by directors of the New York Central, these gentlemen might not care how small dividends New York Central paid provided dividends on these little companies were large.

The New York Central plan is thus wholly in the right direction. But there are minority stockholders in the subsidiary companies, and it is not easy to

adjust their interests. There are many kinds of minority stockholders, but in the case of these corporations, there seem to be chiefly two. One class consists largely of what might be called professional minority stockholders, that is, the kind that always make trouble. The other class consists largely of insurance companies which have held fairly large blocks of Lake Shore and New York & Harlem and other subsidiary company stocks and will not sell out except on terms very advantageous to themselves. Naturally as a business proposition the big corporation will pay no more than it has to. It is doubtful if it would care to pay from \$300 to \$1000 a share for the minority Lake Shore stock, but that is the price some holders say they will ask.

The Lake Shore Gold Mine

MANY years ago when the New York Central bought more than 90 per cent. of Lake Shore stock it paid \$400 a share in its own 3½ per cent. bonds. The agreement made with the Lake Shore stockholders prevented a further increase of Lake Shore stock, which is now absurdly small for the value of the property, and also limited the issue of Lake Shore bonds. This agreement is now a serious restriction upon the proper financing of New York Central improvements, so the New York Central proposes to exchange these bonds for a new 4 per cent. bond of an issue to be large enough to finally include practically all the mortgage securities on both railroads. More technically stated the new 4 per cent. issue will refund, or take up, all the bonds outstanding. There will be one, single issue of 4 per cents. at first \$167,000,000, but to be increased within ten years by from \$350,000,000 to \$500,000,000 for necessary improvements. This huge bond issue will conform to the standards of investment for insurance companies and New York state savings banks, which is worth between one quarter and one half of one per cent. in interest rates saved to the railroad. At present the two companies are so tied up that they can sell only notes, debentures and collateral trust bonds, which savings banks cannot take, and two of which classes insurance companies cannot buy. The great new bond issue is to be a mortgage on both companies, and as soon as possible the companies themselves will be consolidated and Lake Shore stock wiped out.

A Charge on the Future

ALONG comes United States Senator Norris and asks the Interstate Commerce Commission to inquire whether it is proper for the New York Central to impose upon the public \$450,000 additional interest charges for 85 years, the length of the new bond issue, or a total of \$38,500,000, the difference between 3½ per cent. and 4 per cent. on the amount of the bonds for the time specified. The objection is not a weighty one, because the extra charge is small as compared with the savings to be effected in raising capital. Anyone with a glimmering of financial knowledge need not be told that one huge first mortgage bond issue on the New York Central from New York to Chicago will, other things being equal, sell like the proverbial hot cake.

"We believe," said J. P. Morgan, "that they (the proposed 4 per cents) would take the position of a stable bond and, therefore, would be of greater ad-

Made by a Specialist

EVERY maker, we suppose, is producing the best car he knows how to build.

Yet no two makes are alike, and no two makes are of equal value. Some one maker knows better than any other maker how to produce small, cheap cars. Some one maker knows better than any other maker how to produce superb electric cars. And Alexander Winton knows better than any other maker how to produce the world's finest six-cylinder car.

Specialists Lead the World

There's nothing accidental about it. It isn't luck or genius, but hard work, concentration, and experience. We live in an age of specialists. Specialists lead the world, and easily outdistance the straddlers, the foppers, the meo who do not know their own minds well enough to stick to *some one thing*.

Cars That Don't Make Good

It's so in every profession every business, and especially in the complicated automobile business, where a single mistake can ruin a season's output. That's why some cars are up one year and down the next. Also, that's why so many makers are forced to announce sweeping changes from year to year.

How can you expect excellence in the car of any maker who switches and revises and discards his models so rapidly that he never has a chance to perfect any one of them? What sort of specialist is he? How can he hope to equal the Winton Six, which has been the *sole* product of the great Wintoo factory for seven consecutive years?

WINTON SIX

Long stroke motor, left drive, center control, electric lights, self-starter, finest mohair top, easily handled curtains, rain-vision glass front, best Warner speedometer, Waltham eight-day clock, Klaxon electric horn, tire carriers, four-cylinder tire pump, demountable rims, full set of tools, German silver radiator, metal parts nickel finished. Fully equipped, **\$3250**

One Maker's Method

Mr. Winton never tried to make more cars than any other maker. He never tried to see how many different models he could make. He did not flop around from one thing to another, trying to monopolize the entire automobile market. But, on the contrary, for longer than seven years, he has devoted himself to a single object—the perfection of one six-cylinder car, the Wintoo Six.

The Result is Excellence

That's what has made Alexander Winton the world's most experienced six-cylinder specialist, and the Winton Six the world's standard six-cylinder car. No wonder the Winton Six won high-grade demand away from four-cylinder cars. No wonder the Winton Six holds the world's lowest repair expense record. No wonder it is a car of exceptional beauty and of goodness that stays good. For it is the one car in the world that has been most thoroughly proved, developed, and perfected—the most satisfying car that money can buy.

The Winton Motor Car Company

118 Berea Road, Cleveland, Ohio

Plain Facts about Champagne

Can the customs officers inspect life, bouquet, flavor to a wine?

Can a transatlantic steamship freight department improve the purity and deliciousness of a champagne?

If so, by all means pay \$2.00 for your champagne—of which Uncle Sam gets 60c for duty and a steamship company 40c for freight. But if not—buy Cook's Imperial and get the best of champagnes, all of whose cost goes into quality.

venture than small groups of collateral trust bonds and debentures have been done in the past. In our experience it has always been easier to sell a bond on a larger than on a smaller property, provided the larger property were doing equally well with the smaller. There is a broader basis for the bonds, there is a larger amount outstanding, and a more open and better market for them. They are disposed of more easily.

That Morgan is right is proven by the efforts other great railroads are making to consolidate and simplify their bond issues. The Great Northern, Burlington, St. Paul and Southern Railways are all anxious to fund numerous small issues into one large issue. Of course the further this tendency goes the less confusing will railroad finance be to the investor. At present no one but a special student can possibly understand the relations one with another of the fretfully intricate bond issues on most railroads.

A Little Forehandness

BUT to return to the New York Central and finish with it. There may be another reason why the company is anxious to consolidate its corporate and financial segments. The company owns several parallel and originally intended

to be competing lines. The sooner a complete consolidation is formed the harder the Government will have to work if it ever desires to unscramble this railroad omelet. There can be nothing illegal in the absorption of Lake Shore by New York Central because they do not compete in any sense and one is the extension of the other. But absorption of West Shore by New York Central would be another story, and so would the merger of the Michigan Central or Nickel Plate into the big consolidation of Central and Lake Shore. Here is a case where the legal representatives of the people need to be vigilant. Big corporations have been known to "put over" the good with the bad.

Wall Street easily exaggerates the saving in operating expenses to be effected by a merger of these companies. For there will be a saving in this respect as well as in financing. But at least the huge undistributed surplus and earning power of such companies as the Lake Shore and the Pittsburgh & Lake Erie will be brought more directly into the open as added strength behind New York Central stock. The result should be to improve ultimately the position of New York Central stock, and the material and mental comfort of its scores of thousands of owners.

What They Think of Us

Rochester (N. Y.) Herald

Mr. Hapgood is quite right in holding that a publication of the kind which he edits should be written for adults, and not adapted to the requirements of immature minds. It is really a manifestation of the intellectual weakness of the American people that so much insistence has emanated from them that every piece of writing must conform to the requirements of the sixteen-year-old school girl or the boy of equally tender years. Let the juveniles be juveniles, and read and hear and see nothing which is undadepated to the juvenile mind; but to insist that every piece of literature and work of art must conform to the requirements of the younger ones among us, is to insist that age itself will remain as immature as extreme youth. No progress in thought ever will be made so long as we adhere to that foolish notion. Because the babes must needs be fed upon milk is no reason why their elders should be denied a beef-steak or roast pork, and because immature minds are unable to assimilate the products of the deepest thinking is no reason why mature minds should not have an opportunity to exercise their powers of mental digestion.

E. L. Rockwood, Tenn.

You may be, as an editor, what Jack calls a live wire, but your "shredded wheat" style of illustrations are boring. Do you employ them because they are cheap?

W. J. McKone, Albion (Mich.)

Like hundreds of others, we have awaited the change in management and policy of HARPER'S WEEKLY. We had hoped to have its visits continued but we fear we are not at all in accord with the new magazine. We have been keeping it on a reading table in our High School building but do not believe that it will be useful in that collection. From the very first issue we have failed to enjoy your

cartoons, we are one of those "inertistic people" that have always believed that "pleasantness," "decorativeness," and "the suggestion of sympathetic anecdote" are worth while; in fact they all seem like things worth while. We are afraid that we are one of those "inertistic people" whose conceptions of art seem to be very much out of date. We have not been able to suppress a smile at your "men of character, humor and insight" who give us "Cats," "Jack's," "The Hot Spell in New York." Too much for us.

A. A. B., Boston (Mass.)

At last! Some one has nerve to get away from trash and publish real art—congratulations, and don't give up!

George H. Tripp, Librarian Free Public Library, New Bedford (Mass.)

I am very sorry to see that HARPER'S WEEKLY had deteriorated as it has within the last four weeks. It is a poor promise for the future if we are to judge by the so-called cartoons by Stuart Davis, which have absolutely nothing to recommend them, and are about as insane products of decadent art as can be found in contemporary publications.

Detroit (Mich.) Evening News

So far the newspapers have a monopoly on masculinity, crude though much of it is. Maybe HARPER'S can help us out with leisurely developed standards of magazine art virility.

Samuel Russell, Salt Lake City (Utah)

You are certainly going strong for the new freedom of the feminine gender. It is all very interesting.

Long Branch, N. J.

Norman Hapgood writes in what the New York Sun calls his "journal of civilization" an article on "What Women Are After." It is scarcely necessary to fill a page to enlighten us on this

Be Sure You Get
"A CORNER ON SADIE"
in the next
HARPER'S WEEKLY

subject. Women are after men and money, or perhaps better in these days—money and men. We live in hope that the new editor of HARPER'S will cultivate the boiling down process in his literature.

Chicago (Ill.) Post

Norman Hapgood says he is going to make the rejuvenated HARPER'S the organ of feminism in America. That means we are going to hear a good deal more about this movement in the future. They have been talking very frankly about it in Europe for some time. It is inevitable that what they are discussing as a human trend across the Atlantic should sooner or later become a topic of general interest in the United States. If it is indeed a human trend we are not to be left out. We are a little slower to be frank about such matters because the restraint of puritanism is still upon us, and many of us have not outgrown the idea that certain subjects are taboo. But there are indications easily visible that this restraint is chafing the minds of our thinkers.

Moody Magazine & Book Co. (New York) A. W. Ferris, Pres.

I have just read the current number of the "NEW" HARPER'S WEEKLY, in which you state editorially that your publication is the "organ of the feminist movement in America" and remark on the fact that such an article as "Unmarried Mothers" would not have been tolerated a generation ago. There are many persons who will not tolerate such articles now.

If "Feminism" means, as intimated in the article referred to, the "landing" of innocent men like James with n' Louise who has both syphilis and gonorrhea and is pregnant, the Lord have mercy on us men. It is enough to have to bear the responsibility of our own errors without having the officials of maternity hospitals conspire with their diseased inmates to place upon us the results of John Doe's doings.

Mrs. Winnie Woodward, Oakland (Cal.)

I just read your article headed unmarried mothers, and oh, I want to praise you for having such articles printed. I have been a social worker in a private way in connection with my profession as a nurse and in connection with my Christian Endeavor work, and oh, the heartaches one meets, the sorrow before which one stands dumb, and all because—all because—mothers think so little of their high calling that they actually think it a disgrace and think their girls impure if they begin to question about these things. Oh, Mr. Editor, go on with your great work, go on and many saved girls' bodies will be the result.

San Diego (Calif.) Tribune

TO HARPER'S WEEKLY, Mary Roberts Coolidge, who appends doctor (or doctors) of philosophy to her name, sneers through two pages of excellent characterization of our world-famed Bull Moose legislature.

There are rude cynics who never that women cannot reason and that they jump at their conclusions from the altitude of their intuition; but there are doctors of philosophy who, while not taking the trouble to deny the cynicism, insist that a woman's "intuition" or whatever it may be called is usually more accurate and substantial than the boasted "reason" of

most men. But whether Dr. Coolidge was guided by her reason or her intuition it must be confessed that she gauged that Bull Moose legislature in the plenitude of its mooniness very close to its real measure; and she threatens that the next session there will be another circle of women, "larger, more assured, more obstinate, and with more experience in the psychological practice of legislators."

Wherefore it is prescribed in the litany of that legislature: From battle, murder, sudden death, and these women, Good Lord, deliver us!

Winnipeg (Canada) Saturday Post

Norman Hapgood, the new editor of HARPER'S WEEKLY, has enunciated an editorial policy for his journal which is to include a consistent advocacy of all that is proven best in the great modern woman's movement. He sees in that movement, as must all unprejudiced students of the trend of the times, not merely an agitation to be condemned or supported as the mood dictates, but a deep, universal upheaval with which we must all reckon in the most intelligent manner of which we are capable.

The Philadelphia (Pa.) Anatomical Record

Anatomists and zoologists, as well as other investigators who are adding so materially to the fundamental knowledge upon which scientific medicine is based, who depend upon the use of living animals for their researches, will be gratified to realize that one of the leading popular magazines has taken a firm stand in favor of medical progress.

Eugene W. Carr, Salisbury (N. C.)

I wish every schoolboy in America could know and appreciate the full meaning of your article on heroism. You have given us a sermon in your few words on justice, and every true patriot's heart will beat faster if he reads what you have to say out. "What is a nation?" You appeal to our risibilities when you talk about Baseball English, and to the aesthetic side of our natures when you quote us Alfred de Vigny on beauty; and add your own words of wisdom to his. But the fitting climax to all is your beautiful prose poem on "Instinct" which suggests that human nature is the same now as it was in 1500 B. C., that the maternal instinct and mother love is the greatest thing in the world, "The hope of the nation," and that nature indeed takes care of us.

I am glad you are back at the editorial desk. "One of the virtues of the crowd is that it likes to listen to the leaders" of thought.

George C. Payne, Aberdeen (Miss.)

The pictures are daub! Can't you improve on this department? The editorial department is sandy-panty, shilly-shally. HARPER'S WEEKLY deserves better treatment.

The Vagabond, Mineral Wells (Tex.)

Emerson, in one of his Essays, says something about what happens when a thinker is turned loose in the world. With Norman Hapgood as the new editor of HARPER'S WEEKLY we have an instance of a modern thinker turned loose in a very complex world. The first two numbers of HARPER'S show a marked change in the policy and make-up of the WEEKLY and the publication is destined to great achievements. Norman Hapgood is the most powerful editorial writer of this age, and for vision and scholarship he has no superior.

A tempting relish
having the true tomato taste

BLUE LABEL KETCHUP

Keeps After Opening

Vine ripened tomatoes, from selected seed, grow under our personal supervision, carefully handled in sanitary kitchens, same day as picked; cooked but lightly so that the natural flavor is retained; seasoned delicately with pure spices; placed in sterilized bottles—this is Blue Label Ketchup.

Contains only those ingredients
Recognized and Endorsed
by the U. S. Government

Our other products, Soups, Jams, Jellies, Preserves, Meats, Canned Fruits and Vegetables, you will find equally as pleasing as Blue Label Ketchup.

"Original Menus" is an interesting booklet, full of suggestions for the hostess and busy housewife. Write for it today, giving your name and mentioning this magazine.

Amelia von Ende, Takoma Park (D. C.)

I have just seen a copy of HARPER'S WEEKLY, the first since I went abroad some two years ago, and I am especially delighted with your intention of handling such problems as "Unmarried Mothers."

The problem has for some years been studied and freely discussed by German feminists and sociologists, men and women.

Moderate Harris Jordan, New York City

I am editor of a successful magazine, president and treasurer of a publishing company, National President of The Human Welfare League—and I haven't a vote! My porter has, and my negro janitor has, but I haven't. I pay my tax to the state, regularly and promptly, and I haven't a vote! I am a woman!

Milwaukee (Wis.) Press

It is becoming the popular fact nowadays for those behind the footlights as with others who are constantly before the public to fall in line whenever Norman Hapgood's premier brand of feminism is challenged and vehemently to declare they were addicted to the gospel of equal rights long before even its able masculine standard bearer came forth to battle in its defense.

Columbia (S. C.) State

Senator Tillman's speech against woman suffrage has aroused HARPER'S WEEKLY but, never mind, Norman, the South Carolina suffragette party will attend to him when she gets a chance.

Clifford Howard, Editor of The Woman's Bulletin, Los Angeles (Cal.)

Naturally, I am keenly interested in your magazine as the avowed organ of the Woman's cause. The epiphany of the new woman undoubtedly calls for recognition thru some such national medium; and that HARPER'S WEEKLY should be that medium is indeed cause for gratification.

Belle Ferguson Beers, New York

I wish to add my quota to the expressions of opinion concerning the "new" HARPER'S WEEKLY. This is to praise the quiet, conservative, uniform cover design. It is indeed refreshing after the lurid, screaming, shrieking covers that we have been (and are) compelled to look at on every hand. That you will continue the policy and that others will follow your most excellent example is devoutly to be hoped.

Ingaull Kimball, New York City

Your publication is a nuisance. In the conduct of an advertising business, it is essential that I should know something about all prominent publications no matter how inadequate that something be.

When I got back from Europe the other day I undertook to glance through several copies of HARPER'S WEEKLY.

I thought half an hour would do. This glancing has resulted in my sending out for the earlier issues, and aside from the fiction and the stage, I think I have read everything you have printed from the beginning.

Obviously it is out of the question for me to give one publication as much time as this sort of thing takes.

What is worse, I have actually bought several copies for real money, and sent them away to people.

So the expense has become now not only one of time but of money.

Something must really be done about it.

Help Wanted

Male and Female

The McClure Organization has a few more positions open for men and women who are tactful, aggressive, industrious, and — *who possess ginger.*

If you have these qualifications, we will provide the employment and pay you well.

We want representatives on our Three Great Magazines, **McCLURE'S**, **HARPER'S WEEKLY** and **THE LADIES' WORLD**.

The subscription season is about to open. Everybody will soon be subscribing for next year's magazines. Thousands use our publications each year for Christmas presents.

The subscription solicitor will soon be reaping his annual harvest; you can have your share of this easy money.

We pay liberal commissions, and also good bonuses; not the bonus that is next to impossible to earn, but a genuine extra remuneration that is almost impossible to avoid earning.

You can devote your entire time or spare hours to the work.

It will cost you nothing to try; attractive samples, instructions, etc., are sent you free of all cost.

The Money Trust

PROGRESSIVE legislation is always opposed, and then, after it has been tried out, it is likely to be supported most energetically by the same conservative classes who objected in the first place. We believe most earnestly that the Currency Bill ought to be passed at this session, and that, after it is passed, no retreat will ever be made. Any further changes will be in the direction of strengthening it, as, although it is a decided step in advance, it by no means ultimately solves the problem of credit. Some people still say that no money trust exists, although the number who make that statement is much smaller than it was before the investigation by the Pujo Committee and the widespread discussion of the Currency Bill. In our opinion, Mr. Brandeis understands financial matters as well as anybody in the United States, and he is nearly always able, when he objects to a condition, to offer a constructive plan for betterment. He has the mind of a great business man combined with the outlook of a philosopher, and very democratic sympathies. His series called "Breaking the Money Trust" will begin in our issue of November 8. The first two articles are largely a diagnosis of the situation. The next six deal mainly with remedies. The ninth will show the general gain in economic and social efficiency that may be expected as the result of the decentralization of power. It will bring out, among other things, the remarkable results which have been attained in England in connection with wholesale coöperation, where thirty-six men, none of whose salaries exceeds eighteen hundred dollars a year, are conducting a business of \$150,000,000, in successful competition with the best capitalist manufacturing producing and merchandising businesses in England. Some idea of the scope of the series may be gained from such titles as these:

Our Financial Oligarchy
How the Combines Combine
Interlocking Directorates
Serve One Master Only
What Publicity Will Do
Where the Banker Is Superfluous
The Curse of Bigness
Banks That Are Not Such
The Inefficiency of the Oligarchs

The era of destructive criticism has been a valuable and necessary one, but the country is now calling for constructive thought. Pointing out the evils of the present credit situation is interesting, but it is preliminary to the task of explaining how business and credit ought to be

controlled, and that is the task undertaken in this series.

Using Power

IF Secretary McAdoo had not at the right moment decided to use the powers of his office in behalf of the business interests of the country, we might easily have had a panic. The banks thought at first that they could not furnish what money was needed, but as soon as Mr. McAdoo announced that if the banks did not furnish it he would furnish it the bankers suddenly decided it was possible. Those individuals who were afraid that the Wilson administration would be a failure through unwillingness to use sufficient power must have learned a good deal already.

Bird

BOTH of the old parties in Massachusetts need a lesson. Neither can be trusted to carry out to any reasonable extent the wishes of the people and the needs of the State. Mr. Bird is ideally suited for the governorship. His election on November fourth would do much to keep Massachusetts in that proud position of leadership which she has always so highly deserved.

John Purroy Mitchel

MR. MITCHEL is entirely fitted for mayor of New York. The time should be past when we are afraid of young men. Although only thirty-four years old, he has been in active public life seven years, in positions of great responsibility dealing with exactly the most important business questions that will be before him as mayor. Those who know him best trust him most. He has a quick, clear mind, administrative ability, absolute frankness and courage, and an enthusiastic interest in those problems which confront the city. He is a combination of progressiveness and caution. He is attractive, manly, full of humor, broad in sympathy. He believes in those changes in which the most intelligent thinkers believe, but he fully realizes that they can be made only under right conditions. The men on the ticket with him are the best and most experienced business men who could be found. If the ticket is elected, New York will have the most satisfactory city government it has ever had in its history.

McCall, Murphy, Croker

MR. RICHARD CROKER stated on the witness stand many years ago that he worked for his own pocket all the time. That

remark has entered into history. He also stated that Van Wyck was a mayor who was absolutely satisfactory to him. He has recently declared that McCall would also be the kind of mayor who would be satisfactory to him, and on this last question, as on the two others, there can be no possible doubt of Mr. Croker's accuracy. McCall, Murphy, and Croker have taken the same attitude toward the forthcoming election. They took the same attitude toward Sulzer and toward Gaynor. They are all perfect types of the Tammany product. If McCall is elected, Murphy will not only rule the City. He will rule the State.

A Quality of Shelley

THE most poetical of English poets, probably, since the Elizabethans, is also the one who says the profoundest and wisest things in a line or two in passing. You remember *Alestor*, the Spirit of Solitude, who was not understood by cottager, or mountaineer, or child,

... but youthful maidens, taught
By nature, would interpret half the woes
That wasted him.

The italics, it need scarcely be said, are not Shelley's, who stoops not to such emphasis.

Here is a summary of a great man:

Sydney, as he fought
And as he fell and as he lived and loved,
Sublimely said.

How swift is this:

... those cruel twins—
Error and Truth.

And what depths has this:

If you divide suffering and dross, you may
Diminish till it is consumed away;
If you divide pleasure and love and thought,
Each part excels the whole.

Well known, indeed, is that one line:

He hath awakened from the dream of life.

Well known, and a frequent thought, and only a line; but where has it been better said? How different in meaning it is from Shakespeare's:

After life's fitful fever he sleeps well,

and certainly it carries its less bitter meaning not less well.

Putting great spiritual truth into few words, is, indeed, not a surprising quality in a poet, but the essence of what makes poetry.

East and West

MANY quotations are used in so incomplete a manner as to give an entirely wrong idea of their meaning. Take "The play's the thing," for instance. Usually it is used as an argument that the play itself, rather than the acting or setting, is the important thing. As a matter of fact, Hamlet was not making a philosophic re-

mark at all at the moment, but merely saying that a certain play was the thing with which he would catch the conscience of the king.

A more important misinterpretation is the use of a line of Kipling's to indicate the hopelessness of the Orient and the Occident understanding each other. If you say that

East is East and West is West,
And never the twain shall meet—

and stop there, it sounds rather discouraging; but suppose you finish the sentence:

Till Earth and Sky stand presently at
God's great Judgment-Seat;
But there is neither East nor West,
Border, nor Breed, nor Birth,
When two strong men stand face to face,
Tho' they come from the ends of the earth!

When you have read it all, you get the entirely different impression that, although differences must continue to exist, the best types of mind will be able completely to understand one another. Probably a few simple changes will make this ability much greater. President Eliot, who is constantly saying original things in a simple way, pointed out the fact that the Chinese have not yet learned inductive reasoning. It is a mere accident of tradition and convention that they have not, for they certainly are entirely capable of it; and when they do learn it, that one thing alone will bring them immeasurably nearer to our Western point of view.

A boy scout of Amsterdam, Holland, not long ago wrote to a boy scout in China, whose name he selected at random, and his letter was to this general effect: You and I have skins of different color, and I do not stand for the things that you stand for, but that seems to me no reason why we should not correspond and be friends.

Sad

IN a certain issue of *Collier's* appeared an editorial called "Misinformation," in which the author deals severely with Mr. Charles Zuehlín's "Political Snapshots" that appeared in this paper. The chastisement was administered not only to Mr. Zuehlín but to "every hasty-spirited radical who doesn't take time to hither about facts." By the time we had finished this editorial, our usually exuberant spirits were slightly chastened, and we passed on to the next. The opening words were, "Many of the stern young moralists who are winning fame by their pictures," and these stern young moralists were scolded because the people they draw are "gawky, greasy, febrile, and mean"; because they were "doing contemptible things in a graceless animal sort of fashion"; because "their backgrounds are dingy, tawdry, and slovenly or unsanitary." Now we feel particularly guilty in allowing to appear in our paper any artist whose backgrounds are unsanitary. No one hereafter will draw anything for HARPER'S WEEKLY that does not show people who wear good clothes, are well nourished, good to their aunts, and live against perfectly sanitary backgrounds. The author picks out Mr. Bellows, for particular chastisement, saying: "They prove it by drawing a revolting bunch of cats and dogs prowling about some overturned garbage cans." He thinks that our artists ought to

depict courtesy in the subway and devotion to duty in the shops. We may or may not be able to find artists who will furnish us with a series of pictures depicting spiritual individuals carrying out the ten commandments, but whether or not we are able to make good on what is popularly known as idealism, we shall, unless we cool off later, post in the office a rule against the depiction of such horrible sights as dogs prowling in the early morning or men and women showing the follies of human nature. Down with satire, say we, and up with the valentine and the Christmas card. Hereafter, we promise to be good!

Pretty Women, Etc.

SOMETIMES it seems, from looking at newspapers and magazines, as if pretty women, wealth, and baseball were the only interests in our land of liberty that are universal. Let us realize, however, that improvement would consist, not in diminishing these interests, but in increasing others. What were the prevailing interests of Greece at her greatest period? They were wealth and other forms of success, athletics, and human beauty—between them and us the difference under the last head being that they were as much interested in the beauty of men as in the beauty of women. The picture of Jason is thus drawn by Pinder:

"So in the fullness of time he came, wielding two spears, a wondrous man; and the vesture that was on him was twofold, the garb of the Magnetes country close fitting to his splendid limbs; hut above he wore a leopard's skin to turn the hissing showers; nor were the bright locks of his hair shorn from him, hut over all his hack ran rippling down. Swiftly he went straight on, and took his stand, making trial of his dauntless soul, in the market-place when the multitude was full."

Obviously, today we write like that only about women. Socrates is emphatic about the pleasure it gives him to talk about living women rather than dead art. It was in the variety of their intellectual interests that the Athenian public differed from us, and in the distinction and seriousness with which it followed up its interests. Pericles said: "We provide plenty of means for men to refresh themselves from business. We have games and sacrifices throughout the year." The men refreshing themselves from business, however, went to the greatest tragedies written. The Greeks had nothing corresponding to our musical comedy.

If we want to approach in culture the city which, with less than 200,000 inhabitants, produced in one short period more great men of genius than the whole world has now, the way to do it is not to be scornful of the simple and universal interests, hut to fit those very interests into a scheme of life and a point of view that have not only energy but also proportion and refinement.

A Key-note

A CAREFUL READER of this WEEKLY suggests that the standpoint of the publication, the spirit it ought to recommend, almost its motto, should be found in these verses of

Euripides, in which one of the Greek gods is thus described:

"No grudge hath he of the great,
No scorn of the mean estate;
But to all that liveth his mind he giveth,
Griefless, immaculate;
Only to them that spurn
Joy, may his anger burn."

Would, indeed, our country might live up to that. And there are other splendid and superbly modern touches in the same chorus in the "Bacchus":

"A God of Heaven is he,
And born in majesty;
Yet hath he mirth in the joy of the Earth,
And he loveth constantly
Her who brings increase,
The Feeder of Children, Peace. . . .

Love then the Day and the Night;
Be glad of the Dark and the Light . . .
The simple nameless herd of humanity
Hath deeds and faith that are true enough for me!"

Thus nearly two thousand and four hundred years ago, centuries before the birth of Christ, were spoken words which have not been surpassed in fitness to the ideal which humanity endeavors to work out today,—the spirit of joy, combined with the love of men. Murray, whose translations have recently made the *soul* of Euripides accessible to millions, says of Herodotus that the charm of his work often seems to be mainly in a certain strong and kindly joyousness, persistent even amid his most horrifying stories, which must have been the spirit of Athens before it was strangled and supplanted by the spirit of the Peloponnesian war. Herodotus said, "It is clear, not alone in one thing, hut wherever you test it, *what a good thing is equality among men.*"

While a few of our journals, politicians, and investors are howling at President Wilson for a trivial war read this:

"Great Heaven, set both out plain, and all can tell
The False word from the True, and Ill from Well,
And how much Peace is better! Dear is Peace
To every Muse: she walks her ways and sees
No haunting Spirit of Judgment. Glad is she
With noise of happy children running free."

We Americans today may also heed what was said by Cleon, successor of Pericles: "Democracy cannot govern an empire,"—said when the spirit of conquest was destroying the spirit of democracy in Greece. Thucydides tells how war took away from Greece the higher motives, and frantic energy became the quality most prized. "Inferior characters succeeded best. The highest kinds of men were too thoughtful, and were swept aside." A striking feature of Euripides is that he puts many of his most nobly ethical lines in the mouths of women. Says Hecuba, in bitterness:

"There is no free man in all this world!
Slaves of possessions, slaves of fortune, hurled
This way and that. Or else the multitude
Hath hold on him: or laws of stone and wood
Constrain, and will not let him use the soul
Within him!"

Can that be bettered? And Euripides was driven from decaying Athens!

During rainy afternoons society finds diversion in auction bridge

Society You Read About

By HARRISON RHODES

Illustrated by Wallace Morgan

IT is not given to all of us to be "in society"—that indeed we may naively and modestly assume to be the essence of "society's" exclusiveness—but it is possible for all of us to know all about it. This privilege is freely extended to us by the newspapers. Their survey of "society" is so able and magnificent that it is sheer folly to attempt to secure first-hand knowledge. Indeed those who have at all penetrated those sacred regions and have returned in brief periods of social inactivity to enliven us who sit patiently outside the gates report that real "society" is much less glittering, passionate, and vile than newspaper "society". Who, in his senses, confronted with such a choice, could fail to prefer the richer picture from the editorial rooms? If "society" is not what the newspapers say it is—well, so much the worse for "society".

The first thing to be observed about "society" is what might be termed its prevalence. Now you and I have lived in Centerville—or at least we have visited our cousins there. We never thought there was anything like "society" in the town. Cousin Emma never had parties, but in any case she would have asked everyone she knew except the village idiot and the village drunkard. She didn't "dine out". She didn't divorce Cousin Elwell. But when she was in that railway accident going to Chi-

cago she was described in all the papers as a "society leader" of Centerville. It is just possible that if she had not had her hip injured we should never have known that she was a woman of fashion.

ONE of the most curious things about life, as one can learn about it from the newspapers, is that nothing much happens in this world except to people in society. To take a very obvious example, the simpler pleasures of the operation for appendicitis: a woman has no chance unless she has some social standing. If one is to judge by the papers, in the frame of a female without position the appendix remains permanently immured, beyond the reach of surgery. At least every woman whose visit to a hospital is noted is invariably described as a "society woman". In the matter of an automobile accident there is a curious and interesting exception—it may happen to a "show-girl". Otherwise the victim is always a "society woman" unless she is "wife or daughter of a millionaire", another class very much favored by the incidents and accidents of life, which, however, may be assumed to be synonymous with the society group. And divorces seem almost never applied for except by society women—whether the others don't want them or couldn't get them remains mysterious. Unconsciously our minds

become accustomed to this great newspaper view of life. Such a head-line for example as:

"**BAIL Denied to Society Woman Accused of Black-mail**" attracts no special attention from us. That is to say that we assume that anyone engaged in blackmail and consequently denied bail will be a society woman. This is the class for whom life is rich and melodramatic, lived fully and freely. Take the mere matter of murdering and being murdered (one of our leading sports to judge by the papers); these are activities from which women not in society are to all intents and purposes excluded. Who ever heard of a dismembered body dragged from a dark river which was not that of a young society woman? What unhappy husband, dying of a slow and subtle poison, is not thus paying the penalty for having married some bright ornament of the inner circle? What human culture ever succeeded in luring away, for the vile purposes of his slave-trade, anyone but a pure young "society girl"? It really does seem as if these people had all the luck.

Privileged as "society" people thus exclusively are, to enjoy the deeper and more poignant experiences of life, they are equally fortunate in its lighter and brighter happenings. So many things seem to happen merely that they may be "among those present". When, for example, an especially pleasant divorce case takes place, or Harry K. Thaw makes a peculiarly piquant appearance before a judge, it is interesting to note, invariably, in the papers that "in the court room were women prominent in the city's social life". Of course they were there, bless them; their presence seems indeed the only thing which gives the tired old world courage to go on.

The writer saw, last June, the international polo games on Long Island, and was interested not only in the matches, but in the diverse character of the twenty or thirty thousand who made up the attendance. He learned soon enough the folly of thinking or observing for himself. The newspapers headed their accounts, "Society Enjoys Polo" and he realized that this, after all, was what really mattered.

The phrase is characteristic; it is to be noted that "society" not merely *saw* the polo, it *enjoyed* it, as a matter of course. It enjoys everything, its life is evidently one continuous high sparkle. For example after a dismal day and night of bad weather in town you get your morning paper and find that the glad news has been flashed over the wires from Newport, "During rainy afternoon society finds diversion in auction bridge". Now when it rains in the country people not in society curse and revile the climate; then turn sullenly to the card table as a last hopeless resort and find very little diversion in it. Not so society; they have an inextinguishable *joie de vivre*, they take up auction on a bad afternoon with that high bright courage with which the aristocrats of the French Revolution faced the tumbrils.

EVERY little event in their lives seems to take on a golden charm. Sometimes for example you take up the paper and find that among those entertaining at dinner at the Ritz-Carlton last night were—perhaps Mr. and Mrs. James Brown of St. Louis. Their guests were the Misses Grace and Trixie Brown and Mr. and Mrs. Everard Skinner of New York (Mrs. Skinner was Miss Celeste Brown) and Master Fred Harcourt Brown. By this you know that the reporter knows that the James Browns are society people out there. If they had not been the whole thing would have been just a family dinner, no dinner-party, and there would have been no question whatever of "entertainment" involved.

The moment is perhaps appropriate for a personal reminiscence, for the anecdote of the one delightful though still inexplicable occasion when some newspaper

reporter evidently was under the impression that the writer was "in society". It was a January morning when he woke up and turning naturally at once to the society news read that "among those entertaining" the evening before at the Knickerbocker had been,—to his intense bewilderment and delight—himself. After a little he grew calmer and he could remember. He had been going to the play, quite alone. He had been late. At ten minutes before eight, he had ordered roast beef for one, fresh string beans, a Scotch high-ball and a small cup of coffee. The bill had been \$1.70 and he had tipped the waiter a quarter. At ten minutes past eight he had left for the theatre. These are the facts. But once he had been mistaken for a person in society everything of course became different. He was "among those entertaining" because society people are always either entertaining or being entertained. As a matter of fact, when you come to think of it, a man dining alone really combines very happily both functions; the writer now wished he could have read "Among those entertaining and being entertained was—"

A LIFE "in society" is evidently a thing quite apart from life anywhere else. For example one is constantly reading something like this, "Millionaire's daughter gives up society to become teacher". It is hard to understand. One might suppose that even a teacher would like to keep some of her old friends, could find an occasional evening to dine out, or to visit the opera or a play; that one, in short, could be "in society" and still exercise some slight personal choice as to which of its varied pleasures one would accept, instead of behaving like a python. But this is evidently not possible. A recent article ended with an absolutely heart-breaking description of such a "society girl" putting away forever the frocks she had worn "in society" and would never wear again in Brooklyn or Salina or wherever it was she was going to live. You cannot, in short, be in newspaper society and be like any human creature that ever was by sea or land.

What, in Heaven's name, to speak quite seriously, is the use of writing and printing such arrant nonsense? The point is not, in the least, that the people written about either as in or as out of society are misrepresented; that would really be of no very great importance. What is misrepresented is our national good sense and our American good taste. Is it or is it not true that the only fact which interests us in our fellow citizens is that they are "in society"? We are, of course, according to the papers, violently interested in them when they are rich, but this in the journalistic cosmos is the same thing as being fashionable. The morning papers tell us that at a ball on board an incoming trans-Atlantic liner the fortunes of "those present" amounted to a billion dollars. This may well be, but what of it? Is it true that we are so vulgar that this fact is what chiefly catches our attention about any set of ladies and gentlemen dancing? That a ball of such elegant size can exist upon a steamship is piquant; it is a bit of news which, without stirring anyone to the depths, may be presumed to please all. But just the sum total of their fortunes—!

SOCIETY does exist, there is no intention here of questioning that fact. But does it not exist side by side with, supplementary to, other activities? Is it not conceivable that the thrice-lucky people in it do not consider it the whole end and aim of life? And if so, is it not unwise to teach the great mass of newspaper readers that somewhere, in the golden midst of millions, there goes on this radiant sacrosanct existence, which, though led apparently by utter fools, is still the one thing which can give publicity and excite interest? If we are not all snobs, is it worth while to try so hard to make us so?

Bird for Governor

By FREDERICK T. FULLER

Charles Sumner Bird

UNLESS the foresight of a good many experienced politicians is at fault, Massachusetts is likely to elect in November a governor of a rare, if not a vanishing type, a candidate of whom it may be said without any tinge of the common office-seeking east that he is in the field against his own inclinations, simply because he has been forced to believe that in this way better than in any other he can contribute to the triumph of the fundamental principles of the Progressive program and that if he had refused to run no one else at present available could at all have made good his place. And it is certain that if elected Charles Sumner Bird will mainly owe his success neither to the strength of the Progressive party nor to the divisions in both opposing camps, but to the fact that, in his campaign, he convinced the rank and file of the voters not only of his disinterested sincerity but of his preeminent fitness for the highest office in the gift of the citizenship of the state.

I shall not soon forget Mr. Bird's debut as a campaign speaker in Tremont Temple, little more than a year ago. When as a friend and fellow-townsmen I was urging him, a few weeks before, to reconsider his first positive refusal to be a candidate, he pleaded his entire lack of experience and training as a public speaker, and I assured him that in my experience as a political reporter I had always noticed that plain, business-like talks, such as I had heard from him in town meetings, carried more weight and made more votes than the most eloquent efforts of trained special pleaders; and yet I confess that when he rose before that great and highly intelligent audience I was not wholly confident of the result. Certainly, the graces of oratory were seldom more conspicuously absent than on that occasion. Tall, gaunt and angular, closely tied to a manuscript from which

he read in a high, strained voice and with occasional difficulties of deciphering, Mr. Bird made use of but a single gesture—a stiffly up-pointing forefinger waved to and fro with more or less vigor as the requirements of emphasis appeared in demand—and gave other tokens of the physical discomfort of a tyro at public speaking. But I was delighted to see that the impression made on the audience by the evident sincerity of the speaker and the good sense and generous feeling of his address were strengthened rather than weakened by these technical defects. From several groups near me I heard such comments as: "That man is no politician! He means what he says, and knows what he is talking about!" And the heartiness of the applause which punctuated and followed his speech was so unmistakably genuine as to show that such was the common impression. In the following campaign Mr. Bird, speaking almost daily in audiences of all sorts and sizes, of course soon acquired the faculty of speaking freely without any close dependence on manuscript or notes; but he retained throughout what seems to me his chief political asset, the ability of impressing upon his hearers a conviction of his sincerity and earnestness and also of his sane and thorough mastery of the topics in hand.

IT was an instance of Mr. Bird's generosity to those in his employ that first aroused my interest in him. It was in 1906, soon after I came to live in Walpole. A near neighbor of mine, a young man who had worked up through the mechanical department of the Bird mill and had become a draughtsman at a comfortable salary, was working after office hours one day when an important machine became disabled. The mechanic in charge of the machine had gone home. As my friend had formerly worked in this de-

partment he volunteered to put the mechanism in running order. In doing so his right hand was caught in the gears and so mangled that his forearm had to be amputated. Mr. Bird was away at the time, but on his return telephoned to learn the extent of the injury. When told that the right arm was gone he said: "Tell Ralph that it is his brain and not his arm that I have been paying for, and that his job is all right just the same."

AS to the loyalty of Mr. Bird's employees there is indeed no manner of doubt, and such instances as I have mentioned have of course a good deal to do with it. Any one of his older workmen will eagerly cite to you parallel cases showing that this put-yourself-in-his-place attitude is not an occasional impulse but a matter of habit. Here is another instance. A couple of years ago, to test the applicability to his industry of the new theories of "scientific management," Mr. Bird put an efficiency expert in temporary command of certain departments, with full powers as to employment and discharge. A week or so later he happened to meet, leaving the yard at an unusual hour, an old man who for many years had been one of the lower grade of helpers about the mill. Mr. Bird asked where the old man was going. "The efficiency shark has bounced me," said the poor old fellow. The "shark," explained, and proved that the discharged man was entirely unable to fit into the new scheme or give a fair return for his wages. It was impossible, of course, to override the expert's authority; but Mr. Bird directed that the old man be given some simple work in the factory and placed upon his—Mr. Bird's—private pay-roll.

BUT the enthusiastic loyalty of Mr. Bird's employees appears to rest less on these individual instances of generous consideration than upon the whole tenor of his treatment of those in his employ. It is not too much to say that, from the moment when he established his business upon a firm and prosperous footing, his constant aim has been to share the benefits of prosperity with his employees as fully and as rapidly as the exigencies of business competition would permit. Speaking to him one day of Socialism, I said that the Socialists of my acquaintance could have no quarrel with millionaires such as he, who have accumulated wealth by the creation and introduction of a product of real economic value, but only with the great fortunes that are due to inheritance, unearned increments, speculation, or predatory activities and represent no fair equivalent of service or helpful activity on the part of their possessors.

"Ah, but," he said, "I often doubt whether I have not received more than my fair share of the rewards of our industry!"

Impelled, no doubt, in part, by this unusual scruple, Mr. Bird a dozen years ago, when all his competitors were operating their mills on two daily shifts of twelve hours each, changed over to three shifts of eight hours without reducing the wages of his town-workers, an incident unique, so far as I have ever heard, in the history of competitive history. He has also voluntarily reduced the hours of his em-

workers from ten to nine, and has granted the Saturday half-holiday, all without reduction of pay—in refreshing contrast to the course of such concerns as the American Woolen Company, which, after a dozen years of enormous profits, deducted two-fifty-sixths of the meagre contents of the operatives' pay envelopes when the legislature reduced the hours of labor from 56 to 54 a week. Among the many other evidences of his sincere desire to "pass prosperity around"—long before the birth of the new party slogan—may be mentioned his fixing for his unskilled men workers a minimum wage of \$1.75 a day, his liberal financial aid to a mutual benefit association of his employees, his provision of a free hall, reading-room and pleasure grounds for their use, and an arrangement by which the employees who hire his trunks may become home-owners after paying a moderate rental for a certain number of years.

IN view of all these facts it is not surprising that, although Mr. Bird is a firm friend of trade unionism and would gladly see his employees organized, they have never considered it to their advantage to become so; nor that Mr. Bird himself is convinced that not compulsory arbitration but the removal of just grounds for complaint is the true remedy for labor troubles and the one reliable specific against industrial revolution. And yet all that he has done is regarded by him as little more than tentative in solving the problem of a just distribution of the rewards of labor. When a suggestion was made last winter by influential Democrats in the legislature (a suggestion also welcomed by some independent Republicans, that if he would allow the use of his name he would very probably be chosen to succeed Senator Crane by the addition of enough anti-Weeks Republicans to the solid Democratic vote to control the joint convention, the chief reason he gave me for positively refusing his consent was that if such a scheme should succeed and he be obliged to spend his time in Washington for six or more years it would be impossible for him to carry out his cherished plan of devoting his declining years to devising and working out some profit-sharing or cooperative arrangement under which the Bird mills might reasonably be expected to continue as a great and growing benefit to the operatives and to the whole community when he can no longer direct its affairs.

ALTHOUGH Mr. Bird has had neither leisure nor inclination for politics or office-seeking he has always taken a keen interest in town affairs, and his fellow-townsmen have many permanent reminders of his public spirit. For several years he accepted the office of superintendent of highways, and besides devoting much of his own time to their supervision employed at his own expense a civil engineer as his deputy, supplied improved road-making machinery free of cost to the town, and drew freely on his own bank account to supplement insufficient appropriations. The charming village of Walpole Center owes much of its attractiveness to the expense incurred by him in beautifying the village green, and the transformation of the extensive high-school grounds from unsightliness to beauty is largely due to his generosity also. The unobtrusiveness of all these and many similar contributions to the common good is highly characteristic

of the man—there is nothing to show that they are due to the generosity of a private giver.

MANY other New England towns have in recent years been beautified by private munificence, but unhappily often there is a drawback which must largely lessen the satisfaction of both giver and receiver, who can hardly avoid the occasional reflection that but for the ever-present offence of tax-dodging there would be no lack of public funds for these and other public purposes. Were it not for the almost universal habit of our men of wealth—excused but hardly justified by the alleged injustice of our tax laws—of evading assessment upon a large part of their personal property, a habit, which I fear, has tainted the integrity of more than one former governor of Massachusetts, it would be almost an insult to enumerate among Mr. Bird's good points the fact that he is no tax-dodger! How old-fashioned his ideas are on this subject may be gathered from the following anecdote, vouched for by one of the Walpole assessors. For a number of years the assessors, after the manner of their tribe in many a country town, had been extremely lenient in their dealings with the larger tax-payers, especially on the score of personal property. Certain fellows of the baser sort, instigated by some demagogue who made them believe that whatever tax legally due from a rich man was evaded by him and had to be made good, directly or indirectly, by his poorer neighbors, raised a rumpus in town meeting and put in a brand-new board of assessors, who thereupon sent to all the tax-payers a circular telling them that personal property was taxable and asking for full returns. Mr. Bird sent for one of the assessors, went over the list with him, and told him that he had supposed many of the items not to be subject to taxation. With the assessor's aid, he made out a return increasing his assessment some \$85,000; and thereafter supplied the assessors, year by year, with vouchers showing the cost of every new piece of machinery and all other facts and figures likely to help them in making his assessment complete.

ENOUGH has perhaps been said to explain why Mr. Bird's fellow-townsmen, who up to last year have been not very unevenly divided between the two old parties, though with a slight preponderance of Republican voters, gave him last year 548 votes against 144 for Foss and 95 for Walker; but other qualities than justice, generosity and conspicuous business ability are needed to account for the personal affection which he almost always inspires in those who come for any length of time into more than ordinary intimate relations. He is not an effusive man. Many years of the side direction of an extensive business and the absolute command of many subordinates have given him self-reliance, the habit of swift decision, and a full command of the means of terminating an interview which is wasting valuable time. Because of this his manner often seems on first acquaintance somewhat cold and repellent, an impression that is apt to be confirmed by the rather stern and severe cast of his features in repose. But on closer acquaintance one instinctively feels that this seeming austerity, like the protective coloring of some plants and animals, is external only and the natural reaction against a strenuous

environment; and that the real man is revealed by the frank and cordial smile which now and then transfigures his face like a burst of sunshine on a wintry day.

I would not willingly make this sketch a flattering one, and would conclude it if I could with some allusion to offsetting shortcomings and faults; but I confess that I know of none that can fairly be cited as an imperfection in his public or private relations as a citizen, a man of business, a relative or a friend. Mr. Bird himself says that his friends are too fond of him to judge him fairly; and it may be that even my brief acquaintance has cast over me some uncanny spell. Certainly he seems to me a *rara avis* among the politicians that I have known and studied for the last forty years, and more like than any other to the political idol of my boyhood, Abraham Lincoln, in his simple tastes, crystalline sincerity, dislike of ostentation, and self-forgetting devotion to that long-dreamed-of but never yet realized form of government which shall "break every yoke and let the oppressed go free."

MR. BIRD'S election, if he is elected, will mean much to the outlook of the Progressive party in the state and nation, but very little in the way of any striking change in the trend of legislation, the administration of the public business or the enforcement of the many salutary laws which have long been a dead letter because distasteful to powerful business interests or inconvenient to the operation of the old party machines: for, as he is already partly aware but will I think still more fully realize if actually in office, a web has been woven around the chair of the "chief executive" that renders its occupant little better than a figure-head. All the important functions of the executive office are either vested in independently elected officials, whose subordinate place on the ballot makes the nominee of the dominant party organization ordinarily sure of success, or confided to irresponsible commissions whose majority control the governor could not change in one year, even if his ostensible power of appointment were not made nugatory by the veto of an irresponsible and intensely partisan executive council. Furthermore the executive office is overwhelmed by an avalanche of routine duties either trivial in their nature or wrongly assigned—hundreds of subordinate appointments that should be made by heads of departments or by the courts, and the examination of hundreds of individual salary increases or other petty or special statutes which waste the time of the legislature also—to such an extent that the most conscientious and hard-working governor has little leisure for the study of important questions of State. Fortunately Mr. Bird, thanks to an iron constitution and a life-long fidelity to simple and abstemious habits, is at the age of fifty-eight in the prime of his physical and mental powers, and can endure without apparent distress an amount of sustained effort that was the wonder and envy of his associates in last year's campaign. Still the fact remains that even superhuman industry and endurance could accomplish but little under such hampered conditions; and perhaps the most to be hoped under the circumstances is that as governor he may find some time, and a little better viewpoint than that of a private citizen, to study our frame of government, and may gain a wider influence in persuading the voters to amend it.

A Corner on Sadie

A story of social adventure in a Western University

By HELEN STARR

Illustrated by Henry Raleigh

"An argument was certainly going on"

I LIVE in New York where the women of the State have not yet presented the Indies with the vote, but I wonder if the fair sex is not pretty much mixed up in politics anyway. For example, today I patched up a fuss in the Ladies' Aid Society. I counted ten dozen apocryphs before accusing the cook of something I was sure of and gave a dinner in honor of a man from Detroit who knows the future of oil in Texas. A day of political maneuvering when I wanted to embroider!

Made me think back six years to rushing season at college—that two weeks of furious entertaining and string pulling each fall when we vied with the Kappa Kappas, the Gemmas and a dozen other sororities for a few paltry freshmen.

Letters came from alumnae, men with sweethearts from their home town and sisters of our last year's beaux telling us so and so was a wonderful girl and ought to be asked to join Rappa because she was our "type."

There were many factors to be reckoned with in rushing. It took some head work to counteract such diverting influences as the new tennis court behind the Kalfa Fee house, the presence of the daughter of the State's governor in the Gemma house and the cook at the Zelta house who could turn out French pastry at a minute's notice. Some freshmen were strong for a studios atmosphere, others wanted a butterfly existence—we had to study each case and figure out an individual system of capture.

The year of the Sadie episode was my fourth at Langford.

Sorority house cleaning was on when I arrived. The Fashion Aid, the show

piece of our crowd and the last word in tugboat the campus was mopping suds over the library window, Carrie Cupid was chasing cobwebs with a couple of Suphas, and the Owl, whose parents had failed to recognize her gum-shoe possibilities when they gave her the inappropriate Christian name of Mary, acted as job boss.

Bated breath is the natural order in rushing season and everybody had ideas. "It's going to be a big season," "The White Hope from Pasadena is coming to college," "The Kalfa Fees caught a good girl asleep last year. If they are real foxy they may get two this year," and "Who wouldn't join our crowd and be a Rappa?" permeated the air.

I was just thinking of some thousands of people who weren't Rappas and who were still philosophical when I saw Half-Mile Jones, my last year's steady, ambling past and went out on the porch to look at the cut of his suit in the back and be sure I had no regrets.

THE Doormat walked briskly up the drive to our house and leaped up the steps two at a time. Some collegian in sour-grape frenzy had dubbed him the Rappa Doormat—all because he had been our firm made ally during the past six years of his elongated student career. He was so infinitely good-natured and supremely indifferent to the jibes of the other men that before his first year of Rappa devotion was out cumbered cowed him and tried to arouse a heart interest in our sorority themselves.

Tradition had come down that the Doormat was engaged to a girl "back home." At college his interest centered in Rappa en masse and he always took our less facially fortunate sisters to parties in regular turn, never slighting, never loving, in more than twenty Rappa hearts at the same time. His concern in the fall rushing was as keen as our own for two reasons.

The Doormat was a born financier, for hadn't his crowd the finest chandeliers in college—all scrolls, opal glass and beads, and bought because the Doormat had conceived the idea of starting a house furnishing bank to be filled by the half dollar fines of fellows who swore at table? He had pulled more classes and clubs out of the mire of debt than any man in the school and although the members of the Y. M. C. A. knew he was not pure in heart they had been forced to make him treasurer because he was the only man who could look another in the eye and make him dig up dues without a whimper.

The Doormat's most successful financial venture from a personal standpoint was the stock market. Each fall he skillfully looked over the freshie field and conducted a betting pool among the "studies" as to which sorority each girl would join. Of course the faculty had their suspicions but they couldn't be sure.

The work of the Doormat required a deep intuition, a knowledge of all the back issues of Nick Carter, lots of all-round good-fellow stuff and an utter disregard of the classroom. The Doormat had an organized force of window peepers, shadowers and sorority house waiters whose daily reports of news gave him great pecuniary advantage. He had the "goat" of the college and had cleaned up big pools each year by picking the winners, putting his money on them for Rappa and then skillfully helping us to engineer them into our sorority.

Carrie Cupid came up from the girls' dorm and handed me the evening mail. From a pile of last year's laundry bills I extricated a letter from Bess Cushman—an alumna from a nearby city.

"LOOK up Sadie Sears," I read. "Her best friend is Snake Eyes Brown in the Kalfa Fee house but Rappa may be able to get her away. Sadie's a power. That's all I can say. Lovingly in the bonds, Bess."

Snake Eyes Brown! She was the strongest member under our rival roof up the street—a tall, dark girl with slanting eyes and a cunning underhand way of grasping a freshman in the mood for scandalmongering and delivering a series of knocks about our reputation.

As I pressed my lavender muslin I wondered why Bess hadn't mentioned any of Sadie's assets. When old Rappas wanted us to rush a girl they usually wrote, "Her father is president of so and so, has good summer resort home for summer rushing, two motor cars, yacht, gets Turkish rugs at cost which would help furnish the library, etc.—" Not a word of this about Sadie. When I went down on the porch again the Doormat said she came from a small town and that her people had never done anything out of the ordinary.

The landlady at Sadie's boarding-house said she was out but that we could sit in her domicile and wait until she came back. Her bureau scarf and silver were of a country department store order. We had a good chance to get a line on her photos and her clothes were only separated from us by a piece of flowered cretonne so we glanced them over and they were just plain—not bad taste, but little style and no dash.

Just when we were beginning to hate Bess for writing us to waste time on anything so commonplace Snake Eyes Brown and Sadie Sears came in together. Brown gave a sour smile but squeezed an introduction out of her system and sat down with a stay-all-afternoon expression.

SADIE sat down and didn't apologize for her room as though it wasn't the plainest in school. She was rather plain looking too and slight in figure, but her best feature was a couple of large gray eyes that looked out from long lashes in old fashion, and dark hair, wavy at the front and dressed simply. She didn't try in the least to make an impression and wasn't talkative but answered our "How-do-you-like-college-life" line of stuff with fair intelligence. If Snake Eyes Brown hadn't kissed her with such affection when she at last went I don't think we would

even have asked her over to the house to meet the rest of the crowd. At any rate she'd remember an impressive evening at the Rappas house in later years!

That night the united sorority, wearing our best clothes and our social airs on the outside, gathered below stairs to greet the new freshies. From long experience with looking over the new fall material I mentally picked ten freshies in the room whom I thought most advisable for future concentration. The other Rappas agreed with my choice but we hadn't counted on one thing!

Sadie Sears came in late. The Owl and myself were camped on each arm of a chair in which a pretty curly-haired darling sat and gurgled about doings at Cata-

We cultivated Sadie and asked her for more dates. She had already given her best hours to Snake Eyes for the Kalfa Fees and some to the Gemmas and smaller crowds. We took what we could get.

The Doormat was over early the next morning to get a line on the girls we liked best. I gave him a list of the ten with Sadie's name too, and told him we planned to rush them for the remainder of the two weeks.

"Same girls the Kalfa Fees and Gemmas have chosen," he noted.

"Betting started already?"

"Yes. Dope sheet's down in the back room of the barber shop. The Kalfa Fees have all the bets so far."

for us on the sheet consisted mostly of his own money with Touchdown's and a few other friends of years' standing, and that we were vulgarly far down the list. We couldn't stand that—to have every man over at the barber-shop secretly laughing at Rappas's position. We must discover Sadie's hobby and begin the intimate stuff.

Perhaps she was a little sad or homesick, so I whispered to one of the Scops. "Jolly things up—just a little rough stuff and see if Sears takes to it." The girls were live as young kittens and somebody started playing on "Helen Blazes." Our time-worn pinnoforte. The Juniors chased each other around the library table playfully. Sadie smiled with bore-

"Are we to lose every freshman we want?" the younger girls moaned

lina Island. She fairly leaped from her place as Sadie entered. "Dear Sadie, you in college? We must live in the same place!"

THE ten chosen freshmen repeated the same performance and before five minutes had passed they had all made arrangements to move over to Sadie's boarding-house the next morning. Our girls were flabbergasted and the Owl gave me a knowing look and got it from the Los Angeles cherub that they knew her at the summer resort the year before and adored her.

We hadn't planned to waste much precious time on Sadie Sears but the hint gave me the idea we had better give her a little service. We twanged Hawaiian eucalypses, turned the lights low and sang softly. We had always prided ourselves on the attractiveness of the girls in our crowd and ordinarily it would have been some impressive evening; but that night Sadie was the center of interest and our habitual sang-froid, our cats and our pretty house lost what magnetism they once possessed. The freshmen children fairly clung around Sadie and grasped and swung on her every word.

A LINE of girls moved across the campus in the distance carrying bundles and boxes. The Doormat pointed to them.

"That's the reason."

"Faculty at home?" I asked, puzzled, and watching the procession.

"No, the ten freshies are moving over to Sadie Sears' boarding-house! The Kalfa Fees have more dates with Sadie than any other crowd—which means something."

"Do you mean she'd influence the ten freshies to join any crowd she said?"

"That's the pretty wise opinion," he answered, launching his corduroys.

For five years we had only lost four girls to the Kalfa Fees and three to the Gemmas. If we lost the whole eleven girls I'd leave college rather than let Snake Eyes Brown rub it in all year!

"I'll take Sadie canoeing mornings," the Doormat offered condescendingly. That was truly unselfish, I thought, for his time meant rousing more bets in rushing season.

SADIE still retained an air of aloofness and indifference with us that was exasperating. The Doormat said the bets

dom. The Fashion Aid talked about the new clothes with no result.

Suddenly she turned to me with a look of intense interest. "May I take a nap?" An earthquake couldn't have given me more of a shock. We had had freshies in the past ask us to have green ice-cream, to borrow rouge or a petticoat pattern or even take a bath when the dorm water was cold, but never in the history of the sorority had we had requests for sleep.

The girls gave her the Fashion Aid's "home beautiful" room and we gathered below on the porch.

"She's plain queer," the Owl announced. "I think the only way we'll make an impression is to lead it to a man."

Everyone nodded, for the way Half-Mile Jones had been courting Sadie proved the Kalfa Fees were using this method and their bets climbed ever higher, leaving us almost out of the gambling race.

"Touchdown and the Doormat have been with her a lot already," the Owl went on, "but they don't count!" At that time I agreed. "It's got to be the best looking man on the campus."

I saw Carrie Capid quiver and look scared for everyone agreed her devoted

beau was the leading male beauty of the college. In an age of the high cost of thrills it was a blow, but Carrie Cupid had seen the sacrifice made before and knew it had to be.

WE planned a dance. Nathan's dancing was superb. Sometimes I ponder concerning the future of his career when the dancing days are over; but the outlook is too unpleasant. Just then he was supreme. His glides were masterful, his curves sure, and the slanting softness of his eyes and the fine line of his physique made one remember that little quirk about the strength of the weak. His Corliss-Coon head always dipped a little in mothering fashion and every third curve he held his partner a few inches away and looked straight into her eyes. We were certain even Sadie would be impressed by that.

The doorbell rang and the Doormat arrived. Every freckle was alight with news.

"Sadie's got a brother here in school," he announced.

"You ought to have him over to something—it would have to be mild for he plays baseball on the scrub and is awful afraid of hurting his batting eye."

So we asked him to the dance and the next day we cut classes and got ready for it. The Owl sank into a deep chair in her room all day and concentrated on the best way to impress Sadie. She said thinking was more important than anything else. The rest of us painted cards, hung smilax and rubbed flowers until it was time to pin on our smugness.

I was quite enthused over the prospect of our new plan with Nathan and the hope of leaving news from Sadie's brother.

The dance began and all the prominent men in college from the captain of football to the stroke of the crew came in one by one. The Doormat navigated Sadie Sears's brother down the receiving line. He was a stocky, red-checked youth whose dress suit hunched at the shoulders with evident baseball muscle. He was tremendously impressed by being asked to our house and made the comment that he had seen our girls on the campus lots of times but had shunned society. The Owl heavily volunteered to dance the first dance with him, but getting into difficulties before they got from the parlor into the hall she told him she would rather hear about baseball, so they sat it out. We goosed and chirped over him by turns all evening and gave him the Fashion Aid for his supper dance, but the sister hadn't given him her confidence and we had no news.

Nathan took the majority of Sadie's dances. Carrie Cupid took one look at him during the first dance and shot upstairs to her room with dewy lashes. I wanted to go and ease her feelings but there were too many political moves going on below. During an encore I heard Doormat squabbling with Nathan over a dance. I concluded his pride was hurt because Sadie had been passed over to a Greek God.

THINGS were just going fine when the orchestra rose and packed up. The faculty rule said twelve. However, as Sadie and Nathan were talking under the rubber plant, the Fashion Aid slipped over to the piano-stool to play a few more dances, but Bixby of the faculty phoned to tell us he knew we had not stopped our party even if he did live four blocks away!

It gave me hope to see the Doormat the next day on corners, in the book store or

down by the law library making little figures on a card and talking with deep conviction. The news of Nathan's attention at our dance had raised the bets on our side for Sadie and the ten. Never had the Doormat rounded in such numbers of betters before. In years past serious-minded debaters and Greek majors had shunned the chance to turn quick fortunes so excitingly held out by the ring-leader, but this year the whole college, even the Jap students, were up to the margin of last month's hills. The stock list was read before coffee and the 8.15 or the day was not judiciously begun. "Brother" was being patronized by all the politicians in college and asked out socially everywhere.

We only had one more date with Sadie before the "hidding" and as I walked through the moonlight I gave her a line of talk on how grand it is to be a college woman. I tried to make the "Good-night" deep and impressive.

On the way home I met Nathan with Touchdown Smith.

"Betting's awful high tonight," said Touchdown with excitement. "There's a perfect mob down at the barber-shop."

"Let me go down and peck in," I proposed.

"It's no place for you," argued Touchdown with authority. Being a woman I pleaded. "This is my last year in college and if I don't see betting this time I never shall."

"We might let her peck through the back window," Nathan suggested. At that we trotted across the dark campus toward the tonsorial parlors. A half-drawn shade gave us the place we wanted. About twenty men, the leading political and social lights of our college community, were gathered inside, the large betting sheet prominently displayed on the wall. Bottles and soap were piled in the back-ground and the barber with his black waxed moustache stood listening to the talk with reverence for these learned youths. An argument was certainly going on. I had never thought the Doormat really concited before but he sat there and bragged about getting the "goat" of the college on those two girls from Denver last year. Just then Half-Mile Jones came in the front door and heard the line of talk. He said real sarcastically, "Have the Happs or one of the smaller crowds a chance with Sadie Sears?"

HE called us a smaller crowd," I whispered, indignantly.

"No," answered the Doormat awful wise, "because I have a new bet."

"Well, out with it," several voices called.

"I'll bet Sadie doesn't go any crowd at all!"

Everybody hollered. One of the Doormat's frat brothers edged over toward him. "Are you crazy?" he said.

"No; follow my bet and you'll make money," the Doormat whispered.

"A girl of no particular family or money being rushed by every crowd in college and turn them down?" somebody argued. "Not this year!"

The Doormat looked stern and marked down a space for the new bet. They couldn't crowd their money over fast enough and the place became a seething stock market in a greedy attempt to take up the new bet before the Doormat changed his mind. The racket was awful and just as the Doormat had everything to suit his new whim Prexy came from the astronomy tower and stepped quickly into the shop.

"Report to me in my office in fifteen minutes," he ordered, pointing to the Doormat and two or three others near him.

"Oh, if he's fired from college we'll certainly lose Sadie and the ten!" I wailed despondently.

"Haven't you got me?" asked Nathan, squaring his shoulders. I guess I looked quite as sick as I felt. How Nathan's beauty paled beside the convulsions of the Doormat's brain.

"Let's go down to Prexy's office and see what we can find out." Touchdown suggested, so we slowly followed the little group of culprits. Prexy's office was on the second floor, the waiting room below. We hung far in the open windows of the latter. The Doormat, Lefty Shark, and Mig were inside, pending investigation concerning the "disgraceful betting on the young ladies whom they should honor and respect." The men sat on a long bench and the Doormat was dealing out a pack of cards as they waited the summons to go above. It was always rumored that the Doormat's head for figures and natural poker bluff had materially assisted his father's waning business career. The Doormat wore a cheerful grin befitting the excitement of a crisis and as he saw us he sang softly, "Oh, why the deuce does college keep when students are so busy?"

"Aren't you afraid they'll fire you?" I asked.

"Not a chance in the world," he responded, cheerfully. "We've got a fine line of excuses hatched up."

JUST then the president of the Y. M. C. A. came out of the darkness behind us and approached the door. I smelled danger and waved to the Doormat who swept the cards up into his sleeve with one hand. The youth entered the room and handed a letter to the Doormat.

"I heard you were over here and I thought you'd like to see this."

The Doormat whistled. "Bill due—\$400!"

"Prexy has already seen it," said the Y. M., as he went out in a spirit of true humility.

The Doormat turned to us. "Now of course this bill for the new gym apparatus would come just this minute. It's in the pool. I staked the whole thing on my new bet and can't check out till next week!"

Prexy's secretary came to call the boys and we vacated. It was a good two hours before the Doormat came up the steps to our group on the Rappa porch.

"Out for good," he announced.

"And now?" I asked.

"I'll go over to the Maple Valley Hotel in the next town and hang around. Can't stay within two miles of the campus."

"I don't know what will become of rushing with you gone," I said appealingly. "Oh, why did you make that crazy bet and start a noise?" He offered no explanation and didn't even look sad over the thought of leaving college and the betting possibilities. That night I slept fitfully, dreaming of roulette wheels and wheat pits.

The next day the Kalfa Fries, Snake Eye Brown, and Half-Mile Jones were smiling all over the campus at our loss of the Doormat, and the money on Kalfa Fries swelled in proportion. We had only one more date with Sadie—dinner that night. I was having the black blues anyway, when she phoned to say she didn't feel well and couldn't come. To cap the climax the other ten phoned excuses and we actually saw them going to

dinner at other houses on the campus. Our united sorority were livid with rage and to a girl mounted to their rooms, donned the sacred bath robes and green eye shades as in exam. time.

"Are we to lose every freshman we want?" the younger girls moaned.

"I'll never get Nathan away from Sadie," Carrie Cupid wailed. They sat huddled in my room on the couch and floor like a lot of cold sheep. I paced the floor till I could gather my wits together.

"We'll find out where Sadie is to-night. If she's at the Kalfa Fee house she probably intends to join that crowd and take the ten kids with her."

THE Owl rang up every house on the campus, said she was long distance operator and had a message for Miss Sears from her father. The girl wasn't to be found. We tried the same stunt at her boarding-house, the women's club-house; the ice-cream saloon and a few other impossible places with no luck.

"If the Doormat were only here," the girls repeated.

The station agent from the depot phoned. "Miss Sears dropped her hat-pin when she got on the train to go to the city," he drawled. So she was up in Frisco but who with? Half-Mile Jones? We must find out. I phoned wildly for Nathan.

"Yes, I'll get Touchdown and we'll find her if we can," he answered. We paced the floor half the night. The Owl studied calculus to relieve her mind. At twelve a phone call came from Nathan.

"They're eating oysters together," he stated pleasantly. I marvelled at the incongruity between Nathan's beauty and his gray matter.

"Who's eating oysters?" I fairly yelled. That beauty-deep slogan was a wise one.

"Why, Sadie and the Doormat," came across the wire. I breathed again and heard the united sorority sigh as they saw my change of expression. He went on.

"We sneaked into Tate's, saw them sitting there laughing, so got out without speaking to them. Depend on the Doormat. He'll make her join Rappa."

Carrie grasped the receiver from my hand and used up two dollars' worth of long distance cooing to Nathan. We all went to bed believing our luck was changing.

The next morning, according to an old custom, all the sororities on the campus mailed invitations to the freshmen asking them to join their particular crowd.

The freshmen girls were to answer their invitations in person at seven that evening by coming to the chosen sorority house. At six-thirty we were flat on our stomachs before the parlor windows and had the shades raised a half inch. Great crowds of men stood up and down the street talking excitedly. The men feared the Doormat's financial faculties, yet common sense told them Sadie would join some crowd and so they bet against him, hoping to turn the table on him this year if never again.

We saw "brother's" clumsy figure swaggering about among the groups, despised, yet tolerated for his possibilities of stock-market knowledge and respect for his sister's sweep of popularity. Half-Mile Jones couldn't help bragging of a coming victory for the Kalfa Fees and Touchdown Smith and Nathan stood in front of the crowd anxiously peering up and down the street. How the Doormat would have reveled in all this! I could imagine him elbowing the doorposts of the Maple Valley Hotel in his desire to be here.

WE had dropped the first week going toward their chosen sorority houses. Behind we saw a group of ten—the ten we wanted so much. I counted them over and over but there were only ten. Was Sadie there? We burst buttons straining to see if they went up the Gemma walk but they passed it by. I could picture a crowd of fainting hearts behind the Gemma shades.

The freshmen hung their heads in embarrassment before the seething mass of men. Prexy would have had to fire the whole student body if he tried to break up this custom.

With mischief on their faces they passed our house, turned, came back and ran up our steps. We rose and dashed to the door with the mob outside howling in pleasure and disappointment, as per the direction of recent bets.

No Sadie in the throng! We clasped the other children and pinned on their pledge pins. "Where is she?" we asked. The freshmen looked no wiser.

"Not at the house when we left, although we talked it all over last night and she advised us this was the only crowd to join."

WE could hear the mob outside shouting. "Sadie Sears!" I looked out and saw a diminutive telegraph messenger trying to make a path under their elbows. He fairly crawled to our porch and rang the bell. I reached for the message with fearful gaze. I read:

"Sadie and I just married. Best wishes and good luck with the ten freshmen."

The Doormat.

I dropped the message on the porch and fled into the house. The mob crowded toward it and as the word was passed from mouth to mouth I heard the Doormat's name taken in vain. His bet was founded on an inside tip—that Sadie wasn't going to join any crowd at all! Again he had the goat of the college. Doormat had a corner on Sadie for life and the bets would buy the house and lot and a parlor rug!

We distinctly heard Half-Mile Jones say, "Go home, go down into the basement and shoot yourself, Jones." Politics ar'n't in it with a rushing season.

Carrie Cupid looked radiant when she heard the news and took Nathan's next proposal in earnest, so we had to stand an engaged couple about the house the rest of the year!

The Thé Dansant

By CHARLES HANSON TOWNE

WHEN I saw them whirling and twirling
In the golden afternoon;
When I heard the loud band playing
Its reckless, shameless tune;

When I saw their painted faces
Drifting wildly by,
I too forgot the glory
Of the wonderful Spring sky.

Outside, the world was singing
Its marvelous old song;
I thought of scented woodlands
Far from this maddened throng;

I thought of the great Silence
More eloquent than sound,
Of the music in the meadows,
The gospel of the ground.

And I thought, How can they dance here,
In the golden afternoon,
When the earth is wild with rapture,
And Spring will vanish soon?

The scented air—I loathed it,
As the dancers hurried by. . . .
I looked through a little window
At the stillness of the sky.

Then suddenly the music
Ended in one loud flare, . . .
The dancers turned to their goblets—
I turned to drink God's air.

Tim Sullivan's Power

By
ROY
CRANDALL

FOR thirteen days the body of Timothy "Dry Dollar" Sullivan, best known and most beloved of Tammany leaders, lay unidentified in the Fordham Morgue and narrowly escaped interment in Potter's Field. Yet many think that the "Big Fellow" was loved by more men, women and children than any other individual in America; and that he did more, by direct gift, to bring happiness to more people than any other single man in the land; he relieved more distress; fed more who were hungry; clothed more who were naked; buried more who had died; and paid the fees for the weddings of more couples who desired matrimony than any other individual.

He was the King of the Bowery, the most powerful boss, bar alone the leader of Tammany Hall in New York City, and he held undisputed sway for many years over the largest polyglot legion of voters this, or any other country can produce. Practically six hundred thousand men, women, and children believed as "Dry Dollar" wanted them to believe and the voting strength of the great eastern section of lower New York believed it to be the part of their religion to vote as he would that they should vote. Through a score of campaigns his word was the will of all; he sent his lieutenants throughout nine Assembly districts to whisper the words: "The Big Fellow wants Tom So-and-So to be elected this year." That was enough. And on the night prior to the election the Big Fellow would appear in person at a mass-meeting and expound the principles of the campaign. And again that was enough. The votes rolled in; the majority was what he wished it to be.

GRAFT there was to a certainty; crime there was in plenty. Sullivan shared in one and aided or benefited through the other. When the political battles were hottest and votes were needed, criminals were employed to see that the votes were secured; repeaters were shipped by trainloads from Philadelphia; housed in the lodging-houses along the Bowery and, on the day of the election they voted; not only, but often, and they voted as "Dry Dollar" wanted them to vote. He made possible those criminal viola-

tions of the election laws and he and his clan profited from them. He profited from gambling, and money flowed into his hands in an unending stream. But he spent freely. As one man said, "To see 'Dry Dollar' playing poker one would think that money was worth ten cents a pound and that he had tons of it."

As has been said he politically ruled nearly six hundred thousand men, women, and children. And he didn't rule them with a rod of iron. He ruled through love and kindness and a prodigal generosity. Murphy rules today through the power of his great organization and through the power that organization gives him. Men obey him because they must obey or sink into political nothingness. No man loves Murphy, ever did or ever will. No more did any man ever love Croker. The present boss of the Hall is a cold, silent man—a shrewd, cold, calculating machine with a marvelous grasp on affairs and a most thorough understanding of the weakness of human nature. Croker was even colder. He was a dominating Czar. He ruled through fear. No man dared place himself in opposition to the will of Croker and hope to escape punishment or political ruin.

NOT so with Timothy Sullivan. Power he had, and power he could wield, but the power that kept him where he was for many years was obtained through the affectionate regard of the legion of lowly ones who looked up to him as a sort of demi-god. He was their idol; their hope of success. He secured positions for thousands and thus commanded their loyalty, but for thousands who had no positions he did much. Though his power came through the loving regard of his subjects his political acumen worked ever in conjunction with his warm heart, to the end that he could continue in power. To that end he made the people love him. Some may say that he was wicked so to do, especially as he used for base political purposes, the affections thus created, but the people who were placed back in tenement houses after landlords had dispossessed them probably never stopped to discuss the ethics of the case, nor the ulterior motive of the man who had given them a sheltering roof, fuel and food. When the

youthful swain from the sweat shop wanted to marry and had no funds Sullivan paid the fee to the Rabbi and sent presents to the bride and groom. Did the bridegroom stop to ponder on the uprightness of political problems when a ward captain whispered to him the fact that "The Big Fellow" wanted him to vote for his friend?

No man ever lived with sufficient intellect to play that sort of politics day after day, and year after year unless his heart was in it. And that's why Sullivan made so profound a success of the system. He made men and women love him and do his bidding because he loved his fellow-man and because he was willing to do all that he could to redress the pitiful conditions of the poor and the unfortunate. Crime didn't seem to impress him as unusual and it is not recorded that he ever took any advanced steps to stamp crime out; but poverty and hunger he did deplore and he spent vast sums of money to relieve both.

THERE was a wonderful system maintained for years by Senator Sullivan's lieutenants for the relief of the lowly and the suffering ones of the Bowery and of the adjacent and contiguous streets. Four attorneys were on call at any time of the day or night to take up the troubles of any tenant who had been dispossessed for non-payment of rent. And in the slums of New York there are thousands of such cases each year. The rent for a miserable room in a squalid tenement, scarce fit to stable a horse, is overdue. The pale-faced, tubercular toiler who calls that miserable stall his home is unable to pay, and in the dead of Winter, and maybe in the night, deputy-sheriffs throw the miserable scraps of furniture into the street and drive the family after them. It was an important part of Senator Sullivan's life plan—call it political foresight or call it kindness as you will—to have all such cases instantly reported to his ward captains, to the end that a home be at once secured for the dispossessed family and that lawyers in the Sullivan pay investigate the case and force restitution if an injustice were done—as in many cases there had been.

Well do I recall a visit I made with the late Florence Sullivan, a cousin of the

deceased "Big Fellow," to a room in the Bowery, which more than all other things, proved to me the far-seeing, almost ironic political wisdom of the man whose remains were followed to the grave the other day by nearly one hundred thousand men, women and children. This was a Jewish Synagogue, and here was the reason for its existence: Sullivan was Irish. In the early days the Bowery was Irish. But, within the past twenty years the Jews from Russia and Poland have been coming in. The Jews are a clanish lot and along the Bowery they have settled in enormous numbers. Also where are large numbers of men there votes are to be found and in the ballot box a Jewish vote weighs as much as does that cast by an Irishman. Sullivan wanted votes in the ballot box and he was too far-seeing a politician to quarrel with any race or any faction to his own political undoing.

IN this room in the Bowery, some tough young Irishmen maintained a clubroom. That clubroom was the festering spot. It made crooks, thieves and ruffians. The membership was in excess of one hundred and that membership was largely Irish. Ergo, the Jews in the neighborhood suffered from assaults and insults. The club members, in coming and going from the room, thought it fine sport to seize the ancient Jews by their flowing beards and haul them about the street; to punch the younger ones who were as yet heedless, and to insult the Jewish girls. Word was brought to Senator Sullivan. He caused one of his shrewd lieutenants to look into the matter. Then he sent word to many of the leading Jewish men in the neighborhood that he would see that they were no longer molested by the members of that club. He sent police to arrest the club members until the club was fairly shattered. Then he caused the landlord to drive them from the premises. Then he rented the rooms himself and sent furnishers to have it entirely refitted as a fine branch synagogue. That done he gave it to the scores of thousands of Jews in that vicinity as a place of worship. "Florry" Sullivan had succeeded Martin Engel as district leader at the time and a few who were ignorant of the real state of affairs thought that Florry was the donor of that synagogue and the political gainer. The plan was the plan of Big Tim and Florry gained because Tim allowed him to gain and only to the extent that vicegerent gains as his ruler gains. Florry ruled simply because Tim willed that he should and his rule was ever under a stronger ruler from whom he drew inspiration and direction.

THE driving out of the men who formed that club solidified the Jewish vote for Sullivan and it did not lose for him a single Irish vote, for the men he drove from their rooms were ruffians who dared not revolt against his rule. They would be found at the election district voting places on the following election working for the Tammany ticket; especially for that in which Tim was interested because the very livelihood of such men depended upon the good will of The Big Fellow, and they knew that he would place no stones in their pathway as long as they did the things that he wished done. The law-abiding men of the race, of course, had no sympathy for them. The crooks, down-and-out, might be thugs or thieves, short-card gamblers or even gun-men, but they were all units to be handled for the general betterment

of the political fortunes of the clan of Sullivan and their shortcomings made them in nowise unavailable. In fact, in many instances their criminal shortcomings were assets; now and then desperate men were needed to carry an election district that was being especially assailed by the Reformers who frequently made unavailing efforts to find a crevice in the citadel of Tammany supremacy—the lower East Side wherein Sullivan and his underlings ruled. In such instance, it has been charged, obliging authorities at Blackwell's Island and even, it is said, at Sing Sing, have temporarily released efficient political black-legs or sling-shot artists who were needed by the Senator for the holding together of his forces. In needful and stormy times some of these prison birds have been promptly sworn in as deputy sheriffs, and with the badge of authority pinned to their coat lapels, and the revolver and "spring billy" of officialdom in their hip pockets have worked all day at the polls along the Bowery and in the election districts of the lower East side Assembly districts; voting occasionally when the voting was good, and preventing many from voting who were suspected of a desire to vote against the supreme will of the political Caesar.

ALSO, such as they were of great usefulness on those occasions when it was needful that the Bowery pile up a big plurality; when in fact, New York wanted to "go to the Bronx with 165,000." In the good old days that were bad, it was sometimes needful to bring to New York more criminal voters than it housed. The slum section of Philadelphia was drawn on in such instances. Train-loads of Pennsylvania repeaters have been brought to New York a day or so before election on more than one occasion; packed into the low lodging-houses of the section and on election day brought forth and voted in the names of dead men, and of men who had moved from the city, and of men who were in prison. The claim was made that when William Randolph Hearst vainly sought to elect one of his editors, Max Hansen, sheriff against Tom Foley, the life-long friend of the deceased Bowery king, there were Philadelphia repeaters in plenty sent from the hotbed of Pennsylvania's rascality and that they voted with right good-will and with appreciable effect on the Foley plurality. But they weren't needed. Also it is remembered that one lowly follower of Sullivan raised a laugh that day by voicing the following hit of philosophy, the foresight embraced within it having been credited to Big Tim.

"Dry Dollar would be sore if he saw that bunch," said this political Jack Cade. "They're all smooth-faced."

"Well, can't a smooth-faced guy vote as well as one with blazes?" sneered a listener.

"Vote just as well, one't," was the answer; "but one vote lets him out, if the inspectors are inclined to make trouble. Dry Dollar said once that when you were getting repeaters in the district always get guys with whiskers. When you've voted 'em with their whiskers on you take 'em to a barber and scrape off the chin-fringe. Then you vote 'em again with side blazes and a moustache. Then to a barber again, off comes the siders and you vote 'em a third time with the moustache. If that ain't enough and the box can stand a few more ballots clean off the moustache and vote 'em plain face. That makes every one of 'em good for four votes."

NO MAN will ever say for certain whether that bit of political forethought originally emanated from the lips of the late Senator-Congressman, but those who know him best would have laughed with joy at the utterance had they heard him make it, and by the token, would have promptly searched the slums for purchasable voters equipped with beards like the late Senator Peffer of Kansas, for the merest Sullivan suggestion along political lines was like an edict. It was instantly set into operation and the voicing of the wish was the beginning of its accomplishment.

Sullivan was the idol of every prize-fighter in the land; the patron saint of every keeper of stuss games; the king of gamblers himself and the harker and good-wisher of others. And he profited from gambling though those who fastened from his political good-will maintain that no money paid for police protection by the keeper of a gambling house ever reached his hands. But politicians who merely looked up to him as the great leader of the pack were free with the statement that at one time 250 poolrooms flourished in New York, paying from \$60 to \$500 a week for the privilege of carrying on business unmolested and that not one dared even open its doors for an instant without first "seeing Tim."

Sullivan ruled for more than two decades in a vast territory infested with a legion of criminals who needed political protection that they might practise their criminality with the least possible percentage of danger. That he leaves an estate of only two-and-one-half million dollars is convincing evidence of the generosity of the man's nature for he could have had that much a year had he been as dollar hungry as many. Five other prominent men in The Hall well recall one instance which proves that statement. It was on the Sullivan special en route to the St. Louis Convention which sought to make Alton B. Parker President of the United States, despite the wishes of most of the Democrats in New York State and half of those in the Democratic solid South. Sullivan, with the five others, was playing poker. There were no chips and money was being used. A twenty dollar jack-pot came. Five twenty-dollar bills were on the table. Palpably one man was "shy."

"SOMEBODY slipped," said one of the players. "Wan't me! That bill on the side of the table was put in by Dry Dollar. I was the second man in." But none would admit that he was the thoughtless one. There was a protracted argument which the smiling Senator suddenly brought to a startling end. He reached out, took the five twenty dollar bills, and tearing them into bits tossed them nonchalantly out of the window of the whizzing train.

"There, boys, that puts a stop to all argument," he said, as he tossed another twenty on the case; "let's all put in again and there can't be any misunderstanding."

Sullivan has been known to fill his coat pockets with two- and five-dollar bills preliminary to a stroll on the Bowery, the two pocket loads comprising \$2500, and of passing it out within the radius of eight blocks from the Occidental Hotel.

And for all such reasons sincere tears of sorrow were shed by that bereaved army of a hundred thousand who followed him to the grave.

TURN UP

Safety in Railroads

By WILLIAM H. DEARDEN

IT is safer to ride in the subway or on the elevated road of an American city than it is to spend the same time in one's own home. Fast subway and elevated trains carry millions of passengers without a collision, while the interstate commerce commission keeps a corps of inspectors busy investigating smash-ups on steam railroads. If the motorman fails to notice danger ahead in the subway, the sure arm of a watchful machine reaches out to put on the brakes. The motorman and the automatic train-stop, working together, have abolished collisions. On the steam railroad the engineer has been given no such co-worker.

Most people do not know yet what automatic train-stops are. When they do know, then will come the demand.

"Impractical for steam railroads," "not perfected," have been the answers of railroad officials, with much reason until very recently. A very few railroads today are investigating the idea with the evident hope of adopting this modern protection against collision. A few more are investigating with much show of enthusiasm. Most railroads are doing nothing, or attending to those more pressing demands of patrons.

In simple terms, an automatic train-stop is a mechanical device which will shut off the power of an engine and put on the train brakes, whenever the engineer fails to obey a caution or a danger signal. Together with the device goes some system of caution and danger signals which will give ample warning of a train ahead. On most of the elevated systems, the boxy part of the automatic train-stop is a little T shaped steel, called a ramp, that ordinarily lies down between the rails, but when there is danger ahead turns up high enough to strike a lever on the bottom of the first car. This lever in turn will stop the train, if the motorman fails to do so. On steam railroads an automatic train-stop system will not be so simple, but it will work to the same purpose.

THE automatic train-stop, it will be seen, is an advance over automatic block signals. The old method of operating trains on railroads was to control their running by orders to the crews from a train dispatcher. The block signal system came along, with more or less automatic signals at regular intervals along the track, to inform an engineer definitely as to whether or not the track ahead was clear. The automatic train stop is intended to make it certain that the train does not proceed if the track ahead is not clear.

Commissioner McChord has shown the succession of ideas, in discussing the history of ten years of investigating accidents by inspectors of the commission. These reports on accidents on railroads operating trains under the train order system, he says, "quickly brought into prominence the weakness of the personal equation in railroading, showing that by far the greater number of these harrowing train accidents were due to human error. Dispatchers give wrong orders, or fail to give orders where they are required; operators fail to copy orders correctly, or do not deliver orders that should be delivered; conductors and engineers misread, misinterpret, overlook or forget orders."

THE block system, Commissioner McChord points out, is a great improvement over the train-order system, eliminating a great many causes of accident, but he continues, "Notwithstanding the theoretical merits of the block system as a means of safety, it by no means insures immunity from collisions. Obviously, the block system can only afford protection when its danger warnings are observed and obeyed. The intensity of attention and quickness of perception required of engineers on our modern, high-speed trains leads to the result that they sometimes fail to observe or obey signal indications, and when this happens, disastrous consequences are almost sure to follow."

"Noting these disasters due to human error, under the most highly approved system of train operation, the question naturally suggested itself, 'Is it not possible to employ mechanical means that will automatically assume control of a train and bring it to a stop whenever a danger signal is for any reason disregarded?'"

THE Block Signal and Train Control board appointed by the interstate commerce commission studied devices of this kind for six years. Two years ago they declared "there are several types of apparatus and methods of application, which, if put into use by the railroads, would quickly develop to a degree of efficiency adequate to meet all reasonable demands. In many situations, under conditions existing in this country, the board is convinced that the use of automatic train stops is necessary to the safety of trains."

In its concluding report a year ago the board reiterated its confidence in automatic stops, and even more definitely expressed its opinion that workable devices were available.

The series of wrecks on the New York, New Haven and Hartford railroad have been leading the interstate commerce commission, with Mr. McChord usually as spokesman, to take a constantly stronger position in favor of automatic train-stops. After the Westport wreck of October 3, 1912, the commission said, "Railroads ought to unitedly experiment with the automatic train-stop until a device of practicality for general use shall be available."

In its report on the recent Wallingford wreck, the interstate commerce commission did not go so far as to call again for automatic stops on this system, finding more immediate causes for blame in lack of effective supervision and in the failure to install block signals, which naturally would precede any installation of automatic stops. Yet a hint of a future movement by the commission for the new device is given in the announcement that the commission intends to ask Congress for the right to order railroads to adopt such methods and devices as the commission thinks are required for safe operation.

The New Haven road has the unique distinction of doing more passenger business than freight business, in money returns, and as a consequence its operating conditions are nearer those of a subway or elevated system than almost any other railroad in the country. The logic of the situation, to the commission, is that railroads which have congested lines should

be the first to adopt automatic stops, and that experience should determine how far the system ought to be applied to railroads of different operating conditions.

THE recent Wallingford wreck, it is true, is as much a lesson for block signals as it is for automatic train stops. Under the block system an engineer will receive a caution signal long before he reaches a danger signal, or will receive a danger signal in ample time to stop his train. In that wreck the old system of signals used on that section of the railroad did not give a danger signal to the engineer of the White Mountain train until he was almost on the Bar Harbor train. Block signals, if he had obeyed them, would have caused him to stop in ample time. Automatic train-stops, however, would have forced him to stop in ample time whether he was giving attention or not.

The most striking illustration of the need for some system of automatic train-stops, however, is not the wrecks on the New Haven, but the wreck on the modernized Pennsylvania railroad, at Tyrone, Pa., on July 30, a wreck in which not a passenger was killed, owing solely to the fact that cars were of the latest all-steel construction. One engineer was killed, however, and a great many passengers and employees injured.

Train 13, running at 45 miles an hour, ran into the rear of Train 15 which was standing still at a passenger station, throwing the cars about helter-skelter. On the engine of Train 13 was riding Assistant-Road-Foreman-of-Engines Miller, whose duty it was to ride with various engineers and see to it that they operated their trains properly and according to rules. His presence on the engine was for the very purpose, among other things, of insuring observance of signals by the engineer. On Train 13 at the time were riding a number of officials of the railroad in charge of the signal system. The road was fully equipped with the most modern automatic block signals, in perfect working order.

UNDER these extraordinary conditions, the engineer of Train 13 passed, without slowing up at all, a caution signal of the block system, almost a mile before he came on Train 13. Still farther along, the engineer passed a danger signal, which ordered him to stop, and which still left him enough track to stop his train fully before he came on Train 15. At a distance of 1130 feet beyond this stop signal, his engine crashed into the rear of Train 15.

"This accident," says H. W. Belnap, chief inspector of safety appliances for the interstate commerce commission, "again calls attention to the necessity for some form of automatic train-stopping device. The signals installed at this point were of the most modern type, the signal system was very complete, and there seems to be no question that the signals operated properly. The engineer of Train 13 was a man of long experience; the fireman had been in the employ of this company as a fireman for about eleven years and his record was good; and the assistant foreman of road engines was riding on the engine. Yet all three of these experienced men

failed to observe a caution signal indication, the engineman failed to obey a danger signal indication, and the accident resulted.

"A consideration of accidents of this character which have occurred within the past two years leads inevitably to the conclusion that even the most complete and modern system of fixed signals is not adequate under all circumstances to insure the safe operation of trains."

IN contrast with this is the fact that in eight years the New York subway carried 1,554,510,822 passengers without a death due to train accident, and did this with trains operating less than two minutes apart, carrying more than two thirds of these passengers at speeds of 40 to 50 miles an hour. The sole credit for this is not due of course to automatic train-stops, but without that device no such safety would have been achieved.

An enthusiast for automatic train-stops, member of a firm which has a device of this character, whose testimony must be considered accordingly, told a convention of electrical railroad engineers last winter that 64.8 per cent of all the train accidents in the United States from July 1, 1908, to Jan. 1, 1913, would have been prevented by a complete signal system. The 361 accidents preventable he divided as follows: open switch, 38; disregarding danger signal, 46; disregarding caution signal, 6; head-on collision due to neglect of orders by crew, 97; due to neglect by operator, 48; to error of dispatcher, 14; rear end collision due to negligence of flagman, 38; excessive speed, 13; broken rail, 19; derailment due to excessive speed, 29; dead engineman, 1; unknown, 10.

It is true that if all the railroad directors tomorrow ordered automatic train-stops, and were able to raise the money to meet the enormous cost, they could not be installed immediately. Most railroad engineers do not agree that the systems are perfected as yet.

THERE are other objections raised by the railroads to the installation of automatic train-stops besides the one of mechanical imperfection. The one given most prominence is that automatic train-stops would tend to make an engineman an automaton, careless of his responsibilities, as expressed by D. F. Jorgensen of the Minnesota railroads that the burden will simply be shifted from the enginemen to the track maintainers and the equipment maintainers. But Paul Winsor, chief engineer of the M., P. & R. I., points out that most of the automatic train-stop systems have attachments which make it known to the superiors whenever an engineman fails to stop the train himself, and the device steps in to do it for him. The Boston elevated, he says, has found no disposition on the part of its motormen to let the automatic stop do their work, or to fail to report any failures of the system.

Many railroad men believe that the only way to prevent wrecks is to enforce better discipline among the men. "Safety first," the new slogan of most American railroads, is accomplishing a great deal of good.

President George F. Baer of the Reading has recently said, "By discipline—firm, unyielding discipline—alone, can railroad wrecks be averted. I do not believe in all-steel cars. I think the half-steel cars are the safest. But steel cars will not prevent wrecks. Discipline alone can do that."

THAT probably applied to the New Haven wrecks. But the Tyronewreck shows that even when the most earnest efforts are made to insure obedience to orders and safe operation, the human element may still fail. The lesson of the Tyronewreck is to have all the discipline that President Baer calls for, and something more in addition.

A. G. Shaver, signal engineer of the Rock Island lines, is of the opinion that automatic stops would come into operation to prevent collisions in only rare instances, while the loss of life from other causes on railroads, especially the killing of trespassers, is a much more immediate problem, and that efforts should be exerted to treat the other causes first.

The question of expense is a very important one at this time when the railroads feel that they are handicapped by increased wages and increased cost of materials without increased freight rates. Automatic train-stops not only would be expensive to install, but would be expensive to maintain.

The difference between operating trains in a subway or on an elevated structure and operating trains in the open country, is very great. Weather conditions alone are very different. Automatic train-stops in a subway are not disabled by snow or rain or ice, and on elevated lines can easily be protected from the elements. In the open country weather conditions will be severe on any such automatic system. Then the subway or elevated track is always protected from trespassers of all sorts, while the steam railroad not only has trespassers who may interfere, but has grade crossings, yards, etc., where the system would be in constant danger. One essential point of a successful automatic train-stop has killed most of the aspiring devices. That is, that if any part of the whole device breaks or gets out of order at any time, the train-stop will thereby automatically go into action and stop the next train coming along.

OF the investigations by railroads into the subject, those of the New Haven have attracted the most attention, though other railroads have unquestionably gone into the question more earnestly and probably at more expense than the New Haven is at present assuming. After the Westport accident of October, 1912, President Mellen publicly offered \$10,000 for the use of a successful automatic train-stop. The fact that a successful system will mean hundreds of thousands of dollars and possibly millions to its owners made the \$10,000 offer sound questionable at that time, and later some remarks by President Mellen made the earnestness of the company still more doubtful. In March he announced the number of letters and devices received by the company and went out of his way to say, "The competitors represent nearly every walk of life from clergymen to jailbirds. Four of them are now in jail and an equal number are inmates of insane asylums."

Under the new management the New Haven is proceeding with its investigations, presumably with earnestness and good faith. Altogether 3816 persons entered the competition and 704 devices were submitted, a time allowance being given the other competitors in which to file their plans. No one of the devices, it is said, meets with the first requirement that the removal or the failure of any part must result in fixing a stop signal, yet it is agreed that some of the devices very likely can be altered to meet that requirement. Two devices, those

of the International Switch Company and of the Union Switch and Signal Company, are to be tested on the division between Hartford and Newington. Incidentally, both of these devices were seeking recognition of railroads before the \$10,000 offer was made.

A canvass by the Railway Age Gazette this spring showed that automatic train-stops are now in use on the Boston elevated, Hudson and Manhattan Interborough, Long Island, Pennsylvania (on the electrified line through the Hudson tunnel, etc.), Philadelphia elevated, San Francisco, Oakland and San José, and the Washington Power Company, these uses practically all being on subway or elevated lines or similar operating conditions. The Great Western Railway of England has a very similar device, depending upon audible signals at the engineman's ear in the cab, in use on parts of its lines. The Erie had stops on some of its line which it has replaced by block signals. The Maryland and Pennsylvania has the Jones system in use in and near Baltimore, a system in which shoes on the engine come in contact with so-called contact rails at various places, and the control operated by electricity.

Experiments were then in progress on the Canadian Pacific, C., B. & Q., Chicago and Eastern Illinois, Interborough, New York Central, Pennsylvania, Staten Island rapid transit and the Millers system was about ready for extended tests on the Chicago and Eastern. A number of other roads had recently conducted experiments, the number of roads more or less actively interested amounting to 26 all told. The Delaware & Hudson has been testing the Federal system, an audible system, which causes a series of torpedoes to explode if the engineman does not obey signals. The D. & W. has been trying the International system, which operates by ramps, and also the Federal and the Union Switch systems. The Gray-Thurber, the Siemens cab signal, the Wooding contact rail system, the Patterson induction system, and the Safety Block Signal system are among the other devices which have been submitted by inventors and promoters to the railroads and are undergoing tests.

THE need for automatic stops has not been recognized to any extent in England, but the audible cab signal used by the Great Western gives signs of advancing rapidly there. This is not a completely automatic system, for it does not actually put on the brakes, simply operating to compel the engineer to do it or to listen to loud protests and see a record against him marked on a card for his superiors to see later.

Just at present much attention is being given in England to the trial of the Prentice system on the London and South Western. This system has a wire following the track and a current collector on the engine, electric current from the wire along the track being caught by wireless, or more exactly, by induction, in the engine apparatus, so that the caution and danger signals along the track can be made to operate the brakes on the engine.

The real demand now is that the railroads make it their business, either unitedly or individually, but preferably together, to take all the existing systems and work out a successful device if they cannot find any single one to be satisfactory. Some of the big companies are evidently sincerely trying. Most of them are just waiting. A vigorous public demand back of Commissioner McChord will bring this great protection into early use.

Flying Ten Thousand Miles

Part III

By CLAUDE GRAHAME-WHITE

TODAY, when men learn to fly, they go to organized schools and are taught methodically—as they might be taught to drive a car. This tends to safety, and the benefit of their pockets; but they miss the thrill of the pioneer—of him who, with neither system nor safeguard, took out his craft at dawn, and did deeds—and broke wood—while others slept.

Then we were the supermen, pursued by cameras and making history hour by hour; and no recollection is printed sharper in my mind than of one winter morning four years ago at Issy, when, alone save for the aid of a novice, I took out for trial the fastest plane of its day.

For three months prior to the escapade, I had been working daily in the factory of M. Blériot, aiding skilled craftsmen in the building of this, my own machine and seeking to learn the constructor's art. I had ordered a monoplane of a new type, and, as it was my very first machine, I was athirst to take the air, and driven nearly frantic by delay. But at last one day, too late for an immediate test, it was delivered; and so I arranged with a friend who had been acting with me as a factory hand, that we drive next morning to the flying ground, and make the practical acquaintance of the craft we had helped to build.

Concerning this machine, much might be written. M. Blériot, planning a speed craft, had built the first of its type for that memorable Rheims meeting of 1909; and, seeing the monoplane in contest, I had contracted to buy it when the races were at an end. But the fates willed otherwise: at high speed in the air, with M. Blériot in control, the machine burst suddenly into flames, and fell from a height of one

hundred feet. We thought the airman dead, but he escaped with burns and bruises. The monoplane, however, was reduced to cinders, and I had no machine in view. Whereupon M. Blériot, declaring he would put a sister craft in hand, promised me this in place of the first; and it was the second machine, which we named "White Eagle," that now stood waiting for us at Issy. At that time, in view of its 80 h. p. motor, it was regarded with a mingling of admiration and of awe. In the first monoplanes he built, M. Blériot had been content with three-cylinder engines, developing 25 h. p., and it was a drastic step from these to the eight-cylinder monster I had seen fitted to my machine. Speed was the aim of this leap in power, also greater weight-lifting; ordinary Blériots did not carry a passenger, but mine should do so easily. As to how fast the machine would prove in flight, few ventured to predict, but there was a suggestive raising of eyebrows, accompanied by suitable exclamation.

WE, the two would-be airmen, had intended to sleep, and rise betimes, but we were too excited to go to bed, and at 2 A. M.,—hours before it would be light enough to fly—we motored to the aerodrome and awaited the coming of the dawn. As soon as there was light enough to see, we burned to wheel the machine from its shed; but M. Blériot's mechanics, their ardor blunted by broken rest, and with little in prospect save exercise and the likely breaking of a machine, were in no great haste to arrive. We walked about and waited till beyond the hour fixed; then endurance gave way, and we dragged the monoplane forth.

In the gathering light, certainly, it

appeared formidable and we waited again for our sleepy mechanics; but although the morning was perfect, with practically no wind, not one of them appeared. Then it was that we decided to test that machine ourselves.

A FIRST problem was this—how to start the motor without men to restrain the machine? When its propeller revolves, a craft darts forward, and if it is not gripped by the tail it will leap into the air—as one did, without a rider, at this very Issy ground, ending its wavering flight in a crash. One man's weight upon our machine, even that of two, would have been insufficient; what, then, was to be done? The sight of some rope, lying within the shed, gave us our idea. We hitched the monoplane, like a restive horse, to a fence that stood nearby; then my friend stationed himself by the ropes while I, standing at the front of the machine, swung the propeller to start the engine. It fired at once—and I fell on my back. We had forgotten in our hurry to take up the slack of the rope, and the monoplane, springing forward a foot or so, had knocked me over. I jumped up and sprang to the driver's seat, which in this machine was placed beneath the planes; and at the same time my friend, after freeing the restraining rope, managed to scramble in beside me before the machine could gather speed. The motor, for which I had due respect, was throttled down, and we ran across the aerodrome on the ground. In the language of flight this first process is now known as "rolling", or "taxying"; and a machine is prepared for the pupil, so that it will rush to and fro at a gratifying speed, but never under any inducement seek the air. Ours,

though, was hardly one of these. Nearly a mile we sped, our pace increasing; then, from out of the morning mist, loomed disconcertingly a boundary wall. Turning, even on the ground, is no trivial matter for a novice; and though I slowed down instantly, and did frantic rudder work, a collision with this wall threatened a prompt end to our career.

"Jump out and hold the tail," I shouted to my friend—no child's play, by the way, remembering our speed to be twenty miles an hour. But it was the only thing I could think of.

SOMEHOW or other he did scramble clear, our extremity giving him a cat-like skill, and then, sliding and slipping and gripping the tail, he brought us to a halt just under the wall, and scarcely more than a foot from its surface.

Duly chastened by so narrow an escape, we manoeuvred cautiously for the next quarter of an hour—passing here and there across the aerodrome, and growing more familiar both with our sensations and with speed.

Then, just after we had circled at one end of the ground and were beginning to run back again, I called to my friend: "I'm going to try a flight this time." He merely nodded his head and held on tight—ready, in his enthusiasm, to trust himself even to me.

So I accelerated the big motor, which roared out fiercely; and our pace leapt to sixty miles an hour—a wild wind-rush beating against us. And then, very gingerly, I made the movement of the controlling lever, which would raise our elevating plane.

FOR a moment or so, I am sure, we did not realize we were in the air. No change was perceptible, save that the slight swaying and humping, which we felt when traversing the ground, had ceased abruptly. Then I gave a glance down; the surface of the aerodrome lay thirty feet below!

Since then, on many flights, I have found myself thousands of feet high; but never, from the moment of that first swift leap from mother earth, have I felt again such exultation. Fast as an express train we rushed through the air; and then, in some way or other—candidly I cannot say how—I managed to make a landing safely and we were slowing down at the end of the ground. Just a "hop"—in the vernacular of the flying school—was all we had made, but it was one that has lived in my mind, and no other flight will eclipse it.

We turned, flew again, and landed safely; then "hopped" back towards the sheds. But now we were no longer alone. Our mechanics appeared through the mist, and with them—hoping perhaps to chronicle something lurid in the way of a wreck—came pressmen and photographers. In their journey, all the same, was not in vain. Our lonely combat with that 80 h. p. plane had in it material for a "story," and so next day in the Paris press they made us famous.

THE humor that attends aviation, and there is plenty, may be found mainly where novices congregate; happenings

at the schools are often most ludicrous. Picture the aspirant who, despite many warnings, fitted to his machine a motor of 180 h. p. and—when released for a tentative wobble across the aerodrome—shot violently into the air and flew nearly a mile, himself unwilling, in the driver's seat, but for the moment helpless. When, recovering from a temporary paralysis of surprise, he fumbled for the switch and stopped his motor, he alighted pell-mell but without mishap, enjoying that proverbial luck of the novice—such luck as will allow the most awkward of pupils, when in a dilemma, to steer with breath-taking accuracy between two trees, his wing-tips brushing branches upon either hand.

The motor which took charge, and ran away with its pilot, reminds me of another predicament, quite as disconcerting. Descending from a flight with his engine in motion, and running towards the sheds, a pilot reached for his switch as he neared them and moved it to cut off his power. But nothing happened; the switch was

added intensity to the cold. At forty miles an hour and unshielded in my machine, as pilots were in those days, I soon became numb—despite the protection of a wool-lined suit. Changing hands on the control-lever enabled me to retain the use of my fingers; but when above Bletchley railway station, some fifty miles from London, I found a wave of faintness began to steal over me. Such sensations, when steering aeroplanes, constitute a peril; and—but for a piece of forethought—I should have been obliged to plane down. In the outside breast-pocket of my flying suit had been placed, with the stopper already removed, a flask of brandy; and this, with my free hand, I was able to extract. A nip of spirit, followed by the chewing of some chocolate, just tided me over the threatened collapse, and I was able to fly on. Nowadays, builders of aeroplanes are becoming solicitous for the steerman's well-being, and we have machines with seat wind-screens and effectively shielded

bodies. Latest-type craft have, indeed, the ease of a touring car; and so will progress march from one comfort to the next until we have the first of these passenger craft which, operated commercially and according to schedule, will fly daily between the capitals of Europe.

NOT over-large, but seating perhaps twenty or twenty-five people, these machines will—by the very swiftness of their non-stop flights—revolutionize our notions both of distance and of time.

Occasionally one sees a man unlit for flight, as he would be for driving a car, or controlling any mechanism. He may be reckless, or criminally careless; but he goes to prove no rule. That ordinary men can fly is shown daily, at the schools, where hundreds of pupils—quick and slow, clumsy and adept—are taught without accident; and as the art moves to perfection, and machines are more stable, piloting will become as simple as the handling of a cycle-

car. Then we shall have flying clubs, and the world will take to the air. The production of small, cheap machines, which can be flown with safety, should be a question of time. As yet, aeroplanes waste power, but this is a passing phase. Progress in design will spell economy, as it has done with the motor-car; and then the aerial tourist need not be a man of wealth.

out of order, the engine ran on, and he found himself rushing upon the sheds—where a crowd stood waiting. Decoding the results of a dash among the people, he averted upon one side; then, voluntarily charging a bank to the amazement of his friends—who had no idea his motor was out of hand—he wrecked his machine completely, but himself escaped unhurt.

AN experience as awkward, and even more curious, was that of an English airman, when flying in bitter cold. Intending to land, he bent forward to stop his engine; but his fingers had become so numb that they refused to turn the switch; and so he was forced to circle several times, beating his fingers against his body, before he could restore to them either sensation or movement.

My worst experience of cold when in the air—and the bite of it is paralyzing in the early hours—was on the first of my London to Manchester flights.

I ascended just after 5 o'clock on a morning when there had been a hard, white frost; and a chill easterly wind

WE cannot standardize craft as yet, but we are building them of steel, and risk of breakage is being eliminated. Thus precision, ousting rule-of-thumb, turns designers' thoughts to a machine, big, mechanically sound, and of high speed—which shall do battle with a gale. To prophesy that something should happen, within the possible confines of one's own life, shows questionable judgment; but one prediction I shall risk, and it is this: that, before twenty-five years have passed, aircraft will be passing between England and America at a speed of two hundred miles an hour.

The fourth and last of this series of articles by Claude Grahame-Smith will appear in the next number.

He, who, with neither system nor safeguard, took out his craft at dawn and did deeds.

How Murphy Works

I.—In Albany

By EDMUND R. TERRY

Member of the New York Assembly in 1911 from the First District of Kings

MY first experience as an assemblyman was as a member of the Democratic minority in 1908. The minority in the legislature has little of legislative responsibility and there is little or no cracking of the whip, except at times when the independent spirits among the majority are raising a ruction; and I could not but observe how the old organization men in my own party rallied to the assistance of the Regulars on the other side of the House on such occasions. During the sessions of 1909 and 1910, I was not a member. The latter year I did not take the nomination. In the fall of 1910, indications seemed to point to the election of a Democratic assembly, and I took the nomination, for I was curious to see what my experience would be as a second year man. I was elected and my party was, as I had expected, in the majority and I had my experiences,—they were varied and instructive.

They began even before election. In my speech of acceptance, I explained to my constituents the nature and duties of an assemblyman, as I understood them, and it was evident from the manner of the leader of my assembly district, that his conception of the functions of an assemblyman were radically different from mine. I may say, that those differences became more and more marked during the succeeding months. After election my education in government by organization continued.

THERE was a United States senator to be elected by the legislature of which I had become a member. From my studies of the constitution, I had supposed that it devolved upon the members of the legislature to determine who should represent the people of the Empire State in the most important legislative body in the world. As time went on, I observed that Mr. Murphy's opinion as to who was to hold that office was given great weight, and that the opinion of other leaders also received great consideration, but I nowhere noticed any attention paid to the opinions of the members of the legislature. I know my opinion was not asked. It seemed to be regarded as a negligible matter.

At the club one night, in the latter part of December, speaking with Mayor Gaynor and one or two others on various political topics, I ventured to bring up the matter of the election of a United States senator. He voiced what I had found to be a prevailing opinion. "Why," he said, "what is the use of talking about that? They will make up their minds whom they want, and you will vote for him." But I said, "Mr. Mayor, you may have noticed that a good many Democrats have been elected to this coming assembly, that are out of the ordinary run of assemblymen, coming as they do from doubtful districts, where the party had to put its best men forward." "Well, what of that," he said. "Why," I replied, "if eighteen or twenty of those men should get together, they would be strong enough to protect themselves in matters of legislation and strong enough at the same time to prevent the election of any candidate they thought undesirable." "Oh," he said, "don't talk like a rotten-brained idiot. You could not get a dozen of those

men to hold together twenty-four hours." I am giving the substance of what he said. I subsided, as profitless discussion is not to my liking.

I WAS myself an enthusiastic Shepard man, Mr. Shepard being an old and valued acquaintance and a constituent voting in my own assembly district. As the time went on, it became more and more evident that Mr. Shepard was not to receive the support of Mr. Murphy. I believed, however, that he would receive an honest support in Kings County, his own county. I was strengthened in this belief by the consultation, that I had with two of the leaders,—my own district leader, Sheriff Quinn and Mr. John A. McCooey, the leader of Kings County; both these men solemnly informed me, that I should not tie up in any way with Tammany, that Kings County had an organization of its own and proposed to maintain its autonomy. Under these circumstances, I was naturally surprised when I arrived in Albany and found Mr. McCooey a devoted follower of Mr. Murphy and in the words of Shakespeare, "Must bend his body, if Caesar carelessly but nod on him."

From inquiries that I and other assemblymen made when the assembly convened on the first Wednesday of January, 1911, we were satisfied that an uncontrolled vote of the Democrats in the legislature taken then would have elected Mr. Shepard as senator, but it soon became evident, that something was doing. Members who at the outset were frankly in favor of Mr. Shepard grew evasive. The State committeemen controlled by Mr. Murphy were present in a large force and exercised all the control they could over the assemblymen from their districts. The extent of their devotion to the cause of Mr. Murphy, I then suspected, but did not realize fully until later. All sorts of inducements, persuasions and more cogent methods were applied by Mr. Murphy's agents throughout the State to coerce the assemblymen into a compliance with his will. Not only did the adherents of Mr. Shepard feel this, but the friends of other candidates, too, all felt that they were fighting an unseen force, playing, in other words, against loaded dice. The power of the Tammany leader was significantly shown at the organization of the assembly. Every officer was of his selection. Even the page boys, in order to secure appointment, had to have the mystic "O. K.—C. F. M.," endorsed on their application.

THE committees, appointment to which meant a great deal to the assemblymen, were held back in order, as it was generally believed and with reason, to bring wandering lambs into the fold. These conditions created a feeling of resentment in the minds of many of us. On the Thursday night, preceding the Monday on which the caucus was to be held, the appointments for a second time were postponed to the following Monday. That night the opposition to Mr. Sheehan crystallized. The underlying cause was as I have stated,—the feeling of resentment against the usurpation of the functions

of legislators by one man in Fourteenth Street and the character of the candidate and his record in Albany served to strengthen and intensify the opposition. That night eighteen or twenty of us decided of our own motion, uninfluenced by outsiders, that we would not enter the caucus if Mr. Sheehan was to be candidate for United States senator, and would not vote for him during that session of the legislature. Mr. Murphy was notified of our action that night. Mr. McCooey and the Governor the following day.

THE following Monday night, the night appointed for the caucus, the committees were finally given out. It is not more than right to say that they were very fair and on the whole well selected, but our feeling in regard to the committees was, after all, only a small factor in influencing us. We had entered into an agreement about six o'clock that afternoon not to go into the party caucuses. One of the number called the simple agreement we then signed, "The Legislative Declaration of Independence." We did not go into the caucuses. The fight that followed is well known, but there were little side-lights, that may be of interest to our present subject. Mr. Murphy seemed unable to comprehend that a continued opposition to his mandates by Democratic legislators could come from principle. His first reliance was upon the ability of his vassals in the various Assembly districts through the State to coerce the rebels into submission. Failing in that and still unable to comprehend the motives that actuated it, he wasted more than a month trying by every means in his power to find out what big politician or what great interest was behind the movement. As there was no such animating purpose behind the Insurgency, these efforts were futile and merely served to show the character of Mr. Murphy and his organization. More significant than anything else during that entire contest was the personal good feeling between the Insurgents and the Regulars. At the very beginning of the contest the sympathies of many even of the Tammany assemblymen were with us. One prominent member said that he would give \$5,000 if he only dared to join us. Others said that they were absolutely with us and begged us to stick it out and not give up, even if they did not dare to vote with us. As one prominent Insurgent told Al Smith, the majority leader of the assembly, when asked by him if he could not see his way to end the difficulty by voting for Mr. Sheehan. "Why, if you and the rest of you would only be real assemblymen and do your sworn duty, we could settle this matter at the next joint session." The floor leader flushed, but had no reply to make. He had been asked to do what was impossible. The telephone to the headquarters in Fourteenth Street was his political conscience and judgment.

THE working of the organization was particularly noticeable in the various committees controlled by Tammany. There were bills in which sections of the Insurgents were interested. These were put off from week to week, from meeting to meeting, until the chairman could consult

with Mr. Murphy of New York to the detriment of a good many honest and legitimate measures that should have been passed. At times the influence of the telephone upon the proceeding was almost farcical. The first caucus being proved a failure, the Democrats held conferences at which it was distinctly understood no attempt would be made to hind anyone by caucus action. The first of these was in regard to the election of the United States senator and all through the proceeding the telephone at the rear of the room was in active operation and two or three of the Tammany assemblymen kept up a constant communication between Leader Al Smith and the man of mystery at the other end of the telephone. The leader was in just as direct touch with his men as if he had remained in Albany at the Ten Eyck, only the Governor was relieved of his presence. You see, when a representative form of government was originally inaugurated the telephone had not been invented.

IT WAS perfectly evident that the organization under Mr. Murphy affected the entire State and it was absolutely farcical to see before the committees bodies of representative citizens from various cities in advocacy of good bills or protesting against bad legislation, only to have action upon the measures held up until Mr. Murphy could be heard from. In other words, the Tammany theory and practice, so far as legislation of 1911 was concerned, was an absolute negation of the idea of representative form of government. We Insurgents were told we were not Democrats, because we refused to be governed by this one-man power. In fact, as one member put it, it would be cheaper for the State, if, instead of paying the expenses of one hundred and fifty men at Albany, dummy elections were to be held in all the districts absolutely controlled by either one or the other of the organizations, and, in accordance with the result, to let Mr. Murphy have so many votes and Mr. Barnes so many votes, to be cast by a dummy for each and merely pay the salaries of such members only as should be elected from doubtful districts, who ought to be practically independent of either of the two leaders and let their independent votes count in the passage of bills. Under such a rule the voters of the State would have a better understanding of what is done in Albany.

THE work of the two organizations seemed to be largely devoted to two things,—on the part of the Democrats to replace as many Republicans as possible holding good positions by Democrats, and to increase the pay of all offices held by Democrats and also to secure the passage of such bills as made big appropriations on which contracts might be given out. The Republican organization of course opposed. Of such a nature was the High-

way Commission Bill passed in that year, which supplanted one of the best highway bills ever passed by a legislature and which at the time was working so smoothly and efficiently that two of the three commissioners who composed the board that was legislated out, were immediately called to take charge of the road building in other states. That bill was distinctly an organization measure. Assemblyman Wendel, since elected to the State senate, aptly described the situation. When asked by the leader to vote for a measure because it was an organization measure, he replied, "Well, Al, if the fact that it is an organization bill is the only thing that can be said in its favor, it must be an infernally bad bill and I'll vote against it." And he did. Of course the Republican organization members voted solidly against every such bill proposed by the Democrats, but there was one class of bill, that both organizations united in opposing—those were bills, the object of which was to give the citizens a better opportunity to express their wishes in the selection of candidates. Those that were passed purporting to better the conditions surrounding elections, carefully analyzed, show clearly that they served to make it more difficult for citizens to accomplish anything as against either organization. We did pass at that session a direct nominations bill, the one good feature of which was that it contained a provision for a secret ballot at the primaries; but there was enough interjected into that bill to nullify nearly all the good that it contained. During the all-night contest at which that bill was passed, there was one significant vote, that held out a promise for the future.

THE bill came from the senate three hours before the time set for adjourning both houses *sine die*, and was never intended to be brought before the House at all, but an Insurgent in the Judiciary Committee, to which it was referred, forced it out. It was a real direct nominations bill, and after interminable wrangling, the vote upon it finally stood, eighty odd to sixty odd in favor of its passage. The sixty odd represented all the votes that the two organizations, working shoulder to shoulder, could get together; the eighty represented those who were really trying to represent their constituents.

After that vote, however, politics came in. A recess was called. The Republicans had a caucus. The Democrats held a conference at which the telephone again played an important part. Al Smith, the leader, boldly stated that if that Bill passed, it would wipe out the organization in New York City, and if they thought that was desirable then they should pass the bill. Another bill was produced by Leader Smith, which, it was claimed, would give practically the same result, but would avoid the drastic effect upon the organization in New York City.

THE hour was late. It was one o'clock in the morning after a long and busy day. The new bill was too long for any one to read intelligently. The Republican caucus had made it a party measure, so the substitute bill was finally passed by the assembly just before five o'clock on Sunday morning—just twelve hours after the time that had been fixed for final adjournment. One important fact that influenced a number of us in finally accepting the substitute bill was the precarious position of the city charter, that Tammany wanted to put through. They needed two or three more votes in the senate to secure its passage and we were afraid that in a long fight at the end of the longest session of the legislature on record, the charter might slip through. In other words, as shown by the legislature of 1911 and again by the present legislature of 1913, government by organization, when that organization is Tammany, does not produce laws that are for the benefit of the people of the State. There were some of us, who did in that session try to do our duty by the constituents we represented, but it was an awfully uphill fight. To retain our standing as Democrats and our influence with many of our fellow members we were compelled to vote for some of the less harmful of the organization measures.

I WISH to cast no slur upon any one of my Tammany associates in that assembly; personally they were a clever, intelligent lot of men. They had been brought up from their early days to believe in Tammany Hall and its doctrine of following a leader. The idea of political virtue, firmly implanted in every one of them, was that strict allegiance to their leaders meant, on the whole, the best government for the State; that while following this rule, they must shut their eyes to the evils of some of the measures; on the whole, following the party rule strictly would accomplish more for good government than any other way. I believe most of them were sincerely honest in that belief, but I thought and still think that that belief was radically wrong.

The theory of a representative government by the people is that where one hundred and fifty men fairly representative of their respective constituents get together, the results that they arrive at, under ordinary parliamentary rules, will be good legislation. I believe the designers of our Constitution were right in that belief. The results attained by our legislators as at present selected is no arraignment of representative government. It only shows the bad effects of a departure from that form of government and the adoption of our present system of government by organization.

Your next issue will contain "How Murphy Works in New York."

The Wilderness

By MABEL W. BREWER

AS from the tent of Abraham
Went Hagar with her child,
And turned her face in sorrow, toward
The desert place, lone, wild,
So from thy tent, loved one, I go,
Like Hagar toward the wild—
But unlike Hagar, there, of old,
O God, I have no child!

IF I were forced upon the rack
My views of Comstock to impart,
I should confess he is a Jack
The Ripper of the nude in art.

AT THE UNION CLUB

"Why have you given up smoking?"
"I consider it effeminate."

A Manhattan Magna Charta

THERE is a strip of territory thirty feet long—at the corner of Ninetieth Street and Fifth Avenue, where, by the grace of the Fifth Avenue Coach Company, the police-harried New Yorker may stand—from dusk to dawn if he will and from dawn to dusk—holding sweet converse with his friends. No police officers may pommel, club, shoot or arrest him for disorderly conduct should he refuse to "move on."

This is the one free spot in New York, where the boss-ridden citizen may rock his hat at Mr. Waldo and his men of the club. Here for ten paces up or down—he has the freedom of the city. There is one proviso: He must have in his possession one of the special licenses issued by the Fifth Avenue Coach Company at the low price of ten cents and good for an entire day.

One of the most interesting sights of the city is to watch the citizens, drunk with unwonted liberty, stalking haughtily up and down this strip of sidewalk, while the baffled police, powerless to interfere, gnaw their night-sticks and moan.

Time passes.

A bus comes up going Northward, but the licensed citizen is not permitted to

get in; it is full; comes then a Southward going bus; the licensed citizen is not permitted to enter; it is empty.

Bus after bus, processions of buses—going North (always full) and South (always

empty) and into none of them may the weary citizen climb. His charter, issued by the Fifth Avenue Coach Company, permits him only to stand and talk, or contemplate. Nothing else. When he is tired of enjoying the wild liberty of this corner of refuge, he has the healthful privilege of walking home or calling a taxi.

Drama

By N. H.

I. The Guilty Man

A VAST amount of barking has been going on in the New York papers because the Sociological Fund of the *Medical Review of Reviews* announced that on the afternoon of Friday, November 14th, it would give a private performance of "The Guilty Man," a play based upon one of François Coppée's novels. It was this same sociological organization that gave "Damaged Goods" last year. When the Bricux play was first produced, one out of ten persons whom I met declared that such a subject might properly be discussed under certain circumstances but was entirely unsuited to the stage. I invariably tried to find out why it was unsuited to the stage, and usually learned that the speaker did not like to see that kind of play. I then ventured that I did not like to see the kind of plays usually produced, and asked why I should be prevented from seeing the kind of play I did like, merely because other persons did not care to go, being at complete liberty to stay away. I failed to get any answer that I could understand, and apparently so did a great many other persons, because the success of the play in the private performances was so great that it was put on commercially and has been a profitable enterprise. Some people may object to this profit, thinking apparently that nothing ought to make money except those things that have no value.

"The Guilty Man" touches, in a sentence here and there, on other problems, but the main theme is simple, namely that a man who treats his responsibilities to a woman lightly is guilty not only of extraordinary meanness toward her, but of whatever evil deeds are done by his illegitimate offspring. The man in this play has not stamina enough to do the right thing by the woman whose love he has won. He marries another woman better placed socially. The first woman has a son. A few years later, she dies. The son is brought up in a so-called reformatory, and on account of poverty, the absence of guiding influences, and the disgrace of illegitimacy, he commits a crime. The father is prosecuting attorney, and in the end his better understanding is so weakened that he declares in court that he himself is in the real sense the guilty man.

NO doubt it is terrible that good people of the United States should be compelled to know that such a play is being given, although they will not be compelled to see it. Indeed, they will not be allowed to see it unless they are able to secure tickets from those in charge, who mean to have no one present except serious students. Anybody who does see the play can be influenced in no di-

rection except toward more generosity, sympathy and responsibility for his acts. He will, however, be duly scolded by serious citizens, although he will be quite free to go around the corner to the Winter Garden without being criticized. No doubt, if such a play as "Oedipus the King", by many considered the greatest drama ever written, were produced in our time, it would be deemed totally unfit. The Greek tragedian depicted the results of Fate, and our serious playwrights desire to depict the results of error and selfishness. The Athenians loved pleasure, but they took pleasure in contemplating the higher tragic facts. One singular thing about this controversy of whether we are to be free to consider such important topics, or whether it is our duty to be ostriches, is that women are most in favor of frankness. Women were the backbone of the support given to "Damaged Goods" and probably will be the principal supporters of "The Guilty Man." Men, on the other hand, seem to prefer a universe in which certain deadly evils are kept alive as tributary to unbridled indulgence. They think it better that their wives and daughters should not know about these things. But the wives and daughters are rapidly making up their minds not only to know about them, but to end them.

II. Two Plays by Barrie

TWO powerful one-act plays by the most gifted dramatist now writing in English mark the opening of the season. Each is absolutely dramatic, and yet each drives in an intellectual idea with a force that will make it live. Barrie may not be more intelligent than other playwrights; he may not be superior to certain men technically, he may not write better than some others; but he combines all these qualities in a way that makes him certainly the most notable artist now producing plays in our language. He has not only the almost unanalyzable and supremely important combination that results in what we call gift or genius, but he has the highest artistic conscience, and he never puts out anything which does not satisfy himself. The consequence is that every work from his pen is an event. It is nearly always a popular success, and it is always a contribution.

"Half an Hour," well presented by Grace George and her company, shows with splendid concentrated narrative the tragedy of the woman who has not been brought up to earn her way in the world. Lillian Garson has ability, daring, understanding, high-mindedness, but she is helpless to lead her life right because she is a parasite, and she is a parasite through no fault of her own, but as an inevitable product of the social system. Like the aristocrats of the French revolution she can carry herself superbly but she cannot live visibly. Her parents were aristocratic and they married her to a rich brute who had ability to get on in the world. She feels that living with a man merely because he supported her is a degradation, but her marriage had been a sale, and she endeavors to carry out her end of it. Finally, however, his heatility

Grace George in "Half an Hour"

John Drew and H. E. Herbert in "The Will"

becomes so extreme that she decides to run away with a man who loves her and whom she loves. The man is killed in calling a taxicab, and in a most exciting and theatrical situation she returns to her husband without his learning of her elopement. While it is so thrilling that it almost suggests melodrama, it is heart-rending in the ruthless clearness with which a noble woman is shown going back to a despicable situation because she can do nothing else.

MONEY and false standards are also the theme of "The Will". Before describing that play, let me pause a moment to rejoice that John Drew has done so splendid a piece of work so far outside of the line in which he is familiar. He is a real actor, and in this drama he shows it. There is not one touch of those light, personal charms and graces which have fitted into most of his recent plays. It is an accomplishment of sheer strength and technical mastery, and it gives that kind of higher pleasure that acting gives when it is objective, when, in other words, it is a vehicle for the embodiment of differ-

ent characters, rather than for the expression of the dominant characteristics of the actor. It may well be doubted whether any other person in the United States could have acted this part as well.

The illustration of Mr. Drew's range is all the more striking by the fact that the Barrie play is given with the revival of Haddon Chambers' "The Tyranny of Tears", one of the most delightful of contemporary comedies, in which Mr. Drew's lighter side is shown, perhaps, better than in any other play he has given in recent years.

TWO young persons visit the office of a lawyer to have the will of the husband drawn. They are charming. They love each other. They are full of ardor. Only one trait is over-developed. They seem a little too much interested in money. Their dreams of the future center too much around what his salary is ultimately to be. The curtain falls for a moment. Many years have passed. Money has come in abundance and it has changed them both. There is no sweetness left. Grossness and selfish-

ness have forced out the gentler qualities. Again the curtain falls for a moment, and again many years have passed. The man is now making his last will. In the first, he had wished to give everything to his wife, and she had wished him to be generous to poor relatives and to institutions. In the second, she had pleaded against any bequests that conflicted with her unnecessarily large share. As he approaches the third will, he has recognized that money is a curse. His wife is dead; his own life is ghastly. It has occurred to him that he will leave his fortune to his principal competitors, as the worst curse he can visit upon them. He offers it to the lawyer, to anybody who will take it, and all this is expressed in horrible and most true bursts of savage irony. From this play, as from the other, we go away having heard and seen a story, a masterly narrative, and from this as from the other, we have learned more about money and its place in the world than we can learn from any other contemporary literature with which I am familiar.

III. Evangeline

IT is appropriate that the young manager who last year produced "The Poor Little Rich Girl," a play which touched imaginatively one of the most real facts about American life, should be the man to put Evangeline on the stage. In the theater there is harmony between plays on important conditions of the time and plays that are literature. The contrast is between the drama which is alive, either with the thought of today or the thought of yesterday, and the drama which is merely standardized mechanical amusement.

When I was a boy, it was customary at Christmas to give companion volumes of Longfellow and Tennyson. The percentage of Americans who are now innocent enough to rank Longfellow as high as Tennyson is smaller than it was; but it

is common in estimating literature to swing to an extreme, and certainly those who dismiss Longfellow are as far wrong as those who rank him among the great. He has sincerity; he tells good stories; and he tells the truth, even though it be not the truth at its pinnacle. Evangeline is the most popular of his stories, and deserves to be. Hawthorne first became interested in the tale, and he knew a good story. When Longfellow had finished it, Hawthorne stated that he had read it "with more pleasure than it would be decorous to express," and Longfellow gratefully thanked Hawthorne for foregoing "the pleasure of writing a prose tale which many people would have taken for poetry, thus I might write a poem which many people take for prose." Oliver Wendell Holmes proclaimed it Long-

fellow's masterpiece. Probably no line in American literature is more familiar than:

"This is the forest primeval—"

The story that follows has become part of our thought about the history of this country. Much debate took place among historians regarding the literary accuracy of the account, but in spite of research Longfellow's version stands now as close to the truth.

The Hopkins production gave me much pleasure. The story was treated with judgment, the necessary amplifications being all in the direction of illustrating and enforcing what was in the poem. The only mistake was for the very end. In the stage version, Evangeline speaks her last line before the death of Gabriel. Certainly it is more effective

Edna Goodrich and John Harrington in "Evangeline"

that his death should be fully recognized by the audience before she bows her head and murmurs:

"Father, I thank Thee."

A large part of the dialogue, especially in the longer speeches, is taken directly from the poem, and turns out to be splendidly fitted to dramatic recitation.

The familiar pictures touch our humanity, and likewise our interest in those far off happenings connected with the building up of our country, from Michigan to Louisiana. Any impressionable young mind (or old mind that is impressionable) will be exhilarated by this story on the stage. It will be a pleasure to hear and see one of our country's most popular

poems. It will be a pleasure to live in the dramatic and poetic episodes of our country's history. *Evangeline* is an epic but it is wholly suited to drama, and the story, whether in epic or drama, is one that Americans should enjoy. The production marks the second notable accomplishment of a young manager from whom much is to be expected.

The Conqueror

By EDMUND VANCE COOKE

WITHIN me is the world-old might,
Born of the first primeval night,
Which stirred the first atomic mite,
Which turns the lily toward the light,
Which bears the eagle in its flight,
Which urges man to heaven's height,
Which is my heritage, my right
In all its total sum,—
The purpose and the power to fight,
To fight and overcome!

(And yet—and yet—I cannot choose
But ponder on the ones who lose.)

Tribe after tribe and race on race
Have lived, have died, to gain this grave
For me, so must I keep the pace,
No matter what the task or place,
I wear the crown, or bear the mace,
I cleanse the cups, or loose the lace,
Yet shall I never bow my face,
Nor shall my soul be dumb.
Upon my right I rest my case
To fight, to overcome!

(Yet if the struggle be the end
My greatest foe is most my friend.)

My heritage, the Past, is great,
The Present is my broad estate;
The Future is my open gate.
Yet should some seeming Terror wait,
I shall not shrink nor hesitate.
I march serenely on, and straight;
No storm nor struggle, wrath nor hate
May blast me, or benumb.
I tilt into the face of Fate;
I fight and overcome!

(For conquering Fear and conquering Pride,
I conquer Self—and all beside.)

Under the coaching of George Brooke, the Quakers will develop slowly this year, reaching their top form for the big game

Current Athletics

By HERBERT REED ("Right Wing")

Early season progress of the big elevens

WITH all the leading teams, East and West, in full swing, the attention of the coaches turns now to the further development of plays that were successful last year, and to the invention of new plays designed to take full advantage of the now thoroughly settled rules. Doubtless we shall see all the standard formations of the last few years, notably the Harvard "square" and the form of Minnesota shift used by Princeton. The Princeton style of attack has taken shape as was the case last year at a very early date, while there seems to be every indication that Pennsylvania's diagonal tandem will continue to be the stock in trade of George Brooke, the new Quaker coach, as it was of his predecessors.

In the game against the heavy Franklin and Marshall eleven, on a soggy field at Philadelphia, the Quakers used this tandem in the second half as a "rescue play." It was all the more effective in that it was led by a big, blundering tackle named Carter, who promises to be one of the leading forwards of the year. The play itself is far from being new, since it was invented by Glen S. Warner of Carlisle many years ago. Given a speedy backfield, at least one husky lineman to open the way for the play, plus the certainty that the direct pass from the center will be cleverly handled by the last man in the backfield, and the play is most effective.

The continued use of this play (diagrammed in Fig. 2) raises again the old question of the value of the direct pass from center. There are many good judges of football who believe that this form of pass is entirely too dangerous for general use, especially in dashes from tackle to tackle, unless thoroughly covered, and who still think that it is an asset only when a sweeping end run is attempted. Warner holds the opposite view, and there are excellent coaches who agree with him. But it must be remembered that the average Indian backfield is not only very fast but also accustomed to handling a football with the same precision that they would catch a baseball. It is seldom that this same precision can be found among the big and rugged backs that are seen almost annually at New Haven and Cambridge.

YALE'S experience with the direct pass in the last few years has been almost uniformly disastrous. Last season the coaches were of two minds in the matter until too late in the season to make either system of permanent value. Pennsylvania's experiment, therefore, should be of the utmost interest to the football world, inasmuch as with Minds looming up as perhaps the best ground gainer on the eleven the pass will almost always go to the last man in the attack, in other words, to the danger point. It may be

that the Quakers will swing an end around to cover the play, although it would seem perhaps a better plan to drop a tackle or guard around for that purpose.

AT this writing Brooke has sprung nothing new or startling, which was to be expected, as he is not yet satisfied with the combination in the backfield. Much depends upon Captain Young and his ability to play behind the line. Should he prove as good a man as some of Pennsylvania's old time stars it would seem that with him Minds and Marshall working well together Brooke should be able to effect some highly interesting combinations. The Pennsylvania material as it appeared in its early games is far from impressive, but I am glad to note that there seems no longer to be a tendency to put the burden of the work in advancing the ball on the shoulders of a man who has little more to recommend him than his ability to cover a hundred yards on the track in close to even time. The present set of Pennsylvania backs is not remarkably fast, but the men keep their feet well and are everlastingly going ahead when tackled.

I am inclined to think that under the coaching of Brooke, a man in whom I have a vast amount of faith, the Quakers will develop slowly this year, reaching their top form for the big game—which is as

FIRST REVIVAL OF THE MASS PLAY
(Close formation used by Rutgers (coached by G. Foster Sanford) in the opening game against Princeton)

PENNSYLVANIA'S EARLY FORM OF ATTACK
The play is a diagonal tandem led by a powerful tackle. The much-delayed direct pass is used to the last man in the tandem

it should be. I have never felt that the Pennsylvania defense was quite up to the standard of that of the other leading eastern eleven, although there may be reasons for the extremely close play of the backs which will develop at a later stage of the season. As the team plays at this writing there does not seem to be an adequate defense against the forward pass, and part of the defense seems to have been robbed away in order to support a rather shaky right side of the line.

LIKE Harvard and Yale, and unlike Princeton, at this stage, Pennsylvania is doing remarkably good work in making interference beyond the line of scrimmage, the ends being especially active in shooting across and putting the defensive backs out of business. If the Quakers continue to use their diagonal tandem throughout the season there would seem to be a vast amount of work in store for Carter, the big tackle, unless another man almost equally good can be developed on the opposite side of the line. It would seem to the man in the stand that Simpson, another promising forward, now playing at center, might well be paired with Carter to lead the tandem, in which case the Quaker type of attack would be difficult indeed to stop unless the defensive ends drive in very fast across the play.

Perhaps the most interesting feature of the early season was the game between Princeton and Rutgers at Princeton, which the Tigers won, although rather hard pressed for a time. George Foster Sanford has been an interesting figure in football for so many years that he hardly needs an introduction to the great mass of the followers of the game. A man of intensely interesting theories and of unusual ability as a field coach, he has set the stamp of his personality on the work of many an eleven in the past. When it was announced that he would coach the Rutgers team preparatory to its meeting with Princeton, football men throughout the East suddenly became extremely interested. They felt that even with an eleven in a crude state of preparation, practically without training or seasoning, he would turn out some sort of novelty when it came down to action on the field.

It must be remembered that Sanford played and coached in the days of that mass play which the rulemakers have spent so much time and trouble in attempting to eliminate from the game. I do not think that he has ever had a change of heart as to the value of what has come to be called the old-fashioned game; as a strategist he has always placed a great deal of emphasis on power, cleverly applied, not only on attack, but also on defense.

THOSE who looked for something new at Princeton were far from disappointed. They saw an eleven that lined up with more solidity than any other that has taken the field since the new rules went into effect. The diagram (Fig. 1) gives a fair idea of the play, which might well be called a revival of the old mass formation. Three backs were lined up behind and practically against the center, guard, and tackle, while the back who was to carry the ball was only a couple of yards behind this heavy interference. As the ball was snapped the mass surged forward, opening a wide gap in the Princeton line, while the man with the ball came on at top speed and either practically "rude" through on the backs of his interference, or found sufficiently easy going to get clear through to the secondary defense.

In the November **SCRIBNER**

The Ascent of Denali (Mount McKinley)

By Hudson Stuck, D.D.

FIFTH AVENUE, NEW YORK

THE Rutgers line was well suited to the purpose of this play, but the backs were not up to the mark, and so, although the play gained quantities of ground from time to time, the advances were not consecutive as is necessary if the average of two-and-a-half yards to every rush necessary for a first down is to be sustained. Too frequently the man with the ball proved very slow and the opening was closed by the time he reached the line, or, as Sanford himself put it, "He stopped to buy a paper." One trembles to think what a powerful and well coached eleven would do with a play like this, although it is barely possible that they might become exhausted through their own tremendous efforts. Had the Rutgers team been able to vary the play with almost any other maneuver it is probable that more damage would have been done to the Tigers; but as it turned out, Princeton, although victorious, largely through the mistakes of their opponents, knew at the final whistle that they had been in something like an old-fashioned football game.

Just what the future of this play will be, or whether indeed, any other team will take it up, only time will tell. Certainly, it is a formidable engine of destruction, and while within the letter of the rules, still quite without their spirit.

PRINCETON'S early showing, save from the viewpoint of considerable weight and strength in the line, has been rather disappointing. The Tigers' opening game showed so little variety that it was impossible to tell much about the future of the team. As was the case last year, Princeton opened the season with the constant use of their particular brand of Minnesota shift, without variation from the formation that proved of so much value in the big game last year. Against Rutgers, the shift was most unsatisfactory. The backs experienced considerable difficulty in finding their places, and there was a double delay in getting the maneuver under way that made it far from difficult for a heavily massed defense to stop it without gain again and again. Indeed, had the Rutgers men known the beginnings of the art of tackling, it is doubtful in the extreme if the Tigers would have scored at all.

As in former years, there seemed to be a tendency to place too much dependence in the captain of the team, H. A. H.

Minds, of Pennsylvania, kicking from placement

Baker, who was called upon far too often to carry the ball, and who assumed too much of the burden of the defense for so early in the season. Undoubtedly Baker is a harder man to bring down when tackled than was Pendleton last year, but he has still a long distance to travel to reach the ranks of star backs who are something more than mere clever broken field runners. I think that Baker is keeping his feet a little better than he did last season, and that in the end he will be better even than last year in the open, but he has a great deal left to learn in the matter of turning quickly into the openings.

THERE are other backs on the Princeton team who show considerable promise, notably Streit, F. Treanman, who

looks to be improved already over his last year's form, and a husky and willing worker named Doolittle. This young man is still quite green, but to my way of thinking shows a great deal of promise. As a kicker he is very awkward, although getting plenty of distance and good direction. It seems impossible for him to get the ball away without taking two steps, which is so often fatal in a big game. But ball in hand, and turning well inside the ends, he is a great fighter for territory.

Glick is another young man of promise, whose speed undoubtedly will increase as the season grows older, and who, indeed, keeps his feet rather better than any of his comrades.

FROM New Haven comes the annual announcement that Tom Shevlin has come out of the West—perhaps direct from Dr. Williams—with a pocketful of new and fancy plays. Everybody will remember that it was Shevlin who brought the Minnesota shift to the East. Almost any play that has any real fundamental worth, no matter how odd in appearance, is worth trying at least once, and should work at least once, and if Shevlin has brought along any such play it will be welcomed by the football public, which is always looking for novelties. I seriously doubt, however, if Yale will pin its faith this year to any particular play or series of plays.

Old heads and wise heads are in charge of the Yale squad this year—men who have seen plays of all sorts come and go, and who realize that the foundation of winning Yale football is laid less upon deception than upon superb execution and a thorough grounding in the fundamentals. There have been shifts innumerable among the Yale forwards, but when the big games roll around I shall be disappointed if the Blue doesn't take the field equipped with one of the best lines in recent years. This, of course, barring accidents. When the Yale line is right, the entire Yale team is apt to be right. There is plenty of material up forward this year, and it will get better coaching than it has had in many a long day. The very best of the Yale coaches are in action this season, and the mere fact of the presence of Frank Hinsky at so early a stage, gives an air of confidence to all those connected with Yale football that was markedly absent last year.

The Slump in Government Bonds

UNITED STATES government bonds fell five points below their face value in July last and after temporary support in August again declined in September and October to about the same level. If this does not create the impression of investment illness it is hard to say what would have that effect. Complete dearth of a market for the bonds of one of the world's strongest and most powerful nations—if that does not mean the dropping out of investment bottoms, what does?

Apparently there are those who are dazed by this decline, who do not comprehend it at all. For many, many years a government bond has been something to coo with. It has been the standard by which all investment securities were judged. Its strength was under-

stood by the most humble and financially uneducated citizen as well as by the most sophisticated of brokers. Every common swindler bent upon extracting from only too willing servant girls their last penny of savings was wont to compare his filthy offerings with government bonds.

Jack Johnson, flushed with dollars and with victory over the last white man's hope, boasted that government bonds were good enough for him, and amid the approval of millions of his fellow citizens invested scores of thousands in the obligations of his country. Every piece of swamp-covered, mosquito-infested real estate sold to gullible investors a thousand miles away is glibly said to be as safe as a government bond. In short the latter has been not only the premier investment of America but the sole and final basis

of comparison for every other form of investment—the one true metal by which all baser coins would ring false.

Why Have Government Bonds Fallen?

LISTEN to the surprised and pained inquiry of a reader in Iowa: "Early in the year I started in to buy \$10,000 of Panama 3s of 1961, paying 102-103 for them and being assured that the bonds depreciate only toward maturity. What is the reason of present depreciation and what is the future prospect of these bonds? The safety of principal was the primary object. I would not have made the purchase had anyone estimated the loss of the first year's

Lemuel Taketh an Encore Honeymoon and
Gaineth Wisdom

PERCIVAL'S car (as the Boggs quickly named it)
Boasted no racing-blood—nobody blamed it.
Neat enough,
Sweet enough,
Room in the seat enough,
Easy to run; it was awfully sane,
Built with a sort of mechanical brain.
"Isn't no use to try racin' a train
With a small one like this;
But 'er engine don't miss
And she'll keep right along from Ohio to Maine,"
Lemuel Bogg took the time to explain
To his wife, as the two,
On their second day out,
Stopped to take in the view
Nigh a stream where the trout
Played in the cool
Glint of a pool
And the sun in the willows danced gaily about.

ONCE, as they sped by a farmhouse—worse luck!—
Lemuel's vehicle murdered a duck.
Out boiled the farmer and thundered, "See here!
Gol durned, smart city folks, comin' this way
Slaughter my fowls without conscience or keer.
I seen y' do it. I'll thank y' to pay!"
Lemuel chuckled, "Don't raise such a holler!
Honest, friend stranger,
I too am a granger
And know them blamed autos is pests. Here's a dollar."
"Gosh!" gasped the farmer, and touched the machine,
"Ye're the queerest durned autoist I ever seen!"
Lemuel laughed, "Well, a few months ago
I hated them blas-dingled gas-machions so
I was ready to rush in the road
With a load
Of glassware or bricks
Or dynamite sticks
And lust their machiones
Plum to greens,
Smitherreens.

James Preston

BUT all of a sudden I found—it was strange—
My mind undergoin' a marvelous change.
When chickens fell slaughtered and basted dogs yelped
I found myself sayin', 'It couldn't be helped.'
When dust filled the landscape and flew in my eyes
I caught myself thinkin', 'I quite realize
How dust, proper flavored, is good fur digestion.'
I grew sort o' mild on the gasoline question.
I used to think autos was divvils, and then
I suddenly found they was human like men . . ."
"What caused that quick change?" asked the rustical elf.
Lemuel burbled, "I got one myself!"

THE seventh day out—still the weather looked grand
With Lemuel whistling the tune "Beulah Land"—
How, as he put it, "be dumb if I knowed."
They suddenly lumped on the Boston Post Road.
Fine looking touring cars, runabouts, too,
Gave them their dust. Lem, at first, appeared blue,
Then straightened right up with the sunniest smile,
"Shucks! Let the young bust their necks for awhile.
But a man o' my age has his fortune to thank
That his tires is still good and ther's gas in the tank.
Hello! Here's the inn of Leonidas Skinner.
We'll hitch up our steed, Ma, and drop in to dinner."

AS he hacked in the shed
To the rear of the place
Lem, turning his head,
Looked square in the face
Of his Parthian enemy, Hiram J. Scagg.
But Oh! what a change had come over the ag-
—gressively gumptious
And formerly bumpitious
Features which Lem had detested so well!
And the reason was plain
As a lighthouse in Maine;
For Hiram J. Scagg was ensconced in the seat
Of a small, humble runabout, safe, sane and neat.
"My, my,
Why Sit!"
Lem managed to say,
"Though I don't
And I won't
Be inquisitive—pray
What under the sun
Have you been, gone and done
With yer sixty-two ogre-power Cannibal Six?"

"WELL, Lem," answered Si, "since ye ask, might as well
Out with the truth—though ther ain't much to tell.
I just gave up speed when this thought struck me cold;
Some cars is for young folks and some is fur old—
And a greybeard like me in a racin' machine
Is like an old fool who weds sweet seventeen.
So I just swapped my dragon fur this little, tame
Roadster—but say! In Jehosaphat's name,
"What did you do with your giant?"

"The same!"

James Preston

SO they all joined at lunch, quite re-
vived from the shock,
And ate pork and beans from the
very same crock;
A rite so revered in New England, they
say,
That friendship till death is cemented
that way.
And so it appeared,
For that meal so endeared
Once rankerous Lem and once canker-
ous Si
That they quaffed cider straight
This pledge to libate,
"Here's hopin' we live till the day that
we die!"

(Part Two of the Autopilgrim's Progress,
"The Bridal Tour," begins in the next issue.)

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

THE DELCO SYSTEM has made the powerful gaso- lene car as easy to operate as an electric carriage

Up to two years ago the high powered gasoline car was essentially a Man's Car.

Expert knowledge and a strong right arm were required to operate it.

Then came the Delco System—and overnight, almost, the whole status of the gasoline car was changed.

The glaring crudities that had for years impeded its progress were eliminated.

The crank was done away with—the necessity of getting out in the rain or mud to light or adjust the lamps was abolished—the danger of a stalled engine in the midst of congested traffic or on a railway crossing was removed.

At one stroke the gasoline car was refined, simplified, tamed, brought easily within the limitations of a woman's guiding hand.

The Delco System has greatly broadened the scope and usefulness of the gasoline car.

It has made it so easy to operate—so safe and dependable that

thousands of women and other thousands of men who have heretofore felt the automobile too complicated and heavy for them to manage, are now enjoying the delights of driving with perfect ease and freedom.

The first electrically cranked car appeared two years ago. It was equipped with the Delco System.

Today more than fifty thousand Delco equipped cars are giving dependable, efficient service to their owners.

And the great factories at Dayton and Chicago are working night and day to produce over 100,000 Delco equipments now under contract for the coming year.

There is a tremendous and steadily increasing demand among thoughtful buyers for Delco Equipped Cars.

Trust the President

THAT the Currency Bill should pass at the present session is necessary to the welfare of the country. Although matters are quiet on the surface, and the President's tact and coolness have made any great outbursts impossible, yet there is, underneath, the same bitter controversy between him and plutocracy that is going on all the time between the forces of progress and the forces of privilege. Mr. Wilson at the present moment is the leader in the movement toward democracy, political and industrial. He is a wise leader. He has been thinking for more than thirty years with an excellent and a highly trained mind about the human problems of our time. He has seen them against the background of history, with a disposition that has been conservatively tempered by his occupation. He once spoke of himself as a man who sought radical ends by conservative means. What he is asking in the case of currency is not too much. Indeed, it is not enough for an ultimate solution, but it is necessary that that amount shall be conquered now in order that the forces of progress shall remain dominant. If he is victorious in his currency measure, he will have a much better chance in the desperate fight that lies immediately ahead, when amendments to the Sherman Act come up. If he is beaten in the currency measure, it will mean much more than a delay of needed reforms—it will mean that the democratic movement in this country, the progressive movement, has received a set-back, and those who are afraid of greater equality in the world have won a notable victory over their foremost antagonist, which will strengthen them in confidence and in position, and correspondingly weaken him. It is no time for hesitation. Let those who are overmuch impressed by detailed criticism by bankers remember that country bankers, unless they are very exceptional men, hardly dare to do anything but agree with the big men in New York. Let them also remember how the Tariff Bill was criticized and how quiet everything is now; how the Railroad Bill in Mr. Roosevelt's administration was criticized, and how it is approved now; how the Interstate Commerce Commission was treated as a menace to republican institutions only a few years ago; how La Follette, a dozen years since, was looked upon as a dangerous anarchist, while he was forcing through measures in Wisconsin that the railroad men and bankers of that state now approve. This is no time for cowardice, inaction, or mob psychology. Von Moltke said: "First consider, then dare." The currency question has been considered for many, many years. The present

bill has taken what was valuable in the expert knowledge of the Aldrich Bill, and it has added features which give the people control, through their government, and reduce the excessive control of a few over-wealthy men. Such a step is not violent democratic progress; it is only slow and patient common sense. Let us take that step.

"Making Medicine"

IN the New Mexico legislature, the saying is that a minority has no rights save the inalienable one of "making medicine." So long as the minority considers obstruction its function, making party capital its end, it cannot expect to be allowed participation in constructive action. When the Glass Currency Bill was referred to the Senate Committee, Chairman Owen announced his hope that the bill might be perfected and passed without being made a party measure. Such an important subject needs all the light that can be contributed by any Senator with the good of the country at heart. But the Republican members of the committee have been "making medicine" by representing the House bill as so crude and unsound that a great many hearings must be had and all possible objections considered. Senator Bristow, for example, while not displaying any profound knowledge of the questions at issue, is certain that the House bill is "an abortion." The Republican members of the committee have been aided by two Democratic members, Hitchcock of Nebraska and O'Gorman of New York. This combination makes a majority of the committee and if committee action is unduly prolonged there will be no alternative left but for the Democratic members of the committee to report to the Democratic caucus and make the bill a party measure.

The Senate and the Currency

THE Democratic members of the Currency Committee are Owen, Chairman; Hitchcock, O'Gorman, Reed, Pomerene, Shafroth, and Hollis. Owen is a practical banker, has read widely upon banking, is committed to the principles of the Glass bill which he had a hand in framing, and is abundantly able to defend his position. Hitchcock is so independent that he left the Democratic caucus on the tariff measure because it would not adopt his plan of taxing the trusts. O'Gorman is playing politics all the time and playing with Tammany most of the time. The other four members are studying the bill. The Republican members are Nelson, Bristow, Crawford, McLenn, and Weeks, only the last named

being able to contribute anything of value to the discussion. Outside of the committee, Hoke Smith was a student of the currency question in free silver days. John Sharp Williams sheds light on any subject he discusses. Root, Lodge, Borah, Cummins and La Follette, will have ideas of their own to express. Perhaps where there are so few shepherds, more will play the rôle of sheep, and few will act the goat. It may be, that if the bill is reported to the Senate by November 1, the refuge for ignorance will be silence, and those who will have nothing to say will say it.

Folk

IT is fortunate that Joseph W. Folk has become associated with the Administration. He has been a notable figure in the life of the Middle West, and his work as Prosecuting Attorney in St. Louis and Governor of Missouri had no small part in creating the public spirit of today. Since he left the governorship, he has had a very hard fight in his own state, being almost universally opposed by the politicians and reactionaries. In Washington, not only will his ability and clear-sightedness be of general value, but his influence on federal appointments in his native state will inevitably make decidedly for improvement.

Most Important

THE Secretary of Agriculture has said: "I am convinced that the biggest problem confronting us is the rural life problem, and yet it is one which in its largest aspects has been ignored." Mr. Houston made this remark in connection with the proposed School of Country Life in Nashville, Tennessee. This school is appropriately to bear the name of Scaman A. Knapp, who did so much pioneer work in connection with country life in the South, and it is to be run in connection with the George Peabody College for Teachers at Nashville. It will represent the first attempt in America to build an institution devoted exclusively to the study of rural life. Eighty-five per cent of the people in the South live in the country. This school will not only teach the principles of better farming with which Mr. Knapp's name is so closely associated, but it will also teach such subjects as the best system of buying land and equipping farms, establishing farm credits, taxing agricultural property, coöperation of various kinds, better marketing. The question of the best memorial to Dr. Knapp arose immediately after his death, two and one half years ago. A committee was organized with representatives from every Southern state, and it certainly reached the right decision in selecting a school so profoundly needed, especially by the South. The General Education Board offered to give \$250,000, the interest of which is to go to running expenses. The Memorial Committee undertook to raise \$150,000 for the building and the farm. The trustees of the Peabody Education Fund have given to the George Peabody College for Teachers the sum of One million dollars, concurrent with gifts of money by the State of Tennessee, the County of Davidson, and the City of Nashville, amounting

to \$550,000, and sixteen acres of land, with buildings and appurtenances, by the University of Nashville. In closing the Peabody Trust and founding the College for Teachers, the Peabody fund offered to endow the college with the additional sum of Five hundred thousand dollars, provided that by November 1, 1913, the College should raise the further sum of One million dollars. Of that amount, eight hundred thousand dollars has been raised as we go to press, leaving two hundred thousand dollars to be raised this month. It seems impossible that so much money for such a noble purpose could be lost through a failure to raise an additional two hundred thousand dollars, and we have the utmost confidence that the money will be found. There is no possible way in which it could be used to more profound advantage.

Celebrating Perry

THE centennial celebration to Perry is thoroughly deserved by the historical importance of what that Commodore did, but it is impossible to think that Buffalo was fortunate in the way it was carried out. When that city undertook to raise money, enthusiasm was insufficient and the credit of the city was saved by the Honorable W. J. (Fingy) Connors. On the grandstand, alternate panels depicted, first, Perry, next an advertisement, third, the ship Niagara, fourth, an advertisement, fifth, the battle on Lake Erie, sixth, an advertisement, and so on. The side shows flanking the grand stand may have been thoroughly appropriate in their place, but they hardly added much to the celebration of a significant event. In the evening, there was a banquet, the reputed cost of which was fifteen dollars a plate, at which five hundred persons enjoyed the hospitality of the state at no expense to themselves. Such things certainly might be handled better.

Mr. Lane's Idea

WHEN the Secretary of the Interior refused a banquet in Denver because it was to cost seven and one-half dollars a plate, and accepted when the cost was reduced to fifty cents a plate, he took a stand of importance. We cannot work out democracy without applying it to simple, fundamental, essential things. False money standards reach in every direction. One of the great causes of Mr. Taft's failure as president was that he was inclined to conclude that a man who gave an excellent dinner was an excellent man, and when he went to the Pacific coast, he saw all the members of the chambers of commerce and none of the other people. Mr. Lane is on the right track. He is showing it in the whole conduct of his Department, and he showed it no less significantly in the little episode at Denver.

Cheer Up, Walt!

THE Emporia Gazette is one of the most admirable newspapers in the United States,—honest, able, diverting, a regular institution in the country which it ornaments. To be chastised by such a paper is a pleasure. The distinguished

poet who has written most of the editorials since Mr. White began to deal rather with the United States as a whole, and with the Universe, has gone after our scalp on the feminist movement. If we started with all of his premises, we should certainly end with his conclusions. He interprets HARPER'S WEEKLY as declaring that "the feminist movement should give mother a latchkey," and goes on to say that "the feminist movement in Emporia is largely devoted to taking the latchkey from father, and throwing all latchkeys into the cistern." Now his picturesque language leaves one a little in doubt about what he means. So astute an observer as he can scarcely have overlooked the fact that, in the opinion of this WEEKLY, taking illicit liberty away from men is one of the central features of the feminist movement, properly interpreted. If women are to have a latchkey, it is only for purposes of getting in after spending an evening in such a way as even Walt might approve of.

The laureate of the prairie also alleges with praiseworthy fire: "The feminist movement in Kansas surely is a movement to put sex down and keep it in its entirely proper but secondary place in life." Now, it will take us probably a year or more to explain in all its details what we think about suppression, in this delicate but extremely important subject, and what we think about honest expansion. We certainly do not believe that the problems will be settled by a Puritan horror of considering the topic at all. If Walt was brought up in a town as small and as bad as the one we were brought up in, he probably knows that the idea that vice exists only in big cities is a silly dream, and he also knows that the world as governed by decorous silence is not a wholly beautiful world. Think it over, old man. Perhaps you can reach the conclusion that we can study this subject a little without driving the universe off of its axis.

Men, Women and Frankness

LET not Walt, or any other philosopher, imagine that "radicalism" is the most correct word to describe the spirit of this journal. The phrase we prefer is "progressive liberalism." Radicalism suggests a more insistent doctrine or mood than ours; whereas liberalism indicates a general disposition to work for improvement rather than to defend existing things merely because they exist. HARPER'S WEEKLY will be hospitable to the new when it happens to like the new, and devoted to the old when it happens to like the old. Indeed, it will judge a thing not at all from the point of view of novelty or familiarity, but merely from the point of view of truthfulness and utility. In the general desire to represent the free and liberal thought of the community, it includes the thought and desires of women as much as men, and puts a special emphasis on this because it does not believe there is in existence any powerful organ which adequately expresses the point of view of the many thousands of women, especially of young women, who are not entirely satisfied with civilization as it has been worked out by men.

The question of propriety, or decency, or whatever it is called, is one that we are willing

to meet, although in the main it is a substitute for real thinking. While we do not wish to over-emphasize certain questions, we mean to consider them carefully, no matter how much harking may result. Most of the complaints against this spirit come from men. The complaints from women are almost negligible. On the other hand, the enthusiastic approval we are getting from women all over the country shows the soundness of the belief we began with, that they desired a place where their point of view could be interpreted, and are most ardently welcoming it. For instance, here is a letter that has just come in:

I have just finished reading your fine review of Dell's book and also your editorial on "Two Kinds of Mothers." I cannot express to you the comfort and feeling of peace your words have been to me. I think that none can understand the peculiar psychological condition of women as you seem to do. That is what we most want—intelligent understanding—this cry about rights is all bosh—we do not want "rights"—any noble man or woman will give up their rights any time when it is needful—are we not doing it all the time—but we do want the right to live—to know that society was made for us—and not we for society.

That praise, of course, is much higher than we deserve, but the generous exaggeration indicates that women realize they have not had a fair interpretation. We mean to throw our columns open to the wisest thought put forth about women and by women, and especially by those younger women who feel the courage and the energy to re-shape the world to approach more nearly their ideals. Most newspapers are run by men, and it is to be noticed that some of them describe this paper as "effeminate" because it considers the woman's point of view as important as the man's.

The Man on the Front Porch

IN the necessarily experimental task of working out an illustration scheme that shall be sincere, strong, and expressive, and, yet at the same time one that can be digested by our public, our thoughts have been forced a good deal onto the difference between the situation in the European countries and the situation in the United States. An intellectual, satirical free-speaking publication in Austria, Germany, France or even England, receives support from a class that does not exist in this country. It is not a class which means a big circulation, but it is a class much more cultivated than any group in this country and it means a moderate circulation for a kind of paper that here would be called "high-brow," coarse, and plenty of other easy names. The man who sits on the front porch in a moderate-sized town in the Middle West after a good day's work, and placidly talks over simple matters with his wife and children, is the backbone of American civilization. There are hundreds of thousands of him. He is not highly cultivated, but he is half cultivated, and what he has is extremely healthy. This strikes us as the most interesting country in the world to live in. Much more interesting than a small, highly cultivated minority in the old country is this large, half cultivated, but sincere and ambitious element in American life. In the half cultivated, moderately prosperous class of Americans today lies the future of our country.

The Dogfish

Fighting the

By HONORÉ

DR. CARL ALSBURG is young, only thirty-six. Also he is a scientist and dislikes publicity. So he was an unknown quantity to the general public when he became chief of the Bureau of Chemistry which Dr. Wiley had made famous. Nor has the public been able to gather much information about the new head since his promotion. Yet the young chief down in the little Chemistry Bureau building in Washington is putting into practical form some big dreams about feeding America.

Sea Mussel

There are two types of scientific mind. One is the investigating type, the runner-down of minute details. It sees things with the microscopic eye only. The other is the creative mind; the mind that sees details in their whole relationship, not only to each other but to universal problems. Both minds are equally valuable to the world. Dr. Alsbury's happens to be of the latter, the creative type, which is an extremely fortunate thing for the American household.

He knew that the policing of our foods is important and that the police work of the Bureau must continue to be active and efficient. But he saw, too, that policing was not enough. He saw that unless the work of the Bureau were creative and helpful as well analytic and punitive it would miss its greatest opportunity, that of finding food for this strange, crowding new century of ours. And not only must it find the food but it must train the hurried and skeptical American public to eat it.

The need in America for more food is imminent; more food and new processes for preparing foods. Any householder does not need to read the newspapers or magazines to learn that food prices are advancing rapidly. There are many causes. Undoubtedly part of the high prices is due to the middle man and to the stupid and greedy methods of preparing and handling. But, just as surely, a very important cause of the high price of some of the necessary foods is their scarcity. Of no food is this truer than of beef and of mutton.

Since the beginning of 1907, the number of beef cattle in the United States has decreased from over fifty-one millions to thirty millions and the number of sheep from fifty-three to fifty-one millions. In this same period the population has increased by ten millions.

The great ranches of the West are giving up cattle raising. Their great ranges are being cut up into farms for the crowding populace. Housekeepers have grown a little panic-stricken.

"What shall we eat," they exclaim, "when beef becomes out of the question?"

Most of the effort of people who have seen the menace has been toward inducing the farmer to raise more beef cattle. This is fundamentally a good policy. But Dr. Alsbury has viewed the problem from another angle.

"Why always beef?" he asks. "Is there no other food, easy to obtain, as valuable as a food? Why not fish?"

The visitor invariably blinks when the doctor says this. "Why—er," replies the visitor, "fish is not as nourishing as beef. It's all right as a brain food and nice to balance the roast on the menu. But I suppose that the real reason is that human instincts are safe to follow and instinct tells us we must have beef."

Being a gentleman, Dr. Alsbury's voice is not as bored as his expression. "Fish, like meat, is a nitrogenous food. Its place on the menu, like that of meat, is to supplement the vegetables."

"But how," asks the visitor, "can the Bureau of Chemistry be interested in fish? I thought fish belonged to the Bureau of Fisheries."

"The exploitation of our waters as a source of food," replies the chief, "belongs to the Bureau of Fisheries until sea food or fresh water food passes into interstate commerce. Then we over here become interested. It is then in the control of the Department of Agriculture to which our Bureau belongs."

"And let me tell you that this department has a deep interest in fish food other than as an article of interstate commerce and other than as a mere edible. Every pound of food taken from the sea relieves the land of producing a corresponding amount of meat. This releases so many more acres for the production of fruit and grain. Every pound of food produced on land uses up some of our soil fertility. Sea food is a net gain to the land. And it furnishes fertilizer to the land, directly enriching the soil."

Not only the direct loss of food has been great in the decrease of our beef cattle industry but the indirect loss to the land in fertilizer has been excessive. The greatest ultimate profit to a farmer is in feeding every pound of grain and forage raised on his farm to live stock on his farm. His gain is then two-fold, in the selling of the live stock and in the fertilization of his soil. When the farmer does not raise live stock to any degree the loss is not only in food for you and for me, but for him, in the up-keep of his soil fertility.

The "fish for beef" idea is a big one. But it is new only in its application to America. The remarkable thing about the matter is that any man, particularly a man as young as Dr. Alsbury, should have recognized the fact that America has reached the point where the fish diet was becoming necessary. It took the far-seeing, the bird's vision to perceive that.

We have lived only a short time yet we have reached the fish era, long known to the economic history of other nations.

Agnes ago, China reached the point where her crowded people could no longer support themselves and any great number of food animal. But there is no crowding the sea. There is no expense in raising fish. Long ago there crept into Chinese legends the story that in seasons when sea food was plentiful the god of wisdom and the goddess

The German Carp

Beef Famine

WILLSIE

of love appeared, each riding a fish, and in those seasons, marriages were many.

Dr. Alsbury is peculiarly fitted to cooperate with the Bureau of Fisheries in this new work. He is a graduate physician. He is a bio-chemist. During the summers of 1906, 1907, 1908 he held a special appointment as investigator on the value of sea foods for the Bureau of Fisheries. The business of this Bureau is to increase the propagation of fish for food.

Dr. Alsbury's direct, practical effort will be not only to increase the popularity of fish already used for food, but at the same time to overcome our national prejudice against certain fish that are plentiful and in many cases are used freely by other countries. We have put the ban on many fish because they offend our aesthetic sense!

Just why Americans eat the oyster and spurn the sea mussel, no one knows. In Europe the sea mussel is eaten in huge quantities. It is quite as pleasant in appearance as the oyster and it should take no more courage to eat the first mussel than the first oyster. Dr. Alsbury wants America to begin to eat the sea mussel and is planning a campaign to increase its popularity as well as that of several other fish.

Take the dogfish for example. It belongs to the shark family and its favorite diet is lobster. The dogfish is probably so called because it in no way resembles a dog. It is extremely ugly, but its general features, particularly in profile, are not nearly so depressing as is the sole, one of our favorite delicacies. Nature struck a very fair balance between the lobster and the dogfish, its arch enemy. A female lobster will produce 15,000 eggs while the dogfish produces from four to twelve young. But nature did not count on man. Dogfish and man on our Atlantic coast are so enormously destructive of the lobster that the latter is threatened with extinction, unless—man can be persuaded to eat the dogfish! The flesh of the dogfish is very sweet and delicate and it will cut in steaks like the cod. The dogfish should be used as a direct food, but it so abounds on our coasts that it should be used as a fertilizer also. The oil from its liver is quite as good as that from the cod.

The sword fish looks vicious and he is notable among sea folk as a stabber of whales. But his flesh is peculiarly tender and well flavored and is eaten in Mediterranean countries. One finds a few of them in our great coast markets where our South Europeans demand them.

We may be forgiven for disliking the personal appearance of the skate, though he utterly lacks the varied ugliness of our favorite, the lobster. The skate goes against all our pre-conceived ideas of fish symmetry. He has a triangular figure and a mouth on the under side of his body. But his big pectoral fins are such good eating that great quantities of the skate are sold in England and France and Italy. We are beginning to have him in our New York markets now where the Italians demand him. He grows abundantly on our coasts.

The squid is a soul-terrifying animal, with a rolling,

prominent eye, with eight or ten arms furnished with suckers and with an ink bag with which to bewitch his enemies. Yet some of the southern peoples have closed their eyes, roasted his tentacles and found them excellent.

Abalones abound on the Pacific coast. They have a huge and very lovely iridescent shell. Yet Americans do not eat them while the Chinese devour them with gusto. Denuded of his shell and served with aesthetic impartiality, the abalone is not half so repulsive as the oyster and, as a matter of fact, stands close to the oyster in food value.

The oyster is in many ways the very prince of sea foods. A quart of oysters contains about the same food value as a quart of milk or as three-quarters of a pound of beef.

In fact, as regards the relative value of sea foods and meat, the only considerable difference is in fat where meat has the advantage. They are about equally digestible. It takes about six pounds of sirloin steak to furnish a pound of protein and about an equal amount of cod-fish but cod is about sixteen cents a pound and sirloin about thirty. Herring has the same nitrogen value as pork, and mackerel nearly as much.

The popular belief that fish is a special brain food because of the phosphorus in fish is not warranted. Fish have no more phosphorus in their flesh than other food animals and physiologists say that phosphorus is no more essential to the brain than nitrogen or potassium or its other elements.

The work of the Department does not rest with the increase of our fish supply. It plans to stop the wanton destruction of fish in the spawning season. The shad industry is now entirely dependent on artificial perpetuation by the Bureau of Fisheries. Mackerel and halibut are in danger of being destroyed.

The Bureau of Chemistry will start a campaign regarding the packing, marketing and refrigeration of fish food which up to now has been very little investigated. Facts like these will be forced on fishermen and the public: fish caught by gill nets and allowed to die slowly under water decompose easily, as also do fish landed alive and allowed to die slowly. Fish killed immediately after catching keep the best and their flavor is better. Fish should not be kept in a temperature over 25° F. but oysters should not be frozen. Oysters deteriorate very rapidly when taken from the water, especially when in spawn, though they are considered to be most palatable when in spawn.

The wide-spread and growing fear that the oyster is a source of disease and is not a safe food is undoubtedly one of the many factors that adds to the high cost of living. Oysters should be plentiful, cheap and much eaten. Public opinion to the contrary, the great bulk of oysters sold are wholesome. The number of beds where pollution is even possible is relatively small.

The Department of Agriculture wants to stimulate the production of oysters and is planning a special oyster campaign. Thousands of acres of shallow waters are available all along our sea boards for oyster beds and the oyster producing possibilities of the gulf states have scarcely been touched.

"The oyster grower of the shallow reaches of the sea," says Dr. Alsbury, "is as much a producer of wealth as the breaker of new prairie land. But need for developing the new beds will come only when the present distrust of the

oyster is overcome and it is restored to the confidence its food value warrants."

The Department is planning to deal with the oyster situation in a new and constructive way. This policy differs widely from the old one under which shippers of inferior oysters were punished but nothing was done to help producers keep oysters wholesome. Uncle Sam is about to begin a systematic, sanitary study of the entire question of oyster production. The first thing will be to learn what beds from Cape Cod to Texas are polluted. These will probably prove to be few. The Department will then control interstate shipments from these beds and this publicity will prevent local sales.

The second step will be to see that the oysters from wholesome beds are handled in a sanitary manner. These two steps should go far toward restoring public confidence in the oyster. The industry will increase and do its share toward making up for our beef loss.

Dr. Alshurg's ideal is not to stop with punishing the offender. People must be protected, of course, from tainted oysters. But in getting after the wrongdoer, the chief proposes to aid all the producers of wholesome oysters to increase their business. This idea of helpfulness and coöperation will go a long way toward increasing not only the oyster business but the fish industry in general.

When one first watches Dr. Alshurg in his office in the

Chemistry building, one wonders why a man of his type should have taken the position of chief of the Bureau of Chemistry. Dr. Alshurg does not say why. He does not talk about himself. But he is a man whose silences are eloquent.

His days are filled with details of rotten egg seizures and stories of swill that has been bottled and labelled "Catsup." One does not know just where or when he does the creative work of which his Fish for Beef idea is a fair sample. His mind is inherently creative, yet he seems to devote his days to police duty on food malefactors. He has received a fine training in this country and in Europe in medicine and physiological chemistry. Why should he be willing to devote his days to food?

The answer is not far to seek. It is the thing not seen with the eye that counts. Because we have always taken our food for granted and have looked down on the people who prepare and handle it, we are now wildly trying to account for the deterioration of our food industries. Dr. Alshurg's mind and the training of it have made him capable of recognizing the significance of facts that we have not heeded. He doesn't seem to object much to his days of had catsup and worse eggs. He knows he has his finger on the nation's pulse. He knows that to learn the essentials of life one must "live in corners and drudge and do chores."

The Sword Fish

War Trusts

By DAVID STARR JORDAN

UNDER the head of "The War Trades" Mr. George H. Ferris of London has given a very interesting analysis of the Interlocking Directorate System as applied to the most greedy and dangerous of all corporations—those who deal in the munitions of war.

He shows that the several British firms are for the most part not real competitors but joined in a general trust, and that this trust is by no means confined to one country. The scandals in the case of the Krupp Company and the Deutsche Waffen and Munitions Fabrik have their parallels in every country. The Nobel Dynamite Trust affords an illustration of the "cosmopolitan character which the modern war trade is assuming." "This British company with its capital of £3,283,400, its net profits for 1911-12 of £3,819,000 and its regular ten per cent dividends is a shareholding rather than a manufacturing concern. It is in brief an Anglo-German dynamite alliance." It holds the entire capital of the Nobel Explosive Company, Ltd. and it has large holdings in the British South African Explosive Company, the Birmingham Metal and Munitions Company, the Chilworth Gunpowder Company, as well as in the Dynamite Aktien Gesellschaft of Hamburg, the Dresdener Dynamit Fabrik and two other German firms.

With the extension of the great navies,

the smaller nations have patriotically established armor plate industries and ship-building of their own, but this is only in appearance. Most or all of these, in Russia, in Canada, in Spain, in Portugal, in Italy, in Japan are but tentacles of the great British trust, the subsidiary being formed by the Vickers, Armstrongs and Browns to meet the feelings of the people they rob or serve. "Time was when England bled for Portugal, now our old ally must bleed for us."

A MOST remarkable combination is that of the Harvey United Steel Company. "Although a dividend of seven and a half per cent had been paid in 1911, it was decided last year to wind the concern up. Why, it does not appear. The managing director was Mr. Albert Vickers, chairman of Vickers, Ltd. with a holding of 2297 shares. Other directors were Mr. Beardmore, of William Beardmore & Company, Mr. J. M. Falkner, of Armstrong-Whitworth and Mr. C. E. Ellis, with a holding of 7438 shares, representing John Brown & Company, Coventry Company and Thomas Firth & Company. The chief American partner was the Bethlehem Steel Company, holding 4301 shares. The chief French partner was the Schneider Company with 9962 shares. The combine had four French directors; two of these held 2000

shares each. This did not in any way prevent the collaboration of the two German armament firms condemned in the Reichstag by Herr Liebknecht—the Essen Company, holding 4731 shares and having two representatives on the board and the Ellingen Company, having one representative and holding 4731 shares. Finally the Italian Terni Steel Company held 8000 shares. Behind the managers stood the bankers, the same extraordinary amity prevailing. The house of Ernest Ruffer with 6160 shares linked hands with the Bougeres Frères of Paris (3000) on the one side and the Deutsche Bank of Berlin (1350) on the other.

"In forty years all the Peace Societies have not succeeded in effecting such a Franco-German reconciliation as this. In the share list Mr. Newbold found the names of one British General and two Major Generals, and behind these were the shadowy figures of a vast host of Princes, Peers, Ministers of the Crown, soldiers, sailors and clerics! A veritable brotherhood in arms. I cannot believe that the Harvey United Steel Company was really dead. Somewhere it has surely had a glorious resurrection. It surely lives and works to prove the pettiness of national prejudice, with ease of forgetting such scores as Alsace-Lorraine, when men have learned the golden wisdom of good business."

Baconians say
Was the Belasco of his day—
Others more plausibly maintain
He was the uncle of Hall Caine.

Musings of Hafiz

(The Persian Kitten)

HUMAN people have a
lot to say about the
Study of Physiognomy,
but what do they really know?
Rather less I should say than
a mole knows about astronomy.
Now, in my family, the first
thing one has to do is to learn
to read faces, for our human
companions are such wretched
feliquists it is hard to make
out what they really mean
unless one is a face-reader.

LOOK at these two pictures
—I found them on the big
desk in the study. Now please tell me—
judging only by the expression of the
two faces—which is the nobler animal?
Don't show race-prejudice. Try to for-
get you are a human being and that
one of the portraits is that of a Man,
while the other is a portrait of a kinsman
of mine.

You refuse to answer?
How human!

By your very silence you admit the
nobler face of the two is that of my late

relative, who was a member of a royal
family of West Africa. The other is
the face of a well-known gunman and
(as the murderer of my royal kinsman)
a regicide.

HAVE you forgotten that
famous crime, which is now
a part of feline history? It is all
recorded in *Scribner's Magazine*,
with photographs of the scene of
the murder, and of the victim, to-

gether with a full confession
of the crime by the gunman
himself. About a year ago an
attempt was made to poison
him by crushing him under a
gigantic steam-roller. The
gunman emerged unscathed.
The steam-roller was dented
beyond hope of repair.

The last I heard of the
notorious gunman was that
he had escaped to South
America. If he is still carry-
ing on the Vendetta against
my race, I am glad the only
relations of mine he will
meet there belong to an inferior branch
of the family.

Also they are very spotty and
cantankerous.

How Murphy Works

II. In New York City

By HON. EDMUND R. TERRY

Member of the New York Assembly in 1908 and 1911 from the First District of Kings

Illustrated by O. E. Cesare

FOR many years it had been my ambition to be an assemblyman at Albany, but the district in which I resided, the First of Kings, was considered a hopelessly Republican district, and besides, my ambition to serve in that office had always been qualified by my determination not to pit myself under obligation to get it.

In the month of September, 1907, my ambitions had been laid on the shelf as hopeless. The latter part of that month I was called up by our congressman, who, to my amazement asked me, if I would consider the Democratic nomination to the assembly from that district. I told him, that I had always been independent and always intended to be. He replied, "That is all right." "Then," I said, "I will accept with pleasure." I accepted and was, to the consternation of a number of people, elected. As a Republican leader of that district said to me later, "If we

had only known that you were so strong, Quinn (my leader) would have fixed it all right. Your election was a joke on him." It was a fact, I had noticed during the campaign the lack of enthusiasm at headquarters over my running and on election night when the votes were counted, I, myself, saw in each of four different districts, over twenty otherwise Democratic ballots on each of which the name of the Democratic candidate for alderman and my own were scratched and our Republican opponents voted for instead. Now, it happened that my associate on the ticket, the candidate for alderman, was a saloon-keeper, but of a very superior type, while I represented in popular estimation, the silk-stocking element. It is easy to see why a friend of Mr. Shanahan, my fellow candidate, might have no prejudice against voting for me. It is also easy to see why some of my friends might object to voting for

Mr. Shanahan, and as I was informed that this condition existed in nearly every election district in the assembly district it is impossible to avoid the conclusion, that neither of us was nominated to be elected; and that the deal had been made between the Democratic and the Republican leaders of my district to defeat both Mr. Shanahan and myself. I happened to get several hundred more than he, so I pulled through. I mention this to show the treachery of the organization to its own people. It is typical of the Tammany organization as it exists outside of Manhattan; there it has at least the virtue of being true to its own.

I COULD understand then, why my statement of independence made no difference as to my nomination. There was a time when Kings County was a factor,—an independent factor in state politics. That was when we had the

ward as a political unit and later with the election district as the unit, it was the same. In both these systems, ordinary citizens could make their desires effective, if they chose. Under the assembly district system, the average citizen has and can have but little to say in the conduct of the party organization or in the selection of the various candidates for office. That system is the basis of the strength of Tammany Hall in New York City and its adoption in Kings County was the beginning of making Kings County a sort of second-class annex to Tammany Hall. In the assembly of 1911, the pet nickname of the Tammany men for their Kings County brethren was "Petty Larceny Grafters." All this lowering of tone was due to the fact that the assembly district was the political unit of organization. Under this system it is virtually useless to try to dislodge a crowd that once obtains control in the assembly district, as it requires much more than the usual spirit of patriotism that can be expected of the ordinary citizen.

IT is usually successful only when a "Regular," aspires to knock out some other professional politician, who will use the practical method of the practical politician in the primaries and is willing to spend a good deal more money than can legally be spent on any election, primary or otherwise. At the campaign for the election of Seth Low for Mayor of Greater New York, former Senator Coffee organized what was known as the "Brooklyn Democracy," for the support of Mr. Low in opposition to the regular Kings County organization. The feature of his campaign that gave strength to the movement was a specific promise that if the movement were successful, he would proceed to organize on the election district system. The movement won out handsomely, but Senator Coffee did not carry out his promise. The reason that he gave me for not doing so, was that "It was a mighty good thing for the people, but that it wiped out the 'boss'." I suggested to him, that it was better to be a powerful leader than an impotent boss, as he would be under the circumstances, but he chose the latter alternative. My own leader, Sheriff Quinn, gave as his reason for opposition to the election district system, that "It would make too many statesmen." In other words that under such a system the citizens at large would take the interest that they should in politics. At the midnight conference of the Democratic members in the session of 1911, when the Hinman-Green Bill, which provided for the election district as the real political unit, Al. Smith, the Democratic leader, boldly stated, "If you pass this bill it wipes out the organization in New York City." So much for the matter theoretically, if you please. Now to consider it practically.

IN my own district, the organization consists first of men who hold offices through the organization and of others who hope to and their friends. There is also a considerable sprinkling of men representing various corporations and interests, that wish to keep in touch with the organization. While all these, as the votes on election show, are the real

minority of the Democrats in the district, yet as a solid body in the district where there are between thirty-five hundred and four thousand Democratic voters, it is easy to see how their solidarity makes opposition useless.

WE did have a primary fight in 1912 under the existing law and found that an opposition, unless provided with more funds than could be honestly spent, was hopeless. All sorts of threats were made against those who signed our nominating petitions. Those who had property were immediately attacked through the tenement house commission and other offices controlled by the Tammanyized Kings County organization. Relatives of our men who were employed by the government were discharged for trivial reasons. Even children were denied such changes as would facilitate their getting to school and the reason boldly given was that of hostility to the organization. Saloon-keepers who were with the opposition were denied privileges, that their neighbors who were Regulars had without question. On primary day, the printed ballots were withheld until an order was asked for from the Supreme Court compelling the inspectors of election to carry out the law and receive as valid ballots, the circulars on which the names of the candidates for the various positions were printed. Hundreds of our people had gone to the polls and had not voted because there were no official ballots, and the election officials refused to accept anything else. These were finally given out about four or five o'clock in the afternoon. These conditions held all through the city in every district in which there was a contest. Every available office-holder was out working for the organization. At the poll at which I voted one of the Jurors of Special Sessions was in attendance all the afternoon with Sheriff Quinn, the district leader. So that we all felt as if we were really contending, not against an organization representing other voters, but a sort of close corporation of a semi-secret nature.

THE methods of intimidation and otherwise to which Tammany and its allies in other counties will stoop are contemptible. Their mildest epithet for anyone opposing them is "Scalawag." The worst of it is, that even apparently respectable men connected with the organization will lend themselves to the secret dissemination of anything that will discredit their opponents, no matter whether it be true or false. When in the fall of 1911, I was running as an Independent candidate, in many other districts aside from my own, in Manhattan as well as in Brooklyn, when my name was mentioned, the response would be, "Oh, that fellow, why he was dead drunk all the time he was in Albany, an associate of the lowest women of the town and whenever he tried to say anything on the floor, made himself the laughing stock of the assembly." My friends and acquaintances of course knew to the contrary, but such foul play cannot but hurt some, and the more subtle slanders are worst of all. I heard this from so many different sources, that I cannot but believe its universal currency was inspired from headquarters. This is no

aid to a man in his business. It is the same spirit that led to the impeachment proceeding against Sulzer. In other words if a man goes to Albany or holds any other position and tries to do his duty, he renders himself liable not only to criticism from those whose opinions are honestly different from his own, but also to secret and irresponsible attacks upon his character and standing, promulgated by a powerful and omnipresent organization, that he has no way of combating nor does this end with the campaign—once down they wish to keep him there. No organization, the purpose of which is honestly to seek the welfare of the city, state or individual citizen would ever descend to the methods for the retention of power that are employed by Tammany to retain its control and its hold upon the offices and other sources of emolument of benefit to its rank and file and to its chieftains,—particularly to its chieftains.

THAT is the reason why, though we constantly hear of the number of men of respectability and standing that surround and advise the leader of Tammany Hall, none of them ever cares to occupy that position. It is much easier to have dirty work done by someone else than to be personally responsible for it. The Law of Tammany is Rule or Ruin for their own pecuniary gains. As a man prominent in the Party once said to me,

"Well, what's the use of fooling, you know and I know that all this stuff about Party principle is simply to fool the public into keeping us in office." To insure the rule of Tammany, only men who will be subservient are allowed either to be elected to positions in the party or nominated for public positions except once in a while when popular indignation gets too strong; then some man of apparent respectability is put forward in the hope that he may get the votes—and that the organization may get him later, or at least they expect him to give them the appointment of men in the different departments who will run politics after the approved Tammany plan without scruples. If they can do that on the quiet, the more the executive poses the better pleased the organization is. In Kings County there is one Democrat against whose regularity nothing can be said, than whom no one stands better with the intelligent and self-respecting Democrats (a man of not only independent mind but of independent means). He is a man who cannot be held on leading strings, consequently Mr. Murphy has no use for him, or for any other man like him. Every chance the organization has had to slip him in the face, it has taken with avidity.

WHILE Mr. Murphy and what he represents were satisfied with the control of Manhattan Island, it was had enough, but now that he has extended his power to cover the state, the evil is not only greater in extent but intensified in degree, and the only way to kill it, is right at its home in New York City. The corrupt power grows by what it feeds upon. Is it not the very height of absurdity to claim that government by such an organization is a free government by the people?

Next week's issue will contain "What shall we do about it?"

"Today, after ascents beyond number, my enjoyment of the air is undiminished."

Flying Ten Thousand Miles

Part IV

By

CLAUDE
GRAHAME-WHITE

MUCH might be written, from various points of view, about the nerve-strain of flying. Obviously there is a strain, as there must be in handling new apparatus in a new element. But the extent of it depends upon temperament, and the conditions under which one flies. Great cross-country pilots, men who make aerial history, are by disposition buoyant and combative; but they are daring only when justifiable, and show caution instantly it may be needed. One man can remain aloft many hours and climb from his machine fatigued but not exhausted; another, after a short flight, alights with nerves on edge. My rule has been never to fly when I have felt unwell: a pilot who is not fit physically may lack the power to act promptly just when it is demanded of him. Save for this precaution, and for the temporary shock of certain falls, I have flown always with pleasure; and today, after ascents beyond number, my enjoyment of the air is undiminished. Nor have I suffered in physique or nerve. The exhilaration is powerful, and there is no reaction afterwards. Some day physicians will advise it.

I recommend first flights, always, when conditions are ideal; then everything exhilarates, and nothing tries the nerves.

Apart from unpleasantness of motion, flying in a wind is tiring. An aeroplane in a calm needs the merest touch on the controls; often it will practically fly itself; but in heavy gusts one has to work hard. At Blackpool, taking part in a duration contest, I was in the air—save for two or three short rests—from dawn till dusk; and, a tricky wind troubling me all day, I found the ache in my arms during the last few hours' flying almost unbearable. In the future, though, such fatigue will be obviated. When we have large machines, the movement of their planes will be by compressed air, or some other power, and the pilot will control his craft as easily as the helmsman of a liner twirls his wheel. But nowadays, when pulling and balancing planes against the thrust of adverse gusts, the airman needs muscular strength. Often it is not peril from the wind, but sheer fatigue, which brings a pilot down.

THE rolling and plunging of the plane may, in very rough weather, produce a form of air-sickness which is as unpleasant as *mal-de-mer*; and that a pilot should be ill is not surprising. Sometimes a monoplane, fighting an ugly wind, may drop many feet—in one sheer fall—before it can be steadied. Airmen, when flying in contests, have been compelled by sickness to alight; but, for a curious and amusing experience, I think the palm goes to a French pilot in a long-distance race.

He had lost his way—as most of us did before compasses were reliable. Descending near a village to seek information, he soon had the populace round his machine—all, in their excitement, giving directions at once. The airman shook his head; it was impossible in such confusion to understand what was said. Then he had an idea, and called:

"Will one of you ascend with me and show me the way?"

A burly rustic pushed to the front. "If I come," he asked, "what about getting back to the village?"

"I'll drop you near a railway station, and pay your fare home," said the pilot.

At this, to the admiration of his neighbors, the rustic climbed into the machine and was looking down upon his village a minute or so later, from an altitude of three hundred feet.

THEN the wind rose and the plane heeled. Rising higher, the pilot sought a steadier current, but in vain. Conditions, though, were not bad enough to compel a descent, so he turned to his passenger.

"You can see the country well, eh? which is the way to —?"—mentioning the next "control" on the flight.

But the rustic, huddled in his swaying wooden seat, and gripping the nearest upright with convulsive fingers, was beyond the power of speech. His face a chalky white, he pointed dumbly earthward. Air-sickness had him in its throes; and the pilot, fearing the man, in his distress, would roll from the machine, was compelled to glide down.

WHEN, today, I mount to an aerodrome and take a plane for flight, I know three things—not one of which

the pioneer knew; and they spell confidence: 1—My machine is airworthy; 2—My engine is reliable; 3—I need not fear wind—unless abnormal.

But upon rare occasions the best of motors fail, and then one glides to a landing, casting dubious eyes on what—from a deceptive altitude—seems a field attractively smooth. Height flattens the appearance of the land, and a surface may seem level from an aeroplane, although in reality uneven. To one of my pilots, bringing a new monoplane from France by air, came engine failure just above the English coast, and he glided for a field that seemed smooth as a bowling-green. But, poised on the verge of landing, he saw what until that moment had been invisible—a steeply sloping ridge, cutting the field across its center. To alight as he had intended would mean running downhill into a wall. But was there time, before touching the ground, to turn and face the ridge? In the fraction of a second, at such a crisis, a pilot makes up his mind. Here was a choice of two evils—a wrecked craft promising in either. The airman swung short round, his planes standing almost vertical; and in nine cases out of ten, I suppose, the result would have been side-slip, and a similar fate to my encounter with a wall. This time, though, the gods were kind, and he landed as neatly as could be wished.

BUT an inability to detect small contours, when alighting unavoidably, does not add to one's joys when over strange country—as pilots, shattering gear upon golf-course bunkers, have found to their cost. Never, when landing, have I hit a bunker, but I have just missed a river with a falling rotor. It was not a wide river, but most undesirable as a landing-place; and I had a lady passenger behind me. Touch-and-go it was with us—a matter merely of a few feet. All impetus gone, the biplane seemed for an instant to stand still in the air; then it fell—not in the river though, but at the very edge of the bank, where it crumpled its chassis and left us unhurt.

Naturally, I join issue now with the sceptics—those who say the navigation

"But this is the foundation of my faith: flying can and will be made safe."

of the air is dangerous, and must always remain so. On the surface of the earth a vehicle, whatever it may be, has a firm and definite resting point, but in the air—should some mishap occur—nothing lies between one and a sheer fall to destruction; such is the argument. And it forms a preliminary to the general contention that, however much craft may improve, this intangibility of the air must be the barrier always, precluding the use of a large passenger machine, and confining the aeroplane to its use as a weapon of war.

HERE, obviously, there lies a great mountain of prejudice. Of course it must be moved, and it will be moved—but only by inches, and by dint of ceaseless effort. One should remember those meetings of protest, and campaigns of misrepresentation, by which it was sought to stifle the railway pioneers; and as a lesson more recent, we have the struggle waged by motorists against repression and slander. There is this inertia, either passive or obstructive, always to be faced; thus it is inevitable that aviation, from the very greatness and strangeness of its revolution, should be met by a broadside of abuse.

But this is the foundation of my faith: flying can and will be made safe—as safe as the ocean voyage of a modern

liner. None who are in this new industry—builders, engineers, pilots or mechanics—have any shadow of a doubt on this score. Perils there have been, and are now, and for some time will be; but the path of progress opens clearly ahead. Aeroplanes will be made stable, even in a gale. What, in this regard, is the lesson of those preseat-type craft which, although still low-powered and small, will fly in a fifty-mile-an-hour wind? They tell us plainly that, given logical increases in power, weight, and speed, the aeroplane will conquer wind, as ships have the sea. It is absurd to be impatient, or to expect commercial aircraft to spring up, ready-made, within a day; but if I recall the slow-flying, sluggish machines upon which one ventured across country only three years ago, and contrast these with that swift, air-worthy plane in which I made quite recently the flight from Paris to London, I find this question in my mind: "If three years can show such progress, what will another three bring?"

"But," queries the sceptic, "what of the risk of passenger aircraft breaking when in flight?"

ONE might ask similar questions concerning a liner: if one broke its back, in mid-ocean, the results might be

disastrous. But they do not break their backs; nor will perfected aeroplanes collapse. And, should all an aircraft's power-units fail her simultaneously, as—very rarely—the steamship's engines cease their work, she will merely glide to the surface of the sea, or to the nearest land station, and remedy the defect.

What would our forefathers have said had they been told travellers would dine, quite as a matter of course, in vehicles moving at sixty miles an hour? Their mental attitude would have been that of many folk today when one informs them that—even within the span of their own lives—men will be seated, 10,000 feet above the earth, in the saloons of an air-craft travelling 200 miles an hour.

OF the sheer delight of flying, what can one say? Of that smooth and seemingly effortless speed? Of the panorama spread forth below—passing slowly, appearing so far-distant, yet revealed in all its detail? And the triumph, above all else, of riding surely through this unseen element—spurning woods and hills and all those obstructions that bind our earthbound folk? Some joys are so deep that they are dumb; and this is one.

New Disclosures in Medical Science

By JOHN B. HUBER, A. M., M. D.

I. Life Artificially Prolonged

PARACELSIUS, in Dr. Jacobi's sound opinion, "was not altogether a charlatan." He and the alchemists of his era, and before him, were constantly seeking substances, physical or chemical, by which the wasted tissues of the sick and of the aged might be restored. Faust, it would seem, was the only individual who "made good" in the premises; and even his existence has been only in legend and on the operative stage. An elixir of life was sought also in prepara-

tions of "humors" from bodily tissues and fluids; and such latter experimentation was startlingly akin to that reported by Dr. Alexis Carrel, whose previous extraordinary researches are well known to civilization. We refer here to his paper: "Contributions to the Study of the Mechanism of the Growth of Connective Tissue" in the September number of the *Journal of Experimental Medicine*.

It should be remembered that Carrel knows what Paracelsus could not know,

but what Virchow, with the modern microscope for his instrument of detection, demonstrated: that all life, physical life at least, is essentially cellular and that all cells are evolved from cells (*omnis cellula e cellula*); that is to say, all physical development and growth is by cell development and multiplication.

In January last Dr. Carrel reported his success in activating the processes of repair after wounds and from disease, by the application of the pulp of organs

known by physiologists to further tissue growth. He had found that connective tissue cells (those which are the framework of the "basement substance" in which the functioning cells of the body are imbedded) preserved and multiplying in glass jars, might be accelerated in their growth from three to forty times the normal rate, by means of the pulp or the juices of chick embryo, of the adult fowl spleen, of muscular tissue; thyroid extract applied to a dog's wounds marvelously increased the healing process. The healing of a skin wound activated only ten times would be consummated within a day; a fracture of a long bone would be repaired within several days, instead of in six weeks, as ordinarily.

DR. CARREL has now made a considerable advance on his January report. He tells us that a constant relation exists between the rate of growth of tissue and the composition of the medium by which it is surrounded and penetrated. (Herein is again exemplified how genius, in whatever era it is manifested, is prescient of facts fundamental to existence, knows them intuitively; Carrel's statement is essentially in accord with Herbert Spencer's, that "life is the continuous adjustment of internal relations to external relations," the latter being the environment to the mass of cells which make up the living body. Claude Bernard wrote too, that life is the result of the interaction of the cells of which the body is composed, and of their interior medium. But the nature of the interactions had not in his time been ascertained; in order to discover the laws by which they are regulated it would be necessary to modify the humors of the body and to study the effects of these modifications on the growth of the tissues. This could not then be done because there lacked such technique as Carrel has now perfected.) By modi-

fying the medium in which, in Carrel's experiments, the normal blood plasma of the chick is basic, he can regulate, accelerate or retard cellular growth. He can foresee the extent to which a fragment of tissue will increase in a given time. He has found that the dynamic condition of connective tissue cells, which have been living in a given medium for some time, is not a definitely acquired characteristic but a temporary state, and is the product or function of the medium in which the cells are living, and is readily modified by altering the composition of the medium.

THE fact of the constant relation stated led Dr. Carrel to the belief that the problem of multiplication, growth and senility might now be properly investigated. He first determined that connective tissue cells taken from animals of varying ages were activated according to their age; the younger the animal supplying the juice the greater was the tissue growth. In the juice of an adult fowl the connective tissue lived several weeks, nor did its mass increase; but when the juice of a young fowl, or embryonic (pre-natal) juices were mixed with the medium the volume of tissue increased with greater rapidity and was so abundant that it had to be divided repeatedly. Thus, connective tissue that had lived *in vitro* (in a glass jar) beyond a year could greatly increase its mass in a short time; nor in such a medium had the cells, even of old animals, lost their vigor. The question was not so much of cells and their age as of the medium in which they were growing. Dr. Carrel found also that cells which were actively developing in a medium markedly modified the latter and rendered it progressively unsuited to their life. Normal death of tissue cultivated in the laboratory be considered as "possibly brought about by the exhaustion of the nutritive substances contained in the

medium and by the accumulation therein of certain catabolic substances" (such as in the natural biological processes are excretory).

THUS can Dr. Carrel indefinitely multiply connective tissue cells kept alive (as manifested by growth and multiplication) outside the organism, the body from which they were taken. Such cells live precisely as do micro-organisms—germs—which are living, multiplying cellular units. He has kept the fragments of a chick embryo heart which had been pulsating in a glass jar for 104 days, alive after sixteen months of independent existence and more than 190 passages (removals to freshly prepared mixtures of the culture medium), whilst their rate of multiplying exceeded that of fresh connective tissue taken from an eight-day-old embryo chick. Thus time has no effect on the tissues isolated from the organism and preserved by means of Carrel's brilliant technique. Nor were the tissues on which he experimented in a state merely of survival; they were indeed in a condition of real life, because the cells of which they were composed multiplied indefinitely in the medium.

IF the future can assure practical results from Dr. Carrel's great work, the psalmist's three score and ten may be extended to the years of the Pentateuchal patriarchs. The dream, far the most dreamed and most yearned in by men from time immemorial, might possibly come true; "really and truly," and not as children realize idealisms in fairy tales. Faust might conceivably become rejuvenated in this life—a realization to be viewed not without apprehension, unless that individual should become, rather than him characterized in the Goethe work, the soul-purified Faust of the second part of Goethe's mighty epic.

II. A Discovery About Rabies

DR. HIDEYO NOGUCHI, of the Rockefeller Institute for Medical Research in New York, one of the soundest of this century's scientists, and one who, by his researches, has helped to prevent much human suffering, announces that he has "obtained certain results" about the microscopic organism essential to the existence of rabies, one of the most dreadful of diseases. He made fifty series of cultivations with brain and medullary substance removed antiseptically (so that no other infection could complicate the experiments), from rabbits, guinea pigs and dogs that had infected with the rabies virus. In the cultures of such substance Noguchi discovered very minute granular bodies to arise, which on subsequent transplantation, reappeared in the new cultures through many generations. And "the new bodies appear to be obtained from street, passage and fixed virus." (Street virus is that of dogs naturally infected; passage virus is street virus transferred from rabid rabbits to rabbits as yet unaffected, until its potency remains constant, when it is fixed virus. The latter is fatal to rabbits but harmless to men and dogs; and the emulsion used in the Pasteur treatment is a saline solution of this virus.) The method by which Noguchi discovered the granular bodies thus found to be characteristic of rabies, is similar to that employed in cultivating the germ of relapsing fever, which germ is a protozoan; one infers therefore that the

rabies bodies are protozoa. Assuming that Noguchi's findings will pass the tests which inexorable science requires, we find his discovery most vital, for two reasons: this disease can now be absolutely identified; and we may now hope for a cure. Up to this time the "Negri bodies", found in nerve cells of the brain and medulla, and peculiar to this disease, have been an absolute assurance of its presence; but though pathognomonic, they have not been considered the essential factor in rabies. Yet, when a supposedly rabid dog that has bitten a human being is killed, and the Negri bodies are identified in it, both the physician and the patient must assume that the patient has become infected with rabies. But there have been dogs unquestionably rabid in which the Negri bodies could not be found; so that their absence cannot argue the absence of rabies. Noguchi's discovery provides a positive identification. Here, too, is a certain differentiation between true and false rabies. False rabies (lyssophobia) has developed from the imagination of those fearing they have the disease; and so great has been the psychic perturbation that victims of such fright have died exhibiting the phenomena of rabies. And one may now silence those sceptics who declare there is no such disease.

ALSO we may now be sanguine of a cure for rabies. The mortality from this disease, once it is developed be-

yond the incubation period, has thus far been practically one hundred per cent—after sufferings as awful as any known to medical science. The Pasteur inoculations, blessed though they are, are not a cure but a prophylaxis; they avail not at all after the invasion of the disease; but they prevent the development of rabies when injected within a fortnight of the animal's bite, on the immunizing principle by which vaccination fends off smallpox. We have noted that the rabies germ appears to be a protozoan (an animal parasite) and not, as most physicians have supposed, a bacterium (a vegetable parasite). One hopes then, for a cure of rabies by some such chemical compound as "606", by which syphilis (the germ of which is a protozoan) is cured; or by some such specific as quinine by which malaria (also a protozoan disease) is cured. Indeed, some cures of rabies (one in a man, two in a dog) have been reported; but at present it were wild indeed to look upon such reports as otherwise than *sub judice*. Should, on the other hand, Noguchi's bodies prove after all to be bacterial, we may equally hope for the elaboration of a curative serum. Nor should legal measures for the control of rabies in dogs by muzzling, leashing and quarantine be relaxed; more than ever, indeed, should they be enforced, and at all seasons, since the existence of the disease is now established beyond cavil.

McSorley's Saloon

An ancient landmark, a relic of one phase of American life that has passed

By HUTCHINS HAPGOOD

MCSORLEY'S saloon happens to be situated in New York City, on Seventh Street, near Third Avenue, within a stone's throw of the historic Cooper Union, but it might have been, as far as its spirit is concerned, placed almost anywhere in this great country of ours.

It is the type of saloon that is passing away, but is represented by isolated examples, here, there, and everywhere, which still persist.

This famous saloon—and what old town has not its famous saloon?—is sixty years old. John McSorley, its founder, dead these three years at the age of eighty-seven, was one of the historical figures of our town. His horses were as good as those of Commodore Vanderbilt. The quaint portrait of old Peter Cooper hangs on his saloon walls, also an old play-bill announcing a comedy by Harrigan and Hart called "McSorley's Infatuation". An old copy of the *New York Herald*, framed on the wall, announced the assassination of President Lincoln. The walls are covered with old New York and national reminiscences. There is a striking portrait of John McSorley, of his cabinet officers and of the members of his Chowder Club.

A one-hundred-years-old safe, an ancient slanting ice-chest, old solid chairs and tables, a scrupulous care manifested to keep the place as it always was, help to establish an atmosphere of tradition and permanence. Entering the saloon one seems to leave present day New York and to find oneself in a quieter and more aesthetic place.

John McSorley's son now owns the saloon, and his one pious passion is to maintain the spirit of the place and the spirit of his father. He regards his father as one of the great moral characters of the age and he wouldn't change a thing in the old saloon, nor fall in the slightest degree in carrying out the old man's ideas. Even old John's cats are still happily basking in ancient love, and still gaily boxing for the delight of the McSorley worshippers.

OLD John McSorley walked every morning at five o'clock for thirty years to the Battery bath, and opened his saloon at seven. He drank steadily and soberly from the age of thirty to the age of fifty-five and for the last thirty odd years of his life he neither smoked nor drank. He had had enough. No one can sit quietly in his saloon and open his senses to the moral atmosphere without feeling that there is a personality there—a personality respected and cherished by McSorley, son.

Father McSorley sold ale and practically nothing else. If he sold whiskey occasionally, he insisted on its being good and taken "neat"—no mixtures for him. His ideas of drinking were as solid as his ideas of furniture. Nothing flashy for him. Son McSorley does the same, and he sells good ale, too, and a lot of it for five cents.

No woman ever passed or passes the threshold of McSorley's saloon. The dignified workmen who sit quietly for hours over one or two mugs of ale look as if they never thought of a woman. They are maturely reflecting in purely male ways and solemnly discoursing, untroubled by skirts or domesticity.

"Drunks" have never been welcome in McSorley's saloon. They often tried and tried to brace in with a bold look, but McSorley and his son had an instinct for them and for panhandlers and always gently rejected their nickels. The old man used to sell once to some young mechanic, to whom, if he tried to be a "regular", the old man would give a lesson in deportment and then send back to his job.

The spirit of McSorley's is to welcome the drinker of a mug or two during long hours and discourage the "flash" party who spend much but seldom and drive away the quiet, constant ones. No matter how many diamonds and money a light and well-dressed stranger may possess, he cannot get a real welcome at McSorley's, and on no account is he admitted to the back room at lunch time, unless he will content himself with a sandwich and a mug of ale and not disturb the habits of the serious workmen.

McSorley's closes always at midnight. Under the law it could be kept open till one o'clock, but old John McSorley wanted to go to bed at twelve, and so his son does, too. The tradition is as zealously maintained as in any aristocratic old French family.

RAW onions and ale—these are the staples, and both are strong and pure. Reinhardt would have delighted in McSorley's and I think that Velasquez would have found his account there, too, as our own John Sloan does. The wives of the men who go to McSorley's know where the husbands have been. There is no mistaking a McSorley onion.

Old John McSorley was, among his other qualities, a good deal of a prophet. He used solemnly to warn his brother saloon-keepers that if they yielded to the wiles of the devil, for the sake of immediate gold, the liquor license would be raised on them. And, behold, since his early time, the license has gone from

\$75 to \$1,400 a year. The toll on the wicked is great and heavy, and unfortunately involves the good, for we are all brothers in misfortune.

Since the breweries got possession of the saloons, they exact so much of the profit that the poor saloon-keeper is often forced to do shoddily and careless and hasty; or in other words, evil things, in order to live. But McSorley, son, owns his own saloon, and, strong in the spirit of his father, maintains the ways of balance, form, and virtue.

IF there were more saloons like McSorley's in the country, and fewer of the other kind, there would probably now be no strong temperance movement, attacking the price of the grape or the corn—that element of civilization recognized from Plato to Omar as emphasized by Fitzgerald and accepted as a stimulating spark kindling our poetry, our literature, our temperamental sociability, inciting our fancy, and warming the world in which we live.

McSorley's saloon is, as I have said, mainly frequented by quiet workmen who sip their ale and look as if they are philosophizing. It is true that the saloon in general today—(good and bad) is the principal place in which ideas underlying the labor movement originate, or at any rate become consciously held. It is there where men talk over, think, and exchange feelings and ideas relating to their labor and their lives. The social philosophers take their fragmentary thoughts and construct them as to programmes and systems.

SOME of these programmes and projected systems are extreme, some unbalanced. Now, it is probable that in McSorley's saloon the thinking workman takes more things into account than he does in a hiral, hasty and violent saloon of the more frequent type. There is a correcting conservatism in the atmosphere of McSorley's which tends to eliminate from the worker's feeling and thought that which is hastily considered.

The heavy, solid chairs, the rich, dark colors, the trailing mementos of the past give pause to the headlong spirits, tending to take away what is unbalanced.

Yes, as one sits in McSorley's saloon, watching the subtle cats, conscious of the old slanting ice-chest, aware of the quiet workmen sipping their genial ale, wrapped in the shadows of tradition, one feels a little solemn, as in a quiet retreat, though not too remote from human nature's daily luxuries.

A MUG OF ALE

By John

The Woman of It

By ETHFL WATTS MUMFORD

Illustrations by the Author

LET us be done, if you please, with this sort of hypocrisy." This line occurs in the last act of "Damaged Goods," the Brieux play that has been condemned and lauded with equal violence by an excited public. It refers to the conspiracy of silence with which custom has surrounded the facts of sex life, and invariably this line is followed by applause—the applause of women, for of the crowd that fills the theater 90 per cent. are women. They come from every class and grade, and they do not come out of idle curiosity, nor to pass judgment on a play. They do not care if the first two acts of the drama are masterpieces of construction. They are even less concerned that critics have pronounced the third act a medical treatise, and no act at all. They are there to learn, they are there to assert their right to knowledge—their right to protect themselves and to protect their children. The sight of them in serried and serious ranks gives one pause, makes one think.

THERE are many, very many, gray-haired matrons in the throng; women who, a few years ago, would have been the first to criticize a frank word or discussion of the great Taboo. Now, they are facing serious facts. They are voicing approval of the physician who cries out from the depths of sorrowful experience, "Silence is criminal!" "Would that I could cry the truth from the housetops." Courageous mothers have come, shepherding their little flock of wide-eyed daughters and growing boys. They are the pioneers who have realized that ignorance is not, and never can be, bliss, but is Danger in a passive form.

To observe these audiences closely is to be deeply touched. Tragedy plucks one by the sleeve. Courage nods to courage. "The old order passeth," carrying with it the veils of silence and negation. And the women who have dwelt for centuries curtained behind these veils, are blinking in the light that reveals to them their work, their place, their honors and dishonors in a world of realities.

A WOMAN, bent and gray, dressed in faded and antiquated black, creeps in to the theater, and stands behind a pillar, watching with hunted eyes. The money wherewith to pay for her entrance ticket must have been hoarded with hither

self-denial. Why is she here? Watching her, the conviction comes that, from this play of human folly, she has slaved to witness, she seeks to learn the truth to some hideous puzzle in her own environment, a puzzle to which her ignorance could give no answer, and concerning which custom has tied her questioning tongue. She comes in and out, with pitiful apprehension of being seen. Yet who should know her? She hears the marks of service and the liveliness of the tenements. It seems strange that one in her walk of life should not have found fool facts a matter of everyday—then why is she here at all? She is a type, and her like is always present at these performances.

ONCE the curtain goes up and the lights are turned low in the house, the kept woman and the street walker come slinking in—alone always, never in groups—pitiful, fearful, frightened at coming, yet impelled to hear what may be a death warrant. A half defiant air about them, as if they would deny their very presence. They sit far back. In the *entré* act they do not go out to promenade the foyer. They sit, waxen pale under the rouge, their poor painted lips twisted in agony. Slow tears have furrowed the powder on their cheeks. They do not even glance about to ascertain if some one has a newer coiffure than theirs, or is wearing a more daring gown. "The woman at the gate!" She hears herself reviled and pitied. She sees herself pictured, "at once the victim and the cause." They come out from this "place of public entertainment," haggard and absorbed in terrified contemplation.

CHEEK by jowl with these outcast sisters sit groups,—gregarious these,—of mouse-like women, one pigeon-hole as the wives and sisters of suburban clergymen. They gaze with question in their eyes, buddled together, as if for warmth—why have they come?—such daring would seem beyond their drab will powers. Well down toward the front of the house, ostentatious in manner and in the "suit-alienness" of their raiment, are rows of women from the various "Leagues" and "Societies" for the invention and prevention of all sorts of things. They arrive with, "wait-till-I-tell-all-the-neighbors-about-this" air, but they leave with the stricken faces of those who have gazed on Truth of Evil in all its nakedness.

THERE is hardly a face in all the crowded house that does not sooner or later take on an expression of painful reminiscent understanding. The "why" of many an illness, many a death, many a broken life is made plain. Puzzling tragedies are slowly illumined and solved. The inexorable light of fact finds and settles on them like some burning calcium, a spot-light which reveals decay and death, helpless sorrow and innocent suffering.

Yet they leave with courage in their eyes, these women; fight and determination may be seen ten times where is seen one crushed and aimless spirit.

What had been a mysterious Thing, has become suddenly a link in a chain of avoidable disaster.

THE first two acts of the play leave this strange audience silent and tense. They feel too deeply the human import. They follow too closely the painful story. They do not applaud a good piece of acting, nor nod intelligent approval of a well-built scene. When the curtain falls on the first act, they have applauded but once—the doctor's speech calling for publicity. After the second act, which really closes the example-story, there is but a slight outburst. The burst is all inward—whole areas of prejudices have been dynamited.

A WORD for the submerged tenth—the masculine element in these extraordinary audiences. Curiously enough, two types are represented in overwhelming majority: The one fat, pursy, middle-aged, gross in person and manner, with a roll of fat at the back of the collar, punctuated by stubby hairs, looking for all the world like the cylinder of an old-fashioned music box. He wears glasses and stubby moustache, and smokes large cigars between the acts with an effort to appear indifferent and patronizing. His profession, whatever it is, cannot be savory—the sight of him, collectively, is revolting. The other predominant type is lean, blond, nervous and small, perhaps a professor or a school teacher. He is very intent, but seems self-conscious and annoyed when he finds himself emotionally affected. This male minority serves, in several very noticeable instances, to mark the divergence of the male and the female points of view in matters ethical. Take the episode in the first act. The unspeakable treachery of the—shall he be called "hero?"—toward his friend and the wife of his friend; his dastardly selfishness and ruthless cruelty. An appalling confession made to his physician in a spirit of self-laudation and exculpation appears to create not so much as a ripple among the men present. To the women this incident is very different. A wave of horror seems to pass over them. There is denunciation, protest, in the feminine movement that undulates every head from white-haired to henna-dyed.

The third act is presented—"medical discussion," "lecture," "clinic"—what you will; and now constantly the applause breaks forth. And therein lies the answer, the reason for the presence of these throngs of women. This is what the women are applauding. This is the common bond. "Let there be light."

THESE are the lines, marked as they met with vociferous clapping, that receive the instant approval, day after day, night after night, of these mature, determined audiences of women—they are enlightening:

The Doctor: "If I could, I would cry the facts aloud from the house-tops."

The Doctor: "You made no inquiries concerning the health of your daughter's betrothed?"

The Father: "No."

The Doctor: "And why?"

The Father: "Because it is not the custom."

The Doctor: "Well, it ought to be made the custom."

The Doctor: "Let the manufacture of poisonous liquors be prohibited, and the number of licenses cut down."

The Doctor (Of tuberculosis): "The real remedy is to pay sufficient wages, and have unsanitary buildings torn down."

The Doctor: "As for the other—the woman who prowls at the gate,—perhaps some day, she will have a little attention paid to her."

The Doctor: "'I didn't know,' is the cry. People ought to know! Young men must be taught the responsibilities they assume and the misfortunes they may bring on themselves."

The applause rises, diminishes, renews itself again and again when *The Doctor* speaks: "It is the future of the race I am defending!"

AGAIN, when the grandmother calls on God to renew to her poor dried breast the life-giving stream, that she may suckle the ailing child, born with the cursed hereditary taint, the men remain unmoved. But when, in savage determination to shield her own, she proposes to sacrifice the life and welfare of the nurse or anyone else, by any means, however inhuman, there passes from man to man a surge of angry protest, a shocked astonishment at such criminal heartlessness—while in every woman's eyes, young and old, comes a glint of primitive ferocity that cries aloud, "So would I do—and more!"

Talent and Genius

By MABLE W. BREWER

TALENT must have clothes and food,
A place to lay his head,
A fire to warm his hearthstone,
Else he will die, instead.

Genius is naked, unshamed,
Upon himself he feeds,
Hearthless, a fire burns in his breast;
Himself is all he needs.

The Drama of the Under-Dog

By ARTHUR POLLOCK

IN one of those charming though discursive little preambles brought all too early to an end with the familiar, if not now almost classic, phrase "but that is another story," Rudyard Kipling has told of the necessity of nipping in the bud all epidemics of hysteria. He instances a girls' school, where, if she be wise, the teacher will, at the first giggling symptoms of hysterics, snap out a few stern words and so forestall a silly panic. But, unluckily or otherwise, there is no sensibly severe mentor in the world of the stage who, with a crisp word or two, can bring the culprits to their senses and stop the spread of hysteria among the producers of theatrical entertainment.

And sometimes it is just as well that there is not. Most men tell the truth, though inadvertently, when they have drunk too deep. And, similarly, the truths of life often work their way to the surface at the giddiest moments of polemicness in the drama; the periods when it is feeling gropingly about to find itself—as American drama of today is obviously doing—are apt to be productive in the end. Therefore we have reason to expect the drama eventually to profit by the present "epidemic" of plays of the type whose advent Hugo, when he launched that greater "epidemic" of Romanticism, made inevitable—the play of the underworld.

WHEN Hugo in 1830 produced "Hernani," he set to work the wheels that were eventually to evolve our contemporary drama of the under-dog; and it has only been a question of time before *les misérables* should receive more specific treatment on the stage.

Two things Hugo added to the drama—and to literature in general—which have paved the way for the underworld play of our time: the "sympathetic" villain,—that is, the wrongdoer for whom the author elicits the sympathies of the auditor,—and the factor of environment. *Hernani* was a bandit, *Didier* a bastard, *Lacerda Borgia* a murderess who somehow or other, despite her infamy, called forth from us a measure of compassion. "Les Misérables" was all that its name denoted and in the "Notre Dame de Paris," so strong is the influence of environment that the old cathedral itself becomes virtually the hero of the tale.

Making a hero of the man whose characteristics had hitherto fitted him only to be villain, aroused in his behalf the fellow-feeling of the spectators, and thereby ensured a hearing for him—for sympathy breeds understanding. The added element of environment did much toward supplying a universal solution of the great first cause of crime; by revealing what crime hatters on, it showed us why and how the villain came to be a villain. For the crook is just a product of circumstance and environment, as we have come to realize, and it was inevitable that sooner or later some one should discover that simple fact.

THE elder Dumas, too, as noticeable particularly in "Antony," depicted with characteristic gusto the devilries of the under-dog. Dumas *filis* went further in presenting the case of the outcasts of society, at the same time evolving a dramatic form that the modern dramatist of the underworld would do well to stick more closely to. All three seemed to like to show the common man pushing up through the crust of society.

IT is this trend that the playwright of today has taken up. "Raffles," "Get-Rich-Quick Wallingford," "Alias Jimmy Valentine," "The Easiest Way," "The Only Way," and, most illuminating of them all, "Kindling," have given us, with gradually increasing understanding, glimpses into the lives of the latter day *les misérables*. They mark the modern growth of the type that has culminated in the great wave of underworld plays that broke out in the dramatic world last season and has steadily been spreading ever since. And little until lately has been done to check it. Mrs. Grundy, that austere and usually consulted—if seldom actually respected—censor, has seemed for the most part to hold herself aloof, possibly because at most of these productions the purifying influence of her presence has not been needed, more likely because she has felt that we are growing rather wisely to discard our stultifying fear of her illogical and bothersome affectations. Nor has the grudge but persistent chiding of the critics who seem to discern evils in this obsession served in the least to retard its progress. Rather has it gained force steadily, since, with "Within the Law" in the early weeks of last season, it fully seized the men of the theater in its thrall.

THIS rapid and somewhat forced evolution of the underworld play has been called as "hysterical wave." But, unlike much of the hysteria known to the physician, seldom is hysteria in play-producing deep seated. That is the trouble. The type-play, whether it be of the underworld or merely musical comedy, when hysterically pushed, tries to outdo its rivals in novelty alone. It does not strive for depth. So it has been with the plays of the under-dog. This type is to be condemned not because it is objectionable in that it necessitates dealing with phases of life which hitherto we have liked to turn our backs upon and conspired to conceal, not because such subjects are not as proper material for the dramatist as for the sociologist, but simply for the reason that the plays made upon them are superficial. It is because so few of them succeed in getting under the skin of life or even strive to do so that they merit adverse criticism. Entertainingly their authors scratch about upon the surface only. They rarely trouble to glance underneath. They lift up a corner here and there and gain pop-

ularity. They sit back, then, supremely satisfied. That is why a play like "The Lure," though it hardly can do harm, does only a portion of the good it might do. The facts of crime need not to be paraded and exploited but illumined and explained. The present list of *les misérables* dramas playing throughout the country is a large one, and all indications are that it will grow. But the majority of them, being plays of plot and incident primarily, topical in subject matter, and having their effectiveness enhanced by opportune newspaper revelations of the plethora of sensational current crimes, are necessarily, even were they perfectly conceived and impeccably written—which none of them is—but ephemeral concoctions for the theater. To be enduring drama they must go deeper.

THAT defect, we may hope, will be remedied by time. For when these plays have spread as far as possible, it is not foolish to forecast that they will deepen. And, doing so, even though they continue to be bad plays as drama purely, they will, by getting nearer to the roots of modern society, become the invaluable sociological demonstrations of social conditions that they should be. For it is not to the play that merely exploits the under-dog that we should look for aids to progress, but to the play that aims to tell us why the under-dog is under, why crooks are crooks, how prostitutes were led to prostitution. We need more plays like Charles Kenyon's "Kindling," in subject matter and in spirit at least, an ideal crook play. Already we have progressed to the point where we have grown tired of seeing, melodramatically portrayed, the criminal brought triumphantly to justice or miraculously reformed to make an effective final curtain.

WE are interested now, or ought to be, in the youth who happens to be born in the midst of crime, where crime is a virtue or at least an accomplishment, morality not even a familiar word in his ears, and the crooked way the only way within his knowledge; in the honest man brought face to face with the opportunity and the necessity for crime simultaneously; the criminal whom civilization itself has criminally oppressed and who, to live, must often be a law unto himself—the man who is a criminal because of fantastic nomenclature which confuses crime with the struggle for survival. We need to know more of the girl who goes wrong because there seems no valid reason why she shouldn't. Who has open to her no easy way, only a choice of ways to sell herself—a choice that lies between drudgery and shame, the former of which may seem to her no less prostitution than the latter since it is merely selling what she has for smaller pay. These are the under-dogs in whose case against society the profounder-minded playwright will find material for deep and enduring drama.

Forest Fires

DURING the last few weeks, very serious forest fires have raged in many parts of the country. In the whole conservation movement, the prevention of such fires constitutes one of the most difficult problems, as one little piece of carelessness may destroy an enormous amount of our natural resources without good to anyone. These partic-

ular fires in California were not started from carelessness, however, but by lightning. When these pictures were taken, the fires had been burning a week. They were driven up the Mesa Grande and back to within eighteen miles of San Diego by changing winds. As Mesa Grande is at an elevation of about 4000 feet, it was particularly

difficult to get sufficient men to fight the fire. Romona, where the pictures were taken, is at the center of the burning district. East and West, the same story is told, and the problem of how to reduce the loss to the lowest terms is seriously occupying all conservationists, including the department of agriculture.

Peanut Politics and the Short Ballot

By RICHARD S. CHILDS

OURS is not government-by-the-people so much as a government-by-politicians. The census has never counted the politicians as such, but it will serve our purpose to guess high and call it 3 per cent. A government that is largely under the control of 3 per cent. (or even 5 per cent. or 10 per cent.) of the population is not democracy. It is oligarchy—rule by the few—rule by a "governing class."

Of course every citizen is supposed to enter the gloomy jungle of peanut politics and learn the devious paths and byways until he becomes one of that expert 3 per cent. But he doesn't. Our plan of government depends for its success upon getting a certain amount of popular participation, but in the test of actual practice it fails to get it. The plan simply hasn't worked, that's all. It is just as surely oligarchy if the 97 per cent. can control but don't, as it would be if they were excluded from control by force of arms. There is no use in saying "it ought to work" or "it looks as if it would work" or "the people are to blame for not participating so as to make it work." To blame the people when they fail to do what a hundred lawyers in a state constitutional convention devised for them to do is like blaming the circumambient air if it fails to support your flying machine. Your flying machine is intended to be a flying machine—but it doesn't fly. The government is intended to be a democracy but it isn't.

In taking this attitude we are jolting a hoary old political superstition—the belief that "all good citizens should go into politics." No! All good citizens should not go into politics. Economic forces compel each man to work to his maximum efficiency in profitable occupation. The man who has time for much unpaid work in politics could better use that time in paid work at his business, so as to give his children better schooling or his wife a new hat. It is because they are doing their duty that our people do not go into politics. Duty to the family outweighs duty to the State in the minds of average men—and it should. A more volatile people than ours—a Latin race in a South American republic, for instance—might have responded to the frenzied calls to duty at political headquarters. The result would have been absurd excitement and demoralization, injury to industry and economic loss. And calm observers of such doings would say—"What a lack of balance! What a poor sense of proportion they have, to let an election create such an upheaval!" Really, does not the silent refusal of our people to obey that summons constitute a tribute to our sober, wholesome Anglo-Saxon good sense and stability?

SO let's not undertake to change the people! There are too many of them anyway and human nature is a rather stable institution. Let's leave the people just as they are, happily busy at their firesides or going to bed at nine o'clock just when the caucus is being called to order ten blocks away!

Let's see if a form of government cannot be devised, adapted for just such a people! If they were 97 per cent. illiterate, we would provide a system that required no knowledge of writing and reading on

the part of the voter, otherwise the remaining 3 per cent. would have an improper advantage. If the 97 per cent. were too lazy to travel a mile to the polls we would not put the polls a mile away but near enough to attract a full vote. And if, as the case is, 97 per cent. are stay-at-homes who simply can't and won't "go into politics," wouldn't it be wise to provide a system that will work without such participation?

Now there are some political duties which these 97 per cent. stay-at-home voters perform very well—better perhaps than the experts at political headquarters. They can discuss Wilson with wisdom, insight and a pretty full knowledge. If they choose him instead of Roosevelt on election day they can tell you why for an hour at a time. In this matter they are in full control. The politician will all but break his neck in his haste to get on the side of these stay-at-homes and nominate the man who suits their taste. Also they generally control the selection of governors and mayors. Without going to the primaries or caucuses, just by the threat of their vote on election day, they get satisfaction (getting bummed, now and then, for of course you can fool all of the people some of the time). Tammany caters to them to such an extent that when it elects its mayor and no one else, it considers its victory utterly barren.

This superior control which the people exert over the conspicuous offices is due to the fact that these are the only ones on which shines enough of the light of information and discussion to enable the people to see the nominees and develop opinions of their own about them. And to a democracy, such light is vital.

FOR the people may be the most receptive and intelligent on earth, the election conducted with the greatest care, the conditions of nomination safeguarded and every precaution taken to register with precision the will of the electorate, yet if the issue of the election is not clearly illuminated, the people will have no will to express and the answer given to the ballot's queries will not be the voice of the people but that of the interested few. The result is then not democracy but oligarchy.

It is no reflection upon the intelligence of the people of New York, for instance, to state the simple fact that they do not choose informally between rival candidates for the obscure office of secretary of state—it is only saying that being men and not cats, they do not see in the dark! Neither is it a reflection upon them to say that they allow themselves, when voting for this office, to be led around by the nose by politicians. To accept such guidance and throw responsibility on the machine is by all odds better than to vote at random.

The peril of blind dependence upon the machine lies in the inability of the machine to protect its membership against contamination, under present notions of what constitutes correct party organization. The party by its very nature is one thing today and another tomorrow. Any man can join a party; any man by work can climb to a captaincy in it and direct its affairs. Let a party become powerful and the grafters immediately ride it. The original members may be appalled at the influx but they must not

repel it. State regulation of party affairs often only makes it more certain that the original members will not be able to resist capture.

TO give such an easily-contaminated organization the privilege of recommending candidates for conspicuous offices is not improper or dangerous. But to allow it to put through recommendations for obscure offices, where there is no close and suspicious public scrutiny, is to invite the nomination of men whom the people would never elect if they knew more about them.

Now, it is not a difficult thing to remodel the organization of state, county and city and get a plan with no obscure elective offices—a plan that will bring every elective servant within the vision of all the people. In other words, we can simplify politics sufficiently to make it truly popular from end to end.

In some 250 cities we have already achieved this with the Commission plan of municipal government. This plan vests all power in a board of five men. Five names can be easily remembered by any voter without the help of rosters or eagles or stars. Each of these five is exactly as important as the others. The limelight does not focus upon the head of the ticket to the virtual exclusion or overshadowing of the rest, for the ticket has no head or tail. It is like electing a board of five mayors. Mr. Stay-at-home in those cities hears a lot about the candidates for every office and when he votes on election day he votes a ticket that is 100 per cent. of his own making. ("A crazy election," reports the politician, "with every citizen cooking up his own pet list of candidates and no two alike!") And so these commission-governed cities are now getting on very nicely, thank you, without the aid of private political machines to act as interested intermediaries between the voters and the city government. And those cities are learning, too, that these commissions, owing little or nothing to the machines, are more deferential to real public opinion and less mislaid of how their acts will affect the "organization." If the number of men to be elected had been twenty instead of five, things would have worked out as of old, for Mr. Stay-at-home would decline to remember more than five of the twenty names and would "take program" from some civic club or some party machine, as to the remainder, and the resulting administration would be one-quarter citizen-chosen and three-quarters politician-made.

THE Commission plan, or at least its vital Short Ballot feature is beginning to be applied to counties in California, the only state thus far which allows its counties to remodel their own systems of government. The privilege was conferred in 1912 and two counties have taken advantage of it. The new charter of Los Angeles County provides for an elected board of five supervisors and an elected sheriff, district attorney and auditor. The board of supervisors appoints everybody else. Formerly the county ballot carried thirteen offices. Now, as the supervisors are elected two at one time and three at another, it only carries five.

San Bernardino County (Cal.) which is larger than the State of New Jersey, by the way, has carried simplification still further by making the five county supervisors the only elective officers. They serve for five years and are elected one each year. If any rascals ever slip through that needle's eye of intensive public scrutiny, it can then at last be fairly averred that it is "the people's fault."

The application of the same principles of simplicity to the state government is an easy matter since we have a familiar model in the national constitution. The election of governor, lieutenant-governor and legislature is ample to satisfy the requirements of democracy. New Jersey is even simpler, for it elects only the governor and legislature. The succession to the governorship devolves upon the chairman of the state senate and Mr. Fielder, who is governor now through the resignation of Wilson, attained his position by that route.

NOT only are the subordinate officers of the state administration appointed but also the judiciary and the district attorneys in the counties, whence comes the famous efficient "Jersey justice." Propose such a plan in some other state and, to hear its opponents rail against it, you would suppose that giving a governor such power would make him a self-perpetuating despot and the voters his slaves. That is what they are saying right now in Ohio where a much more moderate proposal is pending. In fact, however, our states have such small budgets and such modest administrative establishments that making the governor the real head of the administration in this way still leaves him very much weaker in patronage than the mayors of our major cities.

The legislative system, however, in New Jersey is no model. It is elected at large by counties, which makes a long ballot after all, in the populous counties, and the small rural counties hold such a disproportionate membership in the legislature that Privilege only needs to connect with a few strategic rural political powers to control the legislature. The single-member district, periodically reapportioned, as in New York and elsewhere, is better, despite the risk of gerrymander.

THE appointed judiciaries in various States and in the national government have been folly as popular in their leanings as the elective benches, but while the average layman lives quite comfortably under an appointive Federal judi-

ciary, he would probably not think of that if faced with the question of having appointive judges in his state. An interesting compromise has been proposed in New York, the scheme of "governor's nomination" in which the governor recommends a candidate to the people and then counter-nominations may be made by petition if anybody is dissatisfied with this selection. This introduces an element of responsibility into the judicial nominations, reduces the influence of at least one machine, that of the governor's party, and would probably lead in the

cities, the San Bernardino plan for counties, the New Jersey State administrative system, modified if necessary as to the judiciary, and the New York single-member-district legislature. With suitable separation of elections, the schedule could easily be so arranged that the people would never be compelled to pick more than five officers at one time.

TWO states have started the march in this direction. California has recently taken off the ballot the offices of state printer, the three railroad commissioners and the clerk of the supreme court and made them appointive.

Ohio has just taken off the ballot the offices of Informal directors (3), dairy and food commissioner, state school commissioner, clerk of the supreme court and the public works commission (3). It has granted to the cities the right to frame their own charters and two amendments to the constitution are waiting approval by the people in November. One of these makes appointive by the governor the now elective offices of auditor, treasurer, secretary of state and attorney-general. The other removes the requirement that all county officers must be elective and leaves future legislatures free to simplify and consolidate the county organization.

WHAT has thus been explained is described in circle-circles as "The Short Ballot Principle." Nearly 500 towns and cities have adopted the commission plan of government, crediting its mysterious success, however, to every feature of the scheme except the right one—the flood of light upon the elective offices. The coming generation in the political science classes at the colleges is learning the short ballot principle as one of the vital axioms of the science of government. Every living American political scientist is on record, in his own books or elsewhere, in support of the doctrine. Ex-President Eliot of Harvard says: "It is the gist of the whole matter—the only way to get rid of bosses and machines." Woodrow Wilson says: "I believe the short ballot is the key in the whole problem of the restoration of popular government in this country."

"Penny politics" is a unique American institution. "Taking an interest in politics" ought to mean something bigger than hanging around political headquarters or learning the names of the county committee, or getting up howdah parties. The "short ballot" would leave no basis for the further existence of penny politics or the oligarchy which it creates.

THE JUNGLE

The Chicago 1910 ballot (51 names—size, 16 1-2 by 21 1-4 inches)

The handy ballot of England; one office only to be filled, namely, councillor for the ward (two names—size, 3 3-4 by 3 3-4 inches)

majority of cases to the election of the governor's nominee without opposition. In effect this would shorten the ballot, giving an appointive system, subject always to popular correction.

So, to sum it all up, we can make politics so simple that all the people would automatically and effortlessly become proficient politicians, by merely making a composite of the best parts of various existing systems—commission plan for

The Autopilgrim's Progress

Part Two—The Bridal Tour

By WALLACE IRWIN

Illustrations by James Preston

I

For Lo! the Bridegroom Hummeth

WHEN Mr. and Mrs. J. Percival Brown.
(We left them, some chapters before, in a race—
Or they, rather, left us at as a rapid pace
As ever befuddled a new bridal gown),
When the Browns, as I say,
Being well on their way,
Had passed every car on the road for the day
In Dad-in-law Lemuel's racing machine,
Love perched on the hood
And ah! Life it seemed good—
A smooth road and plenty of fresh gasoline.

"**M**y joy!" spake the Bridegroom, "my dream,
my delight,
O spur to my youth—here we turn to the right—
O beauty unequalled!"

Katura was thrilled;
But her growing enthusiasm was suddenly chilled
When she saw that her husband—it caused her a jar—
Addressed these remarks not to her but the car.
Thus being flouted

The bride rather pouted.
"You love your new auto, the fact is undisputed;
But your poor, patient bride,
Have you cast her aside
For a rival of steel to be openly flouted?"

"Oh mercy,
Dear Katty!"
Cried Percy,
"What's matty?
You know that I worship you, just as you are—"
"If you'd talk to me once as you talk to your car,
I'd feel more at ease,
Dear Sir, if you please—"

The Groom drew his auto up under the trees;
For the Engine of Love, Percy knew, when it "misses"
Runs smoothly again, if you call it with kisses.

AND a few miles ahead, when again scorchingly madly,
The engine itself 'gan to act rather badly
And Percy, getting down
To lift up the hood,
Remarked with a frown,
"You old block of wood!
You flim-flammed and jim-jammed Colonial hack!"
"My dear," murmured Katty, "I take it
all back.

Though once I was jealous, I now put a bar
On you talking to me as you talk to your
car!"

TWAS just after sunset, the fault was
made good.
They were boiling along nigh to Sondheimville
Wood

When whirr, from behind
A new-fangled kind
Of a road-esting drendnought passed by with a blind
Sort of fury.
Katura
Cried, "Don't let 'em sass us
And pass us!"
With a mutter defiant Percy hiked up the spark
And hurdled ahead through the gathering dark,
Creeping more, creeping more
On the monster before,
Like a swift-scooting sword-fish pursuing a shark.
When bang!
O curse!
And dang!
What worse
Could fall to a car on a road scarcely known?
She skidded, she stopped. For the front tire was "blown."
But the worst of it was, (and can sophistries soothe
The lover who knows that Love's road's never smooth?)
That, in hastily starting
From Lemuel's cot,
The couple departing

Had, somehow, forgot
That useful equipment which lovers require
As well as the rest—for it's called "extra
tire."

THE road was deserted, the breezes green
chill
As the moon rose forlorn o'er an Easterly
hill.
Katura brought out a thumbed road-book
and sat
By the headlight, to find where the deuce
they were "at."
She was searching in vain when, with
splutter and splatter,
Clutter and clatter,
A farmer, propelling a crazy machine,
Drew up beside them, reviewing the scene.
"Need a shoe?"

"That's what!"
"I tell yew,
They got,
Up to Billing's Garage,—just a
spell 'round the bend—
The finest ther is. Shall I
take y' there, friend?"
Percy looked at the man in the
tumble-down car
And asked, rather worried,
"Perhaps—is it far?"
"Dew tell!
Just a spell,
Forty rods, half a snack:
I'll give y' a lift and (perhaps)
bring y' back."

"**M**y darling," said Percy, ad-
dressing his bride,
"Can you stay by the car for a minute?" The pride
Of New England flashed bright in her optical spark.

"Yes, dearest! I'm never afraid of
the dark."
So he kissed her eight times, as the
farmer repeated,
"Y' needn't be skeered, ma'am—
it's only a spell."
Then Percy got in and the auto
retreated
To seek the adventures which next
I shall tell.

(TO BE CONTINUED)

The Country Gods

Lines on a Visit to Town

By RICHARD LE GALLIENNE

I DWELL with all things great and fair,
The green earth and the lustral air;
The sacred spaces of the sea,
Day in, day out, companion me.
Pure-faced, pure-thoughted folk are mine
With whom to sit and laugh and dine.
In every sunlit room is heard
Love singing like an April bird.
And everywhere the moonlit eyes
Of beauty guard our paradise;
While, at the ending of the day,
To the kind country gods, we pray,
And dues of our fair living, pay.

So, when, reluctant, to the town
I go, with country sunshine brown,
So small and strange all seems to me—
I, the boon-fellow of the sea—
That these town-people say and be:
Their insect lives, their insect talk,
Their hush little insect walk,
Their busy little insect stings—
And, all the while, the sea-weed swings
Against the rock, and the wide roar
Rises foam-lipped along the shore.

Ah! Then how good my life I know,
How good it is each day to go
Where the great voices call, and where
The eternal rhythms flow and flow.
In that august companionship
The subtle, poisoned words that drip,
With guileless guile, from friendly lip,
The lie that flits from ear to ear,
Ye shall not speak, ye shall not hear;
Nor shall you fear your heart to say,
Lest he who listens should betray.

The man who hearkens all day long
To the sea's cosmic-thoughted song
Comes with purged ears to lesser speech;
And something of the skyey reach
Greatens the gaze that feeds on space;
The starlight writes upon his face
That bathes in starlight, and the morn
Christs with dew, when day is born,
The eyes that drink the holy light
Welling from the deep springs of night.

And so—how good to catch the train
Back to the country gods again!

The Most Interesting Cities

By MARGARETTA TUTTLE

IT is the useless men that living does not change, and the most interesting thing alters with the years, sometimes with the mood. It is so with the cities of the world, and the marvel of the cities, like the marvel of life, is that there is such abundant variety. The marvel of human beings is that they can feel the distinctive note of the cities, and what this note does to them. Different needs at different times, "to every one according to his need, from every one according to his ability." There are those whose sluggish emotions need rousing, whose fears of what another may say need quelling—for them, Paris. In Paris emotion is in the air, it cannot be escaped; and not only emotion but permission for it, recognition of it, arrangement for it. Nobody's eyebrows are raised when the man at the table next to your own reaches across it to take the hand of the woman dining with him; it is expected. Nor does the waiter intrude when the woman at the other table whispers, with eyes averted, to the man with her; it is customary. You may smile as a taxi twinkles past you on the Champs Elysées while within, the woman's head lies on the man's shoulder; but the Frenchman just shrugs. Indeed the French shrug originated in tolerance of another's displayed emotion. Do you hope she will say yes? Take her to Paris.

Then there are those whose emotions need curbing and pruning. For them

London. London, where you enter a restaurant and hear no buzz of conversation, see no exuberance of moving hands and nodding heads; where men and women sit sedately drinking their tea and occasionally commenting thereon with restraint and discretion. It is not to be said what of enthusiasms or impulses may lie beneath; it is curbed. The great hotel men consider their profits as good as doubled when Americans begin to come to their restaurants, not only because of the money spent, but because the American talks and laughs and makes gestures and brightens the atmosphere with a variety the Englishman cannot achieve. Sobriety lovers over the streets of London and in the homes high and low. It is the city of reasonable public conduct and undramatic private procedure. The very epithets the Englishman uses display his moderation. A view is not entrancing as it probably would be in France—it is pleasing. A woman is not adorable—she is a good sort; a hat is not "ravishing on Madame" it is "quite all right." Have you lived too hard, or played too recklessly, or talked too much, or been overwhelmed by another's sensational folly? then London for you.

WHILE Italy has been, Germany is. So if your mood is one of present endeavor you will like Berlin; or if you need to be roused from idle dreams to practical deeds.

But if you need to dream, if you ought to get away from the rushing present, then Florence, where color and form will lie in the breath you draw. And Rome for the days of response to past power; not for art; Rome borrowed its art, but for glory; for regal living and royal dying; for the message of builded stone and massive brick, for the palaces of Caesars and the shrines of saints. Rome in which to say good-bye to some long cherished ambition. But Naples for good-bye to the heart's desire; the beautiful bay before you, the billowing gardens behind you, renunciation in the air!

AND your days of moodiness gone, then New York to bring you into touch with the living, struggling, striving world; New York for knowledge of the Zeit Geist, for the stimulation of the apprehension—nerves. And the importance of these cities to you lies in what you think of them, in the manner that they affect you. For William James knew when he wrote, "The cosmic objects, so far as experience yields them, are but ideal pictures of something whose existence we do not inwardly possess but only point at outwardly, whereas what we feel about them, our inner state, is our very experience itself; its reality and that of our experience are one; the motor currents of the world run through the like of it."

Is America on the Map?

By

CHARLES EDWARD RUSSELL

Illustrated by
William H. Walker

"Does the Duchess buy gloves like these?"

I KNOW in Paris a shrewd old lady who keeps a little glove shop in a region seasonably resounding with the American language, at which times her business thrives and her profits are fair to her eyes. About forty years of commerce have keen-edged her powers of observation, which were good to start with.

One day, in early September, I found her alone in her boudoir of a place, and chuckling immoderately to herself. Nothing to laugh about appeared on the surface of things: the summer had been abominably cold that year and all the missing bent units had returned in a hunch and were poured out upon us in seven days that made Paris like Bombay.

"Why all the mirth?" said I, sourly.

"You Americans are funny people," says she. "There was one of you in here a moment ago — a young man. He was wearing one of those thick, dark green plush hats that make your head hot just to look at. I never saw anybody so uncomfortable. He took it off and wiped his wet forehead which was as red as fire. I said to him:

"Why do you wear that thing? It must be very painful on a scorching day like this."

"Why," says he proudly, "the king wears it."

"What king?" I say.

"Why, King Edward," says he.

"He's no king of yours," I say.

"He's all the king we've got," says he. "I went all the way to Marseilles to see him and he was wearing a hat exactly like this."

"So that is why you feel obliged to make yourself suffer," said I. He didn't seem to understand, he was so grave and

naïve about it, and that was what I was laughing at. Of all the people I have ever known, Americans are the strangest because they are the only ones that seem to wish they were somebody else. Haven't you any country?"

"You shouldn't judge us by one specimen," said I severely. "It is not fair; besides he may have been joking."

She hatted her eyes at me four times in swift succession, then tapped with her finger ends upon some long and thin green boxes that lay on her shelves.

"Joking, you think, eh?" said she. "See those?"

THEY were marked in large, plain letters, "Duchess of Marlborough."

"Duchess of Manchester," and some other names of nobility that I have forgotten.

"When an American woman comes in here and thinks she can't find gloves to suit her, I quietly hand down one of these boxes. No more is needed. Say the gloves are unsuitable; it is nothing. 'Does the Duchess buy gloves like these?' 'Oh, yes, madam,' I say. Then she buys. From these boxes she would buy — what is your barbarous American phrase?"

"Any old thing," I said.

"Yes, any old thing. She would buy it. It is so with all of them about gloves, about everything. I hear them talking among themselves. Therefore I know. And I ask you again what it is? You imitate? Yes? Why do you imitate? And your country is very large, is it not? And rich? And you imitate smaller countries? Holland, Switzerland, Belgium, my faith, are small countries, but the people are content to be themselves. You want to be somebody else. Is it not so? And you have nothing

American, nothing of your own; but you imitate. Is it not so?"

"No, it is not," said I, with emphasis, being touched in my patriotism, which ever vibrates strongly within me. "You don't know us. You would talk very differently if you could see us on our native heath."

Yet, I fear me, some of this was on my part but patriotic bluff.

DO you know what are the most popular names for towns in America? Canton, Newport, Chester. Contemplate that fact for a time. Oh Philosopher, and then read me the riddle of it. Canton — why should any community desire to be known as Canton? The original Canton is a huge, crowded, reeking, repulsive, ill-smelling and unsanitary human warren, without one feature of beauty. Until very recent months it was the world's symbol of everything in place of habitation ought not to be. Instead of being perpetuated, the thing Canton stood for ought to have been blotted from the recollection of man. But twenty-seven towns and cities in the United States have elected to honor this horrible spot by adopting its name, and but for the government regulation that forbids more than one postoffice of the same name in the same state I believe we should be afflicted with two hundred and maybe three hundred Cantons.

There's Manchester. The Indians had a word for this spot, a beautiful, rolling musical name, that expressed an essential of its physical characteristics, a name that meant clear winter stream, or bright sunshine or sunny slope or cottonwood bend, something at once native, pleasing and appropriate. We care not a rap for that. Call the place Manchester. Manchester means smoke and soot and grime and toiling, unhappy thousands. Manchester for us.

UP in beautiful Lake Minnetonka, which is near Minneapolis, is a great, handsome, wooded island that was a historic spot in Indian history and is haunted now with Indian legends. Great battles have been fought there; hundreds of warriors are buried in the mounds that still stand as monuments to valor; on a conspicuous bluff, councils were regularly held and policies decided. Every prominent feature of the island bore in the resonant Indian language a beautiful and expressive name.

Two or three years ago the place began to attract summer residents: roads were cut, cottages were built, localities were

renamed, and these were the names selected for spots around which clustered the very spirits of Indian romance and history: Pembroke, Oxford, Bedford, Avalon, Wychwood, Essex Road, Dorchester Lane, Lancashire, Somerset, Spring Park, Button.

THE great American protective system, so efficient to save us against foreign-made shirts and alicia half-hose, seems to have broken down when we come to the importing of names. Here are some others among hundreds we have lugged in, and the number of communities in the United States now adorned with such: 5 Ninevehs, 6 Bagdads, 6 Westmorelands, 7 Buckingham, 8 Falmouths, 9 Edinburghs, 9 Glasgows, 10 Londons (omitting New Londons): 11 Bethas, 12 Smyrnas, 12 Leeds, 12 Toledos, 14 Romes, 15 Utics, 16 Athenes, 16 Spartas, 17 Albions, 17 Carlises, 18 Avons, 18 Paris, 20 Clydes, 20 Windsor, 25 Auburns, 24 Belmonts, 24 Waverlys, 25 Oxfords, 27 Cantons, 28 Troys, 30 Newport, 32 Chesters.

Contemplating these names, your thought is that surely the choir was prompted by fond recollections of the dear old home—colonists in the new world looking back tenderly to the well-beloved scenes of youth.

The same sort of loyalty has disgraced many another fair section of the world's map. One of the most beautiful, attractive and progressive countries on earth is geographically libeled under the singularly incongruous name of New Zealand, and all because superfluous patriotism burned high in a Dutch skipper's bosom: New Zealand resembling Old Zealand as much as an apple doth an oyster. Similarly we account for a name so much out of joint as New South Wales, and fair Australia itself narrowly escaped a like horrible fate, the loyal Tasman not being restrained by Providence from dubbing it New Holland. I know not by what sudden access of good sense the early settlers revolted against such a monstrosity, but blessed be their memory for the same.

BUT the truth is, we can't work very far this defense about touchingly loyalty to the fatherland. Very few colonists have come to us from Canton or Peking, and they have had nothing to do with naming anything more important than a laundry. All the colonists from Chester put together could not reasonably account for one of the thirty-two Chesters that now make sad the national map. What is it, then, that obscures us? Nobody else seems to labor now under this peculiar affliction. Colonists from the dear old fatherland have settled also Australia and New Zealand, but for the most part they have kept their meddling fingers off the new country's nomenclature. For this is the most astounding fact of all, that in the United States of America of 2000 names of towns taken at random only 129 could be called Americana and of 409 similarly chosen in Australia and New Zealand only 34 were other than native. Some big cities, to be sure, Wellington, Auckland, Melbourne, Sydney, Adelaide, Brisbane, allowed old country feeling to make its usual expression, but these are more than set-off by a thousand mellifluous native names that have been appropriately retained where we should be still going abroad and lugging in something by the ears.

A PART of the City of Wellington is called Te Aro. If we had the naming of it we should call it either Kenwood or

Brighton, I am not sure which; but if there was a ghost of a chance.

A few years ago a new line of railroad was opened to the Pacific coast. Part of it traversed a new country, picturesque and romantic. Stations were placed, as usual, about seven miles apart. For these, all the world of appropriate names was open, names native to the localities, names bright in American history, names of great Indian chiefs that had enlivened things in that part of the world; and here are some of the names that were chosen: Harlowton, Selkirk, Ringling, Josephine, Lombard, Alcazar, Piedmont, Vendome, Cedric, Ravenna, Sorrento, Marengo, Othello, Corfa, Smyrna, Rye, Laconia.

I confess that my poor brain whirls when I contemplate this puzzle, particularly when I reflect that for all the Vendomes, Marengos, Smyrnas, Ryes, Ravennas and the rest existed in the pleasant lands of the Sioux, the Crows and the Blackfoots, alternatives that meant something, to say nothing of the possibilities in the wide range of American history.

In contrast to the foregoing list I offer the following collection of the names of New Zealand towns taken in order from the government time tables of trains between Auckland and Wellington: Oho, Mataraca, Porewa, Winiata, Te Koura, Kikiki, Papakura, Wainiata, Owhango, Te Kumi, Te Horo, Tokomaru, Taihape, Okia.

Of 164 stations on this line 151 have retained their native names.

IF we could do nothing else one would think we might occasionally think of the men and deeds that made this country; but any impartial observer would surely conclude that our story has taken but the slightest hold upon our imaginations: we are far more loyal to the great men of other nations than to our own. We have almost as many Bismarcks as Waynes; we have 21 Waterloos to 7 Bunker Hills; 9 Marengos to only 10 Saratogas; 8 Putnams to 8 Marlboroughs. De Kalb is not so much to us as Cromwell, judging from these lists. General Braddock fares about as well as Sumter, the hero of so many Revolutionary battles. If there is a figure in American history that might be supposed to appeal to American enthusiasm it is that of Stephen Decatur. But the odd fact is we care much more for the naval hero of another country: we have 14 Decaturs and 22 Nelsons. Washington might be thought one man well-remembered by his countrymen, but against the 28 Washingtons may be set 15 Wellingtons and 13 Wellesleys. General Havelock is commemorated in as many towns as Commodore Bainbridge. There is but 1 Farragut, but there are 9 Raleighs, 7 Drakes, 1 Benbow and 7 Blakes. Indian history and the great Indian chiefs are practically obliterated—4 Blackhaws, 1 Keokuk, 3 Red Wings and a few others.

Some of this imitative habit of mind, apparently fixed upon us, has manifestations of much interest to philosophers.

DO but consider our daily bread of orthography. At one time we had developed an American system of spelling suited to our needs and customs. Being a busy people, with a sense of the value of time, we struck from many words a fine collection of old fossil letters; we spelled color, behavior, favor, flavor, honor, labor, savior, with the useless *u*: took a useless *g* from wagon and per-

formed other laudable feats of this kind in the interest of humanity. English orthographers naturally adhered to their old established time-wasting forms. Within the last fifteen years has developed in this country a determined effort to break down the American orthography and compel us to restore the superfluous letters that we so happily excised.

IN all this would appear to be something more than natural if philosophy could find it out. One visiting from Mars, let us say, would perhaps expect another nation to look to us for guidance but would never expect us so to look to another nation. If we have a president to inaugurate, what is the fundamental reason that avowedly we strive to make the ceremonies repeat those observed in the coronation of an English king? If we desire to change the organization of our navy why do we merely adopt that of Great Britain? Or, to come to homely things and small, why do we take from abroad our cue for the fashion of our clothes, the shape of our hats, the colors of our ties and the hour of the day at which we may lawfully be seen in a claw-hammer coat? Why not legislate for ourselves about our customs? The Boston Tea Party and some things of that kind seem not to give perfectly to all this.

Many a foreign visitor, duly impressed with the great size, wealth, resources, energy and progress of this country has pondered in vain over these manifestations. Not long ago I was conducting a traveled German friend about a famous American university. It struck me before I had gone far that I had precious little to show him that could interest him. "That tower you recognize, of course," said I. "It is an exact duplicate of the tower of Magdalen at Oxford. This hall is an exact reproduction of the hall of Christchurch; we have even reproduced the armorial bearings of the acions of nobility that have been Christchurch undergraders. That row of buildings as you will see, repeats the architecture of Merton. In fact, I think we have everything of Oxford here except the nose of Brasenose. There goes a procession of students. See how natural they look in mortarboards and gowns? Yes, we think we have done pretty well here; you might think you were in Oxford itself."

"Well," said he, "Oxford is Oxford and this America. Now show me something American."

"There's a football game," said I.

"Rugby," said he. "I tell you what I think,—I don't believe there is anything American now except cocktails and skyscrapers and some brands of weather. Your national emblem is, I believe, an eagle. You will not think me discourteous, will you? I've looked so long for something American. It has at times seemed to me that a more strictly correct emblem would be a parrot."

"And yet," said I reproachfully, "you have traveled in our sleeping cars; you must be aware that there are no others like them in all the world."

"Thank heaven!" he gaped.

BUT what I want to know is, where is the United States of America and why we wonder at the sincere, honest belief of so many of our English friends that it is a province of the British Empire.

"Show it to me on the map," said old pop-eyed Lord North on a celebrated occasion when a question about America was agitating what he called his mind. That is about the way of it still.

Preliminary drill at Harvard—falling on the ball

Current Athletics

By HERBERT REED ("Right Wing")

FROM the very beginnings of the game at Cambridge Harvard football has been inseparably connected with star backfield players. The list is as long as a man's arm. The poorest of Harvard teams has had at least one splendid back, and the better teams all the way from two to five. It is almost unnecessary. While at other universities backs have been brought up to the front rank by clever coaching—at work on a certain amount of natural ability—the ball carriers have appeared at Cambridge practically ready made. Not that the Crimson coaches are not among the best in developing backs. They are. But the work has been made easy for them with great frequency because of the appearance of sheer genius.

Since Freshmen are no longer permitted to play on Varsity teams, the new Harvard backs get an extra year of schooling and ripening with the first year eleven, so that when they finally appear with the Varsity they step right in at top speed and give a polished performance, even in the early games, rarely to be witnessed at the other great universities.

NOW in this matter of backs the Crimson has outdone even its own remarkable self this year, for there is at Soldier's Field today a trio that, barring accident—and the men are being carefully handled by "Pooch" Donovan, the wary trainer—should outshine any trio of the past. In Harwick, Brickley, and Mahan, the Crimson "has everything" that the most exacting coach could ask—and they are improving all the time. It is no disparagement of Brickley, the popular idol of last season, to say that Harwick was quite as good if not a better back, save only in kicking. This year "Tack" is being groomed for a punter under the tuition of the ablest kicking coach of them all, Percy D. Haughton, and by the time these lines appear Harwick should be in the front rank in the punting game, both in distance and in placing. The drop-kicking of Brickley requires no comment, since it is flawless. But Harvard has a third kicker in Edward Mahan, who is both a punter and a drop-kicker—a little erratic just now, but certain to be in form for the big games.

Here is a backfield that combines weight and speed. Every member of it is a born football player, every member

of it seems to be able to combine fire and dash with splendid headwork and coolness in tight places, and every member of it should be better than he was a year ago. Brickley and Harwick are heavy backs, ideal men for the square formations used so effectively by the Crimson, and while Mahan looks slender in comparison with them, he is a fine figure of a football player, and has more natural ease and grace than either of his comrades. There is more sweep to his style of play, and if any man can run the ends this year that man should be Mahan. This latest recruit to the Harvard backfield is deadily swift and sure in running back kicks, and a stellar performer at either end of the forward pass, a play with which I expect to see the Crimson do well, both offensively and defensively. Indeed, I think Harvard has the best planned and individually keenest defense against the forward pass of any team I have seen so far, and I expect to find it at its best in the big games.

COMING now to the line, we find conditions much as they were a year ago—a really fine first string, plentifully besprinkled with veterans, and a set of only average substitutes. Splendidly equipped with tackles and ends, the veterans, Capt. Storer and Hitchcock, being the pivots of both attack and defense, the Harvard

line should measure up to the standard of a year ago, and perhaps even surpass that standard. There will be need of this line living right up to the hrim of its reputation, I think, for, unless I am sorely mistaken, both Yale and Princeton will put fast and powerful forwards in the field, and even though the rules now permit of more variety in backfield play and furnish opportunities unknown to the old-fashioned game, it is hopelessly impossible to over-estimate even the slightest superiority in the line.

Should Harvard meet a heavy attack in either of the big games—and there is more than a possibility that this is what will happen—there will be need of reinforcements, and just where these reinforcements are coming from I do not see at present.

Granting that in material Harvard has all that a team could expect to have in forwards and ball carriers, what of the most important position of all, the quarterback? Here I confess to disappointment, for the three quarters I saw in action at Cambridge would have had difficulty in finding a place on a good small college team. And there is no Charlie Daly to coach them this year. Whatever there may be of "drive" in the make-up of Bradley, Freedley and Logan seems to be merely on the surface. They have plenty of lung power, and they make themselves conspicuous through waste effort when the ball is dead, but there is none of that quiet defiance before the starting signal, none of that "gearing-up" of the team when it is in action, that mark the high class quarter, and all the young men in question will have to improve mightily if they are to make names for themselves against Yale and Princeton.

These young men are palpably machine-made quarters, judging by their work to date, and I have not been able to discover in any one of them the real gift for the play of their position and the handling of a great engine of attack that should have been in evidence even in the earliest games of the season. Logan I considered to have more promise than the others.

HARVARD is in the unenviable position of being popularly regarded as unbeatable, and no amount of argument will convince any but the keenest followers of football that the path of practically an all-star team is not always strewn

"Edward Mahan, both a punter and a drop-kicker"

with roses. Stars frequently need as much work as raw recruits, and the trainer is usually so anxious over them that he puts in his veto just when the coaches are most anxious to polish up the combination.

The question naturally arises, Is Harvard really unbeatable this year? As football is played today there is often only a slight difference in the merits of the play between being defeated by 20 to 0 and winning by 7 to 0. The difference arises from "breaks" in the game, which are far more frequent nowadays than they used to be. One little "break" will carry a team from what appears to be a winning position on its opponents' "ten-yard line," to a defensive position on its own ten-yard line—and this not once, but frequently three or four times in the course of the game. Comes the psychological moment, and the team that seizes it instantly will sometimes turn what appears to be a perfectly even battle into something approaching a rout. It is sometimes temperamental, this sudden turn of a football tide, and even all-star teams are high-strung on the day of the big game.

THE modern generalship, if it is to succeed, must require perfect individual play of every member of the team, be he the poorest man on the eleven or the best, and a fighting defense has more than once stood off a team immeasurably superior in personnel. It has happened many times in the past that two great lines have fought each other to a standstill, and that a superior offensive backfield—robbed of the help of the line in this way—has been beaten off by backs who were failures as ball carriers, yet who were born defensive players.

WITH Harvard playing the best football of which the Crimson is capable, and making no individual mistakes, the team can be beaten, I think, only by really great football, and it is up to the Harvard forwards to do the brilliant work they did last year, to endure through the heat of the battle, and to "come on" in the last quarter faster than in the first. The type of team that stands the best chance of defeating the Crimson is the type that reeks nothing of the reputation of its opponents—made up of men to whom the star Cambridge backs are just backs, and not great names. Such types Yale has turned out in the past, and although there are not the stars at New Haven that one finds at Cambridge, there should be an evenly developed, balanced team by the time the Blue faces the Crimson in the Stadium. Here, indeed, should be a great battle and an acid test for Harvard's great backfield.

HAPPY the eleven this season that makes the first score, for the psychological value of early points is very great under the present rules. Here is where the drop-kickers figure. There is nothing so disheartening to an eleven, not even a fatal fumble, as being scored upon early in the game by the drop-kick method. There were many who thought when the rules were revised so as to put more of a premium on the running game, that the day of the drop-kick was about over. The conclusion was a hasty one, for if one studies football history at all carefully he will find that the drop-kick has been a deadly weapon at all times, and has won many a game no matter what the state of the rules at the time.

If, therefore, Harvard sticks to canonading early in the game as the Crim-

son did last year, and brings either Brickley or Mahan within striking distance, the opposing eleven will have an uphill fight on its hands. The Crimson defense remains, at this writing, to be seriously tested, and I should not be surprised to see a good deal of ground made against Harvard even before the games with Princeton and Yale, but this need hardly shake the confidence of the supporters of the Cambridge men. One thing is patent, however, and that is that when another man is substituted for either Hardwick, Brickley or Mahan in the backfield, the "punch" comes out of the attack noticeably.

THE sudden departure of Tom Shevlin from New Haven came as something of a surprise to his host of followers who believe implicitly in his ability to whip a Blue eleven into shape for the big games. It need not have been a surprise, however, for on account of shift plings can make up for the kind of shortcomings Yale showed in other directions last year. Over-emphasis on short cuts to victory I do not believe to be any part of Yale's real coaching plans this season, and while Shevlin has made a reputation as a rescuer, he found a team that was not ripe for anything fancy. Coincident with the departure of Shevlin, Capt. Ketcham was moved back to centre where he belongs, and it is to be hoped that no more experiments will be made with this remarkable player and leader.

Ketcham's position as "roving" centre is ideal for a captain and for a man of Ketcham's type—watchful, keen, having that extra sense that divines the opponent's play in its inception. In the circumstances Ketcham would never have played any other position better than the one he now occupies. If it had been intended to fit him for any other position the attempt should have been made long ago, for just now Ketcham is a centre by habit and experience, and should prove one of the greatest players the game has seen by the time the season is ended.

The Elis have been suffering more than their share of injuries, especially in the backfield, but with Knowles out again the kicking is being well cared for, and there is opportunity to try out any number of candidates. Again, there is every reason why the Yale attack can be developed slowly, since there is this year no grueling test with the strong Army eleven.

There is plenty of time before working up new plays for the big game, and it is a certainty that new plays do not go well until the cruder coaching work is over and the team is able to play with precision the various plunges and dashes from the simpler formations. To the average follower of the game the real strength of the Blue probably will not be apparent until the team gets into action in the first big game, but if the coaching system continues to work smoothly, as I expect it will, there will be a first class lot of Yale football players on the field in the latter part of November.

BEFORE this issue of the WEEKLY is out the Carlisle-Cornell game will have been played, and the undoubtedly fine Indian attack tested against a theoretically sound defense. Next week I shall have something to say of this game, not forgetting a few diagrams of the Carlisle attack, always theoretically brilliant, and to be seen in New York against Dartmouth, November 15. At the same time I shall take up the work of both Dartmouth and Cornell.

The Red Man's Gift

When the Pilgrims came to America the chief article of food of the Indians (one of the most stalwart races of men the world has ever produced) was "Indinn Corn."

The women ground it in hollowed stones, and cooked it in a rude manner, but it, together with meat taken in the chase, sustained a race of muscular giants.

Two or three hundred years of cultivation has resulted in a very superior grade of this Indian Corn, and the food expert has produced therefrom, by skillful cooking, a food delicious beyond the comprehension of the past—

By ALBERT W. ATWOOD

Facing the Music

THE newspapers recently told of the suicide of a Col. James E. Tate, of Baltimore, a member of a distinguished Maryland family, a cousin of the late Admiral Schley, and a "former capitalist." From the news reports it appears that Col. Tate had many years ago invested \$200,000 in stock of the American Express Company. When he saw the *Parcels Post* approaching he tried to sell this stock, but could do so only at a great sacrifice. His losses so preyed upon his mind that a self-inflicted death resulted.

Recently there was printed on this page a letter from a reader in Iowa who was surprised and pained because his holdings of government bonds showed a considerable loss as compared with the price at which he purchased them. Herewith is printed another letter of somewhat similar nature. The two letters and the reported cause of suicide all illustrate a most serious investment fallacy. Here is the letter:

"I have about \$6,000, all of which is in six savings banks except \$2,000 which I invested in New York State and New York City 4 per cent. bonds in 1900. These bonds are now very much depreciated, in value now about 90, although I paid 102½. Would you advise me to sell them even at the present price and put the money back into the savings bank, or in your opinion have they reached bottom, and will they go up soon?"

"My sole motive in converting my money into such bonds was the greater security of them, and now I have lost say about \$190, which, if I had had confidence in the banks would not have resulted. Can you suggest any better investment for the money where there is not likely to be any fluctuation."

Market Losses and Investment Worth

THE alleged cause of Col. Tate's suicide and the two letters referred to point directly to a strange but persistent investment fallacy. It is one which troubles thousands of persons in these times, and while it will continue to trouble long after this magazine page has faded away I propose to do my best to attack it.

The fact that a bond, or even a share of stock, has declined in price does not necessarily mean that it is devoid of value. Take, first, the gravest and most pitiful instance, that of a man killing himself because of the great loss in American Express stock. Let it be admitted that the *Parcels Post* will cut deeply into express earnings. Let it be admitted that the big reduction in express rates ordered by the Interstate Commerce Commission will further reduce express profits. Admit perhaps that in time the government will drive the express companies out of business.

To begin with, there are many who believe that he express companies can engage in various operations which the *Parcels Post* will never be able to reach. Already Wells, Fargo & Co. has extended its operations in many useful ways. Furthermore, both this company and the American have become the European

agents for two of the largest American railroad systems, respectively. The American already has a large and lucrative business abroad, transportation, banking and tourist. Even assuming that the Parcels Post should reduce rates to a point where express companies should be obliged to quit, the American has at least \$10,000,000 of property such as real estate and equipment which it could sell at somewhere near its real value. In addition the company has a surplus in cash, bonds and stocks of other concerns of \$21,000,000. Its stock issue amounts to only \$18,000,000, so that if the company were obliged to stop business today it could liquidate at more than the par value of its stock.

No doubt that the suicide paid more than par for his stock, but on the other hand the stock has paid 14 per cent. dividends each year for seven years, 8 per cent. for five years before that and 6 per cent. for very many years. According to newspaper reports the suicide bought his stock "many years ago." Assume that it was twenty years ago. In that time he received more than 170 per cent. of the face value of his stock in dividends.

It may seem a little cruel to find fault with the mental processes of a man who kills himself, but the purpose of these details should be evident to all. The real test of the value of a stock is not whether it fluctuates in market price, but the total sum of dividends it pays and the assets and earning power back of the shares. Of course the man who owns a stock on margin or who borrows on it cannot face the decline with equanimity. Banks are heartless. When stocks fall they demand more collateral. But he who owns securities outright and unencumbered can face falling prices without flinching, provided he knows there is merit behind the price.

Why Bonds Have Fallen

NEW YORK City has issued such vast quantities of bonds in recent years that investment capacity for them has been forfeited. There is a limit to the powers of any digestive apparatus even for the best of food. That is one reason New York City bonds have fallen. But to assume that they are thereby in the slightest degree endangered is undesirable. If there ever should be even the least element of danger the city could temporarily stop its vast outlay for improvements and quickly pile up an unwieldy surplus. Indeed there are those who believe that before many years the city will be in receipt of an enormous income from its new subways. Judging from its past growth the last prophecy a far-sighted man would make for the metropolis is a lack of income.

Bonds of this city and state have fallen primarily because all other bonds have fallen. The one outstanding financial fact of the present decade is the decline in the purchasing power of money. Expressed in other words, prices of commodities, such as food products, have risen. A man who buys a bond at \$1,000, payable in cash fifty years hence at \$1,000 and bearing 8-10 interest year each, must not expect that bond to sell as high as formerly, now that the \$40 buys one third less than it used to buy. A given sum of money is worth about one third less than formerly. What is more natural than that bonds should decline to a parity with the buying power of money?

Bonds of this state and city are only

More work?

Greater ease?

A bigger job?

What do you see in an adding machine?

Some bookkeepers see in an adding machine only a device by which the employer gets more work out of the bookkeeper.

Some bookkeepers see in an adding machine a means of saving time and making work easier.

Others see in an adding machine the means of improving their status as bookkeepers, of increasing the scope of their work, their opportunities for advancement, the salaries they can command.

What do you think?

Say Exactly What You Think

It makes no difference whether there is an adding machine in your office or not. Your opinion will be valuable in either case. If there is no adding machine in your office, you can tell us whether you, personally, would like to have one or not, and why you would or would not. If there is an adding machine in your office, you can tell us how it helps you in your work, if it does, and to what extent it has increased your earning capacity, your efficiency, if it has.

We should like to know what you think, what you feel, what your experience has been, what your opinion is—whether favorable or unfavorable—to adding machines or to us.

Why We Value Your Opinion

What bookkeepers think about adding machines directly and vitally affects our market.

The more that bookkeepers realize how adding machines lighten labor, the more machines we will sell through their influence.

The more that bookkeepers see how adding machines broaden the scope of the bookkeeper's function, put a premium on brain work and ingenuity, the greater will grow the demand through bookkeeper interest.

The more that we know about bookkeepers' experiences with adding machines—about whatever advantages or disadvantages they have found in use—the better prepared are we to sell the Wales. Because we will know better what feature of the Wales will appeal most to bookkeepers, the actual result.

We take this means, therefore, of gauging the present mental attitude of bookkeepers towards adding machines—on that we may the more intelligently plan our advertising and sales work.

How We Will Judge Your Letters

Letter quality will not be the basis of our judgment of the letters we receive. We are not particularly concerned as to the way you express your will.

We make no restrictions as to brevity and scope of subject matter. What we will value most will be the letters which will give us the clearest insight into the actual present attitude of bookkeepers towards adding machines.

What we are looking for is your candid opinion.

No Office Secrets Wanted

Of course, we do not want you to give us any information or go into any detail that will jeopardize your employer's interests in the least.

You need not consider that you have committed yourself or your employer to the purchase of the Wales Visible Adding and Listing Machine by submitting your opinion. Should we in the usual course of our sales work, ever approach your employer, we will not refer to you, in any way, unless you request it.

Fill out and pin the coupon below to your letter before mailing. Or, if more convenient, instead of using coupon, simply state that you saw this ad in Harper's and give other information indicated.

The Device That Makes The Profitable Motor Truck Possible

\$

The real point in figuring the cost of Motor Truck operation—and for that matter the cost of operating horse wagons—is **WASTED TIME**. Time lost on the road—time lost at loading and unloading stations—lost time which amounts to far more than the combined waste of tires, gas, oil, repairs and depreciation. It is impossible to secure, by human supervision alone, accurate data on the movements of vehicles. Checking sheets and cost-keeping systems may show some of the loss, but they do not go far enough—they miss that vital and expensive item "**WASTED TIME**."

THE SERVICE RECORDER deals only with time—it gives an accurate, tamper-proof record of every movement of the vehicle during every minute of the 24 hours—it gives mechanical supervision, accurate and impartial—it plays no favorites—it prevents any unlicensed use of vehicles—it works equally well on motor trucks, horse-drawn wagons, or sleighs—it has no gears, shaft, or outside connection of any kind—it can be attached to any vehicle in ten minutes.

THE SERVICE RECORDER will demonstrate whether horse wagons or motor trucks are the most profitable for any particular line of work, and often will show, how the same work can be performed with less equipment.

THE SERVICE RECORDER is in use by firms and individuals in more than 50 lines of business, in 43 cities, and by 54 railroads, for use in switching locomotives.

How **The Service Recorder** operates—the economy it will effect—the improvements it will produce in delivery service—the experience of its owners, will be told without obligation.

two out of several thousands of issues in this country which have declined. Moreover if our correspondent will read the financial papers he will discover that the same thing is happening in England, France, Germany, Austria, Italy, Brazil, Argentina—in fact all over the civilized world. If anything Europe has felt the drop in securities more severely than this country. At least one great European country has been much nearer panic than the United States.

When Will the End Come?

OUR correspondent wants to know if his bonds have reached bottom and if they will go up soon. That is too big a nut for us to crack. The man who can answer that question possesses almost infinite wisdom. But this much is certain: periods of international illness in the security markets have never lasted permanently. Similar downward movements have taken place before and they have never lasted. However, the owner of state and city bonds would be foolish to sell. The turn will come some time. He says he has lost \$120. He has lost nothing unless he sells.

He wants to know whether it would be well to put his money back into the savings banks. These banks in New York State are models of sound investment institutions, but it is hard to see how our correspondent would be much better off. Savings banks invest in just the same kind of bonds that he has bought. The only difference between him and the savings bank is that the bank can buy so many different securities that the paper loss on some is partly offset by the paper gain in others. We do not see why our reader should not have had full confidence in the savings banks in the first place. There are no institutions in the world which are more carefully regulated or more strictly confined to the safest of investments. However, he would have been no better off in the savings bank, for they have suffered the same nature of paper loss that he is complaining about.

While it is true that savings banks have made up in part from real estate mortgages what they have lost on bonds, the net loss is very great, and has for several years been the subject of a never-ending technical discussion. Their surpluses, in many cases, have been eaten into because of the sinking market value of their bonds. But as the banks keep the bulk of their holdings to maturity it is hard to see that they have really lost anything.

The next time the writer of the foregoing letter wants to invest money in such a way that there will be no fluctuation let him buy a first mortgage upon real estate. But let not him or anyone else deceive themselves. Real estate mortgages do not fluctuate, it is true, but this merit they have not because they are necessarily better than equally well secured bonds, but simply because they are issued in such small units that no market exists for them. Any security which has a broad market is bound to fluctuate because countless forces play upon it. Fluctuation may be, and often is, a bad thing for the peace of mind of an investor, but it does not necessarily signify loss unless the owner sells. The security which has no market does not fluctuate to the eye, but often it cannot be sold at any price. The vital question to ask about an investment is whether it is backed by earnings and assets, not whether it fluctuates or does not fluctuate.

Club Cocktails

THERE'S many a man who has built a rare reputation as a mixologist who lets us do his mixing for him and keeps his sideboard stocked with Club Cocktails.

Made from better materials than a bar cocktail is apt to be.

Mixed to measure—not to guess work—as a bar cocktail always is.

Softened by aging before bottling—as no bar cocktail can be.

JAMES FORBES-ROBERTSON

FORBES-ROBERTSON IN "MICE AND MEN"

Mr. Flagg has drawn the distinguished English actor in a modern piece in which he and his wife have been successful for a number of years. The farewell tour of so elevated and refined an artist has a real importance for those who love the theater. It is a wide and worthy field Forbes-Robertson has covered. And even the repertory of this one trip shows several sides of his distinguished art. It includes the greatest of all plays, "Hamlet," interesting modern works like Shaw's "Caesar and Cleopatra," the dramatization of Kipling's "The Light that Failed," and Jerome's "The Passing of the Third Floor Back."

Mexico

MANY criticisms have been made of the administration policy toward Mexico, but no suggestion has been put forward for a proposition that would have been wiser. What the administration has done has met the approval of the most impartial citizens, and especially of those citizens who believe in the new attitude toward war. Gone is the day when it is accepted without question that thousands of lives should be sacrificed, millions of hard-earned dollars wasted, and the hearts of men degraded, in order to protect a few investors who knew what kind of country they were going into when they made their investments, or in order to enable Americans to live in such a country without running the risks natural to their residence. The present administration has a great constructive work to do at home. It leads and interprets the wishes of a new America. There could hardly be a greater disaster than for the attention of the country and the work of Congress and the President to be turned away from a task which will make men happier to the exciting but degrading occupation of war. That has been the President's standpoint, and he has acted throughout on the best information he could get, and with penetration, tact, and confidence in his own well-matured opinion.

Mrs. Pankhurst

LAWS and regulations can never cover every case, and they are intended to be carried out by officials intelligent enough not to apply restrictions and penalties to persons for whom they never were intended. In our immigration rules, we have been particularly unfortunate. Undertaking to exclude the lower forms of labor from the Orient, we have frequently created wholly needless annoyance for Chinese and Japanese students. The landing of Mrs. Pankhurst ought never to have been questioned for an instant. We happen to be among those who believe that the cause of woman suffrage in England was much forwarded by her up to about two years ago, and has been held back by her activities since, but, even if that belief is well founded, Mrs. Pankhurst's good or bad judgment has nothing whatever to do with the episode at Ellis Island. To treat her as if she belonged to the criminal classes is rough and stupid. The problem of dealing with her is for the English not an easy one, but in our case there is no problem at all. Mrs. Pankhurst did not come over to try to get American women to burn empty buildings or to smash windows, but merely to explain why

she was carrying on that kind of campaign in another country. If Mr. Haywood went to England to lecture on the methods of the I. W. W. in the United States, he certainly would not be interfered with, although if he undertook to stir up English working men to greater violence the authorities would very likely send him home. Those who are alarmed cannot suppose that Mrs. Pankhurst will do America any physical harm. They are merely aligning themselves with those who chronically fear the explosive quality of ideas, or perhaps they are antis.

Two Men

JOHN PURROY MITCHEL has been in the service of the City of New York and the United States government for about seven years. Comptroller Prendergast, who knows, says that Mitchel has had the best experience to equip him for the position of Mayor of New York of any man in the history of that city who has ever run for the office, with the single exception of Seth Low. The only crimes charged against Mitchel are that he is young and that he is radical. To be thirty-four years old is not a crime, even in a candidate for mayor, provided he has had the experience that Mitchel has had, and has shown the same talent and enthusiasm for economy and efficiency. To be radical in these days is not a drawback, provided one combines radical sympathies and beliefs with an exact comprehension of the difficulties and the methods and restrictions of the established order. Mr. Mitchel has a very luminous understanding of the financial situation in New York City. He is a cautious man; a thorough student; a born administrator. He has been working for many years with McAneny, Prendergast, Pounds, Cromwell and Mathewson, all nominated by the Fusion forces to serve with him on the Board of Estimate. The remarkable economies brought about by the present Fusion government, in spite of the preceding Tammany graft and waste for which they had to pay, have been fully set before the voters.

On the other hand, behold a small-minded and weak tool of Charlie Murphy as candidate for mayor, backed by a ticket made up almost exclusively of mere Tammany politicians. McCall's idea of economy is to sell such parks as Dreamland and Rockaway Beach, the only places where the poor men, the poor women, and the suffering children of the congested city have any chance to enjoy the ocean air that McCall's none-too-well-gotten wealth enables him to breathe in his private summer home. Tammany's economy is to steal and to waste, and to make

up for it by cutting off great projects of public welfare. The Fusion method is to do more, and by doing it honestly and well, to spend less.

Newspapers in Washington

IN a letter to the editor of the *Washington Post*, President Wilson said, "Sir, I am quoted in your issue of this morning as saying that any one who does not support me is no Democrat, but a rebel. Of course, I never said any such thing." The sting in that last sentence, "of course," can be made to apply either to the habitual course of the *Post* in slandering this Administration or to the impossibility of any one, not fatally muddled in his intellects, supposing that the President would have said such a thing. On the same afternoon in which the *Post* thus transgressed, the *Evening Star* of Washington attributed to the President the statement that he neither expected nor wanted the support of any Republican on the Currency Measure. To this Senator Thomas replied in the Senate by saying, "I have it from the President's own lips that the statements attributed to him are without foundation."

Underwood

HE is fifty-one years of age and looks younger. When his present term in the House expires, in 1915, he will have served there for twenty years, representing the Birmingham District. As Chairman of the Ways and Means Committee of the last Congress and of this, his position has been a far more powerful one than that of the Speaker, his committee, instead of the Speaker, now having the appointment of all the other committees of the House. With the election of a Democratic House three years ago, he had the responsibility of so guiding its action as to make victory possible in the Presidential campaign following. He has fixed political principles which he refuses to yield even for a cause that has his sympathy. For example, he refused to vote for the match-phosphorus bill, believing that it is an unwise use of the taxing power to destroy an industry. He allowed himself to be used by the reactionary party in some of the Southern states in their effort to defeat the nomination of Woodrow Wilson, and it is not to his credit that Ryan furnished more than half his campaign fund, as he did for Harmon, and as he would have done for any likely candidate after Woodrow Wilson had declined his aid. But there has not been the slightest suspicion of Underwood's disloyalty to the nominee of his party or to the President of the United States. With his fortune invested in the iron and steel industry, he insisted on sweeping reductions in those schedules in the Tariff Bill. He defied the efforts of the Steel Trust to defeat his candidacy for Congress by postponing the erection of its projected plants of enormous size in Birmingham, and there has not been a whisper of scandal about his personal management of the Tariff Bill which bears his name. With the signing of the bill by the President, he felt that he had reached the climax of his long term of service in the House.

Hohson poses as the most progressive of Alabama statesmen but has posed overmuch.

Reinsch

THE new Minister to China is an excellent type of American citizen. Born in Milwaukee, Paul Samuel was graduated from the University of Wisconsin in 1892, and two years later from the Law School. After trying for a year to finance his own meal ticket, he returned to the University for post-graduate work in letters and science. He was instructor for a while in English, then studied abroad for a year and came back to the University to teach political science. He distinguished himself through his grasp of international relations. His classes were popular on account of the easy conversational way in which he exhibited his knowledge and his spirit of fairness. He had the ability to make students work and think without forcing them. Those who knew him in college think of him as an easy and natural diplomat, simple, unpretentious, comfortable as an old shoe, and substantial as Gibraltar. He has been the Roosevelt professor abroad, and the United States delegate to two Pan-American conferences and several other Pan-American meetings, and is the author of a number of books on international relations, which have been translated into other languages and have had the singular fate of bringing in some money. With part of this he made a collection of paintings to illustrate the history and development of European art, a collection now loaned for an indefinite period to the University of Wisconsin. In Wisconsin politics, he has always stood with La Follette. He is a believer in peace and a special student of the problems of the people of Asia. He ought to fill his new job with exceptional felicity.

The Valuation of the Railroads

LA FOLLETTE won a long fight when Congress authorized the Interstate Commerce Commission to make a valuation of the actual property owned by railroads, interurban lines, steamship lines, pipe-lines and telegraph and telephone systems, coming under the jurisdiction of the Commission. A preliminary survey of the work to be done and the methods to be employed has just been made by a committee composed of Assistant-Secretary of the Treasury John Skelton Williams, Chairman, C. F. Staples of the Minnesota Railroad Commission, formerly president of the Association of Railroad Commissioners, Professor Beamish of Chicago University, Professor H. C. Adams of the University of Michigan, and O. T. Crosby, of Virginia. The committee submitted a plan for organizing a department for this particular work with a statement about the kind of experts needed. The investing public is interested in the thoroughness of this work, as are the taxing authorities and state and national public utility commissions and the general public, which is taxed upon the myriad products of soil and mine and forest and factory that enter into transportation. That the problems, although difficult, are not insoluble, such states as Wisconsin and Minnesota are indicating. The valuation of these properties in the United States will take six years to complete and will cost not less than \$15,000,000. A permanent

board of valuation will then keep the work up to date. The railroads must furnish most of the data and it will be the business of the valuation board to see that the data are trustworthy. If the work had been done a generation ago, the country would be better off now.

Social Legislation in Tennessee

THE Tennessee legislature, whose regular session was followed by an extra session, was chiefly noted for the struggle between Governor Hooper and the Regular Democrats over the law enforcement measures. These would have given the Governor the power to enforce the prohibition law in the cities. The two political groups, one consisting of Republicans and Independent Democrats and the other, the Regular Democrats, were evenly matched and were each striving for popular favor, and therefore a considerable advance in social legislation was made. Among these were a compulsory school attendance law for children between eight and fourteen—sixteen if unemployed; the Uniform Law on Vital Statistics, for the registration of births and deaths; the enlargement of the Department of Factory Inspection, with increased appropriations and an added force of inspectors; a law compelling the erection of adequate fire-escapes; the adoption of the parole system for prisoners; provision for rescue crews and first aid supplies for the mines; and the establishment of a Workmen's Compensation Commission. The Child Labor law was amended by prohibiting night-work for children under sixteen and eliminating the exemption for the employment of children in agricultural or domestic service during the school term, while the sixty-hour week for women and children was reduced two hours this year and another hour next year. Most of these measures were advocated by the labor organizations, under wise and effective leadership.

In The Year 1913

THE Honorable Stephen Coleridge is the son of Lord Chief Justice Coleridge, strange as it may seem, as the father was a very able and a very sensible man. The Honorable Stephen Coleridge is one of the best known of the English leaders of the anti-vivisection movement, and is also familiar to Americans on account of two trips over here. Here is the latest contribution to science by Mr. Coleridge that has fallen under our eye: "Knowledge and reason have always been, and must always be, miserable bases on which to build conduct, character, and life. It is true that Science has conferred some benefits upon mankind; it has enabled the slothful to be more slothful, the self-indulgent to be more self-indulgent, and the loquacious to be more communicative. It may have, perhaps, prolonged human life by a few years, or even have kept alive some who had better be dead. But the accumulation of knowledge has no relation to the acquisition of wisdom or the conservation of virtue; and Science has no exhortations for us on the beauty of unselfishness, on the nobility of self-sacrifice, on the splendor of patriotism, on the sanctity of honor, or on the glory of God, and these things matter more to us than the origin of the species,

the excretions of earthworms, the pressure of the blood in dog's veins, or the battles of bacteria."

New Books and Old

OF all the new books announced for publication this fall, how many do you take to be indispensable? Two or three occur to us offhand; the new volumes of the Emerson "Journals"; Charles Eliot Norton's "Letters"; John Galsworthy's "Dark Flower." Yet the literary reviews will teem with adjectives; libraries will huy, and men and women will give their time to crisply bound banalities in preference to books of tried value. The right point of view was expressed a good while ago by a British essayist—"On Reading New Books":

When I consider the countless volumes that lie unopened, unregarded, unread, and unthought of, I cannot enter into the pathetic complaints that I hear made that Sir Walter writes no more—that the press is idle—that Lord Byron is dead. If I have not read a book before, it is, to all intents and purposes, new to me, whether it was printed yesterday or three hundred years ago. If it be urged that it has no modern, passing incidents, and is out of date and old-fashioned, then it is so much the newer; it is farther removed from other works that I have lately read, from the familiar routine of ordinary life, and makes so much more addition to my knowledge.

William Hazlitt's little sermon is all the more pointed in an age which gives too much attention to ephemeral journalism—mostly fiction. We wish there were more readers like the middle-aged gentleman we know, who took with him on his vacation for light reading last month, Balzac's "Caesar Biotteau" (some one had told him it was the first novel in which the almighty dollar is the leading character), and some of Parkman's histories of New France and of New England. The man we write of is a business man of rather more than average common sense. He must have enjoyed his vacation.

Noblesse Oblige!

DOMESTIC servants in France who can prove that for thirty years they have been good and faithful are entitled to the right to wear tri-colored ribbons in their buttonholes. A new order instituted by laws passed this summer is now being enlisted—the Order of Distinguished Domestic Service. The plan is a credit to a nation already famous for ideas that combine practicality and sentiment. That humble service may assert a legal claim to a share of rank and distinction sounds like a corollary to noblesse oblige.

One Kind of Hospitality

AMONG popular discussions, one that calls out genuine feeling is about "what is the most disagreeable of all usual experiences?" We should enter a plea for hospitable urgency at table. Reluctant gluttony is a most depressing fate. Sad enough are the indigestion, auto-intoxication, and general stagnation that come from cramming in the pursuit of pleasure, or from one's own nervousness; but when one is entirely happy with sufficient food for nourishment, and wretched with more, and yet is driven by a hostess to "have just a little more" meat, or pudding, the result is a crime.

Our Foreign Markets

By AMOS STOTE

IN the issue of October 4, of HARPER'S WEEKLY there appeared an article by Mr. C. M. Keys entitled, "Is American Business Failing?" The article quoted facts concerning several of our basic industries. It gave convincing proof that under present conditions the costs of manufacture, administration, selling and competition left no actual margin of profit. These statements related to the giant corporations of our country—most of them being such as come under the rather liberal classification of trusts—and chiefly to the railways.

Aside from the railways, and they must carry the goods to the sea ports, practically all these concerns are doing a large export business. Whether they are conducting their export business along lines best suited to the peculiar conditions of each market is another question. Just what high form of efficiency could bring about for them in the cost of manufacture, administration, selling and competition, both at home and abroad, is still another matter. Assuming, though it is not of necessity a reasonable assumption, that such concerns are already operating under the highest form of efficiency that industry has reached in our country, it would seem that export has little to offer in the way of relief.

AND that is just where we would be entirely wrong. The article referred to dealt only with basic industries; it contained a frank admission the deductions made had nothing to do with the ten thousand other branches of manufacturing, that would continue to pay so long as the country remained healthy. Mr. Keys discussed the production of staples—food, clothing, steel, transportation—the wrecking of which would mean national disaster, and the certain failure of many of the other concerns, those that will pay so long as commercial health is with us. Yet there is help in export.

Whether greater tension comes into the ranks of the staple industries or not, whether or not their costs make export as little profitable as home trade; the fact has been proven beyond peradventure that to all the countless other industries a rightly organized and conducted export business is a profitable business—and a safe and sure safety valve in ease commercial depression of any kind does reduce the purchasing power of our country.

Export kept many a business alive in 1908. It kept factories running. It kept workmen employed at a time when there was little employment. Export will do more than bring relief in times of stress; it will tend to stave off periods of depression by saving the home market from over-production and by bringing money from other countries.

Our great difficulty with export is that we have been too American in our foreign dealings. We are too fond of the word *invasion*, when persuasion is a far more practical, commercial term. We like to food countries with certain wares; and forget that foods always recede and leave an unhealthy deposit, which we are likely to cash in at the bank of Failure. We please ourselves with talk of showing the foreigner how to do business; and overlook the fact that long before Mr. Christopher Columbus pulled off a big deal with Ferdinand and Isabella, whereby he got three modern ships on credit, with nothing but a few more or less imaginary countries to offer as security—I say that we neglect to take notice of the fact that long before this time some of the Caesars were letting contracts for road building that would give any railway a right of way that would take figures off upkeep expenses; and also, that during the morning hours of the world, the Ptolemy boys of Egypt were importing one-humped camels for the establishment of a fast freight line with India, while some of their predecessors had already accomplished some of the slickest jobs of construction along the pyramid line that may be found any-

where. Yes, we must get over the idea that the United States invented business.

How We Stand

SO far as production is concerned we are better able to go after foreign trade than any other country. While we are weak in this branch of finance, it offers no insurmountable barrier and, even if not taken in hand at once, conditions will improve by the very increase in a trade that requires its improvement. We certainly have the goods; we can just as surely meet any fair competition, and make a profit; there are good markets abroad, fine markets, that only need to be properly handled to put our wares in the highway and byway of foreign desire. Here we must stop all self-praise—come to the question of selling, properly handling the markets. Behold us falter, stumble, fall, struggle; oh, how pitifully, futilely we struggle! If there is romance in our industry, then there is certainly tragedy in our selling abroad.

England has been so long the great distributor by sea that she has acquired a knowledge of other countries we may only equal through the most energetic and well-directed efforts. And even England makes mistakes. Germany, that within so few years has turned from an agricultural to an industrial nation, began its study of foreign markets before it had need of them. Yet Germany has its troubles. It sent out experts to investigate the attitude, requirements and conditions of other countries so as to be armed for export at all times. Many of us, on the other hand, appear hardly to realize these markets exist; or if we do realize it we are likely to take the complacent view that it will be time enough to study them when we have a surplus stock of goods taking up space in the warehouse. Later, when Experience sends in a bill of a hundred items at so much per, we feel like getting even with the foreigner by taking our wares away from him.

We are too much inclined to think we are the doctor and the foreigner our patient, and are surprised when he objects to treatment before we have diagnosed his case.

The Egg-Cup Error

HAVE you ever heard how Germany took the Far-East egg-cup trade away from England? A German who was scouting for business, in the land from which the sun comes, noticed that the native egg always did a disappearing act when put in the imported egg-cup. The native hen was—and undoubtedly is—unable to compete with its English sister in size production. The German manufacturer brought out a cup to fit, and got the business.

For a good many years a number of African tribes were heavy consumers of scissors made in Sheffield. A German got hold of the information that these scissors had been the cause of considerable blood-letting at times of political and social gatherings. In fact the glistening points often proved irresistible to many a young huck possessed of an overplus of animal spirits. A German manufacturer made a specialty of blunt nosed scissors for this market, and he soon knew it so well he could call it by its first name.

As to incidents where conclusions were the other way around, we need look no further than home. When the typewriter was a novelty there was a machine manufactured in our country which, I believe, was called the Hartford. A German who saw it went wild with delight, bought one hundred and fifty of them, and hurried to his native soil to make a fortune; with a good prospect of making some considerable of a fortune for the American manufacturers, as well. So far as I know these machines are still looking for good homes. The German

letterhead is so much wider than ours it refused to enter the carriage of the machine. It was too much to ask the printers, paper dealers and consumers of commercial stationery to change the size of letterheads; so it was a case of "leave it lay" with the narrow gauge Hartford.

All the satisfaction the purchaser could get out of the American maker was something very like our present-day expression, "I should worry." And when we figure it out the American certainly was not to blame; nor could he be expected to go to the trouble of bringing out a wider carriage for so small an order. No, he could not be blamed; but he was open to the most severe criticism. That one hundred and fifty might have grown to one hundred and fifty thousand in the years which have passed. Had German requirements been met the machine would have had a running start in control of the trade. That we do hold the bulk of this business today is pleasing—but this experience has been no help in the work.

Our bicycle makers had the German market all their own way during the first years of the business. But they shipped over the flimsy framed affairs our speed ambitious cyclists demanded. The heavy German soon reduced this thing to a mass of hopelessness. German capital saw it and smiled; then it brought out an armor plate wheel you could ride down stone steps with safety—to the bicycle. Of course it won the home market away from us, and holds it now. It is still worth having. The Germans who adopted it have found the bicycle trade as effective an introduction for the automobile as have our manufacturers in this country.

The Peevish Agent

UNFORTUNATELY, our share in the automobile business in Germany is not without its darker side, though our trade there is growing so rapidly it is likely the error will be lived down without any serious loss to those not involved.

The Teuton is not generally communicative concerning his business, unless he has a grievance. I was somewhat startled, therefore, when calling at the German agency of an American motor-car company, at being almost dragged into a private office and told a long tale of woe. I brought this man no introduction or credentials, so it is probable he talked in the same unrestrained manner whenever opportunity presented itself. The unfortunate part of the affair is that the American manufacturer kicked up the trouble while acting entirely within the limits of their agreement. The situation was this:

The agent had spent some twenty thousand dollars building up a trade. His introduction of the machine had been successful to such an extent that the manufacturer refused to renew the contract but decided to take over the agency when the agreement expired, and establish a branch house. The agent had been calmly told that he would be expected to turn over the good-will, offices, organization and statistics. No mention of bonus for labor and expense had been written into the contract, so none would be paid.

We are familiar with this type of contract for it is not unusual with us. But the German agent! His working knowledge of profanity was too limited to permit comprehensive expression. "I know those Americans!" he shouted, without thought for my feelings, "I know them and their ways of doing business! I have seen them in the hotels of Paris and London, and right here in Berlin. When they are not robbing each other they get together and rob their foreign agents. This company is trying to do to me just what it did to their French agent. I know them; they have millions, and we have no money to fight them!"

The contract had nearly a year to run and if the agent is still "representing" the American manufacturer to the German public as he did to me it looks like the new representatives would have some interesting experiences when they take over the business.

Misunderstandings of this kind have always proven expensive, not only to the manufacturer involved, but in a more or less direct way to all our export interests in the country where it occurred.

An appreciable number of English business men of the smaller type still look at our wares and our methods with a measure of suspicion; simply because there was a time when a great many American products sent into that country did not make good, and because our dealings with English agents were sometimes open to criticism.

Hardly does it seem necessary to dwell on the "so-many-millions" of people in England and on the Continent who form logical markets for our wares. We have been hearing statistics of this kind for so long the figures have lost their impressiveness. No manufacturer worthy the title of business man has the right to deny the value of world trade. His difficulty is in knowing how to compass it; how to establish a trade in countries where he knows nothing of the language, laws, coinage, custom and methods of business approach. Exporting through some broker or chance agent seldom brings satisfactory returns. Moreover these methods give him no control of the work, and, at best, they carry little of the feeling of true export.

There is no greater instruction and inspiration to be found in the world of international trade than may be gained through the study of our successful houses abroad. We have now, most of us, passed that period of self-sufficiency when we were inclined to look on other countries of the world as poor and unsafe markets, filled with strange peoples left over from a former age, too backward to appreciate modern productions. We have yet to learn, however, to give them due commercial appreciation. The very lack of industry so evident in some offers us all the greater opportunity through lack of competition.

Our Competitive Advantage

IN the matter of competition the United States stands in a most enviable position. Our wares in England and in France, in competition with German goods, have all the advantage of popular sentiment. In Germany we hold the same handicap over French and English products. And this attitude is by no means negative nor confined to certain classes. In France the feeling is so strong against the Teuton that if a view of the Kaiser is shown in a picture-playhouse the audience will make its contempt and animosity very audible.

The English are less demonstrative in showing their feeling; but from a commercial viewpoint they are just as effective. I happened to be standing at a counter in a big London store when a silk-hatted, frock-coated Britisher—and his wife—came in to purchase a bath robe for the husband. During the process of inspection the wife noticed the "made in Germany" label. Without saying anything she held it so the husband might read the incriminating mark. They glanced at each other; and the latter asked to see a greater variety. Without show or demonstration the label of each garment was examined. As all the robes brought out were of the same material it was soon evident they all came from the same maker. At length the husband asked if the store had any robes made in some country other than Germany, stating frankly, though placidly, that they would prefer not to patronize German industries.

These statements must not be taken as suggesting any preconcerted effort at boycott. There are probably very few people in any of these countries who would let their international feelings get the better of their judgment in a business transaction; but certainly when we have every advantage offered by that valuable asset, good-will, the odds are nothing if not in our favor.

Far too much guesswork has entered into our efforts after foreign trade. Many houses have worked seriously and with determination, have planned the export department at home and the branch organization abroad with the same care and judgment any other department has received; but they have neglected, or have not known how, to estimate the foreign influence and direction that must be understood to achieve success. The business methods of Europe, and largely so of England, are as unlike our methods as are the languages of the Continent unlike our speech.

One of the first things to do when establishing a foreign office is to learn what to avoid. Each market must be known, intimately known, and not from an American point of view, but in the peculiar way it is considered by the native. Just as the mariner needs to know not only his course but the hidden rocks along his course; so the man after export business must know there are hidden causes of offense as well as approved methods of attack. And the hidden things, when known, often appear of such trifling importance to us; though nothing is really trifling when it concerns our business success.

FROM our American understanding it seems absurd that serious business should be forced to recognize habits or customs that have no relation to sensible commercial operations. The young man who went to Germany, after studying the language for two years at home, to get business, did not think the consequence trifling when he lost a good order because he put his hands into his trouser pockets when talking with the head of a big German house. This act constitutes something very near an insult in Germany. It is even worse than wearing tan shoes or a Norfolk coat into the office of an English business man.

A man who is now vice-president of one of our big corporations was, several years ago, the managing director of a subsidiary company which this concern had established in England. One Saturday afternoon, when he happened to be alone in the offices, the telephone rang. The call was from the General Postoffice; something had happened to one of the machines purchased from the American company and it was very necessary that it be repaired at once. As the managing director was well acquainted with the workings of the machine he did just what any other live American would have done; grabbed up a mechanic's tool case, jumped into a taxi, and hurried to the postoffice as fast as possible. The necessary adjustment was easily accomplished and the managing director turned to go. He was about to pass out

when a man on guard at the door politely informed him that it was a government rule no visitor to the private departments of the postoffice could take out anything without leaving his name and address. The tool case brought him under that regulation. Without thought of the consequences the American drew out a card and tossed it through the doorkeeper's wicket.

Monday morning a salesman for the American house had a telephone call from a postal employee, a friend. In awe-struck tones the latter informed the salesman of what had happened on Saturday, and said he hoped the managing director might be warned against ever doing such a thing again. The postoffice appreciated help in time of trouble; but it would have been far better to let it wait until Monday than that so important a man should grossly ignore English precedent.

AN English salesman, with a drawing account of fifteen dollars a week, would have known better. He would have known that to draw off a glove, turn a screw, and so bring about a prompt resumption of service for a customer would be an unwise business move. He would have sent for a mechanic, a person whose class and training fitted him for the work, and let him turn the screw.

How laughable, almost contemptible, these customs seem to us; yet how essential is recognition of them to successful export trade. "I hate to wear this long-tailed coat and high hat," an American in London remarked, "but you have to do it to make good with the Englishman; and while I am here for business they can prescribe pajamas and I'll be with them." This man should take one more step. He should try so determinedly to get the Englishman's view of the matter that he will lose all feeling of antagonism toward the frock coat and high hat.

It is folly to try and ape the foreigner with whom you wish to do business; just as it is wise to respect his peculiarities and conform to them. It's the business we want, and the best way to get it is the way that seems right to the man with whom we are dealing.

A series by Mr. Stote on our foreign trade will follow this introductory article. The one next week will be called "The Crime Against the Motor"

Canning and the Cost of Living

By HONORÉ WILSIE

"I put up all our vegetables and fruits"

THE new Chief of the Bureau of Chemistry has some very definite ideas about the relation of his work to the cost of living in America.

It takes a complicated kind of mind to think along fundamentally simple lines. Dr. Alsburg has set himself the task of taking all the many intricate and apparently irrelevant facts of our every-day living and correlating them into a simple, helpful policy for us ordinary citizens. Notice that Dr. Alsburg says *helpful* and not *punitive*. The distinction is illuminative of the new chief's ideas.

"The Department," he says, "will do its duty, not merely in exercising control over interstate commerce, but also in helping food producers to bring their food up to the proper qualifications; and it will thus add materially to the supply of honest and safe food in the country. The great purpose of the Department is a constructive one, namely, not merely to punish adulterers of food, but to help honest manufacturers to discharge their duty to the community by supplying wholesome products. The Bureau of Chemistry belongs not only to the consumer but also to the manufacturer."

One must not understand from these remarks of Dr. Alsburg that his idea is to lessen the vigilance of the police of his Bureau. The policing will continue to be as ardent as ever, but the new chief

"Canning has left the home and gone into public life"

will endeavor to balance detective work by scientific research and practical help for the manufacturer as well as the consumer.

A man who canned asparagus was fined by the government for putting a poisonous preservative in his cans. The man paid his fine, but he was bewildered.

"My chemist told me," he said, "that he had found a perfect preservative. That it was a salt. I supposed salt was harmless and used it."

The man was honest. To him a salt is just salt! The Bureau of Chemistry saw this and proceeded to show the man how to can asparagus in a wholesome way.

THIS was constructive work. But Dr. Alsbury does not stop here. He gets the whole relation of canning to our civilization and to the cost of our daily living and acts upon this relationship.

Probably no kind of food has been before the public eye so much of late as canned food. And probably no kind of food is used so much, yet is at the same time so much criticized. We resent canned food, but we continue and shall continue to use more and more of it. Canning processes are something over a hundred years old, yet somewhere in the back of our minds still lingers the idea that canned foods are not normal foods. We also have the feeling that if there must be canned stuffs, nothing can be so good as the kind mother "puts up." And mother doesn't "put up" any more! And finally since 1906, when the Food and Drug Act was passed, we have found such wholesale dishonesty and uncleanness in the methods of the canning industry that we have lost faith.

We take the attitude that canned food has been thrust upon us by the greed and business sleight-of-hand of the men who control the canning industry. We talk as if the demand for canned food were an artificial one created by the canner.

As a matter of fact, canned and preserved food will be one of the staples of the new century. We are becoming more and more crowded, more and more specialized in our economic functions. The time has passed when each family can rely on its own food resources. Canned food will become the great food reserve fund of the nation, the absolutely necessary national storage without which a steady flow of supply to demand will be impossible.

On our method of handling the canning industry depends one of the most important aspects of the new century's cost of living.

The demand for canned food is a natural one. Canning has left the home and gone into public life quite for the same reasons that boot-making and weaving and the other fine old home activities have become public utilities. Canning as a non-domestic industry is another manifestation of the new economy that is making of women bread-winners instead of bread-makers.

It is still not uncommon to hear a housewife say with pride, "I put up all our vegetables and fruits. I never buy a can of anything!"

HERS is a fine, yet mistaken enthusiasm. Even though she counts her time and labor worth nothing, a woman cannot can and preserve her vegetables and fruit, using the best of materials, and compete in price with the best of the great canneries. Moreover, you will observe that she admits the necessity of canned foods yet she fails to see that it was division of labor that begot them and that she is failing to accept her division. She is only setting her back against the current of the times which tends to lift from her the burden of domestic hand labor and give her an opportunity for specialization, regardless of sex, that the new century demands.

Canned goods are here to stay. But in enforcing the economic side of the Food and Drug Act we are by no means realizing the full relation of the canning and preserving industries to our new life.

IT is not enough, now, says the Bureau of Chemistry, that your can of unsweetened condensed milk is pure and correctly labelled. It ought to be, and some day will be, so canned and so labelled that the mother, buying it for her baby, can know the volume of real milk that has been reduced to the compass of the can. Dr. Alsbury wants established some standard for food quality.

It is now, says the Bureau of Chemistry, not enough that your can of tomatoes is pure. Tomatoes are a food product that can be canned without addition of other material. If you add water, you are adulterating them. Tomato pulp is not a normal ingredient of canned tomatoes, and if found in your can is adulteration. Also, if more juice is added than would be normally present, this is called adulteration. In other words, if we can get a standard of food quantities in our canned goods, we have a standard on which to base their actual cost and worth to us as food.

It is through the canning industry that one of our most important and fundamental strides toward national frugality is to be taken if Dr. Alsbury is enabled to carry out some of his ideas. We have been wanton wasters of our resources, private as well as public.

"Why not," says Dr. Alsbury, "conservation of our food as well as conservation of our forests?"

Why not? There are pessimists who say that fifty per cent. of what the average housewife spends for food will be found to be divided about equally between the garbage pail and the waste pipe of the kitchen sink. Nor are they so pes-

mistake that they do not, on this occasion, speak a large truth!

THE canning trade is an outgrowth of the kitchen. It has grown by rule of thumb and has taken with it from the kitchen the kitchen's wasteful and careless habits. The average woman tries her cake with a broom-straw because her grandmother did. The average cat-soup-maker lets his tomato skins go dirty and fermented because his father did. The waste that was unnoticed in the kitchen, when taken in relation to the whole canning and preserving industry, is a national detriment.

After we have made what is in the can wholesome, we still have left the waste with which we do little or nothing. This fact has a direct and indirect relation to the cost of living. The greater the waste in canning, the greater the cost of production. The greater the waste, the greater the actual loss of food to the country and also the greater the loss of by-products. If a portion of the waste may be turned to fertilizer and is not, still a further loss comes to the land by the decrease of our cattle industry, and the increase of vegetable- and fruit-canning.

No branch of the canning business shows more clearly our national wastefulness than the sardine-packing business. The attitude of the Bureau of Chemistry toward it is illuminative of the new policy.

TO re-establish the important American sardine industry and to improve the quality of the American fish product, the Department has established a special Sardine laboratory at Eastport, Maine. This field experiment station will make a thorough study of the fish caught in the Maine sardine waters, and the methods of packing them employed by the Maine canners. The object is to improve the quality and reputation of the American sardines which of late with few exceptions have been of inferior quality, and often packed when unfit for packing; or else so packed as to be a very poor article of diet. The attention of the Department was called to the situation very forcibly when it was found necessary to seize about ninety thousand cans of American sardines in Pittsburgh and two thousand cases or nearly one hundred and fifty thousand cans in Norfolk.

The American sardine industry at present, the canners themselves admit, is in a deplorable condition. The whole aim is to pack quantity and give no thought to the quality of the product. There are, of course, a few packers who maintain quality, but many, it is found, pack "feedy" fish, a condition resulting from the decomposition of certain food that the fish eat. Or they are packing soft fish or discards from other factories. These are unfit for food and are absolute ruin to the reputation of the American sardine.

Some of the packers have volunteered to allow the government specialists to use their factories for complete experiments and have expressed a desire to co-operate with the Department in all possible ways to restore the American products to favor.

The new laboratory has already discovered one important point in the packing process that causes loss. The Maine packers pack as large fish as they are able to get into a box—fish from seven to eight inches are packed in so-called $\frac{1}{2}$ mustard size. The smaller fish are packed in the small quarter size cans and many of them are too large for the good sardine size. To make the fish fit the cans the head, a small part of the tail and from $\frac{1}{4}$ to $\frac{1}{2}$ of the best part of the fish is cut off with a pair of scissors. By actual determination, 42 per cent. of the fish goes to waste and of this, 32 per cent. is good, edible meat.

THE newly established laboratory will begin at once an investigation of the best method of packing American sardines in oil and mustard, and will give particular attention to the size of fish adapted for canning in the small sizes. It will begin at once an investigation of the best ways and means of overcoming the "red feed" condition which is a troublesome factor at certain seasons of the year, in packing American sardines. It is believed that if the fish that have been eating the "red feed," are allowed to stay in waters until they have digested it they can be packed perfectly, and will not deteriorate if properly processed. If they are worked while this "red feed" is in their stomachs, however, they decompose rapidly before being put into the cans and make a very inferior product when they are canned.

The new laboratory will make investigations as to the best uses to which to put the part of the fish which is discarded. Whenever it is edible the government will find a way of canning it as a food that shall be cheap and wholesome as well as delicious. For the non-edible portions the government will find uses that will be profitable not only to the packer but to the public at large.

One important fact the consumer is apt to forget is that it is more expensive to produce a first-class can of goods than a poor one. After our canners are taught to use all their waste, the cost of production will be reduced and still the result of the enforcement of the Food and Drugs Act must be in many cases to increase the price to the consumer. The reduction of the cost of living will be at first brought about indirectly.

MOST of us look with horror on any but a new-laid egg with an unbroken shell, and a guaranteed date thereon. The phrase, canned eggs, brings to our minds a horrid picture of a yellow, evil-smelling mess used by unscrupulous bakers in their campaign against the public stomach.

Yet the time is coming when the canned egg will be with us as familiarly as the storage egg and far more acceptably. The fresh egg goes higher and higher in price as our population increases and the feeding of hens becomes more expensive. To can the eggs in times and localities of plenty is the next step.

Up in New York state is an egg factory where eggs are canned under sanitary conditions that approximate those of a first-class hospital. In a sterilized room are the canners dressed in white. Their hands have been made surgically clean.

Before each girl is a tray of eggs at exactly the right temperature for washing. The eggs have been candled. A glass jar that has been sterilized is set by the eggs. The girl picks up an egg and breaks and inspects it. It is a perfect egg and goes into the sterilized jar. She breaks another egg. It has escaped the candler and is bad. The bad egg is rushed out, the girl washes her hands and the process goes on until she has a jar of perfect eggs which are sealed. Nothing could be cleaner or more wholesome than this completed product.

Under the inspiration of the Bureau of Chemistry and its police and creative work, a new spirit has been shown lately by the canning industry of the country. Many methods that were thought to be trade secrets have been found to be common practices and a new spirit of co-operation has appeared. Many of their methods were only partly understood by the canners themselves.

THREE years ago, because of some of the requirements of the Food and Drug Act a research committee was appointed by the National Canners' Association to bring modern scientific thought to bear on the methods and problems of the canners. The work of this committee demonstrated to the members of the association that material progress could be made if scientific men with properly equipped laboratories were to give their entire attention to the needs of the industry. So, recently, a research laboratory has been established at Washington for the purpose of studying the broad questions of the National Canners' Association.

The work of the Association has shown that spinach packed tightly and with a good exhaust is a superior article to spinach that is loosely packed and only partly filled. In many cases the proper amount of sugar to add to different kinds of fruit has not been known and the work of the new laboratory may result in classified information regarding the effects of varying amounts of sugar on the flavor of fruits.

Not the least interesting to note of the many results of the activities of the Bureau of Chemistry is the fact that so many of our food manufacturers have come to realize the value of co-operation in working out the scientific problems that the government has forced on them. There was a time when the power of a man to meet the cost of living depended almost entirely on himself. Now, in our new century of specialization, of overcrowded cities and under-worked lands, the power of any one of us to meet the cost of living depends on the co-operation not of our neighbors alone, but on that of the whole nation.

It is just another instance of the curious relation of everyday living to the whole of life that an industry that has been abused by the manufacturers and resented by the consumer should prove to be a vital factor in the new century's cost of living.

And it is curiously comforting to observe that while we humans produce men capable of poisoning our daily food, we produce just as surely men capable of detecting and counter-acting not only the poison but the economic stupidity that produced it.

The Gauntlet

By GEORGE CREEL

INSTEAD of walking a shaded highway leading to the pleasant places, the honest official runs a gauntlet as cruel as any ever devised by the savages of the primeval forests. It is not enough that he keeps the faith as far as his position is concerned and discharges his duties with an eye single to his oath and to the best interests of the people. In addition to absolute official probity, the faithful public servant must be prepared to repel slanderous assaults upon his private life, personal habits, family relations, business affairs and social record.

Sulzer is not a pleasing illustration. It cannot be truly said that the man ever lifted his head above the drab level of mediocrity, while at times he plumbed the depths of absurdity with his Henry Clay grotesqueries and Thomas Jefferson posturings. But had it not been for his determination to serve the people there would have been no impeachment proceedings.

Special Privilege was never in doubt as to Sulzer's character. Where tools are concerned it takes no chances. It knew him for what he was during the eighteen years it kept him in Congress, and stood grinning at his shoulder throughout the stock gambling, "panshandling" days of the gubernatorial campaign.

It was only when Sulzer commenced to believe his own speeches that the System found him unfit. Not until he revolted against corrupt domination and refused to let grimy hands bury themselves in the people's money did the interests scourge their traitor servant the gauntlet's length. But for the dream of freedom that took shape in his muddy brain—intoxicating him with its pictures of adoring multitudes and a fulsome press—William Sulzer would have served his term in honor and glory, and, in all likelihood, would have been Tammany's candidate for the presidency in 1916.

FROM coast to coast the gauntlet stretches. It runs through cities, states and the nation. Franchise seekers, liquor interests, masters of monopolies, "kept" papers, professional politicians, vice syndicates, grafting contractors, possessors of special privileges of all kinds go to form the parallel lines between which the honest official must run.

In nothing has Special Privilege been more cunning than in its insistence upon the personal note in every reform movement. In nothing have the people been more stupid than in permitting principles to be subordinated by these personal attacks of the enemy.

Is there anything in the honest official's past life that may be unearthed to his discredit? Has he ever figured in any "woman scrape"? Was he ever seen in a saloon or caught in a condition resembling intoxication? Can he be sued on a note? Does he play cards or gamble on the stock market? Is it possible to twist some of his utterances or actions into Socialism or Anarchism? Did he ever speak slightly of the flag? Has he ever had any trouble with his wife, mother, sister, aunt or brother? Is there a skeleton in the family closet?

Only the boldest and the cleanest may dare to protect the people from rapacity or take part in a movement that has for

its object any radical change in the established order. Even then there is no assurance that reputation will not be lost and career ruined, for some of the slanders of the System are so insidious that the community takes them in with the air that it breathes.

There is the case of Francis J. Heney, for instance. Here was a man who gave up a practice of \$50,000 a year to fight for the people against the San Francisco graft ring, and who, in the course of that fight received a bullet wound that brought him to the grave's edge. Yet when he ran for the small-salaried office of district attorney in order to be able to finish his work, he was defeated.

TWO lies accomplished this rejection of a faithful servant by the sovereign voter. One was to the effect that Heney had raped a young girl and had steadfastly refused to support the child. This amazing falsehood was circulated secretly and systematically by the eminently respectable gentlemen who were of the opinion that Mr. Heney's election would hurt business.

The other slander was with regard to Heney's would-be assassin. This creature was made to appear as a hard-working shopkeeper who had lived down in "past," and who when the brutal Heney ruthlessly disclosed the fact that he had served a sentence in the penitentiary, went mad with grief and attempted the death of his cruel persecutor.

The man, in point of fact, was the keeper of a low grocery, a dissolute person who had boasted openly that his fortune would be made could he but get on the Ruel jury, and who was not heard of for seven months after his failure to be accepted. Then, plied with drink and encouraged by promises of speedy pardon and rich reward, the murderous wretch crept into the court room during Ruel's second trial, and spent two weeks waiting for an opportunity to place his revolver against Heney's head.

Judge William F. Lawlor presided at the graft trials. He was far and away the ablest and the most popular jurist in San Francisco and it was generally agreed that he would soon be elevated to the supreme bench of the state. But when Judge Lawlor refused to invent technicalities, protect pettifoggery and lend himself and his office to the grafters, that minute the System commenced to whip him up and down the gauntlet.

Traps were laid for him, lies were told about him, pressure was brought to bear that robbed him of friends and pleasant associations and secured his practical ostracism by social clubs and business organizations. That he won last November, being reflected by a scant majority, was due to the vote of the women.

THROUGHOUT the years in which Francis Heney and Judge Lawlor knew isolation, loneliness, heartbreak and struggle, there was never one single moment in which those whom they fought in the name of law were compelled to undergo like penalties or privations. Even today, when the two faithful servants are still feeling the effects of the gauntlet, the corruptionists themselves lead in society, and head the principal civic organizations.

Sulzer, the mediocre, kept in Congress for eighteen years, tossed the governorship of the greatest state in the Union, and ruined only when he showed signs of wanting to become a faithful public servant! McCall, another prince of commonplace, given promotion after promotion for no other reason than his complacency! And men like Heney and Lawlor forced to fight for every political breath they draw and compelled to walk unceasingly the bitter way of sacrifice!

Can it be denied that Joseph W. Folk was a faithful servant? At any time during his term as circuit attorney of St. Louis he could have had wealth and honor, had he chosen to abate the violence of his assaults on entrenched corruption. In 1908, when he left the governor's office, it was the money gained from the sale of carriage horses that paid his railroad fare to St. Louis.

AS in the cases of Lawlor and Heney, isolation, loneliness and practical ostracism were penalties that Special Privilege made Folk pay for his devotion. As for the men he prosecuted—the rich traffickers in official honor—it cannot be said that they ever suffered anything save the loss of the money that went for attorneys' fees.

Judge Ben B. Lindsey, of Denver, however, is the man most properly entitled to be tagged Exhibit A in this case against the Grateful People superstition. For fifteen years the "kids' judge" has been made to run a gauntlet that is without parallel for cruel malignancy. Special Privilege has accused him of every imaginable crime and subjected him to every conceivable persecution. He has been charged with falsehood, larceny, insanity, beating his mother, blackmail, gross immorality and a myriad other things, each more fantastic than the last.

The latest attack upon Judge Lindsey—far even after fifteen years the gauntlet is still doing business at the old stand—is to the effect that he is the protector of rape fiends and that he is going to be recalled. The Woman's Protective League is a fake organization with headquarters in the office of the street car monopoly and as for a recall, no petition has even been framed nor could they buy a thousand signatures if one were circulated.

Many worthy souls have said, "It seems to me they'd get tired of telling lies on Judge Lindsey and quit."

THERE you have the secret of the gauntlet! Exhaustion! Not on the part of Special Privilege—it never gets tired—but on the part of the people, or on the part of the victim himself. It takes money, time, mental and physical effort to keep on refuting slanders.

Judge Lindsey, for instance, is impoverished by his generosity, philanthropies and practical support of the Equal Justice campaign in Colorado. He is ill, for hay fever and asthma make his summers terrible, and he is exhausted because his small body is too frail for the giant energy that propels him. This last attack, with rare chivalry, was launched by his enemies while he lay on an operating table.

The men who hought officials and dealt

in Denver's public servants as though they had been merchandise—base creatures who made the \$75 a month clerks in their employ commit forgery and perjury under penalty of discharge—are now lickspittles by the civic organizations that have been most active in denouncing Judge Lindsey as an "ill hiel."

Seattle is a more recent recruit to the gauntlet class than Denver or Sao Francisco. Mayor George F. Cotterill, as the inevitable consequence of his bold stand against the usual community combination of Privilege, Vice and Liquor, has had the blood drawn at every step.

It was in 1911 that Mayor "Hi" Gill was recalled. The women, who had just been given the vote, were of the opinion that they did not want a chief executive who built municipal hothouses in the public streets. Wappenstein, Gill's chief of police, was convicted of collecting tributes from women of the underworld, and many "higher-ups" would have followed him but for that bold abuse of the judicial power which is fast making Seattle notorious.

EVERYTHING that "Hi" Gill was, George Cotterill is not. Gill considered prostitution an indispensable adjunct to metropolitanism; Cotterill disputes the theory of necessary evil, has abolished the red-light district and is making Seattle one of the cleanest, most wholesome cities in the country. Gill championed the saloon; Cotterill loathes the entire liquor traffic; Gill was the tool of the franchise-grabbing public service corporations; Cotterill is a firm believer in municipal ownership of public utilities. Under his efficient handling, the municipal water plant is giving greater satisfaction than ever before, the municipal electric plant has brought about a reduction of one half in the rates, over four miles of municipal street-car trackage is under construction, and in his last message he advanced an attractive plan for a municipal telephone plant in connection with other cities and independent systems.

Shortly after his election he was given a delicate intimation of the treatment that a people's mayor might expect. It was during an interview in the office of Alden J. Blethen, owner of the *Seattle Times*, the friend and champion of Gill

and Wappenstein, and one of those whose indictment had been quashed on a technicality. It is well to use the printed words of Mr. Cotterill himself in relating the incident:

"At that time Alden J. Blethen was bitter in his denunciations of Dr. Matthews (a clergyman), Prosecuting-Attorney Murphy, and others connected with the grand jury that had indicted him. With singular boldness he forced upon my attention two disgraceful photographs bearing the heads of the two gentlemen above named upon human figures in indescribably loathsome relations. Here—Alden J. Blethen—explained in detail how and why he had conceived the idea of these vile photographs, securing foundation pictures by searching out some indecencies from a Paris collection, engaged one of the best Seattle artists to combine them with perfect photographic skill with the heads and faces of Dr. Matthews and Prosecuting-Attorney Murphy."

Sweet-scented little attentions like these were not original with Seattle. A St. Louis lobbyist first conceived the idea of blackmail by photographs, and used to get his material after he had entertained rustic members of the legislature at wise suppers. Nor was there anything very new or interesting in the various traps and pits that were meant to prove Mayor Cotterill a "moral leper."

THE "red flag" furore, however, had a distinct creative value. This rather clever attack was made possible by Mayor Cotterill's Free Speech policy that permitted all sorts and conditions of street meetings without other restrictions than those imposed by the law relating to individual conduct. His refusal to throw Socialists, Labor leaders and Syndicalists into jail gave his enemies the opportunity they desired.

Of a sudden the *Times* sweated red ink in a frenzied announcement that a red-flag parade had thrown the American colors in the dust and trampled upon them. There is not the slightest doubt in the world that the men responsible for the outrage were hired thugs, as many of them were recognized, but with this as a foundation, Privilege ran the gamut of frenzied demand that Cotterill he recalled, and that

every "undesirable citizen" be jailed or deported.

The climax came in the July riots in which soldiers and sailors were supposed to have risen in defense of the flag against I. W. W. members. As a matter of fact, according to thorough and impartial investigations, the first trouble arose when three or four drunken sailors attacked a Mrs. Miller who was making a "votes for women" speech. They took away her stand, insulted her, and were soundly thrashed by the crowd that gathered.

Seemingly commanded to riot by false reports, and led by ward heelers and tools of the vice ring, the soldiers and sailors on shore leave hurled a Socialist bookstore and might have started a general conflagration but for the police.

This is the sort of life that Seattle's "best mayor in history" leads. As for Blethen, outside of the fact that the student body of the state university voted to reject his proffered chimera on the ground that they were bought with loathsome money, he has suffered no loss of social or business prestige, and ranks with Ballinger as "leading citizen."

Look where one will, and the gauntlet may be seen. In Toledo, Brand Whitlock, three times elected mayor and one of the world's great souls, is hounded from one campaign to another as "the idol of the criminal classes," and leader of "the element that is fighting for the privilege of debauching your boys and girls."

In Wisconsin the fight is on La Follette. It was whispered, "Didn't you know that he had lost his mind?" In Philadelphia the old MacNichol gang is using every effort to damn Blankenburg. Down in Atlanta, Chief Beavers, who abolished the red-light district is hounded by detectives. In Colorado the enemies of Lindsey take time enough to lie viciously and persistently about "Tom" Tynan, the great warden whose "honor and trust" idea has revolutionized American penal methods. In Los Angeles the attack is on Chief of Police Sebastian who stands for a clean town. In Minneapolis the gauntlet is arranged for the benefit of A. S. Stockwell, the "crank" and "busybody" who has made a twenty years' struggle against Privilege.

Of a certainty, the wonder is not that we have so few honest men in public office but that we have any.

New York Restaurants

By HARRISON RHODES

Illustrated by Wallace Morgan

IT is not merely that New York is our largest town; proportionately more people eat there, as it were, in the open than anywhere else in the country—it is the great restaurant city of the land. People who do not live in the metropolis understand the reason of this easily; they have always read in the newspapers that New Yorkers have no homes. And New Yorkers also understand—that, too, read the papers,—that people—especially west of the Alleghenies—have no homes the charms of which can keep their possessors from the Broadway restaurants. It is intended in this article to assume that no one wants to eat at home, and that, in consequence, information, gossip and philosophy dealing with the eating-houses of Manhattan will be, if tastefully cooked and seasoned, welcome to all.

Strangers may think what they like of the metropolis as a center of civilization,

as a matter of fact they do think of it, when they are here, almost wholly as a cooking center. It is our privilege to know a Philadelphia gentleman of such pride of birth that socially he does not even admit New York's existence, considering it an upstart town peopled by vulgarly and newly rich, whom it might be doubted whether even people living in North Broad Street would care to know. It is his boast that he has never broken bread in any private house upon Manhattan Island! But in any, almost every restaurant of any importance in the same area he is like a fish in water. New York is his playground; it doubtless helps him to realize, more satisfactorily and profoundly, that he is a Philadelphian. As for Bostonians, the writer had the pleasure of introducing one of them to the delights of supper at the Knickerbocker Grill Room, which was pronounced by

the New Englander noisy, vulgar and New Yorkishly distasteful. Unhappily for his reputation for consistency he was discovered the following night, nearly cut in two by the crimson velvet rope which was excluding those who wished for but had not reserved supper tables! The country's heart may be—we hope it is—where the home is, but the national stomach is not far from where Forty-second Street crosses Broadway and Fifth Avenue.

There are, of course, other American cuisines. There is Baltimore, offering in profusion all the fish and oysters and crabs which inhabit her great bay of Chesapeake, and quarreling forever with Philadelphia as to how to cook terrapin. There is New Orleans, cherishing the secrets of the Parisian cookery—which modern Paris has forgotten. There is Chicago, where they first planked the

white fish and even now occasionally provide the prairie-chickens, the lovely crowd of western game-birds, under the quaintly unappetizing name of "young owl." There is San Francisco, where, according to its enthusiastic inhabitants (who have traveled across the continent to dine in New York) living is so good and cheap that they almost pay you if you will eat an exquisite *table d'hôte* repast, *rien compris*. There is the pie-belt. And there is, though the fact is reluctantly set down, Boston, proffering her baked bean. But it is New York that sets the best table, to employ a humble phrase. She is the place to which the provincial resorts to get fresh ideas, new gastronomical inspirations,—and indigestion.

NO complete catalogue of restaurants can of course be attempted. Indeed such a thing would be an insult to the well-fed reader; he knows them all. But he certainly will at least allow a few of the more luscious names to be rolled once again beneath the tongue. This mentioning of real names is, by the way, more than the ordinary magazine editor will allow in his columns. The present writer had printed once, in a best-selling periodical, a story in which the hero, in the course of his infatuated pursuit of the heroine, offered her a dinner party at Sherry's. She was a lady of the very highest fashion, and Sherry's was, in that remote year of grace, the only restaurant at which such a festivity could suitably have taken place. That is the plain fact, neither then nor now, bad or has the writer any special reason to wish to advertise Mr. Sherry. The magazine editor's conscience was not so clear; he corrected the proofs. The dinner took place at "Madeira's!"

THIS, it is submitted, was just silly. Furthermore, it hid nothing, being the kind of blue-pencil change in a manuscript which an ostrich might make with the off claw while its head was hid in the sand. If real concealment is to be aimed at, something much better could be accomplished. For example, it might be asserted that the one agreeable gastronomic function of this past summer, the life-saving event of the heated spell, was the opening of the roof-garden restaurant of the Adlercron. One might describe its tent-like roof of striped green and white, its hanging baskets of pink and scarlet flowers, green trailing vines and electric lights, its tiny enclosing hedge of clipped box. One might describe the magnificent table of *plate froide* by the entrance. One might praise the restaurant's coolness, and grow lyric over the loveliness of the ladies who frequent it. One might assert truly that its clientele was almost like a club, in the sense that if anyone is in town you are sure to see him or her "on the roof." One might add that Antonio, who used to be at the Cosmopolitan and François, who was at Madeira's, have come to be head waiters at the Adlercron. But, unless the reader happens to know, this would put him to a great deal of trouble and confusion. It is much easier

to say that Pierre from Sherry's is now at the Ritz-Carlton, and Luigi, who was in the down-stairs Grill Room of the Knickerbocker Hotel, is there too, and now says, rather wittily, that he is always either in the cellar or on the roof. Equipped with this information, the reader knows perfectly where to dine the first hot night he is in New York.

THE places where one can dine out-of-doors are lamentably few in New York, but they are in consequence easier to deal with. There is the Ritz roof, as per description above, where everybody goes. There is the Astor roof, where many more people go, only—nobody. The Astor roof the more closely of the two resembles the famous hanging gardens of Babylon. The view indeed is fantastically lovely in the most modern way—once even in Venice the writer was arrested, pleased, and then made homesick by a painting of this in-

reminiscent of summer days in Paris. A series of rooms facing north with a narrow terrace upon the street hints at the Bois de Boulogne; there are lattices covering the walls, many flowers, cool wicker chairs, and magnificent sculpture in ice blocks adorning the "buffet froid." And the admirable Charles, himself always cool and collected as befits a summer *maitre d'hôtel*, ushers you to your table. The Plaza's main room puts on a cooler dress, also latticed, this being much the mode for summer wear for restaurants. And a little terrace protected by heavy awning curtains allows a few to eat in the actual open air of the Plaza. Just across, the Savoy puts forth a kind of flowery fringe of tables upon its narrow terrace and balcony, and people obviously dine there.

OF the real open-air, half-country eating places Claremont of course has long reigned supreme. The lovely historic old house, sitting above the Hudson, with a long view north of that lordly stream coming down from the Adirondacks and the Catskills, is one of the town's very prettiest sights. In winter even the glass-enclosed veranda is agreeable. And finally, with summer, the gardens that surround the mansion are all white with tables, and in a great confusion many waiters carry very good food and very high hills to a replete and contented clientele. The Casino in Central Park ought to be one of the most agreeable restaurants this side the Atlantic, but it is not quite that. The food is passable and the waiters do fetch it to you, though in a stern and somewhat forbidding Teutonic fashion. And the air on the terrace is as open as open air almost invariably is. The haunting charm of the Casino is, however, the legend which has existed from time immemorial that it is "not a place where ladies really ought to go." It is, of course, as a matter of fact, one of the last refuges of respectability;—prolific German families from the upper East Side give it its most characteristic note. But one may always, over a stein of beer or a cup of moselle, sentimentally indulge the hope of seeing one of these lovely legendary birds of too brilliant plumage whose presence perhaps made the place doubtful for correct mid-nineteenth century ladies.

SO much for summer. With winter, seating becomes a more serious problem, and high-minded epicures turn their attention to the great question of where the best food in New York is to be found. It is a question, fortunately, which must be constantly restudied. For food varies; with the years it runs good or bad, like shad or women. Last year all the New York restaurants were a little below the standard; this year they may be marvelous. Delmonico's is a very steady restaurant, and so perhaps a little dull. But it is the resort year in and year out of some of the most thoughtful eaters. Sherry's and the Ritz-Carlton are like fashionable ladies, temperamental and uneven. The Knickerbocker three or four years ago set

"Excluding those who wished but had not reserved supper tables."

credible night view of the summer Broadway. Delmonico's roof is agreeable, but, like Delmonico's always, it rests on a solid culinary foundation more than upon any adventitious charms or gaiety. The new McAlpin has an alleged roof garden; a pleasant enough room, up twenty or forty stories, but scarcely a garden. After any meal except breakfast at the McAlpin you can dance, but that is still another story. There is now a class of restaurant in New York where eating is a mere pretext for dancing. Fortunately the McAlpin food is a fairly convincing excuse. The Waldorf-Astoria has a roof too, a pleasant, small, old-fashioned place, but no report has come of anyone dining there, it being devoted to cooling drinks, cigarettes, and contemplative conversation.

Where hotels and restaurants have so special "gardens" they transform rooms. The Knickerbocker at the approach of hot weather opens its "d'Armenoville restaurant," so pleasantly (at least in name)

a new pace; it had, first in the town, bar-wagons, and great silver roulants for the *plate du jour* and amazing vintage champagnes and free toast for everybody—all the latest European "wrinkles." Now, its chefs seem to be for the moment resting a little too easily on fragrant beds of roses—or parsley. The Plaza has food that one can eat. The Holland House too, if you can submit to the head waiter's domineering ways. "Joe" is famous for knowing a good lunch and forcing his regular clients to eat one. But of food that one can eat so have at least a thousand

There are "kosher" restaurants innumerable, and a pest of Chinese eating-places all over the town. There is an excellent Armenian restaurant in the East Twentieth Streets and occasionally one in Lexington Avenue, both frequented by the best rug-buyers for the purpose of eating fried meat strung on what appear to be umbrella ribs. There is a Syrian café in Washington Street. In fact the strangest foods lurk around each New York corner waiting for the unwary or the romantic eater.

There are at least two famous Hungarian places. The Café Boulevard on

street is Castle Cave, a fantastic place where you may eat your dinner in what appears to be a dooryard in a little village street—and be glad that you are in no other village than New York.

Monquin's, domiciled in one of the few historic relics of Sixth Avenue, is one of the best known of the French restaurants where a meal does not necessarily cost a fortune. It somehow manages, in a low room filled with intolerable clatter of the street, something of a Parisian air, even a touch of that literary atmosphere which is so eagerly sought for by

"It somehow manages something of a Parisian air."

other places, one hastens to add, so that one may not seem silly. There are people of no despicable gastronomic taste but of no snobbish standards who will tell you that the Athens Hotel in Forty-second Street has the best cooking in town. The reader shall judge for himself.

THIS is still no catalogue, but one must continue to name names. Thirty-sixth Street is all chop-houses which, though largely conducted by Germans, have a thoroughly English air, as that is understood outside England. There are whole quarters of the town, like the West Twenties, and perhaps even more the streets so elegantly termed the "roaring Forties" which are all restaurants. There are a million French *table d'hôtes*, and half that number Italian.

Second Avenue is to move to Broadway, a municipal scandal, no less. The dinner was just edible, but the band, refreshed, if you could manage it, with a little red Hungarian wine, really gave you a trip to Buda-Pesth. Little Hungary in Houston Street is, if you are to measure gayety by noise, the gayest place in the world—on a Saturday or Sunday winter night. It is earnestly recommended that everyone dine there, at least once in a life-time.

If among the Italians one mentions Goffanti's in Seventh Avenue it is because it is in one way unique in the whole world—the whole of this writer's world, he only means. The menu for dinner is unvaried, each day of each month of each year it is exactly the same. And good! And cheap! Seventh Avenue is a dining center in fact, for across the

strangers and even by New York's own *haute Bohème*.

ALAS, that a passage upon literary restaurants should be almost cynically sad. The Brevoort and the Lafayette (*ci-devant Martin's*) are near Washington Square, the *Quartier Latin* of our fiction writers; there is that to be said for their picturesqueness. And a covey of poets has been flushed in the café of the Lafayette as late as a year ago. But Literary Bohemia dines at home a good deal—two men helping the butler to serve. The part which does not feast in such splendor is alleged to dine in little restaurants which display no sign upon the street and are approached by basement doors where a proper introduction and a sworn statement that you like

neither Robert W. Chambers' work nor that of any of the best sellers are essential before the proprietor at the iron grating will admit you. Something very like this does exist—let the reader find it—in West Tenth and in West Forty-seventh Streets. If you can find and enter Pogliani's you will find excellent Italian food and, at least at lunch, people excellent in their various ways to look at.

Supper places—at the mention of them the pen should shed fireworks! But supper places are no longer especially eating places; they are devoted rather to drink-

ing and dancing. Enough about supper; the writer advises against it and the reader knows he had much better be in bed.

SOME female readers may think that too much has been said about food. When they are in New York they want to go to restaurants not to eat, but to see the people they read about in the society news. In short, Mr. Baedeker, writing of New York, must "three-star" and indicate the resorts of fashion. The Ritz-Carlton still leads, at present; so many people in the very best society own stock

If you don't remember, try to. His whereabouts is a real item of gastronomic news. Let the reader be assured that although an acquaintance with head waiters is not—as some people lately removed to New York seem to think it—the same as an entrée into society, it is probably a step.

THE writer dreams sometimes of organizing this eating in New York restaurants into something more definitely civilizing to the country, gastronomically elevating to the whole land. He

"But supper places are no longer especially eating-places; they are devoted rather to drinking, dancing, and seeing vaudeville."

ing, dancing and seeing vaudeville. Their names are legion. (For a catalogue consult an evening paper or the driver of a taxicab.) They seem perpetually changing proprietors and the various Rectors and Martins move gradually northward toward Columbus Circle, where that famous "night-life" of New York seems likely soon to be centered. Rector's, by the way, induces philosophic reflection. It had gained a fortune as a "gay" restaurant. It lost one as a hotel of sober and dignified splendor. The gay people no longer wanted to go there and the ungay still

in it that it will hold its own for some time. But it is very dignified to go to Delmonico's or the Plaza if you happen to be near there. And it is coming to be rather the thing to go back to Sherry's, it is clear to say you find the Ritz a little crowded and vulgar, although of course you do see all your friends. Then there are special places for lunch. It is probable, for example, that that meal will often be taken this winter in the Della Robbia Room of the Vanderbilt Hotel, largely because Umberto will be in charge there. You remember him at Martin's in the old days, sleek, smiling, kind and efficient.

would like to organize an eating club, conducted tour with explanation by some great authority. Especially like the lovely ladies to learn what a man believes you should water fountains nor but unblushingly the food is. all, but I'se afraid dem tiger stains am bred in de bone"

CESARE

Stripes on McCall

By N. H.

THE Tammany issue is not a local issue. It is, to be sure, of the greatest importance to the welfare of the four million people living in New York City and the more than twice that number who live in New York State, but it also has an immediate bearing on government throughout the United States. Tammany Hall is so powerful that it has often exercised preponderant influence in presidential conventions and in controlling legislation in Washington. Mr. Fitzgerald, of the House of Representatives, made himself famous by siding with Uncle Joe Cannon when Cannon was making his last fight to perpetuate the old régime. This was a perfectly logical performance, as a certain element in the Democratic Party and a certain element in the Republican Party belong naturally together, and in a crisis can always be trusted to act together. Regarding the contest for Mayor of New York now going on, Fitzgerald declared in the House:

A campaign of momentous importance to the Democratic Party is being waged. All the enemies of Democracy in the city and in the country are aligned in an effort to overthrow the organized Democracy in their attempt to place Democratic officials in power.

It will be noticed that Mr. Fitzgerald is rather sweeping in his language. Who is the "Democratic Party," and who are its enemies? His speech proceeded as follows:

The candidate of those enemies of the Democratic Party is a Democratic official appointed by a Democratic president and confirmed by a Democratic senate.

In other words, Mr. Mitchell, Mr. Woodrow Wilson and the members of the Senate are not properly "Democrats" but regicides and enemies to their party. There is no doubt that Mr. Fitzgerald is right in recognizing that there is nothing whatever in common between what he calls the Democracy (namely, Tammany Hall in New York and similar machines in Indiana, Illinois and certain other states) and the Democrat Party as it is represented by Woodrow Wilson, William J. Bryan, William G. McAdoo, Secretary Lane, Secretary Houston, and the many others who are energetically endeavoring to serve their country, and not their private purses or the purses of corporations that keep machines alive. How will the voters of New York look upon this question raised by Mr. Fitzgerald, and raised a few weeks earlier by Mr. Coker in only a slightly different form?

SUPPOSE you are a Republican. Will you vote to strengthen Tammany Hall, and thereby to continue a situation in which a compact body, headed by thugs, is able to win elections often where other nominees would win on anything like a fair expression of opinion?

Suppose you are a Democrat. Will you vote that when there is a Democratic victory it shall be a sad day for the community, or will you so vote that the Democratic Party in New York may ultimately be made worthy of its present leadership in the nation?

The most tiresome statement that has obtained wide currency during the present campaign in New York City is that Mr. McCall is a respectable candidate,

his greatest weakness coming from the fact that he is lending his name to the service of a crooked organization. Mr. McCall is nothing of the sort. He is a rough-necked product of the organization. He may be a little ahler than Augustus Van Wyck, but he certainly is not superior to him in independence or political morality.

IT seems impossible that the business men of this city should be fooled by the principal argument that Mr. McCall is putting forth, namely economy. He is trying to make them believe that the economy issue is the same as the question of how much the city shall undertake to do. Of course, the question of the scope of the city's activities does have an ultimate bearing on the cost of city government, but, in the first place, many of our greatest and most needless expenses have been forced upon us by mandatory legislation brought about in Albany by Tammany influence in order to increase patronage; and, in the second place, the great and pressing question of economy just now has little to do with the scope of the city's undertakings. It has everything to do with the manner of carrying out the contracts to which the city is already committed. During the next four years, the city has to spend for rapid transit extension about three hundred and thirty million dollars. The economy question now pressing is whether that three hundred and thirty million dollars will be spent under the supervision of Mr. Mitchell or Mr. Murphy. Which is the more honest? Which will see that in the carrying out of those contracts there are no favors, no trifling with specifications, no enrichment of insiders?

Mr. McCall's connection with the insurance scandal has already been fully narrated in this WEEKLY. Commenting on that connection, Charles Edward Russell says:

"When a degree of public attention was called to Andy Hamilton's operations, that astute person departed in haste for Europe, where subpoenas of the State of New York are not valid. Subsequent proceedings established the fact that Mr. Hamilton's judgment as to the relative healthfulness of climates at that particular time was exceedingly good. Here in New York the temperature was much too high for one of his florid habit. There is an Edward E. McCall, now a candidate for the office of Mayor of New York, and what many citizens that have not forgotten their history would like to know is whether this Edward E. McCall is the Edward E. McCall that made those notes and was alleged to have been connected with Andy Hamilton in certain of Hamilton's activities. Because, if it is the same Edward E. McCall, he would seem to be of a nerve too colossal for practical use in public affairs."

NOW, let us take up this question of whether McCall himself is a respectable individual. We showed in our issue of October 11 several things. 1. That he had been picked out at least as early as February by the inside leaders of Tammany to be their candidate for Mayor, and had been put on the Public Service Commission in order to groom him for that place. 2. That he was snatched by the Insurance Report drawn

up by Charles E. Hughes. Now let us go a little further into what was meant by Mayor Gaynor when he said, "They are all of one stripe." Cesare's picture, immediately preceding this article, indicates the principal question of the campaign—whether anybody can successfully rub the tiger stripes off of McCall. When Gaynor said they were all of one stripe, he meant these men:

CHARLES F. MURPHY,
EDWARD E. McCALL,
JOHN H. MCCOY,
THOMAS FOLEY,
PHILIP DONAHUE,
JOHN C. FITZGERALD,
ARTHUR MURPHY,
JOHN GALVIN.

It is generally believed that when the rank and file of Tammany Hall raised a howl over the prospect of Gaynor's being turned down by the leaders, the man who was most firm in insisting that the Mayor should be set aside and McCall put in was "Big Tom" Foley. Foley was once indicted as a dive-keeper, and he is well known for his red-light career. When he was seventeen years old, he was a hanger-on at a dive in Brooklyn. A year later, he was part owner of a dive, and three years later he was arrested when his dive was raided, was indicted for running a disorderly place, and, when he was released on bail, fled the country. A year after that, he joined Tammany Hall, working in a saloon and making himself useful at the polls. Three years later, he was a saloon-keeper himself, and ultimately the keeper of several saloons. Another year found him captain of an election district. Tammany men, however, when they become useful, graduate from such occupations into lines of business where they have opportunities for investment. In 1903, Foley opened a "real estate" office, and has been doing a large bull-bonding business ever since. It was Foley who was quoted, about the time the eight men met at Delmonico's (and he had never denied the statement) as saying: "he is one of our own kind," and "McCall is my gladiator."

NEXT to Foley in his energetic determination that Gaynor should be put aside and McCall substituted is supposed to have been Mr. John H. McCoy. McCoy is now the boss of the crooked Democratic machine in Brooklyn, being successor to Pat McCarren. Everything that Murphy is on one side of the River, McCoy is on the other.

Another of these gentlemen is a notorious member of the Gas Lobby at Albany; but there is really not much use in wasting time discussing them, as none of them has done anything worse than McCall himself did when he abetted Murphy in his attempt to use the facts he had against Sulzer as a weapon to induce the governor to turn over the whole State to Murphy and his friends.

The eight men, as Gaynor said, are not only of "one stripe," but of a stripe "fit even to cast lots on the garments of the city." Further light on whether McCall is a respectable citizen merely working with Tammany Hall, or one of the innermost gang whom it can easily be found by considering certain of his appointments.

WHEN Tammany put McCall on the Bench, it was up to him to make good. One of the ways he did it was to appoint as his personal attendant John J. Mackin, who was at that time a district captain for Murphy. The amount which the community had to pay Mackin, however, for helping to don McCall's robe was not sufficient for Mackin's needs and so McCall made him a receiver in sixty-five cases.

McCall, after being raised to the Bench by Tammany, selected as his private clerk Charles A. Hickey. As his salary of twenty-five hundred dollars a year was not enough for Hickey, McCall made him a receiver in twenty-two cases, although it is not looked upon by the bar as desirable for a justice to appoint his own clerk to receiverships.

One of the men McCall selected as a referee was John F. Roesch, generally known as "Red-light Roesch" because in the Lexow investigation it had been shown that he acted as counsel for the managers of disreputable houses. The appointment by McCall was made after the Bar Association had denounced Roesch as an unfit candidate for the position of City Court Judge.

Another appointment was that of J. Sidney Bernstein, who shares his office with former Alderman Samuel Marks, known through the scandal in the purchase of fireworks for the city, and Bernstein himself was removed by Justice Page for demanding an advance payment of five hundred dollars on a fee as referee.

John V. Coggey, Tammany district

leader, was also on the McCall list of appointments. In the legislative inquiry of December 10, 1907, Coggey, it developed, had been running the Correction Department as a patronage machine to such an extent that after the Kings County penitentiary was abolished, he transferred the warden and head keeper, as well as all the rest of his staff, to Blackwell's Island, thus duplicating the force in order to make as many positions as possible, and he also appointed forty new officers "on the advice of friends." This is a typical instance of the kind of economy we always get from Tammany Hall.

OTHER appointees by McCall include two of the Cohalan brothers: Daniel F. Cohalan, who was whitewashed by the state legislature before which he was tried on charges, and Dennis O'Leary Cohalan, who was in the bonding business with State Senator Frawley, who was head of the committee that made the charges against Governor Sulzer.

Asa Bird Gardiner, who got two appointments from McCall, is now one of his chief advisers. Gardiner was once a Tammany district attorney, but was removed by Governor Roosevelt, and his fame really rests on his classic remark: "To Hell with reform."

Richard Croker's lieutenant, Thomas F. Donnelly, had forty references from McCall. Sullivan's henchman, George M. Engel, had four. Vincent T. Coughlin, a thoroughly undesirable Tammany Assemblyman, received six. Thomas T. Grady, the late silver-tongued Tammany orator, re-

ceived three. Emanuel Blumenstahl, one of Big Tim's closest advisers, received three. One of the worst of the Foley and Sullivan henchmen, Max S. Levine, received one receivership and three references.

On June 18 last, McCall, on the recommendation of some Brooklyn politicians appointed, as Assistant Electrical Engineer, Abraham L. Fennell, a man who had never had anything to do with electricity.

THESE are but samples. The list could be made three times as long. If the people want a dyed-in-the-wool, crooked, wasteful Tammany administration in New York city, with an increased Tammany control in the state, and an increased Tammany influence in Washington, they know how to get it; but there is no sense in telling anybody but a child or a defective that McCall is in any way superior to the rest of the bunch with whom he works. Since he went onto the Public Service Commission, he has had, himself, at least six receiverships, and every one of the six was given to him by a Tammany judge. He is at the present writing refusing to resign from his \$15,000 job, while he is spending all of his time campaigning. Tammany knows that, if elected, he will pay back many fold. He is no Sulzer, to attempt foolishly to reform and rebel. He is no Gaynor, too big to be satisfactory to the bunch of eight. He is, as Foley put it, "one of our own kind."

President Wilson and Publicity

By L. AMES BROWN

ON a Monday morning at ten o'clock a score or more newspaper men come bustling in the entrance to the executive offices at the White House at Washington, primed with the questions they intend to ask, and with glowing ideas which they have evolved from reading the morning papers.

It is the time for their semi-weekly interview with the President, at which the "big" news stories of the Capitol originate. This conference is one of the new institutions President Wilson has brought to Washington and he regards it as an important one.

They gather in the lobby to await a signal from Patrick McKenna, the President's doorman, that Mr. Wilson has come over from the White House. Soon the signal is given and they file into the President's office. Mr. Wilson is found standing at his desk and greets them smilingly. Probably if the number is unusually large or small, he advances a humorous explanation for this fact and then, by a submissive gesture, signifies that the field guns of curiosity may be unlimbered.

The questions come in rapid succession. First, there is: "Mr. President, will you tell us something about the Mexican situation?" or "Mr. President, is a reply soon to be made to Ambassador Chinda's last note on the Japanese land controversy." Then somebody wants to know if there are any Illinois appointments pending. Follow questions about the President's position on the wool tariff, on the suggestion of the American Bankers Association for changes in the Administration Currency Bill, as to whether Mr. Wilson really expects to get down to the Panama Canal this fall.

Mr. Wilson is somewhat in the position of a baseball catcher receiving balls from all the basemen and the shortstop coincidentally. He handles his mit with precision, however, and makes returns in every case where he thinks it wise.

IN these conferences, Mr. Wilson reveals his character perhaps with greater frankness than at any other time in the routine of his official day. The President thinks quickly and accurately and always he lets his answers stand once they are made. He shows himself a precisionist in the use of words. Also he is somewhat quick-tempered. At the time when Secretary of State Bryan was on the Chautauqua Circuit along with certain Swiss yodlers and such, a correspondent submitted this question:

"Mr. President, would you tell us what your attitude is toward the criticisms of Mr. Bryan's literary efforts which have been made in foreign newspapers?"

The President replied that his attitude was that which he maintained towards all statements made by persons who "could not mind their own business." His face was flushed and plainly he was angry.

The serious questions and answers are interspersed with humorous incidents of the President's making, however. One of these resulted from his desire to evade a question as to what he wanted the Senate to do about hearings on the tariff. For the President to have answered directly would have suggested that he was seeking to dictate to the Senate.

Mr. Wilson recalled a saying of Artemus Ward:—"Whenever I see a snake's hole, I say to myself, 'that's the snake's hole,' and I leave it alone."

Mr. Wilson said the Senate's attitude was the Senate's business. This time he was smiling.

The President shows fine skill in choosing words for his answers and he demands, most of the time, that his questioners phrase their questions with nicety. Indeed, this leaning toward precision more than once has given a correspondent the wrong idea of what was in the President's mind and opened the way for his writing a story giving exactly the opposite impression from that the President really meant to convey.

AN illustration of this was furnished by the President's discussion of the plan brought forward by Attorney-General McReynolds in June for taxing the giant tobacco corporations so heavily that it would be impossible for them to operate profitably at monopoly size. Mr. McReynolds had advanced this idea at a Cabinet meeting and had been advised to confer with Senate leaders with regard to it. Notwithstanding these facts, when a correspondent subsequently asked the President: "What is your attitude toward Mr. McReynolds' tobacco tax plan?" the President replied:

"As far as I know, Mr. McReynolds has no tobacco tax plan."

The correspondents were taken aback, for they had been informed of Mr. McReynolds' submission of his idea by a high official of the Administration.

Afterward, a questioner who knew of the President's partiality for precision asked about the Attorney-General's "suggestion" and the desired information was forthcoming from the President. It developed that the President considered

that the McReynolds idea was merely a suggestion, which had not been formulated into a plan.

President Wilson has played no favorites among the newspaper correspondents in Washington since his inauguration. No "special privileges" in news matters have been granted because of their loyalty, to the men who stood by him when he was a candidate for the nomination or for the Presidency.

Mr. Wilson and his secretary, Mr. Tumulty, have played fair and when they had any confidence to make on

by them upon important current events. His secretary has "seen" them each morning and afternoon. The big stories that have come out of the White House since March have resulted from these conferences.

Mr. Wilson's experience and study have brought him to a full realization of the important part the newspapers play in the success or failure of an Administration. He has gone about procuring publicity in businesslike fashion and his program has been singularly successful.

His "open door" policy has been

Wilson had not accomplished a single step of his program, legislative and executive. He stood on the brink of his Administration and his remarks should be interesting, measured in the light of developments since they were delivered. Today the President looks back upon the handling of the Japanese and Mexican situations—two of the most perplexing foreign difficulties that have faced this government in recent years—and upon his fight for tariff revision and currency reform.

This is what he said to the newspaper men in March:

"I FEEL that a large part of the success of public affairs depends on the newspapermen—not so much on the editorial writers, because we can live down what they say, as upon the news writers, because the news is the atmosphere of public affairs. Unless you get the right setting to affairs—disperse the right impression—things go wrong. The United States is just now at a very critical turning point in respect to public opinion; not in respect of parties, for that is not the part that is most interesting. They may go to pieces or they may hold together. So far as the United States is concerned, it does not make much difference whether they do or not, because a party has no vitality whatever, unless it is an embodiment of something real in the way of public opinion and public purpose. I am not interested in a party that is not an embodied program based upon a set of principles; and our present job is to get the people who believe in principles to stand shoulder to shoulder to do things from one side of this continent to the other.

"Now, that being the case, I can illustrate one of the bad things that the newspapers may do in order to speak of the good things they may do. If you play up every morning differences of opinion and predict difficulties, and say there are going to be so many sections to this and so many groups to that, and things will pull at such and such cross purposes, you are not so much doing an injury to an individual or to any one of the groups of individuals you are talking about as impeding the public business. Our present business is to get together, not to get divided, and to draw a line and say, 'Now, you fellows who do not believe that genuine public government will work, please stand on that side' (I choose the left because it is Scriptural); 'and you fellows who do believe that it will work, get on that side. And all the fellows who get on this side, then get together and just put these fellows to rout in such fashion that they will not stop until Doomsday.'

"In order to do that you have got to have a lot of fellows who in the news try to interpret the times and to get the momentum in things without which they will not go. I do not mean in the least to imply that any of you gentlemen are interested in making trouble. That is not the point. I would be a mighty proud man if I could get it into your imaginations that you can oblige people, almost, to get together by the atmosphere with which you surround them in the daily news. And the atmosphere has got to come, not from Washington, but from the country. You have got to write from the country in, and not from Washington out. The only way I can succeed is by not having my mind live in Washington. My body has got to live there, but my mind has got to live in the United States, or else I will fail. Now, you fellows can help me and help everybody else by just swathing my mind and other people's minds in the atmosphere of the thought of the United States. The great advantage that you enjoy is that you represent papers all over the country, and there-

fore you can import the opinion and the impulses of the country into Washington, and import it after a fashion that nobody else can employ. A Congressman has to import opinion according to the repairing of his fences—or, at least, he thinks he has; I do not think so. You have not got any fences to repair or to keep in order. Your interest is simply to see that the thinking of the people comes pressing in all the time on Washington. It would help me immensely, and it would help every man in public life immensely, should you do that.

"SO the thought I have in dealing with you fellows is this: that you, more than any other persons, can lubricate—quicken—the processes by which you are going to do, what? Serve the people of the United States. If we do not serve them (the 'we' now applies to politicians) then we will go out of business; and we ought to go out of business. We will go out of business with the applause of the world; because if we do not serve the people of the United States, there is going to be a radical change of venue—and it will be a new kind of trial for public men. So that I do not feel that I am engaged in a partisan enterprise or a party enterprise, or in anything except interpreting what you men ought to make it your business to bring the country. I have got to understand the country, or I will not understand my job. Therefore, I have brought you here to say to you the very simple thing, 'Please do not tell the country what Washington is thinking, for that does not make any difference. Tell Washington what the country is thinking,' and then we will get things with a move on, we will get them so refreshed, so shocked through with airs from every wholesome part of the country, that they can not go stale, they can not get rotten, and men will stand up and take notice, and know that they have got to vote according to the purposes of the country, and the needs of the country, and the interpreted general interests of the country, and in no other way.

"I sent for you, therefore, to ask that you go into partnership with me, that you lend me your assistance as nobody else can, and then after you have brought this precious freight of opinion into Washington, let us try and make true gold here that will go out from Washington. Because nothing better will go out than comes in. It is the old law of compensation, the law of equivalence. In proportion that Washington is enriched, so will the fruition in Washington itself be rich. Now, all this is obvious enough to you gentlemen. I am not telling you anything that you did not know before, but I did want you to feel that I was depending upon you, and from what I can learn of you, I think I have a reason to depend with confidence on you to do this thing, not for me, but for the United States, for the people of the United States, and so bring about a day which will be a little better than the days that have gone before us. I think we can cooperate with enthusiasm along that line, and if you agree with me, I shall be very happy."

Administration affairs, these have been placed in the newspaper men as a body. Unlike previous administrations, this one has chosen to give the inside of the "big" news story that happened to hold the boards at Washington to all correspondents of established reputation who sought the information. Other administrations relied upon a few trusted correspondents to receive such confidences.

THE President has trusted a greater number of newspaper men than has any previous President.

Mr. Wilson has met the newspaper correspondents twice weekly since his inauguration and submitted to questioning

vicinated by the treatment he has received from the newspaper men of Washington and from the newspapers of the country.

The second week of his Administration Mr. Wilson had the correspondents meet him in the East Room at the White House and there addressed to them some remarks on his purposes and the way he wanted them to help him consummate these purposes. These remarks were made in the strictest confidence and no word of them was printed.

I am authorized by the White House to make public for the first time this "speech" of the President.

At the time of its deliverance Mr.

THE President and Secretary Tumulty have established that they believe in the widest sort of publicity. They have taken pains to get the White House viewpoint before the country on all important questions, "hot from the bat." At times it has been deemed wise by them that this viewpoint should be described to the newspaper men and incorporated in news stories without being formalized by an official statement from the White House.

In no case, however, has the White House been far behind its critics in getting its side of a case into print.

The president's semi-weekly conference with the newspaper men was one of the

"The confidences are strange-looking spectacles to the old timers here in Washington"

new institutions which the President brought to Washington with him in March and which, like many another of his belongings was declared to be unworkable by conservative old-timers.

It has "worked" through that stage of the Japanese negotiations when the Japanese public mind was inflamed at what was considered a violation of the national honor; a Mexican embargo wherein a war-like ultimatum was given at Mexico City and then recalled; through the early stages of the special session of Congress when President Wilson was counselling assiduously with his "legislative colleagues" at the Capitol on the tariff and currency revision, with

the strong desire that his efforts should not be prejudiced by the idea among the members of Congress that he was attempting to dictate to them.

The new institution has survived and flourished because both the President and the newspaper correspondents have recognized their responsibilities and accounted for them. The President has been frank whenever possible. He has spoken freely at times for publication and at others with the strict understanding that what he said should never get into print. He has discussed "between ourselves" matters so ticklish that his statements might have brought on international complications had they been published.

The newspaper men have appreciated the President's confidence in them and have vindicated it. In only one instance has a story been printed containing information which the President expressly conditioned should be regarded as confidential. The only effect of this incident was the turning away of one newspaper man from the conference. The President maintained unimpaired his belief in the others who had consistently respected his confidences.

The confidences are strange looking spectacles to old-timers here in Washington and many never have been able to become accustomed to them.

The House of the Nations

By CHARLES CAMPBELL JONES

ALL the busy street could have seen that the Dutchman was broad of face, big-bodied, and slow moving. His mustache and imperial seemed as out of place upon his ruddy countenance as his periodical outbursts of cholera seemed out of sympathy with his placid disposition. He wore a blue suit, a wide gray hat, and shiny shoes; he was clean with the glow and polish of a scoured kettle; his independence was to be observed in every look and action; he moved as if he knew well where he wanted to go, what he wanted to go for, and could be just stubborn enough to carry out his intention in spite of any or all circumstances.

Now that he was not so young as once, and since he had made and saved something upon which to live in his own unass-

suming manner, the Dutchman did not attempt to continue in business. All the work he felt called upon to do was the necessary pottering about his yard and cottage, the cultivation of what he hoped would prove a good, new kitchen garden, and the careful tending of innumerable old-fashioned flowers. To these light labors he gave—as befitted an honest, thrifty citizen of a hustling republic—his strict attention. In his times of illness he sat, summer or winter, puffing meditatively at a long-stemmed pipe,—in summer under the long, dim-visited grape-arbor; in winter before the pleasantly crackling kitchen fire. And since he had no regular occupation, and more time to think of things in general, his temper was growing just a bit more peppery and he was wont to remember longer.

He was giving little heed to the tumultuous clanging and clattering that surged about him now. He was bent upon the spending of not more than twenty-five cents,—an adventure to be considered gravely and performed with some caution.

The spending of this particular money was of more than ordinary importance to the Dutchman's temper. He wanted some green stuff; and whenever he thought of green stuff, he straightway grew redder of face and neck and wished fervently that he might have a pet Italian of his own to kick and pummel whenever his feelings upon the subject needed a safety vent.

In the yard about the neat little cottage there had been a strip reserved for a kitchen garden ever since the lot was first

laid out. A wrinkled, jabbering Italian had builded a flat building on the next lot to the south, thereby spoiling the strip as far as its regular use was concerned.

At times the Dutchman believed he saw something radically askew in the conduct of a country that allowed an Italian to own respectable flats, while he owned nothing but the cottage that sheltered him. Much sordid reflection in the shade of the grape arbor, with the red bricks of the flat building in plain sight, had given him what he was pleased to suppose a fixed opinion. He spoke with open contempt of those who seemed willing to live in a manner quite beneath the dignity of a first-class citizen, to sleep and live several in a room, to clutter already over-crowded quarters with the stock-in-trade of a hawker, and all just to be able, after many laborious years, to build and rent flats. He felt that he had excellent reason to dislike all manner of "Dagoes"; and, if possible, he would not buy his green stuff from one of them. But he meant to get value for his money—above everything, best value for the money was the thing to be considered.

The city market was nearly a full block long, and about one hundred feet wide; a low, dingy-raftered, musty structure with a passage straight down the long center and a row of stalls on either side. There was an atmosphere of bluster and hurry and a scent of stale vegetables; the floor was dirty, tracked with street mud and trodden, discarded produce, yet in the hollows still damp with the usual early morning attention to cleanliness.

Through the long space between the stalls passed and repassed a variegated confusion of races,—all the motley population of a city come to morning market. Most of the people were very poor; all wanted the value in full for their scarce dinars.

At a fat butler's stall a tall Chinaman, impassive and unemotional, discussed the price of a picked roast with the meat cutter. The bargaining was sharp, and the two men, as inwardly intent and alert, as outwardly calm and uninterested, paid no real heed to anything else.

Beyond, at an Italian greengrocer's, a white-eyed, shiny-faced negress cast a scornful glance at the insolent clerk, waved her large hand in a gesture conveying utter annihilation, and, nose-in-air, shouldered her disdainful way through the unheeding crowd to another stall.

The negress, still shaking her head and muttering, over at the other stall bumped against a Jewess—lean, harsh featured, and stooped wearily with the three-fold burden of child-bearing, years, and labor.

The black woman strove to gain the attention of the stall attendant, in spite of the patent transaction going on between the man and the Jewess. The lean featured bargainer, exhibiting a swift readiness to fight for her privilege of precedence, accepted the attempt quite as a matter of course. She could understand people who ignored the rights of others, people who wanted the best of it for themselves; she was of that turn herself. From the racket of the vociferous tradesmen, from the huffling clang of gongs, the boom of horns, and clatter of wheels outside, and from the pushing unmanly throng about her, she drew justification for her philosophy.

As the Dutchman, his methodical mind upon the green stuff, entered the market, he inadvertently jostled a swart, slit-eyed Sicilian woman, heavy with

child. She was squat, grimy of clothes and skin, and the Dutchman instinctively moved his immaculately clean person away. It could not have seemed to him that he could possibly have anything in common with her. He was not interested in her, nor in her kind, except to wish that these aliens, these late comers, these scum and scoundings of that part of Europe not to be blessed with the beloved title of *Vaterland*, might, firmly and without delay, be kept out of this rapidly becoming too free country.

The woman, in her turn, swept the Dutchman with hot black eyes, snapped something in the searing anger speech of the sun-lands, bated the man for a fat, clumsy pig of a foreigner, and batted on into the seething mob ahead.

Over at one of the middle stalls—a greengrocer's—a flat-raced, wide mouthed, cosmopolitan—by courtesy "American"—suddenly and aggressively began to cry cheap produce.

There was an instinctive movement toward the cry; as the marketers came closer and packed tighter they caught, one from another, a certain contagion of fierce eagerness. Every unit of this working, squirming mass wanted to get nearest the same stall; not altogether for the bargains which they well knew were not at all likely to prove such wonderful values, but because the wide-mouthed man had succeeded in directing the combative selfishness that existed in all of them. The wide-mouthed man pretended to offer the first comers—strongest, or luckiest, it mattered nothing—the best of it for themselves; it was every one for the best of it, and whatever might be left for the hindmost.

In the press of the crowd the Dutchman found himself jammed against the Sicilian woman. He had the same feeling of aversion that had been his at the entrance, only intensified now as he was crowded closer. Sourly, he wondered why the woman did not choose to buy from one of her own kind, instead of from this American; then he grunted and considered that she probably wanted the best of it from wherever it was to be had, that maybe she wanted a bargain so that her man might in time, with such slowly accumulated savings, build ugly, red brick flats next door to some more deserving person. He strove to get away, but gave it up after one or two grumblingly ineffectual attempts. The crowd was too dense, too eager, and quite too careless of the interests of anyone.

The Sicilian woman was being roughly jostled. She was just recognizing the Dutchman for the fat pig of a foreigner when a strange expression, slyly and oddly beginning, passed across her face. There was in the look something that was old when the first of life was young. It left the swart face holy, and fit with the high glow of endeavor.

The woman swayed uncertainly, put out her crooked hands against the unyielding backs in front, and, with an inarticulate "An—an—an—n!" sank down to the refuse strewn pavement.

The Dutchman paused in blinking consternation. His mind, like his body, moved slowly. Then, in a stunned instant, he knew. He did not bother about the things he had thought left there at the entrance; he did not appreciate that he had been trying strongly to reach the stall beyond to spend, maybe, the whole twenty-five cents, and not with an alien—a long hated Italian; he did not recall or

consider that he had struggled—as he supposed at the time, to the best of his ability and power,—to increase the distance between himself and this very person.

There was a sense of awful need upon him. Something that dwelt in a far recess of being, untroubled by the oldest, most cherished racial differences and animosities, stirred him. He braced his thick legs to the solid floor, heaved his broad back, and cleared a space.

He reached the stall nearest him—the one next to the American greengrocer's—and a place was made for the woman. The wide-mouthed man still bawled loudly of bargains to be had; the crowd gave to him the greater share of its attention. Between a fighting chance for the best of it, and the attraction offered by some unknown disturbance in which a fat, flustered Dutchy seemed to be interested, there could be, in reason, but one choice. The big man turned his red and sober face to a negress and a lean Jewess, who, side by side and equally eager but not now warring for precedence, came silently forward on the one errand.

Above the market noises the waiting Dutchman heard, three times repeated, a faint wailing cry that thrilled him as the first cry of little Rudolph in that intense morning hour, long ago. Once again he stood at the sacred gate, and heard, thin-toned and holy, the echo of God's voice where lately He passed by. As he remembered that it had not been given the little Rudolph to laugh and thrive and immeasurably gladden the lives of himself and the patient wife, the imperial host something of its stiff fierceness, quivered strangely, and a clicking roughness caught in his old throat.

In the dull wonder of vision he saw again the awful years before the little girl came to make a strange house in a strange land—home.

He wondered if "it" would live and laugh and thrive; if it was a first born, and a soldier of hope; if they, its father and mother, had ever but a little pledge and proof of a new nationality—a race—constituted, yet ever mutable, member of a great, human, native family. A sense of cosmopolitan kinship, a newborn understanding of brotherhood with all these peoples,—snow-land or sun-land, flat-buying and cottage-dwelling—followed the sunset memory of little Rudolph.

The Dutchman was not much of a philosopher, but he remembered his first sight of the maternal statue of liberty. He recollected what the new world, shouldering up out of the western deep, had meant to him; and he realized that it must mean the same to all—even as the light in the grasp of the heroic figure was meant to shine for all. He pictured the face that, even though so little understanding then, must have been rapt and glowing as he looked; and he felt again the reverent, brotherly thrill.

Over the heads of the silence-stricken, slowly apprehending crowd he looked into the slant, quiet eyes of the tall Chinaman and surprised there a flicker of the same sympathetic understanding that was warm in his own soul.

The Dutchman felt that he must talk with somebody. He drew out a blue figured handkerchief, and mopped his sweat-greased forehead, scowling darkly and anxiously.

"Mein Gott!" he blurted in heavy confusion, "Indi I would hate to half me in this place a little baby. Hey?"

Aunt Suzanne

By CORNELIA L. F. BROWN

MY great-aunt Suzanne had twenty-one children. I only learned this on a recent visit to the old home where the original brothers and sisters founded our people and where Aunt Suzanne did at least her share. I was astounded at this record of Aunt Suzanne, whose name I do not remember ever having heard before. Such an amazing woman! Incredible that I could grow to be thirty years old without ever hearing her unusual story. Twenty-one children! Not seven or eight or ten nor even seventeen! But twenty-one!

Once my senses rallied from the shock of this news I tried to consider Aunt Suzanne more calmly, to ponder on the sort of woman she must have been. A most remarkable soul! Infinite resources must have flowed to her straight from the Source of all Good. "Tell me something about Aunt Suzanne," I asked my uncles and aunts, of their aunt.

"Did you never know that she had twenty-one children?" they said.

"Yes, yes, I have just learned that, but what else about her? What was she like? What kind of a woman?"

"Oh, bless you, she was a busy woman."

"I know, but . . ."

"Well, you see Uncle Lawler was a very peculiar man. He quarreled with all the relations and wouldn't even let Aunt Suzanne come to her own father's funeral. There was a funeral week before that in the family. And it seems Uncle Lawler's carriage wasn't as far front in the procession as he thought it ought to have been on account of Aunt Suzanne's being the oldest sister. He took it as a serious slight to him. We never saw much of any of them after that. He drew them out of the relationship. They sort of harbored his grudge and handed it on, that is, those that are left of the twenty-one."

"Oh, then they didn't all grow up?"

"No. There were six of them till a few years ago, and now I believe there are only four left. You see some were twins, delicate, lots of care and then died early. Some went with the regular diseases of childhood. The rest dropped off in the teens. One boy ran away."

"But of the four that are left? What are they like?"

"Well, you see Uncle Lawler was as queer as Dick's hat band. The children were pure Lawler—the whole tribe!"

"Were they smart, brainy you know, at all?"

"It's hard to say. You see, Uncle Lawler was educated in Ireland to be a lawyer or a poet or something way up in the classics. He was laying for a big career. Then when he came to this country he thought he saw big money in farming. But he never was cut out for farming and never made much of a go of it. So he turned against farming. He said it was his undoing and none of his children should ever waste their time as he had. Nothing but the devil's snare, he called it. None of the children were ever allowed near a school. All the learning they ever got was what Aunt Suzanne could manage to give them."

"Well, what about Aunt Suzanne, then? What became of her?"

"Oh, you see, she was a busy woman, and I suppose when the last child grew

up there was nothing more to do for a moment, the machinery had time to stop and it did. Just stopped running is all."

"I see. The process of relaxing was too much for it."

SO that is the last that history has to say of Aunt Suzanne! Alas! Where is the Conan Doyle of such a heroine? Surely she must have left at least a finger print on a window sill! Is her story said in the fact that she was a "busy" woman? Is it nowhere written that she was happy or that she was sad? That she felt that her life was a glorious work, or that she saw it to be a tragedy? Was she a victim of Nature's extravagant fertility? Or did she believe she could outdo Cornelia in being the mother of many Gracchi? Was her work a welcome field for the expression of many talents? Or was the expression of those particular talents merely a courageous meeting of demands put upon her by the twenty-one? Better say twenty-two, for it seems evident that Uncle Lawler counted.
